Mr. ULLMAN. Mr. Speaker, on Sunday, March 17, 1957, an important landmark in Columbia River navigation was officially dedicated. The celebration that day marked the completion of the navigation lock at the Dalles Dam. This lock, which is 86 feet wide and 675 feet long, will provide a lift of 87 feet for ships and remedy a navigation system which has long been limited and cumbersome.

Completion of this facility is one more indication of the speed and efficiency with which work at the Dalles Dam has been progressing. The dam was originally authorized by Congress in 1950, and construction started in March of 1952. The 5 years which have elapsed since then have seen a structure of 8,700 feet, or 1.6 miles long, come into existence. Work has been expedited to the extent that the dam now is said to be further advanced than any other dam of similar size in a similar period of time.

It was indeed fitting, therefore, that this engineering achievement was properly observed. Both the newly elected Governors of Oregon and Washington, Robert D. Holmes and Albert D. Rosellini, attended the ceremonies and participated in the events of the day. Other officials from both States and from surrounding communities also participated in the ceremonies.

Certainly the Columbia River Development Association is to be congratulated in planning and arranging the March 17 celebration. Their work on this particular occasion is indicative of their dedication to the achievement of full and comprehensive development of the great Columbia River system. The success of that organization represents the hard work of many individuals, but I doubt if anyone would object if I paid particular honor to Mr. Edward T. Chambers, president of the Columbia River Development Association, and Mr. W. S. Nelson, chamber of commerce manager of The Dalles. In connection with the dedication ceremonies, Mr. Nelson spoke briefly on the passing of a historic landmark as a result of completion of the navigation facilities at the Dalles Dam. For many years the Dalles-Celilo Barge Canal has been of great historic and scenic interest. This canal, placed in operation in 1915, made navigation possible on the Columbia River above The Dalles. Yet, it has long since served its period of usefulness and the new facilities necessitated the flooding out of the old barge canal. The remarks of Mr. Nelson with regard to this barge canal are, I believe, of great historic interest and, under unanimous consent, I include them with my statement:

DALLES-CELILO CANAL: HISTORICAL HIGHLIGHTS
(Remarks of W. S. Nelson)

Within a few weeks, we shall witness the passing of the Celilo Canal and with it Celilo Falls. Celilo Canal has been the important link in through navigation of the Columbia River, betweeh its mouth and the upper Columbia and Snake Rivers. Through it has gone many millions of tons of waterborne commerce.

Until Celilo Canal was completed and placed in operation, May 6, 1915, through navigation on the Columbia above The Dalles was impossible. Such navigation as was conducted abve Celilo Falls was made possible by the portage of commerce around Celilo Falls.

The first wagon portage road—19 miles long—around Celilo Falls was established in 1858. In 1862, the Oregon Steam Navigation Co. began the construction of a portage railway between The Dalles and Celilo, which was completed and opened to operation April 20, 1863, 15 miles in length. This railroad was a 5-foot gage instead of the conventional 4 feet 8½ gage. This portage connected with boats built at Celilo and operated between there and points on the Columbia and Snake Rivers. The freight rate between The Dalles and Celilo was $15 per ton. From The Dalles to Lewiston it was $80 per ton. Passenger fare was $60 from Portland to Lewiston. In 1880, the line was sold to Henry Villard, who was then building a railroad system, and in 1882 it became a link in what is now the Union Pacific Railroad. With the extension of rail service throughout the interior, navigation finally ceased on the upper river.

The first project adopted by Congress for navigation improvement around Celilo Falls was authorized in the River and Harbor Act of August 18, 1894, a boat-railway sytsem. This project was abandoned and another adopted by Congress in the River and Harbor Act of March 3, 1905, at an estimated cost of $4,485,000.

In 1908 the Oregon Legislature appropriated $165,000 for the cost of acquiring the right-of-way for the Dalles-Celilo Canal and the construction of the second portage railroad for use in connection with the construction of the canal. It completed this road in 1905. Work of construction of the canal began in 1908. The largest number employed at any one time was 1,500. Eight were killed during construction. Drilling of rock was done by steam. Canal completed May 6, 1915.

A few years ago, John W. Kelly, a writer of news articles, wrote the following, which appeared in the Spokesman Review, Spokane, Wash., December 2, 1951:

"The Dalles Dam on the Columbia when completed will obliterate another of the river's most historic physical features, the most historic Celilo Falls; just as historic Kettle Falls became a thing of the past with the rising waters behind Grand Coulee Dam. The Cascade rapids disappeared behind Bonneville Dam. Only in memory will these beautiful and inspiring falls remain to man (man merely moves the falls to the site of the dam, he does not obliterate them). Celilo Falls holds an even more impressive place in history as a fishing rendezvous for Indians than did Kettle Falls. Early travelers called it Salmon Falls and marveled at the sight of Indians fishing there. As historic and beautiful landmarks of the Columbia River pass from sight, with the building of dams and other monuments of progress, it becomes more important that man's recollections of these landmarks be treasured zealously."

No project for the improvement of the Columbia River for navigation excels the accomplishment of the Dalles Dam. Celilo Canal, 8½ miles long, with limited locks and channel depth, has long been a bottleneck in water carrier operation on the upper Columbia. It limited 8½ miles of navigation to 1 towboat and a barge carrying 600 to 800 tons. In contrast, the Dalles Dam will permit the passage of 1 boat and 7 barges, carrying from 7,000 to 10,000 tons, all lifted to or lowered from the Inland Empire in 20 minutes.

No organization has suggested that this forceful change in navigation of the Columbia be recognized. What is here submitted is for thinking about whether such a change so beneficial to our welfare merits any acknowledgment. But more than this, as historic Celilo Canal fades from sight shall our farewell be the wiping away of a falling tear. Shall we reflect our exultation at the opening of the majestic gates of the Dalles Dam to the commerce of the world by the raising of a feeble salute. Shall such be our thanks for a great project. Progress is the activity of today—and the assurance of tomorrow.

Henry Ward Beecher said, "We should so live and labor in our time that what came to us as seed may go the next generation as blossom, and what came to us as blossom may go to them as fruit. This is what we mean by progress."

Forrester Fights for All Citizens—Right of Trial by Jury in Danger

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. DAVIS of Georgia. Mr. Speaker, one of the most able members on the House Judiciary Committee is Congressman E. L. FORRESTER, of Georgia. His effective work in the committee in opposing the infamous so-called civil-rights legislation has attracted the attention and earned the admiration of those who believe in constitutional government in all sections of this country.

One of the excellent newspapers published in Georgia, the Metropolitan Herald, of Atlanta, carried a splendid editorial commending my distinguished colleague in its issue of March 20, 1957. The editorial is as follows:

FORRESTER FIGHTS FOR ALL CITIZENS

The Nation owes a debt of gratitude to Georgia's Congressman E. L. (TIC) FORRESTER for his fight in the House Judiciary Committee against the obviously un-American

provisions of the administration's so-called civil-rights proposals.

The brutal truth is that these proposals would destroy our basic civil rights. They would reverse the fundamental concepts that a man is innocent until proven guilty, that an acused person is entitled to a trial by jury, that one accused of violating the law has the right to face his accuser, and that there is no place in our system of justice which allows a person to be arraigned because he might violate a law.

Throughout the hearings, Congressman FORRESTER has hammered away at these dangerous and unconstitutional proposals. For weeks it looked like his (and every American citizen's) cause was lost. The committee, of which he is a member, was stacked with proponents of these measures. However, the Georgia Congressman's persistence and devotion to constitutional government is at last beginning to pay off.

Already this battling defender of the Bill of Rights has been able to get a few amendments adopted which eliminate some of the more dangerous proposals. However, many others still remain in the proposed legislation.

Because of his fight, based solely on constitutional law, thoughtful citizens in other sections of the Nation are awakening. They are discovering that while these proposals are aimed at the South, they would destroy our most cherished constitutional rights. Therein, Congressman FORRESTER has rendered an outstanding service to the entire Nation.

We are thankful for the courage and tenacity of "Tic" FORRESTER. We are fortunate that he is a member of the committee. We are grateful that the gentleman from Leesburg does not have a faint heart.

We salute him for his courage and commend him for his determination in defending constitutional government and the Bill of Rights.

In the same issue of the Metropolitan Herald the editor deals with the prospect of the loss of one of our most precious rights, namely, trial by jury, a right which is guaranteed to us by the Constitution.

This splended editorial deserves wide distribution, and I have asked unanimous consent to insert it in the CONGRESSIONAL RECORD. This editorial follows:

RIGHT OF TRIAL BY JURY IN DANGER

One of the most precious heritages we have, as citizens of this great Republic, is the right of a trail by jury. The Founding Fathers recognized this to be one of the foundations of any free government and wrote this guaranty into the Constitution.

Yet, this week, 17 members of the House Judiciary Committee voted to destroy this basic right * * * and in the name of "civil rights." What sham. What hypocricy.

Thomas Jefferson and James Madison knew what they were doing when they insisted that this right be written into the Constitution. The framers of the Constitution understood well the dangers to ordinary citizens if they were not protected by this right. Until recent years no American dared challenge this great principle.

However, alien ideologies have gained a grip in this Nation. Many segments of our population have been brainwashed by subtle propaganda wrapped in the cloak of such seemingly fine phrases as "civil rights" and "brotherhood." Many well-meaning citizens, who believe in civil rights and brotherhood, have been used and are being used by those who would destroy our form of free government.

In Communist Russia and other Soviet-dominated nations, citizens have no right to a trial by jury. Commissar judges try, convict, and condemn those citizens at will. There is no appeal. There are no civil rights. There is no liberty, no freedom.

Now we are faced with a similar tragedy in this Nation. Petty politicians, fearful of the bloc vote, would destroy the fundamental civil rights of every American citizen to appease a small segment of our population.

If this measure, now before the Congress, passes in its present form, it will mean that Congress officially repudiates the Jeffersonian principle of a republican form of government and replaces it with the Marx-Lenin doctrine of the all-powerful central state which controls and dictates every facet of human life.

Surely we in the United States are not ready to replace the doctrines of Jefferson with those of Marx? Surely we are not willing to destroy our constitutional liberties for a mess of political pottage.

God have mercy on us if we do.

Resolutions Adopted by the Kansas Livestock Association

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. REES of Kansas. Mr. Speaker, under consent heretofore granted, I am including resolutions adopted at the 44th annual convention of the Kansas Livestock Association in Wichita, Kans., on March 14 to 16, 1957. I believe Members of the House who are particularly interested in livestock and agriculture will be interested in these resolutions.

The resolutions follow:

BRUCELLOSIS AND TUBERCULOSIS

Whereas the Kansas Livestock Association has been informed that the original budget requested of the legislature by the State livestock sanitary commissioner for the control and eradication of brucellosis and tuberculosis, has been reduced; and

Whereas this reduction of appropriations would seriously reduce the effectiveness of these programs; and

Whereas the amount of State appropriations influence the amount of Federal funds appropriated for the program and would result in a corresponding decrease from this source: Therefore be it

Resolved by the Kansas Livestock Association, That the Kansas Legislature restore and appropriate the original budget requested by the State livestock sanitary commissioner for the control and eradication of tuberculosis and brucellosis in Kansas.

PINKEYE AND SHIPPING FEVER

Whereas the Kansas cattlemen are aware that pinkeye (keratitis) and shipping fever (pasteurellosis) of cattle annually accounts for great economic loss to the cattle industry: Be it

Resolved, That the Kansas Livestock Association go on record urging the United States Department of Agriculture, Agricultural Research Service, Animal Disease Section, and the appropriate Kansas agency, to recognize the importance of these two diseases and to set aside sufficient funds to implement research leading to their control and/or eradication.

STATE TAXES

Resolved, That the State government refrain from using the ad valorem tax as a source of revenue, thereby reserving said revenue exclusively for local governmental units; be it further

Resolved, That the sales tax residue be returned to the counties for local use as it has been in the past.

FEDERAL TRANSPORTATION TAX

Whereas the price for farm products has been in a depressed position, and the 3-percent transportation tax is collected on all freight shipments, which charge is a hindrance to the movement of freight and actually reduces prices to farmers:

Therefore, it is recommended that this tax be removed from all farm product shipments.

SOIL AND WATER CONSERVATION

Whereas the livestock industry is a major industry in Kansas and is in the grip of a critical water shortage, we recommend a soil and water conservation program engineered to use the earth, nature's great reservoir, in holding the water where it falls to the greatest extent possible, through proper land use, ponds and detention dams.

We recommend a partnership approach to flood-control and water-conservation problems and we agree with the several reports submitted recently relative to a national water policy based on the same proposition and theory that the Federal Government and the local beneficiaries jointly contribute to the cost of all flood-control and water-conservation projects of the Federal Government, the local beneficiaries paying for easements and rights-of-way.

We recognize that agricultural and urban water needs are increasing rapidly, and that many mutual problems are involved. We urge that rural people acquaint themselves with urban water problems and strive to help town folks understand our problems and their dependence on agriculture, proper land use, and water conservation.

As an example of cooperation and mutual benefit, we cite the completed watershed treatment on Sandstone Creek in Oklahoma which has already controlled a storm of 50 to 100 years, frequently with flood storage to spare. In addition it has changed a dry water course into a flowing stream of quality water.

We recommend that where the people are asking for a cost-sharing program of flood and water control and have organized a watershed, but have been stopped from further progress by an authorized but inactive Federal dam project, we request the Governor, our Senators and Representatives, to take appropriate steps to allow them to proceed under the watershed flood prevention act.

RIGHT TO WORK

Whereas the right to work is an important issue in Kansas: Therefore be it

Resolved, That the Kansas Livestock Association favors the right-to-work principle. We oppose any form of compulsory membership in our organization or any other organization and will work for and support the passage of House Concurrent Resolution 20, the resolution now in the calendar committee of the house of representatives, which will permit the people of Kansas to vote for right to work in 1958.

BRAND LAW

Whereas the Kansas Livestock Association has long recognized the need for effective brand inspection in certain areas of Kansas and the bill passed by the house of representatives as house bill No. 116, allowing brand inspection on a county option basis, was in the form approved by the association's officers and directors.

Therefore we, the Kansas Livestock Association, strongly support and urge the passage of this bill by the senate.

PACKERS AND STOCKYARDS ACT

Whereas the Packers and Stockyards Act adequately provides for the control and supervision of trade practices in the meatpacking industry; and

Whereas it appears that proper control and supervision of the meatpacking industry under this act has not been effected, due possibly to insufficient funds; and

Whereas legislation has been introduced in the 85th Congress to transfer the authority now under the Packers and Stockyards Act to the Federal Trade Commission: Therefore be it

Resolved, That we oppose legislation that would transfer authority now under the Packers and Stockyards Act to the Federal Trade Commission; and be it further

Resolved, That in order that the act be properly and adequately administered under the Secretary of Agriculture, we urge the responsibility for administration of the act be removed from the Commodity Branch and placed under a separate and independent agency; and be it further

Resolved, That we urge adequate funds be made available for the proper administration of the act.

PACKERS' CONSENT DECREE

Whereas the Kansas Livestock Association is committed to the principle of efficiency in marketing livestock and meats; and

Whereas the so-called 1920 packers' consent decree prohibits only certain packers from owning and operating retail meat markets and from manufacturing, transporting, distributing or otherwise dealing in certain commodities specified in the decree, and popularly referred to as the "unrelated lines,"—the Kansas Livestock Association believes that meat distribution would be more efficient and its costs lowered if these packers were permitted to retail meats and other related products as are their competitors: Therefore be it

Resolved, That the Kansas Livestock Association opposes those portions of the consent decree which conflict with the beforementioned views; and be it further

Resolved, That copies of this resolution be sent to the Secretary of Agriculture and to the Attorney General of the United States.

DEPARTMENT OF AGRICULTURE

We commend the State board and department of agriculture for their work on behalf of the livestock industry. We look forward to continued cooperation with their personnel in utilizing the department's facilities whenever we need aid in our marketing problems.

LIVESTOCK SANITARY COMMISSIONER

Resolved, That during a period of years when most State and National agencies have increased their expenditures, the State livestock sanitary commissioner, A. G. Pickett, be commended for economy and a decrease in expenditures in his department while providing better service to the industry.

QUALIFICATIONS OF STATE LIVESTOCK SANITARY COMMISSIONER

We vigorously oppose any change in the method of selection of the State livestock sanitary commissioner or any basic change in the qualifications necessary to hold that position.

CONTROL OF PREDATORY ANIMALS

In dealing with the problem of the control of the coyote as a menace to livestock and poultry producers as well as to wild life such as quails, prairie chickens, and pheasants, it is the feeling of this association that the use of the so-called gas or cynamide gun should not be prohibited by law because it has been found to be a most effective weapon in dealing with this problem.

However, as a protective measure for domestic animals the association recommends that these guns should not be set less than one-half mile from any occupied farmhouse without the consent of the landowner or tenant. The association also recommends that the use of these gas guns by minors be prohibited unless they have written parental consent to use them.

MEAT PROMOTION

Whereas meat promotion is vital to the livestock industry in Kansas and Kansas livestock auction markets have increased financial support of the national livestock and meat board; and

Whereas the meat merchandising committee of this association has performed excellent service in seeking more widespread support of the national livestock and meat board: Therefore be it

Resolved, That this association ask all possible financial support of the national livestock and meat board by nonparticipating Kansas markets.

DROUGHT DISASTER FEED PROGRAM

Be it resolved, That the Kansas Livestock Association, in convention assembled, requests the Secretary of Agriculture to immediately reexamine the drought disaster feed program to eliminate the widespread inequities. A copy of this resolution is to be sent to the Secretary of Agriculture and the chairman of the Committees on Agriculture of both Houses of Congress.

HUMANE SLAUGHTERING

Whereas a number of bills have been introduced in Congress calling for mandatory use of humane slaughtering methods by all slaughterers; and

Whereas the American Meat Institute and the American Humane Association are cooperating in studies and research on more humane methods of slaughtering: Therefore be it

Resolved, That the Kansas Livestock Association is opposed to any mandatory legislation until more acceptable and economical methods are developed by the industry.

APPRECIATION

The Kansas Livestock Association extends its thanks to all those who have contributed so much to the success and enjoyment of our 44th annual convention.

Especially, we extend our thanks to the city of Wichita and the Broadview Hotel; to the Oklahoma City Livestock Market, the Santa Fe Railroad, the Wichita Livestock Marketing Interests, the Fourth National Bank in Wichita, and the Kansas City Stockyards Co. for special events; to the press, radio, and television services; to our convention speakers; to our convention committee and its chairman, Tom Potter; to our president, vice president, secretary and his staff, and all other officers and committee members.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Slow Pace of American Development of Peacetime Uses of Atomic Energy

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. JOHNSON of Texas. Mr. President, one situation which has been deeply disturbing to many of us is the slow pace at which our country has been operating in the development of peacetime uses of atomic energy.

Three years ago the Congress passed a measure which was supposed to speed that development. Yet today there are indications that we may have been outstripped not only by our friend, Great Britain, but perhaps even by the Soviet Union.

The Baltimore Sun on yesterday carried an article written by its Moscow correspondent, Howard Norton. Mr. Norton is a reputable newspaperman, considered by his colleagues to be an accurate and well-informed reporter.

This article describes—apparently from direct observation—the Soviet Union's first atomic power station. It is not a station that can be termed a tremendous commercial achievement. Nevertheless, it is established and is operating; and a second one is also running.

Because of the tremendous importance of this development, I ask unanimous consent that Mr. Norton's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNDER A MOSCOW DATELINE

(By Howard Norton)

Moscow, March 23.—Russia's first atomic-power station is not what you would call a resounding commercial success.

It hums bustly, day and night, for 100 days days at a stretch without refueling. And it manages to turn out about 5,000 kilowatts of power.

But the engineers who run it will confess, if you ask them, that it is not producing quite enough power to supply the needs of the little atomic city that was built specially to house the people who built and operate the power station.

"Of course," they explain, "it's an experimental project. It should be much larger."

Secrecy still cloaks much of the activity at the atomic city, though the power station has been running since 1954, and films of the whole setup have been shown in the theaters both here and in the West.

IT IS NOT GIVEN A NAME

Despite the fact that many thousands of people know it is located about 135 kilometers south of Moscow, in a forested region, the Kremlin still insists on taking the precaution of not giving the city a name, and not showing it on the map.

The atomic city housewives do much of their shopping at the town of Maloyaroslavyets, which is also nearby.

The powerplant itself is a squat, unimpressive thing by comparison with the city of huge apartment houses, theaters, stores, and schools that has been put up to keep it going.

Like an iceberg, its most important part is out of sight.

The heart of the station is a graphite cylinder about 15 feet tall which, in turn, is housed inside a water-filled concrete cylinder with walls 9 feet thick.

And to make doubly sure that there is no stray radiation, this whole thing is buried deep in the ground. The station itself is built over and around it.

REPORT NO ACCIDENTS

The Soviet scientists who have been studying the station since it was opened in June of 1954 claim they are amazed by its safety and by the smoothness of its operation.

They say there has not been a single breakdown of any kind or the slightest accident or injury to personnel.

They admit it is uneconomic to operate here in European Russia where cheaper types of fuel are available, but they have their eyes on some of the remoter regions of Siberia where the cold rules out water power, and the lack of transport bars coal-operated power plants.

An atomic plant, they say, could be kept going in these far regions by a single airplane-load of uranium, flown in once every 3 months.

They see in it the key that may open some of Siberia's untapped resources.

It takes 1,400 pounds of uranium to load the graphite cylinder and start the chain reaction going.

128 RODS REPLACED

After 100 days of operation at full capacity, only 7½ pounds of uranium will have been consumed.

But at this point the "critical mass" of fuel falls below the amount required to maintain the chain reaction, and the 128 uranium rods have to be pulled out and replaced by new ones.

The old rods are cooled off for 3 months in water-filled storage tanks, and they they go back to the factory where the uranium is recovered and reused.

The way the plant operates sounds simple enough. Ordinary water is pumped through the uranium rods. The heat generated by the atomic reaction raises the temperature of the water to between 260° and 280° C. (water boils at 100° C.).

This jet of superheated water is then used to create steam to turn the generator turbines.

WANT IT SIMPLE

Persons who claim to know something about atomic energy say this is an elementary system—just in the kindergarten stage of atomic power.

But the Soviet scientists, who agree to a point, explain that this is exactly what they want—something simple enough to operate efficiently far from civilization; something that does not require heavy loads of fuel or frequent repairs.

Russia has a second atomic power station in operation, too. But it is not ready to show that one off, or say much about it.

The first one—at the little "atomic city" south of Moscow—probably will continue to operate as a sort of monument, long after its days of usefulness as an experiment are over.

For, in addition to being the first in Russia, it was also the first operating atomic power plant in the world.

And this is one Soviet "first" that nobody will brand as a phony.

The Still Explosive Middle East

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. JOHNSON of Texas. Mr. President, I believe that most of us have now become resigned to the realization that the Middle Eastern situation is far from a solution.

The Israeli withdrawal from Gaza and the mouth of the Gulf of Aqaba was one of the preconditions for working out a solution. But there were other preconditions, in the form of actions to be taken by the other side. These have not been met.

The careful and very perceptive columnist, Roscoe Drummond, summed up the situation admirably in an article published yesterday. I ask unanimous consent that his article, taken from the New York Herald-Tribune, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STILL EXPLOSIVE MIDDLE EAST

(By Roscoe Drummond)

WASHINGTON.—The candid judgment in Washington is that the Middle East crisis is going to become more explosive, not less, during the coming weeks.

Most United States officials take an increasingly gloomy view of Egyptian President Nasser's uncooperative, even provocative, attitude since the withdrawal of Israeli forces.

Thus far, President Nasser has done nothing to improve the climate for peace since the United Nations and the United States rescued him from the Anglo-French-Israeli invasion.

Cairo has announced that it will continue to deny the Suez Canal to Israeli shipping, which means that Egypt asserts the right to use the restored canal as an instrument of national politics. This would be a clear repudiation of the six principles for the operation of the Suez unanimously approved by the U. N. Security Council and accepted by the Egyptian Government.

President Nasser appears to be persistently and successfully elbowing the U. N. forces out of the Gaza strip, from which so many harassing raids were launched against the Israeli frontier.

Although the U. N. General Assembly approved the function of the U. N. expeditionary force to help maintain quiet during and

after the withdrawal of Israeli troops, Nasser is doing everything he can to undercut the U. N. either as a means of helping to administer Gaza or to guard the border.

Either Nasser will prevail or the U. N. will prevail, and that is the nub of it right now.

It is true that one Israeli freighter has sailed down the Gulf of Aqaba to the Red Sea undisturbed by either Egypt or Saudi Arabia in using its right of innocent passage through international waters.

But it is too soon to consider even this issue settled. Cairo continues to talk about barring Israeli ships from plying the waters through which they must pass to reach the Israeli port of Elath. It may soon be more than talk, because Egyptian troops are now reported to be moving toward Sharm el Sheikh, where installations survey the Gulf of Aqaba.

President Nasser justifies these anti-Israel practices with the assertion that Israel must not be rewarded for aggression. This is an empty justification.

If the basis for discrimination again Israeli ships in the use of the Suez and the Gulf of Aqaba is the recent invasion, then there was no basis for such discrimination before the invasion.

Of course, Israel should not be rewarded for aggression, but it is not reward for Israel to receive the fair and impartial treatment which she, in right, deserved to receive, and the denial of which helped to bring on the invasion.

The U. N. Assembly has overwhelmingly condemned both the Israeli invasion and Egypt's discriminations against Israel.

Now that Israel has obeyed the U. N. resolution, are we to accept the fantastic Egyptian contention that Egypt does not need to cease its provocations on the ground that to do so would reward Israel?

All these are the reasons why the hardest tests in the Middle East still lie ahead for the U. N. and the United States.

For years, the U. N. resolved against but did nothing to stop the Egyptian provocations against Israel. Will it act effectively if these provocations are, in fact, resumed?

We shouldn't overlook the fact that the U. N. did not get Israel out of Egypt. It was the United States which persuaded Israel to withdraw after we assured Premier Ben-Gurion that we would actively and energetically work to realize the assumptions on which she was withdrawing: freedom for Israeli shipping, freedom from the Gaza raids.

In many ways, Israel is today resting her safety and, perhaps, even her survival, upon the good faith and good offices of the United States. If Nasser continues in his present course, the United States, by itself and through the U. N., will be called upon to prove that these assurances are strong, not weak.

The peace and stability of the entire Middle East will be at stake.

The Character and Accomplishments of Hon. Sam J. Ervin, of North Carolina

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. JOHNSON of Texas. Mr. President, recently I had an opportunity to visit the great State of North Carolina, and there I met many of its outstanding citizens. I learned of the great admiration and affection which all the people of that State have for their distinguished senior Senator, SAM JAMES ERVIN, JR.

This morning there was published in the New York Times a biographical sketch regarding Judge and Senator ERVIN. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIXIE'S JESTER-KNIGHT, SAMUEL JAMES ERVIN, JR.

WASHINGTON, March 24.—Adversaries of SAMUEL JAMES ERVIN, JR., frequently find themselves opposing, not the senior Senator from North Carolina, but Job Hicks, Uncle Ephraim, or Old Jim.

MAN IN THE NEWS

These belong to a host of folk heroes, all endowed with the eternal wisdom of his native hills, who in anecdotes heed the Senator's slightest beckoning to deflate a pompous speaker or needle a reluctant witness. The lawyer-judge from Morganton is acknowledged to be the Senate's best raconteur.

But since entering the lists as a States rights champion, especially in the current struggle over civil-rights legislation, the Senator has offered his colleagues less the portrait of the jester than of the county prosecutor in Dixie armor.

This has not necessarily dulled the point of his lance.

WASHINGTON AND ANANIAS

Jousting with Attorney General Herbert Brownell, Jr., at a hearing of the Subcommittee on Constitutional Rights, Senator ERVIN made the point that signed affidavits cited in a civil-rights case might not be "verified information."

"When you reduce the testimony of George Washington and that of Ananias to cold paper with no opportunity to see their demeanor of conduct * * * it is practically impossible to distinguish between them," he said to the Cabinet officer.

The Senator at 60 presents a handsome bearing that belies, somewhat his attachment to the hill people he tells so much about. His features are bold and his voice is easily heard across the Senate Chamber. He is addicted to highly polished tan shoes, fine fabrics and neat cravats. But some who observe him from day to day swear that the judicial robes fall over his shoulders when he rises to speak.

When appointed to the Senate in 1954 he was an associate justice of the North Carolina Supreme Court.

BORN IN NORTH CAROLINA

He was born September 27, 1896, in Morganton, N. C., and received his early training in the law traveling over Burke County with his father.

He likes to startle visitors by telling them he is the only man to have gone through Harvard backward. He went there just for the third-year course, because, as he puts it, "he was afraid some other fellow would get my girl back home." At the end of the first year, though, the romance still seemed stable, so he took the second year. Reassured again, he went back and completed the first year.

He got his law degree and the girl, too. Senator ERVIN and Margaret Bell Ervin now have three grown children—two daughters, Margaret and Laura, and a son, Sam J. Ervin 3d, who recently began his law practice in his father's old office back home.

The Senator's gift for the illustrative yarn was demonstrated recently at a committee hearing in which a ranking Government official, evading specific questions on foreign-aid spending, confined his answers to general statements.

THE CASE OF THE DIVORCE

Senator ERVIN said the witness reminded him of the husband back home who notified his lawyer he wanted to divorce his wife. He conceded she was beautiful, a fine cook, and a model mother.

"Then why do you want to divorce her?" the lawyer asked.

"Because she talks all the time," the husband replied.

"What does she talk about?"

"That's the trouble. She never says."

And that, Senator ERVIN said, is the trouble with many witnesses who come before congressional committees.

Address by Hon. Estes Kefauver, of Tennessee, to the Young Democratic Club of America

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered to a meeting of the National Committee Men and Committee Women of the Young Democratic Club of America on Friday, March 22.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KEYNOTE ADDRESS BY SENATOR KEFAUVER TO THE YOUNG DEMOCRAT CLUB OF AMERICA, MARCH 22, 1957, MAYFLOWER HOTEL, WASHINGTON

I am very happy to be present at the opening of this national committee meeting of the Young Democratic Clubs of America.

It is appropriate that you young Democrats, with such a great stake in the future because you are young, should meet here in the Capital to take stock, so to speak, at this particular time.

There is abroad in the world a vast and sometimes turbulent sense of change. Many patterns being set today will have profound effects on the future. Many of these results will be unchangeable. As Democrats, although we do not control the executive branch of the Government, I think we must assume our fair share of responsibility for the way in which those patterns of the future are shaped.

In Bermuda today the head of this Nation and the head of Britain are meeting. We can see dramatized in that island one of the profound changes. The British Empire, which was such a source of power and strength in the 19th century, undisputed ruler of the seas, obviously comes to the island of Bermuda as still a great world power, but the second power. The United States is the first.

This meeting, concerned as it is with the eruptions of the Middle East, with the plaguing questions of the Far East, with renewed understandings between two old friends, the British and the United States, presents in capsule form the concerns of the world.

It also emphasizes how little understanding really exists of the new world order—how little understanding there is of what is to replace the age of imperialism and colonialism, of how the new nations, bursting with a sense of nationalism, are to live together.

You, as young Democrats, will have to live in that world. You, therefore, have a vital interest in its shaping.

The sense of change is just as profound within the borders of our own Nation. The seeds of new social and economic problems are being planted. You and I will have to live with them. One of the most important is size—size of the industrial unit and economic power which it represents.

Let's take a look into this future for a few minutes.

There is no question but that science and technology are getting ready to produce goods and services that even to the sophisticated border on the fantastic. That this is not a dream is demonstrated by the fact that working models of some of them are currently on display at the New York Stock Exchange. I recently read an article entitled "Focus on a Fabulous Future" which appeared in the March 1957 issue of the Exchange, a little magazine published monthly by the New York Stock Exchange. This is what it says:

"While the future cannot be forecast in great detail until it finally settles around us, there are revealing portents available inside test tubes, on drawing boards, in research laboratories—and the Stock Exchange's new million-dollar exhibit hall gives visitors an exciting glimpse of this incredible world of tomorrow. Working models, animation, color, 15,000 moving parts and 11,000 lights all open a window on the goods and services corporations are developing for future delivery."

The article goes on to describe the exhibits of several corporations. Of the United States Steel exhibit, it says:

"Through show windows of the United States Steel Corp.'s exhibit, for example, model rocket ships built to scale whoosh by a towering metallic city, while far below a farm flourishes beneath the sea. As the future unfolds in almost bewildering sequence, Narrator George Hicks describes the magnitude of what tomorrow is expected to yield."

Of Consolidated Edison's exhibit the article says: "Against a large panoramic night view of New York City, an atomic powerplant in miniature demonstrates how nuclear energy will be harnessed for electric power, from boiler to turbogenerator. Since the model represents the Consolidated Edison Co.'s Indian Point nuclear steam-generating plant now under construction, the future may be around the corner. The plant is scheduled to start supplying energy in 1960."

As even the staid New York Stock Exchange suggests: "The future will stagger the imagination of even the most visionary guest * * * a coming age of rockets and atomic energy and cities in the sky."

This all sounds wonderful—and ths progress was made possible, I may note in passing, by the vision of Franklin D. Roosevelt and Harry Truman who had the courage to turn the scientists loose, with adequate support and appropriations from the Government, to make it possible to harness the atom.

But while we are exulting over this peek into the future, let us not forget that it raises new social and economic problems which you as young Democrats will have to live with and concerning which the pattern may be in the process of being fashioned right now.

How is all this to come about? In the Wall Street Journal of March 14, I read the report of a speech by Mr. Roger M. Blough, chairman of United States Steel, made to the Economic Club of Chicago. Speaking for one of the world's most powerful corporations, Mr. Blough is worth listening to.

Mr. Blough told his audience that "a new business concept—giant corporations joining to form large combines for spreading their risks—may be developing on the economic scene."

"The future may indeed call for bigger business organizations, as man seeks to unlock the secret of the atom, penetrate outer space, and harness the rays of the sun," he said. He suggested that "business which evolved from the individual entrepreneur to the partnership and then to the modern corporation, now may be moving into an era of partnership of corporations."

Mr. Blough then went on to point out that this partnership of corporations was not merely a forecast of what would be necessary to handle America's tomorrows, but that it was also a report of what is already taking place. He said:

"Our biggest corporations are rapidly getting too small to do all the things that are expected of them. The development of raw materials, for instance, has become so expensive, and involves such risks, that a number of large steel companies have had to band together to develop faraway iron-ore deposits, and to establish plants and processes for the manufacturing of usable blast-furnace materials out of low-grade taconite ores."

He asks, but leaves unanswered this question: "Does this joint development idea, perhaps, presage the birth of even larger joint venture in business enterprise than our present-day organizations?"

Following Mr. Blough's speech the Wall Street Journal itself raised the questions which I know must have occurred to you as they did to me. The Journal, in its editorial, asked:

"Would it be possible to prevent such organizations from becoming literal monopolies? Even if so, how much damage would be done to competition? Would small businesses continue to multiply as they now do? Could these giant enterprises remain efficient and so, in fact, meet the demands of the consumers in whose name they were created?"

These questions are relevant. You and I, especially you, must answer them. They are relevant to you as young people; they are relevant to you as Democrats. They foreshadow the formulation of the kind of world you will live in.

My own tentative answers to these questions, result from my knowledge of the past. In the America of today, it has not been possible to prevent existing giant corporations from becoming monopolistic. If the America of tomorrow demands combinations of these giants, it is not likely that we shall be able to prevent them from becoming literal conopolies.

The answer must be either that the America of tomorrow does not require such combines, or that, if it does, they as literal monopolies must be controlled in the public interest.

That is a function of government, and, therefore, of politics, not in the narrow sense of partisanship but in the broader sense. We must prepare ourselves. We must study most intensively the necessity for increase in business size to accommodate the problems of the America of tomorrow. We must study most intensively the techniques of Government control. We must be prepared.

I submit our Democratic Congress is now leading the way in a very statesmanlike manner toward exactly the kind of study and planning we need for the America of tomorrow.

In the Foreign Relations Committee, as a result of the resolution passed during the Middle East hearings on the motion of Senator FULBRIGHT, we are gathering together the information needed to assess the policies of the past as a guide to the future.

In the antitrust and monopoly subcommittee, of which I am chairman, we are engaged in a study of concentration and I certainly have in mind the further extension of this study to determine just what kind of society we will be living in tomorrow.

This Nation was founded on the principles of free enterprise and individual liberty. What we want to do, and what we must do, is save our freedom, and still have the blessings of the scientific and technological achievements of which we are capable.

This will be the task of the Democratic Party, and you, as young Democrats, must play a large role in molding the policies by which we will achieve our goals. For you, with your future ahead of you, the America of tomorrow is more important than for any of the rest of us.

Local Service Airline Subsidy Payments

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 25, 1957

Mr. DIRKSEN. Mr. President, Mr. C. A. Myhre, the president of the Frontier Airlines, delivered a very interesting address at the Chamber of Commerce of Grand Junction, Colo., in which he discussed the question of local service airlines, and whether they will continue to be a subsidy burden to the taxpayers.

It is a very timely discussion, and should be of great interest, particularly as we consider the whole question of subsidies in connection with the Commerce Department's appropriations.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN ADDRESS BEFORE THE CHAMBER OF COMMERCE OF GRAND JUNCTION, COLO., BY C. A. MYHRE, PRESIDENT, FRONTIER AIRLINES, INC., FEBRUARY 22, 1957

Will the local service airlines continue to be a subsidy burden to the taxpayer or will presently available corrective measures be applied by the regulatory agencies in time so that the present local service airline subsidy will be reduced and eventually eliminated?

The subsidy paid to the 13 local service airlines has increased every year since 1947, when it amounted to $7 million; in 1956 it was $24 million, and the CAB estimate for 1958 is $29 million. This estimate, in my opinion, is low; most of the carriers are currently requesting increased subsidy and, as a result of area cases now in process, there will be substantial route extensions which will further increase our mail pay needs. I would guess that by 1958 the subsidy may approach $40 million. But whether it is $29 million or $40 million, the problem which I want to discuss with you remains the same: How can these rising subsidy bills be offset?

We are long past the point that there is any question that the local service airlines are a necessary part of our air transport service and are performing a function required in the public interest. The function of providing good air service from small and medium-sized communities to the larger metropolitan centers has proved of great economic value. This fact has been established by your steadily increasing patronage, by numerous certificate renewal cases and finally confirmed by Federal legislation in 1955 when Congress, by unanimous vote, made permanent the certificates of public con-

venience and necessity of the local service carriers.

There is likewise no question but that further extension of the local airlines routes into presently unserved areas is also in the public interest. The people in such States as Nebraska and South Dakota, which have been completely by-passed by local air service, have contributed by Federal taxes for many years to the support of local air service in the rest of the United States and are entitled to local service in their own States. As our country grows, more and more air service will be necessary.

I don't want you to get the idea there is anything wrong with air transportation as a business or that subsidy has been necessary. The 12 domestic trunk airlines are among the fastest growing, strongest business concerns in our entire economy and, as of last week, no subsidy is being paid for domestic trunk operations.

The carriers which serve the smaller communities require subsidy today primarily because they are required by Board order—not by traffic or economic reasons—to operate under such conditions and limitations that they cannot operate economically.

None of us in the local service industry enjoys being subsidized. We look forward to the day when, like the trunk carriers, we can operate on a profitable basis. Please don't be under the misimpression that because we are subsidized we have no financial worries; despite the $24 million which the local service industry received in subsidy last year, it had an operational loss of $660,000. After almost 10 years of subsidized operations, the local service carriers show a deficit in their earned surplus accounts of $327,000. These financial problems are of obvious concern to our stockholders and we think they ought to be of concern to the public we serve simply because in the long run only financially healthy companies can provide the best in air service. Beyond that, we fear that unless we show progress toward reducing our subsidy requirements, the Congress may not indefinitely foot the bill; in a sense, therefore, I'm suggesting that the very existence of the local service airlines is at stake. Representatives of the industry as well as representatives from the CAB itself, have on numerous occasions advised Congress that the reduction in subsidy was one of the two major objectives—the other one being improved air service. These are not incompatible objectives, and let me emphasize that I don't think that the expansion of the local carriers should be curtailed because it will involve additional subsidy; but I do think that steps can be taken which will reduce the cost of this expansion. The solution that I will suggest for this problem promotes the most important objectives in civil aviation—reducing subsidy and improving the quality of the air service.

Before discussing a solution, I would like to give you a few statistics about the typical local service airline:

It represents an investment of $500,000; its annual revenue is about $3 million which is $2 million less than its expenses—this difference is made up by subsidy. This company operates with a load factor of 45 percent; the average distance between stops is 85 miles. Its costs per revenue ton-mile are $1.10.

Theoretically, we can reduce or eliminate subsidy by increasing revenues and decreasing expenses, or some of both. What I want to do is to place some of the suggested solutions in their proper perspective by indicating the extent to which they can contribute to the reduction in subsidy. Let us first look at three ways in which our revenues might be increased:

First, the board itself is conducting an investigation to determine whether, in fixing the amount of subsidy payments, the rate of return on the carrier's investment should be greater than the 8 percent now authorized. Even assuming that this might be increased to 12 percent, the financial benefit to our typical local service carrier would be only $20,000 (4 percent of investment of $500,000). Obviously, this is no solution; in addition, it also represents an increase in subsidy rather than a decrease.

Secondly, our company could raise the charges for its services. No doubt you noticed that United Air Lines has recently indicated it will raise its fares by 6 percent; Capital and Eastern Air Lines have stated they may follow suit. The typical local service carrier would receive approximately 6 percent of the available annual revenue of $3 million provided that no decrease in the volume of traffic would result from increasing the cost of travel. Past experience indicates that a decrease would result and a fare increase would not be pure gain. In addition, local service fares are keyed to the level of trunkline fares and it does not appear fair or justifiable to expect the traveling public to pay more to avail themselves of local air service than it costs them to travel on trunkline carriers.

Thirdly, it is possible for continued improvement in increasing traffic. It is a historic fact that virtually all local service carriers have not only increased their traffic, but have increased their load factors consistently over the years they have been operating.

Next, let us look at some of the opportunities for reducing costs:

First, costs may be reduced through increased efficiency. There is, of course, some variation in the level of costs among the 13 local service carriers. Differences in weather conditions, mountain flying, wage scales, gasoline prices and the like explain in part some of the cost differences. In my opinion, success in this area is represented by holding the line—no one has found it possible to reduce costs significantly.

Many have hoped that costs could be reduced by the introduction of more modern aircraft—after all, the DC–3 (which is the workhorse for our industry) is 20 years old. However, none of the three carriers which has tried newer equipment have been able to reduce its subsidy needs. The operating results of the three airlines which are operating modern postwar equipment (Martins and Convairs) demonstrates that the shortness of haul made necessary by certificate restrictions on their routes results in significantly higher direct expense per ton mile in two cases, and virtually no improvement in ton mile expense in the third case. Furthermore, the depreciation expense per ton mile on the new equipment is so much higher than the comparable expense for DC–3 equipment that any operating efficiency is more than offset.

These are the results:

Type of aircraft	Airline A [1]		Airline B [2]		Airline C [3]	
	Martin	DC–3	Martin	DC–3	Convair	DC–3
Direct expenses per ton-mile less depreciation	$47.49	$44.78	$38.14	$42.69	$40.09	$52.53
Depreciation per ton mile	$10.26	$1.70	$5.34	$2.02	$8.22	$1.66
Total direct expenses per ton-mile	$57.76	$46.48	$43.48	$44.71	$48.31	$44.19
Average load factor (percent)	42.2	47.7	49.1	47.9	52.1	54.1
Average length of hop [4]	97	69	93	61	81	78

[1] Allegheny for calendar year 1956.
[2] Southwest for 12 months ended Sept. 30, 1956.
[3] Mohawk for 12 months ended Sept. 30, 1956.
[4] Estimated.

From these figures it can be seen that the carriers which have started to use larger and more modern aircraft have not been able to reduce their unit costs.

While each is helpful, none of these solutions comes even close to solving the problem.

There is only one solution and that is to treat us as if we were airlines and to start relaxing the artificial restrictions—which none of the trunks have—on our operations so we can operate economically. These restrictions are the heart of the problem—today we must stop every flight at every point on the route with minor exceptions.

This has three results. First, it prevents us from operating the airplanes at economical distances—our average length of flight is only 85 miles. Second, it prevents us from getting enough people on each airplane to be economic. Third, by forcing the public to make an unnecessary number of unwanted stops to reach their destinations, it becomes a disservice to the public and discourages use of our services.

The same economics apply to the small carriers as apply to the trunks—whether an airline makes money or loses money is largely dependent on three factors, the volume of passengers carried, the number carried on each plane and the distance the plane operates before it comes down again.

To prove this point, we have undertaken an analysis of the costs and traffic characteristics for a 5-year period for a number of local service carriers and so-called regional trunklines. We have computed statistically what everyone in the industry has taken as axiomatic: that unit costs sharply decline as load factor and length of haul increases. The theory has never been challenged; the only question was, how much. Through this detailed analysis, we have attempted to answer this question: How much? Our study shows that if the average hop of our typical airline increased from 85 miles to 100 miles (and if at the same time the volume of traffic remained constant), costs would decline by approximately $500,000. Moreover, if the average length of hop increased to 120 miles, costs would decline by $1 million. These startling conclusions are based on what actually happened to a number of airlines over a recent 5-year period. The DC–3 can be operated at its maximum efficiency at hops of approximately 125 miles; the Convair, for example, achieves its maximum efficiency on hops of approximately 200 miles. On shorter hops neither aircraft is an economical piece of equipment—remember that the average local service airline has an average hop of only 85 miles. I suppose that most of the local service carriers have carefully studied the opportunities for replacing the DC–3 with larger and more modern airplanes. The problem has been, and is today, that no economies will

result from operating a modern airplane on flights which are too short for even a DC–3.

But substantial savings will result if we could operate the newer aircraft at the stage lengths for which they were designed. It should also be realized that not only would great strides be made in attaining self-sufficiency, but substantial improvements in air service would be made available to the traveling public.

We are not asking for anything that will harm the trunk airlines. As I have said, the trunks are among the fastest growing, most profitable concerns in our economy.

The contrast between the members of this industry is enormous. The domestic trunks carry over 97 percent of the ton-miles moved by passenger carriers in this country and receive over 98 percent of the commercial revenues. In the year ending June 1956 the total revenues of the trunks approximated $1¼ billion. For the same period, the total net operating profit of the trunks was $124 million. As of December 31, 1955, the trunks had an earned surplus of $276 million. Since the enactment of the Civil Aeronautics Act in 1938 to 1956, their passenger revenues increased more than 44½ times (from $24 million to over $1 billion), their total assets approximately 31 times (from $36 million to $1,100,000,000).

Trunk airline growth from 1955 to 1956 was the equivalent of the total revenues of five trunk carriers, Western, Braniff, and National, Northeast and Continental. This single year's growth is twice the total revenues of the entire local service industry.

In the 10 years since 1947, the growth in revenues has been about 3½ times. In the last 7 years the domestic trunks have realized almost $600 million in net profits on operations.

On the other hand, the other members of the domestic air passenger transportation family, the 13 small carriers, present an entirely different picture. They account for only 2½ percent of the ton-miles carried in domestic operations and 3.3 percent of the commercial revenue operations. They showed an operating loss of $661,000 in the last year compared to the almost $124 million operating profit realized by the domestic trunks. For the entire local service industry our books show a deficit of $327,000, after all charges, as a result of our 10 years of operations.

In contrast to the $276 million earned surplus of the trunks, we have an actual deficit of $327,000.

The controlling reasons for the strong position of the trunks is that the Civil Aeronautics Board has made it one of its major policies to strengthen their routes and thereby to eliminate their subsidy need.

The last two carriers to come off subsidy, Northeast and Continental, have received major route awards from the Board in the last several months. Northeast was extended from New York to Washington to Miami in order to participate in one of the major markets in the world and Continental was extended between Chicago and Los Angeles, via Kansas City and Denver, for the same purpose. Every one of the trunks has received a number of major route awards since the locals started in business. Delta and Braniff have been extended from Texas and Georgia, respectively, into New York. A carrier operating in our part of the country, Western, had its route modified so that it would have a Minneapolis-Los Angeles route and a Denver-San Francisco route, and even American, which has the greatest profit-making route in the world, received a new route between Chicago and San Francisco.

Obviously, it wouldn't take any such program as this to get the locals off subsidy, but it is going to take determination on the part of the Board and a lot of consideration for our plight to make this possible.

Even if the Board should adopt as a major policy the reduction of our subsidy, Civil Aeronautics Board proceedings are becoming so complicated and time-consuming that little effect could be accomplished in the next several years. In order to get some action started, we have three specific proposals (I am using Frontier as an example, similar situations apply to all other local carriers):

1. After Frontier has provided two daily round trips to intermediate cities, allow us to operate without restriction between any two cities where competitive air service is not available. This would permit, for example, nonstop service between Denver and Phoenix, Denver and Grand Junction, Salt Lake City and Albuquerque, Phoenix and Farmington. Between these cities, Frontier offers the only air service available today. This suggestion creates no new competition for other air carriers; it would simply give the public better service, and enable Frontier to reduce costs by really allowing us to serve the demand over our existing routes, and to serve it in an economical and sensible manner. If the CAB were to take this action today with respect to only two segments on Frontier's present system, our subsidy needs for the next year would be reduced by a minimum of over $700,000, or by nearly 30 percent.

2. The CAB should declare a moratorium on proceedings involving trunkline applications for service between terminals served by Frontier. This would mean that while the Board is studying the problem of reducing subsidy, the potentially lucrative routes in the area we serve would not be awarded to an already prosperous trunk carrier. If we lost our chance for profitable routes today, we'll still be on subsidy many years from now. Good routes not yet served are becoming scarce.

3. The Board should institute an investigation to determine whether, after providing required local service, Frontier could operate without restriction between all cities it is authorized to serve. We think that the opportunities for savings through route improvement are so amazing that the Board should test our conclusions in a formal investigation—where all interested parties could voice their agreement or disagreement. The acceptance by the Board of the principles which I have discussed could then be used as a guide in planning the future development of air transportation.

If the CAB were to take this action today with respect to only two segments on Frontier's present system, our subsidy needs for the next year would be reduced by a minimum of over $700,000 or by nearly 30 percent. With such savings in prospect, you may well ask what possible objections can be raised to this plan? In the first place, trunk carriers are seeking authority to operate between terminals served by Frontier; they will not remain silent if opportunities for even further expansion are denied them.

Secondly, the Board itself appears to have had some difficulty with authorizing local carriers to serve profitable route segments. The Board's past policy has been to eliminate local carriers as applicants from profitable route cases. In the last seven major local service route cases, only one involved the prospect of a profitable operation. Indeed, it has been regularly suggested by the trunk carriers that the true or real distinction between a "local service" and a "trunkline" route is whether it can be profitably operated.

Neither of these objections is substantial in terms of the opportunities offered the public by granting the route improvements we seek.

Our proposals, we believe, go to the very heart of air transportation economics; the Board has, in a sense, shifted the unprofitable, subsidized obligations from the trunk airlines to a new class of carriers without granting them offsetting, profitmaking opportunities. We seek to give best possible air service and to minimize our costs in the confident belief that through route modifications the industry will become not only self-sufficient, but a profitable part of our free enterprises.

We all recognize that carriers like Frontier were created to serve the local, short-haul markets. This type of service must not only continue, but, in our opinion, be extended. The thrust of my thesis is not that we abandon the service we were designed to perform, but rather that in addition, we be permitted to operate profitable routes, the profit from which can be used to offset the losses on the short-haul routes. This is a mighty important issue—it can reduce our subsidy, strengthen us financially so that we can finance newer equipment, and lead to an improvement in our short-haul service.

The problem is an economic one; we think it calls for an effective and practical approach, and we believe that route improvements is the place to start.

An economic route structure, supported and served with adequate, modern equipment, will permit the best possibility of providing all of the services required in the public interest and with the greatest possibility of eventually relieving the present subsidy burden upon you, the taxpayer.

Address by Hon. Estes Kefauver, of Tennessee, to National Capital Wing, Civil Air Patrol

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at Parents' Night, National Capital Wing, Civil Air Patrol, on Friday, March 15, in Washington, D. C. This is the 15th anniversary year of the Civil Air Patrol. It is doing a fine job.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR KEFAUVER AT PARENTS' NIGHT, NATIONAL CAPITAL WING, CAP, MARCH 15, 1957, INTERDEPARTMENTAL AUDITORIUM, WASHINGTON, D. C.

I am pleased to be here, at the invitation of your Wing Commander, Colonel Donohue, to meet with you members of the National Capital Wing of the Civil Air Patrol. I am particularly pleased at the opportunity of speaking to so many of the Cadet boys and girls, and to their parents, who are here with them tonight.

I was a member of the 79th Congress which passed Public Law 476, an act to incorporate the Civil Air Patrol. I was also a member of the 80th Congress which enacted Public Law 575 which established the Civil Air Patrol as an official civilian auxiliary of the United States Air Force. In my home State we are very proud of our Tennessee Civil Air Wing and of its commander, Colonel Alfred M. Waddell.

As a member of the United States Senate, I serve on both the Armed Services and the Judiciary Committees. I am, therefore, in a position to know of the valuable contribu-

tion made by the civilian pilots and observers in Civil Air Patrol aircraft. They flew over 24 million miles over water in our effort to meet the enemy submarine attacks in the coastal waters of the United States during World War II. Twenty-six CAP airmen were lost and more than 800 were awarded the Air Medal for their service in actual over-water reconnaissance.

Fortunately, the end of the war did not mean the end of the Civil Air Patrol. It has been continued and it has played a new and challenging role in these days of an uneasy peace. Under the guidance of Gen. Carl A. Spaatz, the retired Chief of Staff of the Air Force, serving as chairman of its National Executive Board and of its immediately past national commander, Maj. Gen. Lucas C. Beau, and its present commander, Maj. Gen. Walter R. Agee, the Civil Air Patrol is effectively fulfilling its mission.

I agree with President Eisenhower who had this to say in his message of congratulations to you in this 15th anniversary year: "From nearly 3,000 bases throughout all our States and Territories, the 90,000 volunteers of the Civil Air Patrol fly daily missions for the safety and well-being of their fellow citizens. In case of national or regional emergencies, the Civil Air Patrol stands by in flight readiness."

Air Force Chief of Staff Gen. Nathan F. Twining described your function well in saying: "We in the Air Force look to the youth aviation education program of the Civil Air Patrol to help answer the ever-increasing demand for alert young men and women in private civil and military aviation. With its light plane operational force and its nationwide youth program, the CAP is a major element of American airpower."

General Twining refers to that aspect of the mission of Civil Air Patrol which particularly commends it to me—the emphasis on youth training and youth programs. As many of you may know, as Chairman of a subcommittee of the United States Senate, I held public hearings in many parts of the United States, seeking information in the field of juvenile delinquency. I am hopeful that those hearings, and the facts which they developed, may make some contribution toward marshalling the forces of parents, teachers, clergy and public officials to the seriousness of the problem and to the importance of its solution.

It is in this area that the program of the Civil Air Patrol, maintaining as it does a nationwide youth organization of some 50,000 boys and girls, ranging in age from 14 to 18, is of great importance. It offers a partial solution to the problem of the boy or girl whose leisure time is used without direction or incentive and who too often becomes a statistic in the reports of the juvenile authorities. The training of your cadets in the basic fundamentals of aviation, in the theory of flight, in communications, navigation, and meteorology is an important contribution to them and to the Nation in this jet age of supersonic movement and supersonic thinking. That this is so is evidenced by a survey conducted by the United States Air Force last year. This survey showed that some 28,000 former Civil Air Patrol members were then on active duty with the Air Force. The quality of your cadets and the effectiveness of their training is indicated by the fact that the first two classes of tthe New United States Air Force Academy lists 67 of your former cadets among their numbers. Of equal, if not greater importance, is the training they receive in the fundamentals of military drill, in discipline and courtesy. These are the important rudiments in character training which will give meaning and direction to the other fields in which they are instructed.

Of this program, on October 5, 1955, Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, said, in part: "The frontiers of today reach skyward. The Civil Air Patrol, through its work with teen-age cadets, is creating in thousands of young Americans an intense desire to explore a field in which the horizons appear to be unlimited. * * * The energy of youth must be utilized in some manner. The channels into which it is directed may be either creative or destructive. Certainly the work of the Civil Air Patrol * * * is one very effective means of reducing the opportunity for delinquency. * * * I believe that the cadet program is a unique contribution in the fight against juvenile delinquency as well as added insurance that we will have eager young explorers patrolling the unknown airways of tomorrow."

This is a powerful endorsement of your organization. At the same time it is a challege to you, the senior officers of the Civil Air Patrol, to interest on an ever widening scale the thousands of boys and girls as yet not enrolled in your cadet program.

During the coming summer, thousands of young cadets will be attending encampments at many of our airbases. Some will have qualified for a special course in the operation and tactical application of jet aircraft. And still others will go as your representatives to some 22 friendly foreign nations in exchange for their counterparts who will visit with us here. This International Cadet Exchange is an important contribution to better understanding and mutual appreciation among the participating nations. And these are the foundations upon which the peace for which we are all striving may well be built.

Again, I am happy for the opportunity of meeting with you. I want to assure you that I am aware of what you are doing and that I will always be sympathetic as a Member of the United States Senate to such of your problems as may be presented to us for assistance.

Thank you again. And goodnight.

Heroism of Ambassador Willauer

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. GREEN. Mr. President, a week ago today, my distinguished colleague from Illinois [Mr. DIRKSEN] had printed in the Appendix of the RECORD the story, as printed in the Scripps-Howard press, of a notable act of personal courage and compassion on the part of the United States Ambassador to Honduras, Mr. Whiting Willauer.

Mr. Willauer has been a friend of mine for many years and he has had a remarkable career in the Government service, which I have followed with interest. I wish to join with my colleague from Illinois in recognition of Ambassador Willauer's recent act of heroism, and to have printed in the Appendix of the RECORD an article about it which appeared in Time magazine of March 18, and also an editorial from the Memphis Press-Scimitar of March 7 entitled "Beyond Duty's Call."

I feel that these articles will be of interest to all the Members of the Senate, and I wish to invite special attention to one paragraph in the editorial which reads as follows:

One courageous, selfless deed such as this will do more to cement relations between the United States and another country than a generation of protocol and stately receptions.

I wish we had more ambassadors capable of such dramatic and effective acts of good will in the countries to which they are accredited, and I hope the Department of State will use the special qualities of Ambassador Willauer to the full extent.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Time magazine]

During a routine day as United States Ambassador to Honduras, one-time Boston admiralty lawyer Whiting Willauer, 50, got a call for some strictly nonroutine work. A 12-year-old boy had drowned while swimming in a river pool near the capital city of Tegucigalpa, but the body could not be found. Would the Ambassador lend his skin-diving equipment to help the search? "Whitey" Willauer gladly complied, but the borrowers did not understand how to use the equipment. The Ambassador forthwith donned his own oxygen mask and tank, dived into the 40-foot depths, found the boy's body, and brought it to the surface. Explained Willauer, "Nobody else could do it, so I did it."

[From the Memphis Press-Scimitar]

BEYOND DUTY'S CALL

If you harbored the idea that American ambassadors abroad never got out of their striped pants or far away from their tea caddies, you can be mighty wrong about that.

Take the case of Whiting Willauer, our Ambassador to Honduras. When a 12-year-old Honduran boy went down helplessly in a treacherous river, His Excellency Whitey Willauer donned his skin-diver's outfit and went in for him.

For more than an hour the Ambassador prowled the 40-foot depths and finally came up with the body. His feat is getting a great play in the Honduran press, as it well deserves.

One courageous, selfless deed such as this will do more to cement relations between the United States and another country than a generation of protocol and stately receptions.

Our hat's off to the colorful Whitey Willauer, more than making good in his first diplomatic post.

Three Hundred and Twenty-third Anniversary of the Founding of the Free State of Maryland

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. BUTLER. Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared in honor of Maryland Day, the 323d anniversary of the founding of the Free State of Maryland.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, today, March 25, is the 32d anniversary of the Free State of Maryland. On this day in the year 1634, a small group of God-fearing, freedom-loving men and women came ashore from the *Ark* and the *Dove* at a point in what is now St. Marys County, Md. With firm conviction and belief in the teachings of God, with courage and fortitude, with enthusiasm for hard work, these men and

women set out to change a wilderness into a home, both for themselves and others who cherished liberty and freedom and the rigt to worsip God in accordance with the dictates of their own consciences.

The fertile lands of Maryland, the sea and the great Chesapeake and its tributaries, responded to the steadfast, dedicated efforts of these brave people. Maryland flourished; its people obtained material wealth, and more important, that peace of mind that comes only with religious freedom.

During the American Revolution, Maryland played a dominant part in the events which led to our independence and throughout the pages of American history, Maryland, during times of peace and war, has amply fulfilled its responsibilities to our Nation. Maryland has protected our liberties and our freedoms and contributed immeasurably to the wealth, the culture and the great American tradition. Our history rings with names of such great men as Hanson, Carroll, Decatur, and Taney, just to mention a few, who gave America capable and dedicated service and leadership in times of stress and need.

Maryland was also at the forefront of the expansion and development of America. Almost 150 years ago, just west of Cumberland, a small band of western Marylanders began felling the trees and clearing the trail for the construction of the National Road; the first internal improvement to be undertaken by our young Nation. Running straight as a plummet into the setting sun this highway eventually reached St. Louis, Mo., and was a spectacular success. Millions of Americans and immigrants—families, gold seekers, adventurers of all types, traveled over this road on their way to the west.

From an early date, Baltimore has been one of America's great seaports, the center of merchant-marine activity reaching to every part of the world. This great port is also the focal point of a vast railway system which stretches to every section of our continent.

Today, as in the past, Maryland exerts a great influence over the affairs of our Nation. The industrial output of her factories, her fine seafood, her quality food and dairy products, her unequalled tobacco—all contribute to the prosperity and high standard of living in America.

From the scenic mountain wonders of western Maryland, past the fertile farm and dairy lands of the foothills, the industrial colossus centered in Baltimore, the quiet dignity and fine tobacco lands of southern Maryland to the charming and fruitful Eastern Shore, Maryland is truly America in miniature.

The Way to Peace and Security in the Middle East

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, March 25, 1957

Mr. KEFAUVER. Mr. President, on March 21, our former colleague, Senator Herbert H. Lehman, made a forceful and well-considered analysis of problems in the Middle East. He also outlined the failures of American foreign policy to deal with them properly. Senator and Mrs. Lehman were paid a highly deserved tribute by the large audience assembled to do them honor. I ask unanimous consent to have the address delivered by former Senator Lehman printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF HERBERT H. LEHMAN AT THE CONVENTION BANQUET OF THE NATIONAL COUNCIL OF JEWISH WOMEN, SHERATON PARK HOTEL, WASHINGTON, D. C., MARCH 21, 1957

My memory of associations with your organization is a long one. I had the privilege of working with the National Council before I ever thought of getting into public life. That goes back to a time that very few of you here can remember—before many of you were born.

During all the years that I held public office I had reason to know that in nonpolitical matters affecting the public interest, the National Council of Jewish Women could always be depended upon to take its stand in support of the public good—to meet the needs of the underprivileged, to promote the welfare of all the people, and to serve the best interests of our country.

Although I have now left public service, I expect to continue to work alongside your organization, and with many others, for the same good causes and purposes—for freedom, justice, and equality at home, and for peace with justice in the world, for all men everywhere.

I shall continue to work in the direction of these goals—with Mrs. Lehman, my life's companion, at my side—just as long and just as hard as the good Lord lets me.

Tonight I want to talk about one of those goals—the goal of peace, justice, and freedom abroad, with specific reference to the Middle East.

Today, as it was many centuries ago, the Middle East has become the chief arena of world struggle, the area where our leadership is being tested, our principles are being tried, and the peace of the world is at issue.

The Middle East has become the center of world struggle, because about 2 years ago Soviet Russia saw a chance to stir up the Middle East, and by a single stroke to sit astride the jugular vein of Western Europe—the Suez Canal, the lifeline for the vital supplies of oil and other essential materials which Europe requires from the Middle East.

Soviet Russia made her move and gained her objective.

Soviet Russia gained the foothold she sought, first in Egypt and then in Syria. Throughout the Middle East and the entire Arab world the voice and the words have been Nasser's, but the direction and the power have been the Kremlin's.

With the welding of the Moscow-Cairo axis Egypt's dictator, Nasser, was able to pursue his dream of destroying Israel—to launch his murderous raids against Israel's territory and people while stockpiling Russian arms in Sinai for the final assault.

He was encouraged to send his agents throughout north and east Africa to stir the boiling pot of Arab nationalism and to direct its force against Israel, France, and Britain.

He was emboldened to seize the Suez Canal, crux of the Soviet design for the Middle East.

This was the course of events of 1955 and 1956.

It was not until January 1957 that our Government seemed to recognize the fact and magnitude of the Soviet threat in the Middle East.

In January of this year, President Eisenhower took public cognizance of the danger and requested Congress to pass a resolution. Secretary Dulles declared that the threat to the free world was the greatest of the past decade.

But by January of 1957, the danger had already been running—and growing—for almost 2 years. Its critical nature had become obvious to most observers as soon as the Kremlin began the large-scale shipments of arms to Egypt in September of 1955.

At that time, and in the months following, I, and many others, strongly urged the United States Government to do something to meet the danger, but our officials chose rather to wait and see. In spite of continuous Arab aggression and public threats to annihilate Israel, our officials rejected the requests from Israel for arms to restore the precarious military balance. They turned thumbs down on a proposal for a security pact with Israel.

The errors and shortcomings of American policy in the period before the Soviets moved into the Middle East helped to set the stage for that move.

Beginning in 1953, our Government undertook to follow a new policy of falsely-called impartiality as between tiny, besieged Israel, and the vast Arab States which menaced and besieged her, as between Israel, the bastion of freedom, and the Arab States, the backwash of feudalism.

The effect of this policy was wholly disturbing and provocative. In the Arab States, it awoke hopes which could not be realized, and hence contributed to disillusionment. In Israel, it aroused fears which could not be stilled, and hence contributed to desperation.

In 1954, our Government brought pressure to bear on Great Britain to yield to Egypt, unconditionally, the right to occupy and defend the Suez Canal area.

Beginning in the late summer of 1955, and throughout the months of 1956, Soviet power grew and spread in the Middle East, with Nasser acting as the spearhead of it.

On October 29, 1956, Britain, France, and Israel struck back violently, in their separate ways, against the provocations, threats and attacks upon their vital interests, emanating from the Moscow-Cairo axis.

The response and reaction of our Government to the actions of Britain, France, and Israel were almost incredible.

Apparently without recognizing the Kremlin's role in this whole situation, we linked hands with the Soviet Union—and thus played directly into her hands—in the rush to frustrate the Anglo-French and Israeli undertakings. In this way, we unwittingly helped pull the chestnuts out of the fire for both Nasser and the Kremlin.

I suppose that President Eisenhower and Secretary Dulles thought that they were acting in the best interests of the United States, but I do not yet understand how they could have thought that way. By its acts last November, our Government, out of pique at Britain and France, almost destroyed the western alliance, the very bedrock of our national security.

Our Government has been trying ever since to repair that damage, and has not wholly succeeded yet.

But in regard to Israel, I do not know how much President Eisenhower and Secretary Dulles have learned from past errors. Based on the most recent developments, I have growing doubts and fears.

This brings me down to the very present time.

Last month our Government brought every pressure it could against the Government of Israel to induce or force the withdrawal of Israeli troops from the Gaza strip and from the heights dominating the entrance into the Gulf of Aqaba.

The pressure was brought because Israel had demanded, as a condition for her withdrawal, assurances of security against attack and strangulation, and for the safety of the lives of her people.

President Eisenhower and Secretary Dulles expressed what amounted to outrage at this very reasonable attitude on the part of Israel.

I should have thought that the United States Government, eager as it must be to promote conditions of peace and stability in

the Middle East, would have welcomed the Israeli determination to remain in possession until firm concessions could be secured from Egypt—concessions that could not help but advance the cause of peace in the Middle East.

But our Government did not seem to understand this. Our Government continued to insist on unconditional withdrawal—on a return to the status quo ante. We publicly stood with U. N. Secretary General Hammerskjold in his legalistic interpretation of the situation. President Eisenhower and Secretary Dulles joined in the threat of sanctions against Israel.

American public opinion, and world public opinion, soon revolted against this position. The idea of sanctions against Israel impressed people everywhere as basically immoral. And Ben Gurion's steadfast insistence on assurances struck a responsive chord.

Finally, the United States Government, in concert with other great powers, gave Israel the assurances she sought, and Israel withdrew her forces.

Today's question is: Will we redeem our pledges to Israel or will we try to hedge on them?

I would judge it an act of gross perfidy if the United States Government should now try to dodge or avoid in any respect its assurances to Israel. I still refuse to believe that our country, proud of its noble traditions and high ideals, could ever lend itself to such a course. We would inevitably forfeit the respect of the whole world.

We are now responsible for the security of Israel. We gave our word. On the basis of that word, Israel withdrew her forces from the strategic positions they had occupied. Now we must share in the responsibility of preventing Nasser from once more standing at Israel's throat with a bared knife.

Our failure to act in this situation would endanger the peace of the Middle East, and would, as in the past, play straight into the hands of the Kremlin.

Underlying our assurances to Israel are two immediate objectives:

1. To remove the danger of hit-and-run raids and attacks from the Gaza strip or from other areas along Israel's borders;

2. To insure to all freedom of shipping through the Suez Canal and the Gulf of Aqaba, thus lifting the illegal blockade that has strangled Israel for so long.

These objectives must be achieved. We must make clear to the world that we are determined to achieve them. Without their consummation, there will be no real or lasting peace in the Middle East. We must make all of this crystal clear to Egypt and to the Arab States.

This brings me to what I believe is the real heart of the basic problem in the Middle East.

First of all, there is the fact of grinding poverty and social injustice. There is also the fact of surging nationalism. The real trouble is that the major forces of Arab nationalism have been deliberately focused on the destruction of Israel, rather than against the prevalent conditions of poverty, disease, and social injustice.

The rulers of the Arab States have vied with one another in hostility to Israel. Seeking to expand their influence at home and abroad, each would like credit for the destruction or crippling of Israel.

The destruction of Israel is always on the bargaining table when Arab leaders hold talks among themselves or with the representatives of the great powers.

But our Government has consistently pretended not to notice while the Arabs have talked about wiping Israel off the map. And, indeed, some of our diplomats in Arab countries have sometimes sounded as if they privately sympathized with the Arab viewpoint.

This attitude on the part of some of our Foreign Service people dates back a long time. They had the same attitude during the Truman administration. The State Department has never understood the importance of Israel.

But the present Secretary of State started something new in our relations with the Middle Eastern countries. He inaugurated a policy he called impartiality. I have already referred to it. In my judgment, it has been one of the chief sources of trouble.

Of course, I cannot see how one can be truly impartial between a would-be murderer and his intended victim, or between a gang with murder in their hearts and a single individual, marked for destruction, who wants only to live in peace.

Our Government's persistent reference to "impartiality" as a new American policy in the Middle East has meant to some Arab leaders that under the right conditions, the United States might consider the destruction of Israel to be justified.

Closely related to this is the question of direct negotiations between Israel and her Arab neighbors concerning some of the complicated questions between them * * * the question of permanent borders, and the question of the Arab refugees, for instance.

It has been urged by some men of good will that the settlement of these troublesome questions be left to direct negotiation between the countries concerned, and that our Government should confine itself to insisting on such direct negotiations.

I, myself, find it hard to see how Israel can successfully negotiate with her Arab neighbors as to borders as long as these Arab neighbors do not agree that Israel should have any borders at all, or even should exist.

I cannot see how there can be good-faith negotiations with regard to Arab refugees, as long as the Arab leaders insist that the Arab refugees should take over Israel, and that the Israelis should become refugees or be exterminated entirely.

In other words, the first obstacle that must be overcome is the notion in most Arab quarters that under some conditions, at some time in the not too distant future, the destruction of Israel may be accomplished.

The United States must take the lead in extinguishing this notion once and for all.

The United States Government must start talking straight talk to the Arab leaders and the Arab masses. We must stop telling the Arab leaders one thing and the Israeli leaders another. This practice may be good old-fashioned diplomacy, but in the present situation, good old-fashioned diplomacy will not do.

The difficult prescription of simple honesty is called for.

Our Government must convince the Arabs that when our officials say that America supports Israel's right to existence, our Government is talking primarily to them, the Arabs.

Our Government must convince the Arab leaders that there are no circumstances, and no considerations—diplomatic, political, or economic, under which or for which we would stand aside and let Israel be attacked and destroyed.

We must point out to the Arab leaders and the Arab peoples that in any event, they would gain nothing real if they were to succeed in adding to their vast territories this little finger of land called Israel, in which an economy has been built by the blood, sweat, and tears of the Jews of Israel. On the contrary, the Arabs would lose much. They would gain much more by emulating this model of enterprise, and by trading with its people.

It must be made clear to the Arab leaders, but especially to officials in our own State Department and in the British Foreign Office, that any suggested solution which envisions the territorial reduction of Israel, making it impossible for this little nation to sustain itself, would weaken rather than strengthen the stability of the area, and would endanger rather than promote the cause of peace.

It must be made clear to the leaders of all nations that the million and a half Jews who have found refuge in Israel also have a right to live and to belong. And there is also a right of existence for a Jewish homeland to which Jews from other lands, seeking asylum from persecution, may go.

This is the first part of the message which the United States must deliver to the Arab States and to the Arab peoples—in forthright and straightforward phrases, without doubletalk or evasion of any kind.

The second part of the message which must be conveyed especially to the Arab peoples is that when the security of Israel is assured, the United States is prepared and ready to assist with all our might and resources to help the Arab peoples achieve their proper and legitimate aspirations to prosperity, honor, and dignity.

We are ready to help the Arab States and peoples defend themselves against attack or subversion.

We are ready to help them advance toward the frontiers of freedom and greater human rights for each and for all.

We do not sympathize with their hates or their prejudices—and will not, for any consideration, lend our approval or sanction to such hates and prejudices. But we will respect Arab customs and traditions, as they affect Arabs.

We are ready to welcome the Arab States into the comradeship of free peoples. We are ready to embrace them as friends, or to respect them as neutrals, whichever they desire.

We will not seek to dominate or exploit them, or to win them to any way of life except that which they freely choose.

But they are not free to destroy their neighbor, who is our friend and ally—Israel.

This should be our message. To deliver it is our mission and responsibility.

If our officials will deliver this message and convince the Arabs that we really mean it, I am convinced that a new chapter will be opened in Middle Eastern affairs. I believe that there would be a change of attitude and then, a change in the course of events.

Negotiations between Israelis and Arabs, leading to a lasting and cooperative peace, with the United States and the United Nations organization standing by to contribute their good offices and assistance, would not only then be possible, but, in my judgment, would inevitably follow.

In this way, the designs and cabals of the Kremlin can be frustrated. This would be a truly effective and I believe the only way of meeting the threat of Soviet power in the Middle East.

In the meantime, we must, as I have already said, do everything within our power to insure maximum security for Israel, and for her neighbors, too, and make clear that our interest in the Middle East is to advance the cause of peace and justice, and no other.

I am just a private American citizen, as most of us here tonight are. I have no greater authority in the councils of our Government than any of you. But, thank God, this is a democracy, and the voice of the people is and can be heard.

It is our responsibility, as American citizens, to make our views known and our voices heard in the seats of power in the Capitol, in the State Department, and in the White House.

This is our responsibility—yours and mine. If we insist on the kind of approach I have discussed tonight, an approach so consistent with the best traditions of America, we will have served well the cause of peace and justice.

Hamilton's Enduring Contribution

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding address delivered by Dr. Bower Aly, professor of speech at the University of Missouri, on the subject, Hamilton's Enduring Contribution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAMILTON'S ENDURING CONTRIBUTION

(An address delivered by Dr. Bower Aly, professor of speech, University of Missouri, at a convocation held at the Sam Houston State Teachers College, Huntsville, Tex., in observance of the Alexander Hamilton Bicentennial, March 14, 1957)

From December 15, 1774, when Alexander Hamilton's first pamphlet in defense of the American Revolution was published until February 17, 1801, when his efforts on behalf of Thomas Jefferson were rewarded by Jefferson's election to the presidency, Alexander Hamilton was energetically engaged in the service of his country. During the remarkable quarter-century that witnessed the revolution of the American colonies from their mother country, the Declaration of Independence from Britain, the harrowing war of revolution, the period of indecision under the Articles of Confederation, the drafting and the ratification of the Constitution and the establishment of a Nation under the administrations of George Washington and John Adams, Hamilton was either officially or unofficially and almost continuously involved in public enterprises, earth-shaking in their significance for the men of that day and in their consequence for posterity. During the latter 20 years of the period, Hamilton was never far from the epicenter. His remarkable achievements in the center of the storm have caused President Eisenhower to proclaim and the Congress to provide for the observance in 1957 of the 200th anniversary of his birth.

As a teacher speaking to teachers, present and prospective, I think it appropriate here and now to consider with you what the life experience of Alexander Hamilton has to offer to us. What can we learn, what can we teach of Hamilton that will be serviceable today?

I

The first lesson taught us by this remarkable man is one of special interest to all young people—it is the power of youth. Since we do not know for certain when Hamilton was born we cannot know how old he was when he was killed by Aaron Burr, but according to the current way of reckoning he must still have been a young man, not yet 50, when he died in 1804. By his own account, he was only 19 when, in 1776, he became captain of artillery; and he would thus have been aide-de-camp to Gen. George Washington before he was 21. Throughout his life he showed an amazing precocity and demonstrated beyond peradventure the fact that young men can accomplish, if they will, outstanding deeds not only of valor but of prudential judgment. Not merely in his chonology, however, but also in the vigor of his actions he exemplifies those spirit-stirring qualities that have made him for posterity a symbol of brilliant and audacious youth—preternaturally wise, perhaps, but young still in his hopes, in his expectations, and in his enthusiasms. Too often nowadays, forgetting the lessons of American history, we discount the power of youth. Hearing great clamors about juvenile delinqency, which more often than not is simply youthful energy gone to waste, we forget the strong potentialities of our young people in America. Yet our Nation in the past was built and defended by young men and women. My great-grandmother was only 16 when she bore the first of her 11 children in the wilderness that Missouri then was; her husband was but a few years older. I dare say that many of you here would not need to go far in your family tree to find among the pioneers a boy-girl family who struck out for themselves and surmounted the dangers and privations of the frontier.

We forget, too, that although our old men have declared our wars, our young men have usually fought them. The actual fighting in the Civil War, the bleeding and the dying, was chiefly done by boys—boys in blue and boys in gray. Even today some of the most vital units of our air defense are manned by men so young that they consider 25 to be an old and 30 to be an ancient age.

To our young people today, Alexander Hamilton—rightly understood—could well serve as a symbol of youth, a source of inspiration. And I will state as my considered judgment that in the war in which we are now engaged—a war in which the future of our Nation and our people is at stake—no more urgent task confronts us than the complete and effective mobilization of all our youth, not as unwilling draftees but as eager volunteers in the mastery of the sciences, the humanities, and the languages necessary to our survival and to theirs. The hour is late, the time is short; yet a way must be found to cultivate the aspirations and to use the energies of young Americans. Youth responds to youth. Even today, 200 years after his birth, Alexander Hamilton may still serve his country if our young people will learn of him that they may be both young and useful to themselves and to their fellowmen.

II

What can we learn, what can we teach of Hamilton that will be serviceable today? Hamilton can teach us the power of integrity. For Hamilton's usefulness as a man and a leader depended not only on his brilliance and his audacity but also on his incorruptibility. During the decade when he was one of the leading architects and the chief builder of our Federal Union, Hamilton had almost unparalleled opportunities to advance his private fortunes at the public cost; but the most searching inquiries by his enemies in his own time and since have only illuminated the sense of honor that made his responsibility a public trust. Sometimes imposed upon by friends and acquaintances, sometimes despairing of the capacity of men to govern themselves without corruption, he nevertheless maintained for himself a code that permitted him no private profit from his public office. Indeed, even in private life, when he held no office, he declined to enter into a moneymaking scheme lest it should reflect upon the confidential relationship he was known to have to the administration. It is touching yet heartening to observe Hamilton, as Secretary of the Treasury with millions of dollars in his charge, seeking a loan of $20 from a personal friend. It is reassuring to hear the cynical Talleyrand exclaim, "I have just come from viewing a man who had made the fortune for this country but now is working all night to support his family."

Need I dwell on the relevancy of Hamilton's example for us today? In our times, we have witnessed the shameful selfishness of little men of both political parties, men who, far from protecting their honor as persons and as officers of government, have contrived devious illegal or perhaps legal ways of advancing their private interest from the public funds. In so doing they may have profited personally—but at what enormous cost to the body politic. For by their example they have tended to teach many of our young people falsely to believe that our Government is a racket and that our officers are plunderers. This, my fellow teachers, is the real subversion of our times: To teach young Americans, from whom our strength must be drawn, to distrust their country and their Government; to believe that dishonesty is the expedient way of life; to assume that the only honor is that proverbial among thieves. Against such subversion Alexander Hamilton stands as a confident witness to the personal satisfactions to be gained from an honorable career as well as to the power of integrity in public life.

III

What can we learn, what can we teach of Hamilton that will be serviceable today? Hamilton can teach us the value of applied energy. A prodigious and systematic worker, Hamilton developed within himself the faculty of sustained and powerful effort toward a prudential goal. Time and again one reads in amazement of his feats of sheer labor—of physical, of mental endurance. Whether he was negotiating with Gates to obtain soldiers for Washington's army or writing a Federalist paper or constructing for Washington an opinion on the constitutionality of the National Bank, Hamilton pushed himself hard and purposefully. As we contemplate the millions of hours that men dissipate nowadays in those time killers that indulge the wish to be suspended—half waking, half sleeping—in a world of makebelieve, we must view with even greater admiration the approach to life and labor exemplified by Alexander Hamilton. Usually genial, sometimes even merry, Hamilton was primarily a man at work. As Fisher Ames observed, "It is rare that a man who owes so much to nature descends to seek more from industry. But he [Hamilton] seemed to depend on industry, as if nature had done nothing for him."

Hamilton's means to the life adjustment that seems to be the goal of modern educators was to work without ceasing to make himself the master of whatever problem confronted him at the moment. Could we do a better service to our young people today than to recommend to them this kind of life adjustment to the problems of the present day?

IV

What can we learn, what can we teach of Hamilton that will be serviceable today? Hamilton can teach us the primary need for responsibility. Able in the fullness of his powers to delegate and to assign tasks, Hamilton was never, either in a lowly situation or in an exalted one, the least inclined to shirk or to shift responsibility for his own actions. On the contrary, he was front and center in every enterprise in which he was engaged. His eagerness to be in the forces attacking the British redoubts at Yorktown symbolizes his approach to problems civil as well as military. Even when most oppressed by the personal problems of earning a living, of caring for his family, he was unwilling to transfer to other persons those tasks that, under his conception of his public responsibility, fitly belonged to him.

In modern times we have witnessed the proliferation of what has been called public relations. Doubtless in a highly complicated society, some systematic and continuous means of relating great enterprises to the public must be found; but if public relation becomes a mere substitute for the active and vital interest that men of the first rank should have in public questions, then our country is indeed in danger. For the times require nothing less than the best efforts of our best men in and out of government. Our enemies abroad will not be

appeased by even the highest paid publicity agents nor by the slickest of all public relations counselors. One of the gravest dangers in our present society is the inability of conservative men to speak for themselves. The inarticulate conservative, the leader of judgment and of experience who cannot form a policy and defend it before his colleagues and the public may have limited usefulness, but he has not learned the lesson that could be learned of Hamilton: A leader should be responsible for explaining and defending his own policies.

V

What we can learn, what we can teach of Hamilton that will be serviceable today? Perhaps the greatest of all lessons that Hamilton has to teach us is the lesson of realism. Highly imaginative, Hamilton channeled his ideas so as to envision fact rather than fantasy, to predict what should and could and would be rather than to sigh for beauteous but unrealizable dreams. Hamilton's ideas were his servants rather than his masters. His contributions to the concept of federalism—surely one of the greatest offerings ever given by the New World to mankind—was thus derived not only from reflection, from thought resulting from reading and study, but also from experience; and the whole was heated in the crucible of immediate and compelling need. The central idea of sovereignty—of two governments operating within defined limits upon a single citizen—is so obvious as to be touched with the simplicity that often marks true genius.

Hamilton's characteristic mode of thought was that of problem solving: How can a given purpose be accomplished with the means at hand or in prospect? In this approach to life, he thus somewhat more nearly resembled the modern American man of affairs than he did the men of his own time. If his preferred solutions to problems were not always realistic, he endeavored to accommodate his preferences to the facts existing and to proceed toward his major objective "• • • to promote the increasing respectability of the American name; to answer the calls of justice; to restore landed property to its due value; to furnish new resources both to agriculture and commerce; to cement more closely the union of the States; to add to their security against foreign attack; to establish public order on the basis of an upright and liberal policy."

In his realistic approach to problem solving, Alexander Hamilton was almost unique among American statesmen in understanding and using all of the three great forms of power: The military, the fiscal, and the persuasive. Trained in the hard school of the War of the Revolution, he knew both the necessities and the limitations of war. Perhaps one of the greatest services he ever performed for his country was his insistence on keeping the peace with Britain at the time of the Jay Treaty. Yet, when force seemed to be necessary to the exigencies of the Union, he did not hesitate to use it. His theory and practice of finance was also realistic. The measures for funding and assumption were designed above all to provide a powerful interest favorable to the new Nation-State and to offset the agrarian devotion to the state government. The Federalist Papers, the Continentalist, in fact, nearly all of his writings should be viewed, like his use of military force and fiscal policy, as means to an end, the end that he envisioned during the whole of his mature life: To establish "a great Federal Republic, closely linked in the pursuit of a common interest, tranquil and prosperous at home, respectable abroad."

Hamilton was realistic also in his assessment of human nature. It is simply not true, as has been alleged against him, that his measures were inspired either by a love for the rich or by a hatred for the poor. The fact—which would be simple were it not obscured by the fogs of partisan politics—is that Hamilton was completely engaged in building a nation which, as he thought, had to be constructed of the materials at hand. All men—not simply the rich and well born—had virtues. All men—not simply the poor and weak—had vices. As a precaution, Hamilton accepted the Biblical doctrine that "the heart [of man] is desperately wicked and deceitful above all things," and he did not find in the doctrine any exemption of farmers as a class. As a realist, in politics, he did not believe that the voice of the people is necessarily the voice of God. He wished to protect all of us against that bit of the knave in each of us, and he wished so to order events that even men's vices and their more unlovely virtues might be made to work for the common good. Aristotle, keen student of men and nature, observed long since that to praise the Athenians in Athens is not difficult. One might construct a corollary: to be realistic about Americans is not politically expedient in America. A politician is on much safer ground at election time if he sings the ancient hymns of praise; but is not the nation more likely to prosper in the long run if the realist has his say?

Hamilton was a realist also in his conception of our true policy toward foreign nations. In his contribution to Washington's Farewell Address, as in the Camillus Letters, he set forth clearly the obligation of the statesman not to think more highly of other nations than he ought to think. Hamilton's prime devotion was to his own country and to its welfare as he and George Washington conceived it.

CONCLUSION

Many men have attempted to account for Hamilton's ardor in the pursuit of his vision of American nationhood. He has been charged variously with corruption, with ambition, with desire for power, and with the need to sublimate the sense of inferiority growing out of his illegitimate birth. It has even been charged that, as a servant of the rich, he was dazzled by plutocracy. A wiser reading of the sources would suggest rather that the plutocracy was dazzled by Hamilton.

The simplest explanation is the best. It seems to ring true and to fit the facts we know about Hamilton: The power that motivated Hamilton, whatever its source, was that which moves the artist in any field. As Beethoven expressed himself in composing The Moonlight Sonata or as Michelangelo satisfied his creative urge by working on The Last Judgment of the Sistine Chapel, so Alexander Hamilton—the artist in statecraft—gained profoundest satisfaction from moving forces military, financial, and persuasive toward the creation of a federal republic.

Seldom has any nation owed so large a debt to any man. To Alexander Hamilton and to George Washington jointly we owe the nationhood we have achieved. If our country could not have been born without the aid of George Washington, it would not have developed without the genius of Alexander Hamilton. As a nation we owe to this waif, this boy, this young man, this statesman more than we can ever hope to recognize. It is gratifying to know that in the Nation's high schools this year we are at least acknowledging our debt by an observance planned in every one of the 55 States, Territories, and possessions of the United States of America that Hamilton helped to plan and to build. It is satisfying to reflect that if we can but learn and teach of Hamilton the lessons of youth, integrity, energy, responsibility, and realism, his life may serve now as heretofore to bless his countrymen.

National Cultural Center for the District of Columbia—Correspondence Between Senator Wiley and Mrs. Robert Low Bacon

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. WILEY. Mr. President, on March 18, as indicated beginning on page 3360 of the CONGRESSIONAL RECORD, I spoke in praise of the proposed National Cultural Center for the District of Columbia.

I mentioned at that time the splendid job which had been performed by the National Auditorium Commission which we of the Congress had created for the purpose of preparing the plans for such a center.

Since making my comments, I have been pleased to hear from a great many citizens in the metropolitan area who are especially interested in seeing Congress promptly select one of the alternative sites, so that this fine project can be commenced.

It will be recalled that in making my original remarks, I pointed out that, since I am not a member of the Senate District Committee and have not had as much opportunity as I would like to explore the site and other questions, it was not possible for me at the time to attempt to make any recommendation on the matter of sites.

I stated, however, that all the factors bearing upon choosing the best possible site should be carefully and promptly studied by the Congress.

Among the many prominent persons with whom I subsequently conferred was one of the most distinguished members of the Commission, Mrs. Robert Low Bacon.

I had invited her detailed reactions, and I was pleased to receive this morning a letter from her. In it she points out the case for the selection of the Foggy Bottom area.

I know that her communication will be of deep interest to my colleagues, especially those serving on the Senate and House District Committees, as well as to the members of the Washington Board of Trade, the Federal City Council, and other interested groups which have given devoted attention to this very important subject.

I ask unanimous consent that the text of my letter of inquiry to Mrs. Bacon and her response today be printed in the Appendix of the RECORD.

There being no objection, the exchange of correspondence was ordered to be printed in the RECORD, as follows:

MARCH 22, 1957.

Mrs. ROBERT LOW BACON,
Washington, D. C.

MY DEAR MRS. BACON: I've just returned from a meeting of the Senate Foreign Relations Committee this morning. I was glad to hear from our committee consultant, Mr. Julius Cahn, of your kind phone message, regarding my Senate speech on March 18 on

the need for a national cultural center for the District of Columbia.

I know that there are comparatively few, if any, people, here in the District, who are better qualified to comment on this subject than yourself. I say that, not only on the basis of your most active role on the Auditorium Commission, but in view of your many years of other service to this community, as well.

I understand, for example, that since the 1920's, you have been doing your part toward the establishment of a National Opera House here. Such great civic leadership is certainly to be commended.

Under the circumstances, therefore, I would like to invite you personally to give me the benefit of your judgment now on the status of the cultural center project.

I am sure that you feel, as I do, that no time should be lost in getting under way on it.

I recognize, as I know you do, the great international significance of this cultural center. Since, however, I have to work simultaneously on many other foreign-policy fronts, I have asked Mr. Cahn—in his committee service—to help follow through—on the cultural center.

I look forward to receiving your personal observations.

Sincerely yours,

ALEXANDER WILEY.

WASHINGTON, D. C., *March 25, 1957.*

DEAR SENATOR WILEY: Thank you for your letter of March 22. I am indeed glad to know of your appreciation of the international significance of the cultural center for which the Auditorium Commission was created by act of Congress.

It has long been a matter of amazement that the capital of the United States should be unique in its lack of facilities for opera, ballet, and drama.

Our planning committee has studied the requirements and the question of the most suitable site, evaluated according to convenience, surroundings, outlook, terrain, size, and zoning.

Although in the presentation of our plan to the joint district committee of the Senate and House the choice of the site was left to Congress, the executive committee of the Auditorium Commission passed a unanimous resolution in favor of the Foggy Bottom site. It is the only site easily accessible to 90 percent of those who would use the center, also being near the Lincoln Memorial and Memorial Bridge, it would be more frequently seen by prominent visitors and tourists.

Foggy Bottom, between the Lincoln Memorial and Virginia Avenue is the last stretch of the river fronrt as yet unspoiled and it should be made beautiful, therefore it would be as advantageous to the development of that area to have our beautiful buildings, which would not be high, nor completely obstruct views of the river, there, as it would be ideal for the cultural center to be located on that site.

With confidence that your support will help to bring about this happy conclusion,

Sincerely yours,

VIRGINIA M. BACON.

How We Lost the Peace

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 25, 1957

Mr. DIRKSEN. Mr. President, Elizabeth Churchill Brown, the wife of Constantine Brown, the columnist, has written a book entitled "The Enemy at His Back." This very interesting book deals with how we lost the peace. It was reviewed by Mr. Walter Trohan, and his review was published in the Chicago Sunday Tribune of October 7, 1956.

I ask unanimous consent that the review be printed in the RECORD.

There being no objection, the book review was ordered to be printed in the RECORD, as follows:

HOW WE LOST THE PEACE—THE ENEMY AT HIS BACK, BY ELIZABETH CHURCHILL BROWN

(Reviewed by Walter Trohan)

This is the story of how we lost the peace after winning World War II in Europe and in the Pacific. It is strong meat, but it is meticulously documented to support the thesis that Communists launched, and dupes furthered, policies which prolonged the war in Europe and in the Pacific for advancement of the interests of the Kremlin.

There is a detailing of the policy of "unconditional surrender" which prolonged German resistance and of the ignoring of Japanese surrender overtures so that Soviet Russia could get into the Pacific war in time to communize Asia.

Perhaps the book is best summed up by its quote of Eugene Dooman, able career diplomat, in testimony before a Senate committee. In detailing pressures which rejected sage counsel to keep Soviet Russia out of the Pacific war, Dooman said:

"My purpose in testifying here was to indicate in general that policies put forward by the left-wing press, from the Daily Worker right down through the line, were in effect substantially translated into United States policies and to indicate from personal knowledge how that operation was carried out."

All this story has been told, as it developed, to readers of the Tribune. Mrs. Brown has done a creditable job in weaving one segment of the Communist conspiracy into a rounded, if unhappy and even frightening, story. Every statement is documented except for the one that she went to the Library of Congress to read some of the columns of her husband, Constantine Brown, diplomatic correspondent for the Washington Star, and found the initial inspiration for her book in a column January 30, 1945, detailing Russia's price for intervention against Japan. It would hardly be necessary to go to the Library to get any of Brown's prophetic columns; his friends could testify that he has memorized them and is most happy when talking about them.

Corn Program

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 25, 1957

Mr. THYE. Mr. President, I ask unanimous consent that an editorial entitled "Deadlock Hurts Midwest," which appeared in the Minneapolis Star of March 22, 1957, referring to the question of legislation on a corn program, printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEADLOCK HURTS MIDWEST

Now that there seems to be little chance of any new legislation to benefit corn farmers this year, indications point to a further increase in the surplus of corn that already is bulging out of Government bins. The prospects also are for a further cut in income of Midwest corn and livestock farmers.

The huge carryover of corn required that the corn allotment be set at 37,300,000 acres for this year. That represents such a sharp cut in acreage that Corn Belt Congressmen had been seeking a new formula to increase the 1957 allotment. Without some change, the prospects are that many farmers will not abide by their allotments and the overall national corn acreage will be far in excess of the 37,300,000-acre allotment. Unless farmers plant within allotments, they will not be eligible to join the soil bank.

The efforts of the farm-State Congressmen to work out a solution for this problem were stymied by an intramural quarrel that split the farm bloc wide open. The Democrats wanted a bill that not only would increase corn plantings but also would provide soil-bank payments for feed-grain producers and increase soil-bank money for growers of wheat, cotton, peanuts, tobacco, and rice. The Republicans were chiefly interested in benefiting the corn and livestock farmers.

From the Midwest point of view, however, the results of the congressional deadlock are serious. Further overproduction of corn probably will result in a big increase in livestock output, which, in turn, could have an adverse affect on farm income from this source. In addition, many farmers will be ineligible for soil-bank benefits which otherwise could help prevent a drop in farm income in this area.

Both parties will have to share the blame for their failure to work out an acceptable compromise unless a bipartisan group of Midwest Senators succeeds in its current last-ditch attempt to put through an acceptable measure.

United States Foreign Policy and the Truman Doctrine

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 25, 1957

Mr. HUMPHREY. Mr. President, 10 years ago this month President Truman went before Congress to proclaim the Truman doctrine. This important anniversary went by without much public attention in the United States. It did not escape the attention of some of our allies abroad, however; and in a dispatch to the Manchester Guardian, Mr. Max Freedman, the Guardian's Washington correspondent, pointed out an appropriate moral.

Mr. Freedman's article, which appeared in his newspaper on March 14, 1957, was entitled "Lessons in How To Master a Crisis." In his opening paragraph Mr. Freedman says:

It is impossible to imagine a more forlorn contrast than the contrast between the creative initiative of 1947 and the shambling ineptitude which produced the Suez adventure.

I ask unanimous consent that the text of Mr. Freedman's article be printed in the Appendix of the RECORD; and I suggest that th. message be pondered by all Members of Congress who are concerned with the development of a more forthright foreign policy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LESSONS IN HOW TO MASTER A CRISIS

(By Max Freedman)

WASHINGTON, March 12.—Ten years ago today Mr. Truman went before Congress to proclaim the Truman doctrine. This anniversary is notable for at least three different reasons. The doctrine achieved its immediate purpose in saving Greece and Turkey from Communist domination. Still more important, it gave the decisive impetus to America's rejection of the allurements of isolationism and to her acceptance of full responsibility in world affairs. Finally, it has many lessons to teach, if only by the wisdom of contrast, in showing how a crisis should be mastered. It is impossible to imagine a more forlorn contrast than the contrast between the creative initiative of 1947 and the shambling ineptitude which produced the Suez adventure. For all these reasons the Truman doctrine deserves study.

At the outset it is essential to dismiss two myths which have become part of the consecrated folklore of American politics. It is said that the British retreat from responsibility in Greece and Turkey, a retreat enforced by an oppressive sense of economic weakness, marks the deliberate renunciation by Great Britain of her status as a World Power. The other myth would have us believe that the United States not only stepped into the breach with heroic promptitude but that it did so armed with the wisdom which soon produced the Marshall plan and the larger vision of the North Atlantic Treaty. The design of history cannot so easily be twisted into the trappings of melodrama. In the development of American policy there was as much creative improvisation as consistent foresight.

Only by an effort of memory is it possible to recover the mood and atmosphere of those vanished years. The compulsion of events had driven the American people to accept burdens and duties completely remote from the traditions which had sustained their early greatness. All the same, there was a visible reluctance to abandon the emotional comforts of isolationism. More disturbing was the refusal of public opinion to recognize that Russian communism had become an armed doctrine on the rampage, eager to cast into thralldom the vulnerable economies of Europe. American opinion had to be educated before it could be led; and the education, conducted during a period of unexpected crisis, could be effective only if there were no suggestion of superior wisdom belonging to the policymakers. The history of the next few weeks provides a salutary lesson in the importance of good manners as well as in the courage of statesmanship.

The decision that Britain's burden in Greece and her responsibility towards Turkey had grown too great for her diminished strength was communicated to Washington it is true, at short notice, but the State Department and the Foreign Office had both been aware for many anxious months that Greece and Turkey might be lost to the free world, a loss which would open the Middle East to the covetous appetites of the Kremlin. There was no recrimination between London and Washington: no cry of betrayal. Unlike the incoherent indignation which disgraced the Suez crisis, the alliance was in good heart and was functioning with exemplary cordiality. It never occurred to anyone to interrupt the sombre march of events by an idle and irritating assessment of each country's measure of responsibility for the crisis. The urgent task, clear to every official in Washington, concerned not the pedigree of the crisis but the necessity of preventing it from having a disastrous sequel. (No such spirit prevailed after Suez. There were two fatal barriers: the lack of confidence in Mr. Dulles, and the absence of wisdom and candor in London and Paris.)

The significance of the Truman doctrine is not to be measured by the grant of $400 millions in military and economic aid to Greece and Turkey. The United States had expended more than that amount in emergency aid to Greece since the end of the war. The Truman doctrine became a memorable declaration of American policy because of the principles it expressed and the obligations assumed by Congress. The United States could have thought in terms of an immediate crisis; it could have turned to the United Nations to escape the burden of national leadership; it could have accepted the permanent decline of British and French power; it could have diluted the responsibility of the administration by deferring to the wishes of Congress. In fact, it did none of these things.

The principles under which Greece and Turkey were to be saved from Communist enslavement applied with equal authority to the other threatened nations. It was the universal recognition of these principles that made the Truman Doctrine something more than an heroic gesture in response to a direct challenger and elevated it to the status of an enduring principle of American action. Equally important was the decision to grapple with the problems of economic weakness in Western Europe: unless this task dominated the nation's thinking there would be a desolating succession of problems similar to the perils of Greece and the anxieties of Turkey. Once this fundamental point became clear, it was possible to move from a mere rescue operation to the more constructive experiments in world order: the Marshall plan and NATO suddenly found themselves on the agenda of statesmanship. (Once again the Suez crisis provides a shabby contrast. The only responsible voice raised in a plea for these larger issues belonged to Mr. Acheson, who had played perhaps the decisive role in the earlier solution of American policy. But he was now out of power. So in the end, after all the torrents of rhetoric at the United Nations and the careful debates in Congress, nothing was done to help Western Europe to pay for its dollar imports of oil; the border problems which harass the security of Israel were left in smudged confusion; and the ugly feuds which darken the Middle East were still unresolved.)

At least as impressive as the Truman Doctrine, and the greater decisions which followed it, was the manner in which the United States accepted the risks of leadership. After formulating its policy, the administration won the quick and valuable cooperation of Congress, then responsive to the flexible gifts of Senator VANDENBERG. American opinion was instructed to realize that the burdens cast on the United States would be heavy and would be borne for a long time. Although the United States acted outside the United Nations, as it had to do if its policies were to succeed, all the decisions were in conformity with the charter and saved it indeed from tragic eclipse. Out of the perilous fate which menaced Greece and Turkey the United States once wrought a deliverance which increased the safety and strength of the free world. Could not a wiser, a more courageous, and a more generous policy in Washington have used the spur of the Suez crisis to open a happier chapter for the Middle East?

Address by Hon. John Bell Williams, of Mississippi, Before the Defenders of State Sovereignty and Individual Liberties

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a very able and scholarly address delivered by our colleague, the gentleman from Mississippi, Hon. JOHN BELL WILLIAMS, delivered in the ballroom of the Jefferson Hotel in Richmond, Va., on Friday evening, March 22, 1957. The occasion was a meeting of the Defenders of State Sovereignty and Individual Liberties. Our colleague from Virginia, Hon. WATKINS M. ABBITT, was the toastmaster and I had the privilege of presenting Congressman WILLIAMS to the audience. It was a large and enthusiastic audience and the address of Congressman WILLIAMS was frequently interrupted by loud and sustained applause. At the conclusion of his address the entire audience stood and applauded for several minutes.

The address is as follows:

I bring you greetings and best wishes from 2 million citizens of the great sovereign State of Mississippi. As a guest from a neighboring State, I come before you not in any sense to suggest to you what policies you should adopt or what courses to follow in coping with the problems which you may encounter in the conduct of your internal affairs. Rather, I appear before you as a fellow American and a neighboring southerner to discuss with you matters of mutual concern to our respective States and people. In the words of the Apostle Paul: "Come, let us reason together."

There is little need to recount the many and complex problems that confront our great Nation. You know, as I do, that we face almost insurmountable difficulties in the field of our domestic economy. The foreign doctrines of socialism and communism are on the march. Our currency is undergoing a steady trend toward inflation, and our national debt exceeds that of the rest of the world combined. We try to cope with problems over production in agriculture with domestic programs, while our foreign policy dreamers concoct new scheme to spend our tax moneys to expand the operations of our competitors. We face the threat of predatory war with an atheistic enemy across the seas. We have many problems.

All these, as grave and foreboding as they are, must pale into insignificance, though, in the face of the montsorus problem presented to us by a political Supreme Court on Monday, May 17, 1954.

Other issues are temporary, and deal with the present; they affect primarily this generation of Americans. The issue presented by the Supreme Court threatens to undermine the very structure of our form of government. It would dissolve the very foundations upon which our free democratic society was built, and destroy forever the purity of

race that future generations of Americans, both white and Negro, have a right to expect. It threatens to pervert moral premises by translating them into a conglommerate potpourri of amalgamated theories of mongrelization.

We might well consider the fact that once mongreilized, we can never reestablish purity of race, nor can we revive a pride of racial integrity. The hand of man can be employed to destroy racial purity, but once destroyed, man lacks the power to restore that purity. That is why we, both white and Negro, who have pride of birth and race must act to protect and preserve that legacy; otherwise those who follow in subsequent generations will be shackled with the fetters of miscegenation and a heritage of immorality beyond which there will be no escape.

For the shame of this it will not be their generation, but our generation, which must suffer to account.

In facing up to these problems, we cannot afford the luxury of complacency or the convenience of hasty action. If we are to prevail, and we must prevail, we must act in calm and deliberate judgment, but with the firmness and resolve which the occasion demands. There can be no retreating from principle, no compromise born of momentary expediency, and no haggling over methods when that haggling retards the progress of our high purposes.

Above all, we must present a united front, for there is our strength; and we must also understand fully the nature of the evil and know the identities of our enemies in this struggle for our American freedoms.

It was to meet this vital need that the defenders of State sovereignty and individual liberty came into being. It was to meet this need that the citizens councils in my State were born and subsequently the Association of Citizens Councils which etxends throughout several of our sister States.

Your presence here tonight is evidence, in itself, of your love for the institutions of freedom under our great American Constitution, and your dedication to the preservation of the noble ideals that have become an integral part of the America we know and love. Your presence here speaks eloquently of your concern for the happiness and strength of the America of the future.

Yours is a fight for the future of our great American institutions, our civilization, and our ideals. You are waging a fight of morality and conscience: that children of both white and colored races may be permitted to enjoy participation in a society unsullied by almagamation and untsained by moral disintegration.

I would be a coward indeed, unworthy of my self-respect, unfaithful to the trust of my heritage, and a traitor to my children and my children's children, if I sought refuge—as some do—behind a laissez faire acknowledgment of these dangers, and fail to rally behind the great and good people of my State and Nation when they marshal their forces to repel the evils that beset us—evils that imperil the future happiness, security, and freedom of my children. I salute you as great and fearless Americans, and I am proud to be a part of you.

We are struggling to uphold law—not lawlessness. We intend to hold our ground firmly and resolutely against those who would honor an illegal fiat of nine men who have made an abortive attempt to change the meaning of our Constitution.

But let there be no mistaking our motives; no flouting our aims. We are gaining friends throughout this Nation among thinking people; patriots who love, respect, and revere the basic concepts of our form of Government. These friends are coming to our side because they know we are right. They know that the continuation of our dual sovereignty form of Government depends upon our ultimate victory over the forces of centralization and totalitarianism.

There is no room in our movement for those who advocate violence, nor do we have a place for those who practice race-mixing in private, but who in public anoint themselves as leaders in the fight for racial purity. If hatred of minorities is to be the criterion for membership in our resistance movements, it would be better that we dissolve our organization, for hatred breeds strife, lawlessness, anarchy, and destruction.

Ours must be a firm but peaceful resistance. Peace and understanding, enlightenment, and fundamental Americanism will have to be our battlecry as we seek to enlist friends and allies throughout the rest of the Nation.

Remember this: All the progress we have made since Black Monday toward exposing the hyprocrisy and evil designs of our modern carpetbag enemies; all the gains we have made in demonstrating the illegality of the Court's decisions; all the sympathy we have cultivated in other areas of the country in our crusade for the rights of the several States—all this can be swept away with one shotgun blast, by one explosion of dynamite touched off in the heat of passion.

Our legitimate patriotic organizations will not fight lawlessness with lawlessness. The Defenders in Virginia, the citizens councils in my State of Mississippi and our other legitimate resistance organizations will never condone or place the stamp of approval on violence as their weapon to preserve individual freedom in this country.

It is tragic, indeed, that our once-respected United States Supreme Court, honored through the ages for their legal ability and their personal and judicial integrity, should conduct themselves officially in such a manner as to bring down on their heads the shame that has followed in the wake of some of their recent decisions.

Three years have passed since they exchanged their judicial robes for the caps and gowns of sociology professors and proceeded to tear the heart from the American Constitution by their fantastic ruling in the school-segregation cases. It is a sad commentary on current judicial integrity when their decisions can be attacked on legal premises by eminent lawyers and jurists from every part of our country. Sadder, indeed, is the fact that, to my information, at least, not one single legal authority of any stature has been willing or able to come forward and offer a legal defense for the Court's Black Monday decisions.

Criticism of the Supreme Court's recent decisions, which overtly usurp powers and functions rightly belonging to the States or other branches of the Federal Government, has not been confined to unofficial sources.

We have reached a pretty pass, indeed, when the supreme court of a sovereign State of the Union finds decisions and orders of the Federal Supreme Court so unreasonable, so fantastic, and so contrary to both law and the public interest as to compel them openly to defy its edicts. This occurred but a few weeks ago in Florida, when the Florida Supreme Court was compelled in good conscience and consistent with established law, to state in one of their decisions:

"Indeed, it is unthinkable that the Supreme Court of the United States would attempt to convert into a writ of right that which has for centuries at common law and in this State been considered a discretionary writ; nor can we conceive that that Court would hold that the highest court of a sovereign State does not have the right to control the effective date of its own discretionary process.

"It is a 'consummation devoutly to be wished' that the concept of States rights will not come to be of interest only to writers and students of history. Such concept is vital to the preservation of human liberties now. And whatever one's ideology may be—whether one is a strong defender of State sovereignty or an equally fervent advocate of centralized government—we think the great majority of persons would agree that if the death knell of this fundamental principle of Jeffersonian democracy is to be toiled, the bell should be rung by the people themselves, as the Constitution contemplates. President Lincoln's words of warning are just as true today as they were almost a century ago, when he said, in his first inaugural address on March 4, 1861:

" 'If the policy of the Government upon vital questions affecting the whole people is to be irrevocably fixed by decisions of the Supreme Court * * * the people will have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that eminent tribunal.'

"And we do not feel it is amiss to refer to the following remarks made by George Washington in his Farewell Address:

" 'If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed.' "

A recent Alabama criminal case, reversed by the United States Supreme Court, brought forth this comment from the circuit judge before whom the case had been tried:

"The opinion is the voice of the Supreme Court of the United States, but the hand is the hand of the NAACP. The opinion of the majority of the Court speaks the truth neither as to the facts nor as to the law. The opinion offends and is repugnant to judicial sensibilities and the good name of the people of Alabama. In the sacrifice of the South on the altar of the Supreme Court's psychological and sociological omniscience the Fikes case is but another handful of salt to rub into our wounds. It is a damning confession and commentary on our times."

Here in Virginia, your supreme court of appeals, on January 18, 1956, found it necessary to repudiate a directive of the Federal Supreme Court in a case involving Virginia's marriage laws.

Rejecting an unwarranted invasion of the field of jurisdiction reserved to the State of Virginia, and refusing to be intimidated by the Supreme Court into taking action contrary to established law, your supreme court of appeals said in its opinion:

"The record before the circuit court of the city of Portsmouth was adequate for a decision of the issues presented to it. The record before this court was adequate for deciding the issues on review. The decision of the circuit court adjudicated the issues presented to that court. The decision of this court adjudicated the issues presented to it. The decree of the trial court and the decree of this court affirming it have become final so far as these courts are concerned."

Recently, a Federal judge in the great State of Texas refused to order compliance with the Supreme Court's black Monday decisions, reminding the Supreme Court that "if there are civil rights, there are also civil wrongs." In his decision, he openly and officially criticized the Supreme Court for its segregation decisions, stating flatly that they were based on no law, but rather on what the Court regarded as more authoritative: modern psychological knowledge.

The fact is, my friends, that there is no legal basis for the Court's decision in the school cases. Their decision flies in the very face of the Constitution, and is repugnant to every principle and concept of established law.

For 58 years, since the Court first enunciated the separate but equal doctrine as

being in accordance with the constitutional requirements of equal protection under the law, the right of the States to educate their children in segregated public schools was not in question. In a succession of decisions the Supreme Court affirmed and reaffirmed that right of the several States, so that the separate and equal doctrine became a firmly fixed principle of law, a part of the American institution.

Acting on this premise, the Southern States have poured multiplied millions of their State tax dollars into programs of equalization, to bring Negro schools to a level of equality with the white schools, and seeking to assure complete equality in educating the Negro and white youth. The States have initiated and carried out these programs out of a sense of fairness to both races, and in complete disregard of the fact that the burden of expense in so doing rests squarely and almost wholly upon the members of the white race alone.

Even this was not enough to satisfy the radical element, which continues to agitate and to press—not for equal status for so-called minorities—but for a preferred status, and a condition wherein the majority shall be subject to the rule of the minority.

Simply and succinctly, the Supreme Court, in its Black Monday decisions, yielded to the pressure of these johnny-come-lately political opportunists, who claim to hold the balance of power between the two major political parties and who demand ransom with the political future of this country as their hostage.

All these facts the liberals brush off as the bigoted rantings of Southern race baiters and demagogs, and when confronted with these truths, they cringe and seek shelter behind pious declamations and idealistic but irrelevant platitudes.

I am sorry to say, though, that these elements have become so strong in recent times that they control a great segment of the press and radio of this country, to the extent that a form of censorship has been imposed against the dissemination of information and news that might—directly or indirectly—reflect favorably on the attitudes of southern white people, and the logic—moral and legal—of our position.

In many areas, news stories that justify southern attitudes are deliberately withheld from print; statements favoring segregation by Southern leaders are deliberately distorted to make the author appear as a bigoted fool. Words are lifted from context to make it look as if we in the South hold our Negro friends and neighbors in utter contempt—which is, as you know, contrary to all of the teachings and traditions of the southern people. They refer to our area as the Bible Belt, and proceed to hold our religious beliefs up to public ridicule. It has been impossible for us to tell our side of the story to the Nation, because we have been denied access to the means with which to communicate it.

It is significant that those who are farthest removed from the problem, and who know less about it, are the first to come forward with solutions to it. Segregation is no problem, for instance, in Minnesota, or Montana, or Oregon, or Arizona, where an infinitesimal percentage of the population is comprised of Negroes. The problem belongs to the South, and it is ours to solve in the way we deem best suited to local conditions and needs. We do not welcome the interference—however well-intentioned it may be—of outsiders whose only knowledge of conditions here is to be gained from a slanted northern press, or the commercialized diatribes of scalawag southern journalists.

Is it bigotry to hold that race consciousness is a virtue, as distinguished from race prejudice? Race consciousness is neither prejudice nor intolerance. It is an innate awareness of a birthright being held in trust for posterity. In every group, white and Negro, there are individuals who, despising their birthright, have violated that trust. It is even so in Virginia, but, thank God, a majority of us have been taught, and we understand, how it came about that Israel became a great nation, while Edom faded into oblivion. We recall the downfall of every great empire when it became infiltrated with immorality and was reduced to mongrelization through racial intermarriages and intermingling. Even Benjamin Disraeli, a great man in his day, said: "No man will treat with indifference the principle of race, for it is the key to history."

Race consciousness, recognized as a virtue among the southern people, both white and colored, is a symbol of evil in the eyes of a great majority of the northern press and, I am sorry to say, is being preached as anti-Christian from many pulpits throughout the country.

I am not a student of the Bible, though I profess faith in Christianity and the omnipotence of God. Eminent southern clergymen, in whom I rely for my interpretations of the Word of God, have told me unequivocally that segregation is not a spiritual subject, and that there is nothing in the Bible or its teachings that can be cited directly or indirectly to support the theories recently advanced that segregation, per se, is anti-Christian or contrary to the teachings of the Son of God. Yet, they tell me that the Bible deals with miscegnation and interracial marriages in no uncertain terms, holding this to be contrary to the principles of godliness, and in contradiction to the teachings of Christianity.

Thus, church leaders who adopt the pious attitude that interracial marriage and the resulting mongrel offspring are acceptable in the light of Christian teachings assume unto themselves the divine power to rewrite the meaning of the Gospel. In so doing, they invade the realm of politics and their preachings to that extent, at least, should be accorded consideration in that light, and that light alone.

The fact is that there are basic differences between members of the white and colored races, and so long as those differences continue to be as pronounced as they are, integration of the races where Negroes exist in great numbers is but a meaningless figure of speech and will not work. This fact was never more clearly documented than it was last fall, when the tragic results of racial integration in our Nation's Capital came into public view through the vehicle of a congressional investigation. As a member of that investigating committee, I can tell you that the conditions revealed to public view were shocking beyond imagination. If you have not had an opportunity to read the report of findings that resulted from that investigation, I would urge you to do so. It is a vivid portrayal of what we may expect if we sit by and permit forced integration to come about in our schools.

I shall not deal here with the various force bills, popularly called the civil-rights bills, one of which was reported by the House Judiciary Committee last week, except to tell you that these bills deprive American citizens of their most fundamental and basic civil rights, while guaranteeing no additional civil rights to any citizen, white or Negro. These bills specifically deny the right of citizens to trial by jury in certain cases; make the United States a party to lawsuits against individuals for the benefit of other individuals, and grant more authority to the Attorney General of the United States than has ever been conferred on an individual since the days of absolute monarchies and the "divine right of kings."

The civil-rights bills deal primarily with the so-called right to vote, and would grant the Attorney General the power to interfere with the right of the States to determine the qualifications of electors as specifically and exclusively granted to them under the Constitution. All this they would do in the name of protecting the so-called right to vote.

Proponents of the civil-rights bills overlook the fact that the privilege of franchise is not now, and has never been—under our form of government—considered a civil right. So we wonder just what kind of civil right they are trying to protect by depriving our citizens of the right to trial by jury, to free speech, and the right to choose one's own associates.

In Kent's commentaries, there is the definition of civil rights as "the right of personal security, the right of personal liberty, and the right to acquire and enjoy property. Right itself, in a civil suit, is that which any man is entitled to have, or to do, or to require from others, within the limits of prescribed law."

Bouvier's Law Dictionary is very concise in the definition: "Civil rights are those which have no relation to the establishment, support, or management of government."

Black's Law Dictionary says: "Civil rights are such as belong to every citizen of the State or country or, in a wider sense, to all its inhabitants, and are not connected with the administration or organization of government. They include the rights of property, marriage, protection of the laws, freedom of contract, trial by jury, etc."

If the right to vote is an inherent civil right of the American people, then it must be conferred on all our people without restriction for any reason, whether it be age, place or length of residence, failure to register, or any reason whatever.

Otherwise it is a conferred privilege and not a right. The fact that the Constitution gives the States the power to prescribe the qualifications of their electors, and did not require the granting of universal suffrage without restriction, of necessity removes the privilege of voting from the category of being an inherent civil right.

All of these developments: The drive for integration of the races; the passage of Federal civil rights legislation, and recent Supreme Court decisions depriving the States of other basic powers specifically reserved to them by the Constitution are but part and parcel of an alien movement that has been underway in this Nation ever since we became the dominant world power. Enemies of America know that if they can destroy the sovereignty of the several States of this Union and concentrate all authority in Washington, their last major hurdle toward gaining control over our vast commonwealth shall have been completed.

I would quote from a well known American: "The Federal Government did not create the States of this Republic. The States created the Federal Government. The creation should not supersede the creator. For if the States lose their meaning, our entire system of Government loses its meaning and the next step is the rise of the centralized national State in which the seeds of autocracy can take root and grow."

Those are the words of Dwight D. Eisenhower, spoken during his 1952 campaign for the office of President of the United States.

Listen to this, spoken by this same man to the Conference of Governors, meeting the next year in Seattle, Wash.: "I am here because of my indestructible conviction that unless we preserve in this country the place of State government with the power of authority, the responsibilities, and the revenues necessary to discharge those responsibilities, then we are not going to have America as we have known it. We will have some other form of government."

My friends, those words were spoken by our President at a time when he was seeking the political support of good and patriotic Americans, and they ring with the essence of American statesmanship. I regret to tell

you that, in my opinion, his subsequent official actions have not been consonant with those statements of basic principles. On the contrary, I think it can be said with reasonable accuracy that no president in the history of our great Nation, in the discharge of his official duties, has more flagrantly reneged on his campaign pledges or violated his publicly pronounced beliefs more than the present occupant of the House at 1600 Pennsylvania Avenue. Where advocates of States Rights and Constitutional Government had thought they had a champion, they soon found a quisling to their cause.

I regret to say that few champions of States' Rights are found in my party—the opposition party—outside the Southern States; nor can my party be held blameless for the many sins against America that have been committed in the name of civil rights and general public welfare.

America can be saved, and our democratic society preserved, but only if Americans have sufficient love for it to make the sacrifices necessary to preserve it.

As God-fearing people, we are obligated to resist tyranny, no matter what form it may take. If we are true to ourselves, we must resist it even when it wears the sheep's clothing of judicial robes, if freedom is to be the legacy we bequeath to our children.

The resolving of this crisis does not call for complacency, timidity, or cowardice. It will call for taxing new reservoirs of courage, and will demand sacrifices that will test the strength of our convictions. In the face of the Supreme Court's brazen usurpation of authority, its flagrant disregard of constitutional limitations, its willful flouting of judicial precedents, its wanton contempt for the doctrine of stare decisis and other recognized principles of established law, we must resort to drastic measures if we are to preserve the structure of our Republic. This will mean suffering and sacrifice on the part of liberty-loving Americans, and it means seizing the offensive from the conscienceless self-seeking elements who seek to destroy our Republic. It means that we must seek and find the courage that distinguished our great American ancestors in their struggle to build this Republic, and there can be no retreating from principle for any cause whatsoever.

In this historic fight to preserve American liberty, I would remind you—as did your great senior Senator, the Honorable HARRY FLOOD BYRD, earlier this week—that the great sovereign Commonwealth of Virginia is marked as the first and most important target of those who would destroy State sovereignties. As your Senator said, the Federal Government and the NAACP mean "to try and bring Virginia to her knees first." I can tell you, as a citizen of a sister State, that the integration forces are concentrating their fire upon you, not only because of the great prestige you enjoy among the several States, but because they know that if they can break the will of the people of Virginia, other States will lose the will to resist, and will capitulate as a matter of course.

These beautiful rolling hills gave to us the architects of American liberty. It was one of your sons who wrote the Declaration of Independence; another is credited with being the father of the American Constitution; and still another led the forces of independence against the crown, and later served as our first and most revered President.

The character of the people of the Commonwealth of Virginia has always been reflected in the quality of leadership that Virginia has furnished to our Nation from colonial times until now. You have never failed America in any hour of crisis, and I am confident as an American that in this crisis, Virginia will again furnish the leadership so badly needed for our patriotic American cause.

We in Mississippi, our neighbors in Alabama, Louisiana, Georgia, and our sister States are also under attack. We know that direct assaults against us are in the planning stage. But for the present, the frontlines of the fight to save America are in Virginia, and our hopes and prayers are with you as you seek to turn back the evil forces of centralization, miscegenation, and racial amalgamation.

The man from Monticello once said: "Timid men * * * prefer the calm of despotism to the boisterous sea of liberty." He said, "The God that gave us life gave us liberty at the same time. The hand of force may destroy, but cannot disjoin them."

It was his creed that resistance to tyranny was obedience to God.

The same God that watched over Jefferson, and inspired him to swear eternal hostility against tyranny, watches over us tonight. With His divine guidance and help we shall not fail.

Does Congress Really Want Economy?

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Does Congress Really Want Economy?" published in the Louisville Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Louisville Times of March 21, 1957]

DOES CONGRESS REALLY WANT ECONOMY?

Congress, reflecting what may well be a general public uneasiness, has been bemoaning the size of President Eisenhower's proposed budget. If Congress is in a mood to do more than weep, it could make a good start by adopting the administration's proposal to increase postal rates so as to diminish if not eliminate the annual postal deficit.

In the last 10 years, the total Post Office Department deficit has been approximately $5 billion. "The interest alone on this portion of the national debt is now costing American taxpayers more than $100 million a year," Postmaster General Summerfield said early in 1955. And unless postal rates are increased, the 1957–58 fiscal year will add nearly $700 million to the postal deficit.

A POSTAL BARGAIN

Despite this burden, Congress always has been reluctant to increase postal rates. Despite congressional talk about economy, there is no assurance that Congress will be consistent this year and pass the cost of the postal service on to those who use the service.

In comparison with people in other countries, American postal users are getting a real bargain. A study made a couple of years ago showed that postage on an ordinary letter, 3 cents here, is 4.17 cents in England, 5 cents in Canada, 8.5 cents in Sweden, and 9.6 cents in Germany. Yet costs in this country are higher and distances are greater. No wonder the Post Office Department runs up a larger deficit than any other national system.

WOULD CUT DEFICIT

The administration's proposal, put before the House Post Office and Civil Service Committee this week by Mr. Summerfield, would not eliminate the deficit but would reduce it to $189 million. The rate on first-class mail would go from 3 to 4 cents; post cards would go up from 2 cents to 3; airmail letters from 6 cents to 7, and airmail cards from 4 cents to 6. Other increases would be made for second- and third-class mail.

What would this amount to for the average household? Very little, actually, for it is estimated that the ordinary family mails only about 10 letters a month, which would mean an added cost of 10 cents a month.

It seems to us that if Congress wants to be taken seriously in its talk about economy, it will demonstrate its good faith by putting the postal increases into effect.

The Engineer in the Atomic Era

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an article entitled "The Engineer in the Atomic Era," written by Thomas E. Murray, P. E., member of the Atomic Energy Commission, and appearing in the issue of the American Engineer of November 1956. The views of Mr. Murray should be publicized as extensively as possible and his article should be read by as many persons as possible. It is an article which should not only command the attention of all, but challenges the attention and consideration of all persons. There is no man more qualified in the world to discuss or write on the subject matter of the within article than Mr. Murray.

Thomas E. Murray graduated from Yale University's Sheffield Scientific School in 1911 with a bachelor of science degree in mechanical engineering. Within a few years after graduation from college, he entered directly into the field of management, becoming president of the Metropolitan Engineering Co., which was founded some years earlier by his father, who was himself an engineer of achievement in the electric and power industry. From 1915 to 1949, Mr. Thomas E. Murray served as president of that company and of the subsequently founded Murray Manufacturing Co. He has served as a member of the Atomic Energy Commission since 1950.

His ingenuity and creative ability are indicated by some 200 patents which have been granted him covering a wide range of achievements. During World War II, Commissioner Murray won a special award from the United States Government for his invention of a new method of manufacturing shells which saved tons of strategic material and accounted for 25 percent of all World War II trench mortar shell production.

His sound judgment and rare mixture of kindly understanding and adherence to principle being well known and appreciated, he has been called upon to serve the public in many capacities, such as his successful peace-making efforts in

1941 in the important Bell Aircraft controversy and his successful efforts in labor disputes involving New York City bus companies.

The article follows:

THE ENGINEER IN THE ATOMIC ERA

(By Thomas E. Murray, P. E.)

The realities of atomic energy have made one fact abundantly clear—that no individual can rightly stand apart from mankind or remain unconcerned by his responsibilities for the well-being of his fellowmen. The fact of this mutual interdependence among men as a condition of human welfare has been recognized for ages. But the practical consequences of the failure of the individual to assume his responsibilities could—in this nuclear era—be tragedy on a scale not yet experienced. Where failure in the past has meant poverty and death—even of tremendous porportions—failure in the future can bring into question the very continued existence of mankind.

Each individual—and particularly each educated man—has under these circumstances the responsibility of acquainting himself with the facts of atomic energy as they pertain to the possibilities both for the betterment and for the destruction of mankind. The engineer should feel this responsibility to a preeminent degree. For his special qualifications endow him with an ability to comprehend with greater clarity than most, the concrete dimensions both of the threat and promise inherent in the atom. And this greater comprehension should bring forth in his own actions and in those of his profession concerted efforts, not only to alleviate the threat; but to transform the promise of atomic energy into practical reality.

Quite apart from the danger of catastrophe inherent in atomic energy, engineers would by their nature enthusiastically seek to penetrate its secrets, to harness it in man's service. This is in the very best traditions of the engineering profession. Ordinarily any relationships that exist between the constructive and destructive uses of the various forces of nature are not in themselves of special importance. Yet my over 6 years experience as a member of the Atomic Energy Commission has convinced me, an engineer by profession, that the promise of atomic energy and programs for its realization cannot rightly be disassociated from the threat. These years of close association with with the ever-growing proportions of the menace have intensified my views as to the responsibilities we have, individually and collectively, to accelerate development of the peaceful uses of atomic energy. Moreover, I am persuaded that more widespread awareness of the nature and scope of the danger we face would be accompanied by an increasing insistence that our programs for peaceful employment of the atom be greatly augmented. Engineers have the opportunity and the responsibility of contributing to that wider understanding. But first each must himself become acquainted with the facts. In what follows I shall attempt to indicate some of the more important ones.

The first is that man has now developed nuclear weapons of such power that the explosion of a sufficient number could render the earth uninhabitable. The President in a speech on September 20, 1956, described the situation in these words: "We witness today in the power of nuclear weapons a new and wider dimension of the deadly horror of war. Humanity has now achieved, for the first time in its history, the power to end its history."

This is the stark, if almost inconceivable, reality. As such, one might suppose that the collective intelligence of mankind would be imbued with concern lest man, as a consequence of his actions, be overtaken by a fate so monstrous. Regrettably there is little or no evidence that it has. At least there is little to indicate that the consequences of nuclear warfare are being permitted to exercise the decisive influence which they should wield in determining the actions of nations.

Some insight into the grave nature of the problem can be gained by retracing the course of nuclear weapons development. In World War II the power of a bomb was its explosive force, the force of a blast, accompanied by heat and followed by fire. The atomic bomb, of the kind unfortunately dropped on Hiroshima, was a bomb bigger by many thousands of times than the biggest high explosive bomb dropped during the war. Before we had time fully to comprehend the implications of these weapons we were catapulted into the hydrogen era by the thermonuclear explosion of November 1, 1952. This and subsequent explosions have made it clear that nuclear weapons can be produced, not many thousands but many millions of times the explosive power of World War II blockbusters. Beyond that we know that there is no upper limit to the size of nuclear explosions that can be produced.

The several orders of magnitude by which thermonuclear weapons transcend and even dwarf atomic weapons in explosive power warrants our considering hydrogen weapons as in a class by themselves. But great as is this difference, it is not the more important one. The thermonuclear bomb inflicts destruction by blast and thermal effects over a far larger area than atomic weapons. But it also unleashes destruction in a more insidious form—in the form of a fallout of radioactive particles. This radioactive fallout, which consists largely of the products of atomic fission is localized in the case of atomic weapons. But the fallout which results from the detonation of hydrogen weapons reaches in its effects far beyond the areas of blast and thermal damage.

The contamination which results from this fallout creates hazards of both an immediate and long-term nature. An immediate hazard is created in thousands of square miles adjacent to the site of a thermonuclear explosion carried out in close proximity to the ground. In this area the radioactivity is of such intensity that protective measures would have to be taken for days and sometimes even weeks and months to prevent death or serious illness to those exposed.

Hazards of a long-term nature would include those due to internal exposure to radiation from materials inhaled or ingested. The most important contribution to this hazard is that from radioactive strontium. And the potential danger associated with this substance is of such immense importance that it is worth discussing in some detail.

Radioactive strontium is one of the products released in all nuclear explosions. Unlike the strontium ordinarily occurring in nature, it emits beta particles, 1 of the 3 types of radiation given off by radium and its decay products. Moreover, its radioactivity persists over long periods of time—its intensity dying off by a factor of one-half every 28 years.

Some of the radioactive strontium produced in the explosion of a large thermonuclear weapon falls to earth rather quickly. But a significant quantity is shot up into the stratosphere where it diffuses throughout the entire envelope of atmosphere surrounding the earth. From the stratosphere it settles slowly into the lower regions of the atmosphere where it soon falls to earth. Since only a fraction of the amount stored in the stratosphere falls to earth during the course of a year, the contamination continues to be deposited for years after the explosion has taken place.

From the soil and by other routes the radiostrontium enters the structure of growing plants. It then passes as food into the human body where it is absorbed in the bone structure. Here its beta radiation, if sufficiently intense, can cause changes in the bone and even bone tumors. Of this fact there is no question. Questions do arise, however, in attempting to establish the amount of radiostrontium that can be carried by humans without harmful effects. Nevertheless, from what we know it is clear that the explosion of a sufficiently large number of thermonuclear weapons could bring about concentrations of radiostrontium in human bones on a worldwide basis which are considerably in excess of the maximum considered permissible for the general population.

This is one of the consequences that must be understood by the term all-out nuclear warfare. There are others. There is, for instance, the harmful effects of a genetic nature that mankind would incur as a result of large-scale use of nuclear weapons. Although our knowledge is not sufficient to predict the degree of damage; it is adequate to warn us of the disaster that could lie in this direction.

These and other consequences of all-out nuclear warfare should, I think, convince every individual that he has a responsibility to prevent this present threat from becoming a reality. I am of the belief that one of our best hopes for insuring against this is to educate each individual to a very real understanding of the potential for good and for evil in atomic energy. From widespread understanding of this type there would come forth concerted efforts to insure realization of the potential for good inherent in atomic energy. Such a positive approach poses special responsibilities for the engineer. For his is the "art and science by which the properties of matter and the sources of power in nature are made useful to mankind." And atomic energy as a source of power is one of the potentially most attractive of all the applications of atomic energy.

As the nations of the world strive for higher living standards and as ever increasing inroads are made in the world's energy and material resources, the availability of energy becomes a matter of crucial importance. Certain aspects of the problem are of a long-range nature; others are of such immediacy as to require action beginning now.

Over the long term there is for example the necessity of providing for population growth. The world's population will have risen in the course of the present century from 1.5 billions to between four and five billion individuals. Even in the absence of improved living standards and depletion of material resources, this increase in population would have posed eventual problems. The fact is, of course, that strenuous efforts are being made the world over, and particularly in undeveloped countries to increase standards of living. It has been estimated that, if the entire world were to use mineral resources at the rate characteristic of this country, six times the amount currently being used would be required. The implications in terms of increased energy requirements are at once apparent.

Meanwhile the availability of these resources is dwindling. For example, where we were formerly using copper ores containing 5 percent copper, we are now reduced to processing those averaging nine-tenths of 1 percent. In consequence greater expenditures of energy are required. A like condition obtains with respect to iron ore. Within a few years we will be processing ores containing 25 to 30 percent iron. By contrast the ore originally mined in the Mesabi Range contained 50 percent and more iron. If we start using taconite ore we might be using 2 or more pounds of coal to produce 1 of steel where formerly 1 pound sufficed for producing 1 pound of steel from high grade ores.

These three factors of population growth, prospective improvement in living standards, and depletion of materials resources combine to heighten the importance of energy to man's future. Such is the need that we are forced to look beyond the limited resources of conventional fuels to a new source. And such a source—almost unlimited in its potential—is available in atomic energy.

The need to accelerate development of this new source of energy is a matter for action now. Shortages of conventional fuels are of present concern for some countries abroad, especially the highly industrialized nations of Western Europe. In such countries imported fuels are necessary to maintain and expand their economies. For example, in the case of Western Europe, the total net expenditure of fuel imports have been placed at between $1.5 and $2 billion for 1955, and these are expected to increase to $5 billion by 1975.

The United Kingdom has already determined that the development of atomic electric power is essential to its future and has undertaken its development as a matter of national policy. Under its program a large number of power stations will be built by 1965, having a combined installed capacity of 1½ million kilowatts.

The pattern of atomic-power application in underdeveloped countries is still a matter of conjecture. This is not to say that the need is uncertain. There are many situations where shortage or inaccessibility of conventional fuels argues for the application of nuclear power now. In others, sound planning for the future should mean that at least a start be made now in this direction. What eventuates from this pattern of need will depend on the progress we as a nation make in developing atomic power. The fact is, however, that formidable barriers stand in the way of progress in this field. And there is the further fact that these barriers lie, in large degree, in the field of engineering. Some of the problems involved are new; in others the only element of newness derives from their application in association with the utilization of atomic energy. Most of the traditional branches of engineering have already felt their impact in some degree. This combination of the new with the familiar and this diversity in scope can best be illustrated by examples.

To begin with the familiar, some of the most crucial problems that confront us in building power reactors are those of corrosion. In water-cooled reactors, for example, the corrosion resistance in very hot water of the materials involved is a decisive element in their selection. Poor corrosion characteristics can have unfortunate consequences in reducing heat transfer in the reactor, in increasing the radioactivities carried in the coolant, in causing malfunction of moving parts, and deterioration of the coolant-containing boundaries. One thing is clear, we need far more information than we now have concerning the corrosion characteristics of conventional materials in ordinary water at high temperatures, the basic requirement of corrosion resistance is not new, but it is one of crucial importance in reactor design.

Corrosion resistance, for example, is important in the selection of materials for reactor fuel elements. These fuel elements, which contain the heat-releasing fissionable materials, must operate at high temperatures in the presence of intense radiation with little consequent deformation. In addition to being corrosion-resistant the materials used should capture as few neutrons as possible. This combination of requirements has given rise to the use in reactors of an entirely new metal, zirconium.

There is another approach to the fuel element problem which would eliminate the difficult problems involved in fuel element fabrication and corrosion. That is to dissolve the fissionable material or fuel in the coolant which circulates through and removes heat from the reactor. The present difficulty is that the chemical solutions which carry the fuel are very corrosive and also tend to break down under reactor operating conditions of high temperature and radiation. To solve this problem will be to take a long stride toward the realization of a reactor that is fundamentally attractive with respect to such characteristics as control, safety, and the economics of power production.

In the broader field of metallurgy there is this same insistent need to cope with older problems while at the same time extending our knowledge to solve the newer ones. We have still to learn much more about the welding of materials used in reactor plants than we now know. Several factors make it especially important that we acquire this knowledge. Among them are the necessity of using welded joints to meet stringent leakage standards that must be met in reactor construction and the severe hazards that can accompany failure.

In its newer aspects atomic energy has already brought with it the development of new metals such as hafnium, and more intensive development of others such as beryllium and the liquid metals. But there is one metal that presently requires much more development than it has hitherto received. I refer to plutonium, a fissionable material produced in all nuclear reactors. As power reactors come into operation more and more plutonium will be produced, processed, and made available as fuel for new reactors. As matters now stand, however, we just do not have sufficient information to enable us to use this plutonium satisfactorily as a reactor fuel. Hence, the development of plutonium metallurgy must stand high on the priority list of problems whose solution is vital to the future of nuclear power reactors.

Problems not less difficult than those already mentioned will be encountered in the other branches of engineering: in developing technologies of liquid metal coolants, in synthesizing complex circuitory to control nuclear processes, in extending heat transfer knowledge to meet the special requirements of reactors, and in myriad other forms. Beyond these problems, however, there are two general considerations pertaining to the engineering development of reactors which are of paramount importance. Both concern the potential hazards of reactor operation. And for that reason each brings into focus the responsibility that the engineer has to the community.

One of these general problems is that of reactor safety. The possibility exists that power reactor accidents could conceivably occur in which large amounts of radioactivities would be dispersed over wide areas. Even conceding that the probability of their occurring is small, the potentially catastrophic consequences of such accidents requires that no step be overlooked which would contribute to reducing their probability to the smallest value possible. A reactor incident could have its origins as much in a faulty valve as in faulty control circuits, as much in poor mechanical design as in the area of reactor physics. Hence, each engineer involved in the design of atomic powerplants will feel an additional sense of responsibility that derives from a knowledge of the possible ill consequences of failure on his part.

The second of these problems is perhaps less immediately apparent. Yet it goes to the very root of the engineer's responsibilities. I refer to the long-range consequences of the development of atomic energy insofar as they could contribute to contamination of the environment in which man lives—and in which his children must continue to live. The fact is that the increasing utilization of atomic energy will inevitably increase the amount of radioactivity present in the world. We must not let the accompanying hazards from this radiation rise above acceptable levels. And we are assured by competent groups of scientists that we need not do so if we are alert to the responsibility we have for finding safe ways of disposing of these radioactive substances. This then is another area in which the engineer must overcome formidable problems in the interest of discharging his responsibility for the welfare of mankind.

The problems which I have cited are only barely indicative of the large number that confront the engineer in the broad fields of atomic energy. These will be for him a call to action. And a call that will, I am confident, be sharpened by the ever-widening threat to humanity from nuclear weapons. It is a summons which can and must be met by bringing to bear the full genius of the American engineer in a concerted effort to eliminate the barriers that now stand between us and widespread utilization of atomic energy. I know of no field of engineering endeavor where the individual could contribute more in the service of this Nation and of mankind.

Municipal Credit

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 25, 1957

Mr. WILEY. Mr. President, I am sure that all of my colleagues will agree that one of the real challenges facing us is to make sure that the municipalities of this Nation are in the strongest possible position so to say that they can meet the complex problems of this new age.

There is hardly a major city across the land which is not plagued by such chronic problems as congested downtown areas, spreading blight in the older portions of the cities, rising overall expenses of municipal government, difficulties in finding equitable sources of tax revenue, and similar issues.

Meanwhile, the trend to the suburbs has complicated most municipalities' problems. Thus, they find that some of their principal taxpayers now reside outside their cities' tax jurisdiction, while the suburbanites still benefit from municipal services during the day.

I was interested, therefore, to read in the February 1957 issue of the National Municipal Review a most interesting article, based on a previous address, by Mr. Wade S. Smith, director of municipal research for Dun & Bradstreet. The article frankly describes what the investor looks for in evaluating municipal credit.

Naturally, the municipalities cannot have a strong credit rating unless they achieve certain sound standards, such as those outlined by Mr. Smith. Upon such rating depends the municipalities' ability to sell their bonds at reasonable terms so as to meet municipal obligations.

This article, I may say, is published in the periodical of the National Municipal League, a splendid citizens' organization founded as far back as 1894, and devoted to the cause of good government—effi-

cient, democratic, incorruptible government.

I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD, preceded by a list of the officers and councilmen of the National Municipal League itself.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

National Municipal League, 47 East 68th Street, New York, N. Y.: A citizens' organization for better government, founded 1894, incorporated 1923: Alfred Willoughby, executive director; John E. Bebout, assistant director; Allen H. Seed, Jr., assistant director; Cecil Morgan, president; John S. Linen, vice president; William Collins, vice president; Carl H. Pforzheimer, treasurer; Richard S. Childs, chairman, executive committee. Regional vice presidents: Jac Chambliss, Chattanooga, Tenn.; C. E. Commander, Jr., Jacksonville; Ben B. Ehrlichman, Seattle; Robert H. Fouke, San Francisco; John B. Gage, Kansas City, Mo.; Carl J. Gilbert, Boston; Barry Goldwater, Phoenix; Thomas Graham, Louisville; Lloyd Hale, Minneapolis; A. E. Johnson, Denver; Mark S. Matthews, Greenwich, Conn.; H. Bruce Palmer, Newark; Ed P. Phillips, Richmond, Va.; Thomas R. Reid, Dearborn, Mich.; Lee M. Sharrar, Houston; Charles P. Taft, Cincinnati; Alex R. Thomas, San Antonio; H. V. Watkins, Jackson, Miss.; James E. Webb, Oklahoma City; James C. Worthy, Chicago. Council: George H. Gallup, chairman; Frederick L. Bird, New York; Henry Bruere, New York; Mrs. Albert D. Cash, Cincinnati; W. Howard Chase, Hohokus, N. J.; Jerome K. Crossman, Dallas; Winston W. Crouch, Los Angeles; E. D. Dodd, Toledo; Harold W. Dodds, Princeton, N. J.; Charles Edison, West Orange, N. J.; Herbert Emmerich, Chicago; Bayard H. Faulkner, Montclair, N. J.; Ewart W. Goodwin, San Diego; Francis A. Harrington, Worcester; Harry T. Ice, Indianapolis; Mrs. Siegel W. Judd, Grand Rapids; Myron C. Law, Seattle; Bruce H. MacLeod, Springfield, Mass.; L. E. Marlowe, Richmond, Va.; Roscoe C. Martin, Syracuse, N. Y.; Frank C. Moore, Kenmore, N. Y.; Vernon C. Myers, New York; Otto L. Nelson, Jr., Princeton, N. J.; John K. H. Nightingale, Jr, Providence; Mrs. Maurice H. Noun, Des Moines; James M. Osborn, New Haven, Conn.; Kenneth Perry, New Brunswick, N. J.; Lawson Purdy, New York; Robert H. Rawson, Cleveland; Arthur B. Richardson, New York; Murray Seasongood, Cincinnati; Edmund B. Shea, Milwaukee; Charles T. Silverson, Minneapolis; James A. Singer, St. Louis; Halsey Smith, Portland, Maine; Frank A. Vanderlip, Jr., New York; George S. Van Schaick, New York. Honorary vice presidents: Harold S. Buttenheim, New York; W. B. Munro, Pasadena, Calif.; William J. Pape, Waterbury, Conn.; Henry L. Shattuck, Boston. Former presidents: James C. Carter, Charles J. Bonaparte, William Dudley Foulke, Lawson Purdy, Charles Evans Hughes, Henry M. Waite, Frank L. Polk, Richard S. Childs, Murray Seasongood, Harold W. Dodds, C. A. Dykstra, John G. Winant, Charles Edison, Henry Bruère, George H. Gallup.

WHAT THE INVESTOR LOOKS FOR IN EVALUATING MUNICIPAL CREDIT

(EDITOR'S NOTE.—The article below is the address of Wade S. Smith, director of municipal research, Dun & Bradstreet, Inc., before the Municipal Tax and Credit Clinic, a session of the National Conference on Government of the National Municipal League, November 14, 1956, at Memphis, Tenn.)

While this is a nontechnical discussion, some prefatory definition is necessary. Three words in the topic call for agreement:

1. Investor: This is no little fellow. Municipal bonds come in thousand-dollar pieces and round lots are 10 bonds and multiples of 10. Our man probably is not the actual owner-investor anyway—he is an employee or officer of a financial institution, insurance company, or large estate. He is knowledgeable, well informed, and spends both time and money to get the facts he wants.

2. Credit: My company (Dun & Bradstreet) has a widely displayed motto reading "Credit—man's confidence in man." "Reputation" would be a satisfactory synonym.

3. Municipality: Used here in the jargon of the municipal bond trade to mean State and local governments of all varieties.

About the same things that make a community a good place to live in, work in, and do business in, also make its bonds attractive to investors. And conversely, about the same things that make citizens dissatisfied and impede business and industry also make a community's bonds less attractive to the investor.

Of all the factors pleasing alike to citizens and investors, the most important easily is good management. Management activities in at least four areas are significant to the discussion here: (1) The defining of objectives and determination of means of realizing them most effectively and economically—in other words, planning; (2) the operation of the machinery of government to attain the planned program—or administration; and (3) checking up on performance to see whether the expected result was obtained and at what cost—or reporting.

LOOK TO PAST

Management obviously doesn't exist in a vacuum. Competent management necessitates competent men, equipped with the needed tools. And you don't necessarily have to see the men and the tools at work to see the evidence of their existence, any more than a woman need see a stranger at work in her home to determine whether she is a good housekeeper—a look inside the house will tell.

Reputation, for housekeeping and for anything else, has its roots in the past. Consequently, the investor looks to the credit history of the community. Has it paid its debt punctually in the past? Has it met its current bills in a provident manner, living within its means? Or is there a history of default, of refunding of maturing bonds, of long-term borrowing to meet operating costs or budget deficits? These are all black marks on a record, but can be offset, not eradicated, by remedial action.

The past, of course, is no guaranty of the future, and the investor consequently looks to see how things are going here and now. Is a sound future in the making or are the seeds of trouble being sown?

1. Is the community planning adequately for its needs, both immediate and long term? Does it have, and use effectively, the tools to do a good planning job—standard zoning and building laws, an effective planning agency integrated with the legislative body and top management, a master plan, a capital budget? Do the several local governments in the community work in harness or are they competitors? Possession of the tools does not insure that a good job will be done, but their absence imposes insuperable obstacles. The alternatives are doing without needed services and facilities, or doing things piecemeal, with the attendant risk of unpleasant surprises for both taxpayers and bondholders.

2. Does the community adhere to sound principles of debt administration? Does the local debt—and this includes that of all the local government units in the community—appear to be within ability to repay? Is debt arranged so that annual debt service charges are manageable or so that recurrent budget crises are probable? Is the term of the debt at least no greater than the probable useful life of the facilities acquired with the bond proceeds?

3. Does the city have a revenue system which provides revenues adequate to meet local requirements? The richest community is no better off than a poor one if laws prevent its local government from realizing on that wealth. Is the system flexible to meet future needs? Is the property tax system soundly administered, with equitable assessment of property by competent appraisers, efficient collection on a tax calendar well geared with flow of cash requirements and adequate and impartially administered enforcement procedures? Is there a well-balanced program of non-property-tax revenues? (The average city now receives less than half its governmental revenues from property taxes.)

In this same connection, are there any significant reservations of or limitations on the taxing power? Tax rate limits which include debt service find little favor with investors, who understandably want an unconditional promise to pay. Earmarking of revenues also is potentially troublesome.

4. Does the community use standard techniques in making and controlling the execution of its budget? The budget is the heart of effective management, whether in industry or government, and a city executive's budget message is sometimes the most revealing piece of information available.

5. Finally, is there a regular periodic checkup on progress? The best evidences are the comprehensive annual administrative report and the comprehensive annual financial report.

If this list has a familiar sound it is not coincidence. Good local government and good local credit go together. And if you want more details on some of the standards applied by the investor in judging some of these basic factors, look to the standards set forth in publications of the National Municipal League: Model County and Municipal Bond Law, Model Cash Basis and Accrual Budget Laws, Model Real Property Tax Collection Law, Model City Charter, and so on. Sound practices in municipal government beget sound municipal credit.

In a short paper like this, necessity requires omission of discussion of some special areas of concern to the investor—economic resources, their extent, stability, and trends, notably. But our interest here centers on the governmental side, and the investor applies many of the tests in determining bond quality that a citizen applies in determining whether he has good or bad local government. If the citizen is satisfied, the chances are good that the holder of his community's bonds is also satisfied; if the citizen dislikes the way his community is run, and fears for the future, the investor probably shares that apprehension.

Such Is the Way of Winter

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. SIKES. Mr. Speaker, under permission granted to extend my own remarks and to include extraneous material, I wish to have inserted in the CONGRESSIONAL RECORD a poem written by James Brick. Young Brick is 11 years of age and an enthusiastic student of nature. The poem was written after reading Longfellow's Hiawatha and I feel it

is worthy of inclusion in the CONGRESSIONAL RECORD.

The poem follows:

SUCH IS THE WAY OF WINTER

(By Jim Brick)

In the land of snowshoe rabbits,
In the land of falling snowflakes,
Long flown south has the raven,
Long flown south has the plover.
Here the country is Wabbasso's
In the icy grip of winter.
Now the small and silvery snowflakes
Fall against the winter's bleakness,
Fall on lifeless, whitened lowland,
Fall on barren snowswept highland.
And in concealment of the fir trees
Are the gentle, timid roe deer—
Shivering, shaking to their utmost
From the cold and from starvation.
For the wind has stripped the leaflets
From the slender treeling mothers.
And now the bear, fat with gorging,
Prepares to make his winter denning
To slumber soundly through the winter,
And when spring comes, then awaken.

Then the air is rent with howling,
Howls of wolves, truly famished.
Now they charge upon the roe deer
White-fanged, cruel, and relentless.
Ho, the roe deer leaping upward,
Leaping toward the deadly circle
Made of wolves—bristling, snarling.
Now the quarry is selected,
'Tis a sturdy roebuck yearling
Leaping also with the others.
Now the leader, in his cruelty
Gives the orders, yelping, barking
"Cut the hamstring or the throat vein
For after that there shall be feasting";
And with this cry they cornered swiftly
The roebuck to dispatch him.
And the frenzied roebuck, alas poor roebuck,
Striking out with bony antlers,
Striking out with dainty forehoofs
But in vain, the wolves are heedless.
In they charge and soon it's over.

Dead now lies the spirited roebuck.
Gone now is the light of living.

Now the wolves begin their feasting
To gorge until the sun arises,
Then hide the meat for future eating.
For game is scarce upon the northland.
Now the wolves will soon retire,
And when night falls begin again
The cycle of the north.

The 5 Percent Tax Switch Plan

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 25, 1957

Mr. WILEY. Mr. President, I was interested to read in the March 1957 issue of the magazine Investors Future, published at Crystal Lake, Ill., a most interesting article on what has been called the 5 percent tax switch plan.

This is the sort of proposal—one of many stimulating ideas—which, in my judgment, should have the review of the Hoover-type Tax Study Commission which I have been recommending under the Wiley bill, S. 769.

Under this particular plan, an investor, instead of paying the full capital gains tax—25 percent maximum—would pay only 5 percent tax on long-term profits—over 6 months—on that portion of the total amount which he or she received from the selling of one stock which he or she then reinvested into another stock or stocks within 30 days.

As will be readily apparent, the basic idea of the plan is to unfreeze present investments in stocks—investments which have been described as locked in because of the present 25 percent capital gains tax.

Proponents of the plan, including Mr. William D. Bowden, editor of Investors Future, as well as others who have studied it, believe that the plan will accomplish several objectives simultaneously:

First. Basically, they feel, it will encourage a turnover in investments and unfreezing of risk capital, so as to encourage the expansion of our free enterprise system.

Second. It will, they feel, bring more money into the Treasury, not only right away, but over the longer term.

Third. It will, in their judgment, provide a break for the investor by giving him more freedom to use his capital as he or she desires.

Of course, any such proposal would have to be studied in greatest detail by the best experts of the Treasury Department and the tax-writing committees of the Congress.

So, I trust that in time to come, we will indeed have a Hoover-type Tax Commission which would be in a position to study this and other constructive ideas and then submit their analysis to the Congress.

I send the Investors Future article to the desk and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR ECONOMY'S GREATEST IMMEDIATE NEED

(By William D. Bowden, editor)

("Someone has got to worry about the investor—and right now," says G. Keith Funston, president of the New York Stock Exchange, in a discussion last month of need for tax reform in which he recommended a tax-switch plan as formulated by the staff of Investor's Future in November 1955.

(The investor does have someone worrying for him—Investor's Future. We have mailed thousands of copies of the original 5-percent switch-tax plan to business and industry leaders. Valuable discussion have been carried on with pertinent Senators and Congressmen—as well as important Government officials. And the plan has—and is—receiving serious consideration.

(We have worked closely with William Jackman, president of the Investors League, a national, nonprofit, nonpartisan membership organization of investors—which is waging a continuing and effective fight for improvement in our tax laws.

(Investor's Future will continue to worry about the investor, and its staff will continue their efforts for a capital gains tax revision. But the ways of Government are often slow and devious, and sometimes the only way to produce speedy results is to use the threat of the ballot box.

(Action on a tax revision should be taken during the current session of Congress—and, outside of eliminating the capital gains tax entirely, no better solution to the problem has been announced by any Government official. You, as an investor and a citizen, should make your wishes known to your Senators and Congressmen, and to Treasury Secretary Humphrey and President Eisenhower.

(One large investment house informs us that it estimates over 40 percent of all risk accounts have holdings locked up in one or more securities because investors are reluctant to risk a switch into more promising ventures while they must pay a 25 percent capital-gains tax on their accrued profits (this situation has not lessened in 2 years).

(On these pages the 5-percent switch-tax plan is presented in full detail—and we again urge that all investors give it their support. This is a tax proposal that, if adopted, would give much deserved relief to the investor—increase the immediate and total tax flow into the Treasury—aid the immediate release of much capital from the deep-freeze—stimulate new ventures and the expansion of others—and add immensely to the popularity of the administration with the taxpayer.

(Why are Congress, Government officials, and the President "dogging along" when such a tax revision could be the most vital action possible to keep our economy prosperous and sound for the present and for the years ahead? If they think they are soaking the rich, they're badly mistaken. The latest available statistics of the Internal Revenue Service (for 1953) discloses that 78 percent of all people paying capital gains tax in that year had incomes of under $10,000.)

In spite of the fact that our country's present great industrial status is the result of individual companies being nursed on risk capital—and only because of this vital nourishment were able to grow into important, self-sustaining maturity—we now have an embargo to hinder the flow of risk capital into companies that would promise us an even greater future.

This embargo operates under the name of capital gains tax, and apparently is deeply entrenched into our economic life mainly because it is still believed politically preferable to "soak the rich."

Yet it is very obvious that our economy will suffer if vital nourishment is withheld from it—just as a child cannot grow properly if it does not receive required quantities of nourishment.

The problem seems to have reached a stalemate, since the Government says it must have the capital gains tax revenue, elected Government officials feel they cannot politically afford to cut the taxes of the rich and the men of business and investors, themselves, are willing to accept the fact that no change in this tax law will be made.

Yet, suggested here is a very simple arrangement, which would not only permit the investor to switch his risk capital into investments of his choice without paying the present high capital gains tax but also at the same time bring more money into the United States Treasury.

Let's take a look at the effects of the present capital gains tax. Without a doubt, it is freezing more capital and stifling more new investment ventures than any other single factor. One large investment house estimates that over 40 percent of all risk accounts have holdings "locked-up" in one or more securities because the investor is reluctant to risk a switch into more promising ventures—and thus have to pay a 25 percent capital gains tax on his accrued profits.

Now, the investor may be right or wrong in making his decision but the fact does remain that the present tax is (a) stopping the flow of risk capital; (b) limiting the investor's horizons; and (c) postponing, if not almost nullifying in such cases, the capital gains tax collections that the Internal Reve-

nue Bureau had hoped for under the present tax.

So we can see that the capital gains tax, in its present form, hurts everybody.

But what if we used a simple 5 percent switch tax plan with our present capital gains tax law? Certified public accountants, businessmen, and a number of Government officials who studied the plan, agree it would accomplish the following: (1) bring more money into the United States Treasury, not only right away, but also over the longer term; (2) give the investor more freedom to use his capital as he wishes—and thus to make larger profits; (3) permit our economy to grow and prosper through a distribution of risk capital where it is needed.

HOW WOULD THE PLAN WORK?

Instead of making an investor pay the full capital gains tax (25 percent maximum), the switch tax would let him pay only 5 percent tax on long-term profits (over 6 months' on that portion of the total amount received from selling one stock which he reinvests into another stock (or stocks) within 30 days.

The investor can keep on taking profits on stocks held 6 months or more and only paying 5 percent as long as he continues to reinvest each time within 30 days. When he finally doesn't reinvest within the 30-day limit, he pays the full tax (at present rates), minus the 5 percents already paid on the difference between his initial investment and the final selling price.

This means that the investor can switch all of his investment capital, or as much as he desires, to stocks he prefers and still pay only a minor tax. His money continues to word hard * * * and the Government receives tax money now that it wouldn't have if the larger tax kept the investor from selling.

One thing that must be considered, of course, is what date should be used to determine what price level should be used for stocks held when the switch-tax plan goes into operation. In order to give the most immediate effectiveness to the plan, January 1, 1954, seems like the best price-level date.

In other words, on any stocks purchased before January 1, 1954, full capital gains would have to be paid, when sold, on gains realized to that period * * * but only 5 percent on any gains since then if the money is reinvested within 30 days.

Using this date (prior to the 1954–55 market rise) would let most investors have the 5 percent advantage on at least a good portion of the long-term profits they have to date.

On any stocks purchased subsequent to January 1, 1954, the actual cost price would be used. Only the 5 percent switch tax would be paid when the stocks were sold and paper profits realized.

The personal bookkeeping needed to carry out the plan might seem complicated to start with, but tests have proven that actually little more bookkeeping is needed than is required under the present tax system.

Let's look at the hypothetical example that is given on this page and analyze the transactions.

As of January 1, 1954, $20,000 is invested in stocks. Approximately 7 months later, the stocks are sold and a long-term profit of $17,000 is realized.

The investor pays the 5-percent tax on this profit—or $850. If the present capital gains tax payment was required, he would have paid $4,250.

So when the money is reinvested within 30 days, $3,400 more money is put into the market because of the lower switch tax.

(And, remember, many investors probably would not cash in their profits and switch stocks if the 25-percent penalty was present.)

Now $36,150 is invested and approximately 11 months later these stocks are sold with a profit of $5,850. The 5-percent switch-tax payment is $292.50, compared with the present tax's maximum 25-percent requirement of $1,462.50.

When the money is reinvested this time, an additional $1,170 goes into the market because of the tax "saving." So now the 5-percent switch tax has enabled $4,570 additional to be used by the investor.

Total invested on September 13, 1955, then, is $41,707.50. And profit taken on this is $9,292.50. The 5-percent switch tax of $464.63 is paid instead of a 25-percent (maximum) tax of $2,323.12. So an additional $1,858.49 can be reinvested. By now the investor has been able to have $6,428.49 more invested because of the switch-tax plan.

And here's a really important point: the Government has received $1,607.13 which it would not have received if the 25-percent capital-gains tax had deterred the investor from "taking his profit" in order to switch into what he considered a more promising opportunity.

Thus the investor now invests $50,535.37. However, on the next transaction he has a loss of $5,535.37. Hence, he pays no 5-percent tax and, naturally, would pay no tax under the present 25-percent-tax law.

He decides not to reinvest his $45,000 within 30 days, so the investor must now pay the 25-percent capital-gains tax (but minus the three 5-percent tax payments made) on the difference between the original investment and the final selling price, because that difference is his actual realized gains.

The original investment was $20,000 and the amount received from the last sale was $45,000. Thus the 25-percent tax must be figured on a $25,000 profit, and is $6,250. This, less the total of $1,607.13 already paid in switch taxes, leaves a tax balance due the Government of $4,642.87.

The investor would have been required to pay $8,035.62 under the present tax law (if he had made the switches). But he only paid a total of $6,250 under the switch-tax plan, so he has a tax savings of $1,785.62, or 22.2 percent.

However (for the sake of comparison), had he been able to deduct the loss under the present law, his tax would then have been $6,651.78. So he still has a tax savings of $401.78 or 6 percent.

The total tax savings (or privilege) received by the investor is due to the fact that he is credited as though he kept the 5 percent switch taxes invested even though these sums actually were paid to the government.

WHAT ARE THE NET RESULTS?

1. A road block was removed that probably would have stopped the investor from switching his stocks when he preferred to change his holdings. Thus we get rid of an artificial prop under stock prices, and we can expect more new investment dollars to be attracted as a result of more equalized supply and demand influence on stock prices.

2. The government received $6,500 during a time when it would have received nothing if the switches weren't made.

3. The investor received more total profit because he was permitted to reinvest the difference between the 5 percent tax and the present 25 percent tax.

4. Thus the government received the 25 percent tax on a larger profit with the result that it received more total income.

5. The investor would also benefit from the fact that he wouldn't need to worry about taking profits in any one specific year in order to get tax credit for a loss incurred in that year.

However, if it should happen that a total loss was incurred, the investor would not get credit for the 5 percent tax payments he had made. The payments were made for the privilege of making the switches without paying the higher tax. In such a case, of course, the government would have received tax payments which it otherwise would not have received.

If an investor dies and has already paid some 5 percent switch taxes—the estate would have no more liabilities on the capital gains for capital gains tax.

Also, if an investor takes some profit and only reinvests within 30 days a portion of the amount received from selling the stock, he would pay full capital gains tax on the portion not reinvested—but only 5 percent on the portion reinvested.

THE MOST IMPORTANT BENEFIT

The advantages to the Government and to the investor are important. But of even more importance are the benefits which our economy would receive from the 5-percent switch tax plan.

You know as well as I that, in order for our economy to remain healthy, it must continue to grow, which means business must expand. And, in order for business to expand, there must be an investment of risk capital.

Yet, when it costs so much via the present capital-gains tax (or investor's profit tax), how can we expect those investors who have made a profit through one risk investment to move their money to another similar situation? Yet that is what our economy needs.

* * * * * *

We should not forget that it was risk money that started such companies as General Motors, General Electric, Minneapolis-Honeywell, RCA, etc.

There is absolutely no sound reason why the capital-gains tax law should continue to hinder the flow of money into the segments of our economy that need that money for vital growth. The 5-percent switch tax plan would do a lot to correct the basic faults of the present capital-gains tax law.

While this discussion has been directed toward the field that interests you most—the securities market—there is no reason the plan would not be adaptable for all transactions now covered by capital gains—a house, farm, etc.

This would stimulate a much greater flow of investment money within our economy. And it would encourage many investors to leave the presently tax-privileged investment mediums and obtain more capital gain potential.

The way to go about making a change in the present highly impractical capital-gains tax law is to convince our representatives in Washington that they should act without delay. Investor's Future will continue its efforts in this behalf, but the individual investor should also make his wishes known.

"The Regulation of the Press Is the Most Difficult, Dangerous, and Important Problem They Have To Resolve. Mankind Cannot Now Be Governed Without It, Nor at Present With It," Said John Adams

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in 1946 a Commission on Freedom of the Press, financed by a grant of $200,000 from Time, Inc., and $15,000 from Encyclopaedia Britannica, Inc., completed a 3-year study which reached

the conclusion that freedom of the press is today in danger for three major reasons. The reasons given by the commission were as follows:

First, the importance of the press to the people has greatly increased with the development of the press as an instrument of mass communication. At the same time the development of the press as an instrument of mass communication has greatly decreased the proportion of the people who can express their opinions and ideas through the press.

Second, the few who are able to use the machinery of the press as an instrument of mass communication have not provided a service adequate to the needs of the society.

Third, those who direct the machinery of the press have engaged from time to time in practices which the society condemns and which, if continued, it will inevitably undertake to regulate or control.

The commission's report created considerable controversy at the time it was published and its findings were questioned.

The issues with which it dealt were deeply controversial, and have been so throughout the history of this Republic.

President John Adams, for instance, wrote in 1815 that—

If there is ever to be an amelioration of the condition of mankind, philosophers, theologians, legislators, politicians, and moralists will find that the regulation of the press is the most difficult, dangerous, and important problem they have to resolve. Mankind cannot now be governed without it, nor at present with it.

My distinguished colleague from California, Representative JOHN E. MOSS, JR., as chairman of the Government Information Subcommittee of the Government Operations Committee, is constantly faced with important aspects of the pressures operating against an entirely free press in our country.

The American Society of Newspaper Editors has an important committee on freedom of the press, and this committee has a full-sized job on its hands.

Some time ago Adlai E. Stevenson issued a warning against any "deterioration of democracy, when self-criticism withers, debate dries up, and power over the mass mind is concentrated in a few hands." To Mr. Stevenson's mind there exists a crisis in the honest political communication on which an informed electorate must depend.

The Democratic standard bearer continued:

Ordinarily, the party in power can confidently rely on both the minority party and the press for critical examination. This was true—and then some—when we were in power. But alas it is not true now.

Mr. Stevenson's view of the situation was given a strong factual basis last week in New York City at a meeting of the National Editorial Association, a group whose membership totals about 5,500 publishers and editors, mostly of smalltown weeklies.

Dr. John Tebbel, chairman of the department of journalism, New York University, declared that "only the most myopic partisan would deny that for the past 20 years the press has been overwhelmingly Republican." Dr. Tebbel reported on the partial results of a study of political campaign coverage by the newspapers in seven cities.

The New York Times on Saturday, March 23, carried the following article regarding Dr. Tebbel's findings:

PRESS IS CALLED REPUBLICAN

At an earlier session, Dr. John Tebbel, chairman of the department of journalism, New York University, declared that "only the most myopic partisan would deny that for the past 20 years the press has been overwhelmingly Republican."

Dr. Tebbel reported partial results of a study of political campaign coverage by the newspapers in seven cities. The study was made possible, he said, through a $5,000 grant from the Skinner Foundation, a Michigan fund.

Twenty-one newspapers published in New York, Providence, Chicago, Memphis, Houston, Kansas City, Mo., and Los Angeles were surveyed.

Dr. Tebbel said he had found little evidence of bias in the writing of news, but considerable bias in picture coverage. Also, "the general tendency was to give Mr. Eisenhower better position and more favorable headlines," he said.

"The device of the press conference, which Mr. Eisenhower used adroitly as a campaign weapon, was abetted by some newspapers through the common practice of splitting up the conference into special topic stories," Dr. Tebbel reported.

He criticized the "unfortunate tendency" by some newspapers to display in the news columns political stories by staff writers "which are really highly partisan editorials and columns."

One of America's great editors, William Allen White, once said:

Too often the publisher of an American newspaper has made his money in some other calling than journalism. He is a rich man seeking power and prestige. He has the country-club complex. The business manager of this absentee owner quickly is afflicted with the country-club point of view. Soon the managing editor's wife nags him into it. And they all get the unconscious arrogance of conscious wealth. Therefore, it is hard to get a modern American newspaper to go the distance necessary to print all the news about many topics.

In the last 30 years, according to Mr. White, newspapers "have veered from their traditional position as leaders of public opinion to mere peddlers and purveyors of news, the newspapers have become commercial enterprises and hence fall into the current which is merging commercial enterprises along mercantile lines."

What Thomas Jefferson saw in 1786 as true then is even more true today. He said:

Our liberty depends on the freedom of the press, and that cannot be limited without being lost.

He also said that "where the press is free, and every man able to read, all is safe."

Jefferson also said:

No government ought to be without censors; and where the press is free, no one ever will.

The distinguished editor, Virginius Dabney, of the Richmond Times-Dispatch, wrote a few years ago that "Today newspapers are big business, and they are run in that tradition."

Which brings me to my subject today.

II

It seems to me there exist compelling reasons for a national labor newspaper today, and that the establishment of such a paper would be a major contribution to a free press, and the cause of freedom in our country.

The need for such a national labor newspaper today was illustrated best, I think, though this conclusion was not reached, in the dissenting opinion by Associate Justice William O. Douglas in the case involving the United Auto Workers and the Taft-Hartley Act provision prohibiting union expenditures in connection with Federal elections. Justice Douglas was joined in his dissent by Chief Justice Earl Warren and Justice Hugo L. Black.

Justice Douglas wrote that—

We deal here with a problem that is fundamental to the electoral process and to the operation of our democratic society. It is whether a union can express its views on the issues of an election and on the merits of the candidates, unrestrained and unfettered by the Congress.

The Jeffersonian thesis that "our liberty depends on the freedom of the press, and that cannot be limited without being lost" has been undermined and endangered by the Court's position.

The text of the brilliant dissenting opinion by Justice Douglas is included here as part of my remarks:

[From the AFL–CIO News, Washington, D. C., of March 23, 1957]

DISSENTING OPINION ON UAW VOTE CASE SCORES BREACH OF RIGHTS

The following is excerpted from the dissent by United States Supreme Court Justice William O. Douglas in the case involving the auto workers and the Taft-Hartley Act provision prohibiting union expenditures in connection with Federal elections. The majority of the Court found that the UAW must stand trial on charges of violating the act. Douglas was joined in his dissent by Chief Justice Earl Warren and Justice Hugo L. Black.

"We deal here with a problem that is fundamental to the electoral process and to the operation of our democratic society. It is whether a union can express its views on the issues of an election and on the merits of the candidates, unrestrained and unfettered by the Congress.

"The principle at stake it not peculiar to unions. It is applicable as well to associations of manufacturers, retail and wholesale trade groups, consumers' leagues, farmers' unions, religious groups, and every other association representing a segment of American life and taking an active part in our political campaigns and discussions.

"It is as important an issue as has come before the Court, for it reaches the very vitals of our system of government."

POLITICAL SPEECHES NOT CRIMINAL

"Making a speech endorsing a candidate for office does not deserve to be identified with antisocial conduct. Until today political speech has never been considered a crime.

"It usually costs money to communicate an idea to a large audience. But no one would seriously contend that the expenditure of money to print a newspaper deprives the publisher of freedom of the press. Nor can the fact that it costs money to make a speech—whether it be hiring a hall or purchasing time on the air—make the speech any the less an exercise of first amendment rights.

"Yet this statute, as construed and applied in this indictment, makes criminal any expenditure by a union for the purpose of expressing its views on the issues of an election and the candidates.

"The principle applied today would make equally criminal the use of a union of its funds to print pamphlets for general dis-

tribution or to distribute political literature at large.

"Can an act so construed be constitutional in view of the command of the first amendment that Congress shall make no law that abridges free speech or freedom of assembly?"

SIZE OF AUDIENCE IRRELEVANT

"The Court says that the answer on the constitutional issue must await the development of the facts at the trial.

"It asks, 'Did the broadcast reach the public at large or only those affiliated with appellee?' But the size of the audience or its nature has heretofore been deemed wholly irrelevant to first amendment issues. One has a right to freedom of speech whether he talks to 1 person or to 1,000. One has a right to freedom of speech not only when he talks to his associates and friends but also when he talks to the public.

"It is startling to learn that a union spokesman or the spokesman for a corporate interest has fewer constitutional rights when he talks to public than when he talks to members of his group.

"The Court asks whether the broadcast constituted 'active electioneering' or simply stated 'the record of particular candidates on economic issues.' What possible difference can it make under the first amendment whether it was one or the other?

"The first amendment covers the entire spectrum. It protects the impassioned plea of the orator as much as the quiet publication of the tabulations of the statistician or economist. If there is an innuendo that 'active electioneering' by union spokesmen is not covered by the first amendment, the opinion makes a sharp break with our political and constitutional heritage.

"The Court asks, 'Did the union sponsor the broadcast with the intent to affect the results of the election?' The purpose of speech is not only to inform but to incite to action. * * * To draw a constitutional line between informing the people and inciting or persuading them and to suggest that one is protected and the other not by the first amendment is to give constitutional dignity to an irrelevance.

"Any political speaker worth his salt intends to sway voters. His purpose to do so cannot possibly rob him of his first amendment rights unless we are to reduce that great guarantee of freedom to the protection of meaningless mouthings of ineffective speakers.

"Finally, the Court asks whether the broadcast was 'paid for out of the general dues of the union membership or may the funds be fairly said to have been obtained on a voluntary basis.' Behind this question is the idea that there may be a minority of union members who are of a different political school than their leaders and who object to the use of their union dues to espouse one political view.

"This is a question that concerns the internal management of union affairs. To date, unions have operated under a rule of the majority. Perhaps minority rights need protection. But this way of doing it is, indeed, burning down the house to roast the pig. All union expenditures for political discourse are banned because a minority might object."

Walter P. Reuther, president of the United Auto Workers, recently declared that he considers "the development of an effective labor daily newspaper to be one of the most important challenges and opportunities which confronts the united labor movement."

Now that we have achieved a united labor movement—

Mr. Reuther wrote—

I feel that the question of developing effective means of communication with the great mass of our membership is a matter of compelling urgency. Certainly a daily labor paper is one of the essential instruments of communications.

It is to be hoped that the Supreme Court will take no position that will hinder or impede such an important development as the establishment of a free and independent press in this country.

III

The other day I saw a newspaper headline which caused me concern. It said: "Labor's Daily's Future at Stake. ITU Can No Longer Go It Alone: Hurd"

Labor's Daily is, as every Member of Congress doubtless knows, a unique and praiseworthy project begun about 4 years ago by the ITU, whose President is Woodruff Randolph. The ITU is the 104-year-old International Typographical Union, the printers' union, affiliated with the AFL–CIO. The ITU is the oldest continuous labor union in United States history. The "Hurd" mentioned in the headline is Don F. Hurd, ITU secretary-treasurer.

The headline was bannered across the front page of the national edition of Labor's Daily, a tabloid-size newspaper generally of 12 pages which has an influence far in excess of its nationwide circulation, said to be in the neighborhood of 10,000.

As I understand it, the ITU began the national edition as an adjunct of several local editions which were used, in effect, as strike weapons at locations where the union's locals were striking against publishers. The national edition itself apparently was founded also for idealistic reasons, and it has been continued in that same vein until now it alone remains out of nearly a half-dozen local ventures at one time associated in one major project.

As I mentioned, this newspaper is truly unique, and it would be tragic if it were to have no future. Until Labor's Daily was established, the United States had never had a national labor paper. This seems rather astonishing when one realizes the United States has more free trade union members than any other country. Europe, by contrast, has many labor dailies.

I don't say these things as a partisan of labor but as a partisan of the cause of free competition of the press.

Competition in this field, like so many others, seems to be declining.

New examples of this are provided often by the news services, but one of the most recent summaries of this trend was provided by the Commission on Freedom of the Press, composed of a number of prominent civil leaders from outside the press itself. Their book on the topic was published by the University of Chicago in 1946, and was entitled "A Free and Responsible Press."

Among other things, the booklet documents the conclusion that the responsibility for organizing and selecting news for national distribution is being concentrated in the hands of fewer and fewer people, under a declining number of publishers.

In many places—

The report summarized—

the small press has been completely extinguished. The great cities have 3 or 4 daily newspapers each; smaller cities may have 2; but most places have only 1. News-gathering is concentrated in 3 great press associations, and features are supplied from a central source by syndicates. . . .

Throughout the communications industry, the little fellow exists on very narrow margins, and the opportunities for initiating new ventures are strictly limited.

Details of this distressing picture have improved little since 1947, I'm sure, despite or perhaps even in part because of the advent of television.

Perhaps the lack of competition is causing the press to become complacent. One of Washington's journalistic statesmen, Thomas L. Stokes, commented the other day he thought the complacency of the press is partially responsible for the closing of avenues of information in Government here, so that reporters are hamstrung in trying to dig out the facts in their effort to keep the public informed.

We all realize competition in the field if ideas is our foremost importance in the search for truth. Each limit on such competition is as potentially dangerous as a cancer cell getting a foothold in living tissue.

Freedom of the press is always in danger, for it is the first target of those who would limit the right of the people to learn how they may best elect their governments, and govern themselves.

As Alexander Hamilton, in an address in 1804 in defense of Harry Croswell who had been indicted for libel of President Jefferson, said:

The liberty of the press consists, in my idea, in publishing the truth, from good motives and for justifiable ends, though it reflect on government, on magistrates, or individuals. If it be not allowed, it excludes the privilege of canvassing men, and our rulers.

If this be not done, then in vain will the voice of the people be raised against the inroads of tyranny.

In addition to these compelling reasons for the continuation of Labor's Daily to help provide press competition, there are other reasons which relate to the characteristics of organized labor itself.

We may not realize it, for example, but the publication of Labor's Daily is a continuous flow of living, current history. I am sure future historians will find it a valuable source of material with which to write the story of the labor movement. No other publication contains so much daily news about labor.

What is more, there are many areas in this country where the voice of labor is not permitted to be heard in the local press. If it is heard, it is distorted and maligned and attacked until many union officials have adopted a policy of not making and statements to their local newspapers. Labor's Daily gives—or would give—them a chance to present their own views.

Most of those areas are in the South, where a recent Gallup poll found 31 percent of the people disapprove unions altogether.

It seems to me a national labor daily with a special southern edition made available in large quantities in certain areas could be of great importance in helping southerners become better acquainted with the reasons for trade unions.

A national labor daily with a reputation for honesty and accuracy could do much to dispell the growing smog about labor's weaknesses and failings which is obscuring its basic integrity and practical worth in an economy such as ours.

It is hardly necessary to point out that few of the daily newspapers which carry the smoking headlines about foul balls in part of the labor movement ever bother to carry news of the myriad of worthy activities conducted by union rank-and-file members and the majority of their leaders.

It seems to me the truth would be greatly helped if the public had easy access to a national labor daily which told of labor's daily efforts to get more civil rights for all people, to get better educational facilities for all children—whether of union members or not, to get more health and welfare programs for the sick, disabled, and the aged; to make use of the Federal Government's facilities to prevent localized depressions before they become big, national depressions; and to raise wage standards for those in the lower wage brackets—most of whom are not union members.

I could go on with this list at great length.

There are many union leaders and others who agree with me and who have expressed their congratulations to the International Typographical Union for having started Labor's Daily, and who would like to find a way to see to it that the United States continues to benefit from an independent newspaper such as Labor's Daily is well on the road to becoming.

At the same time there have been other interesting comments from readers of Labor's Daily, such as that of Barrow Lyons, Washington newspaperman and author of several books, who wrote:

> If there is anything organized labor needs most it is objective, straight information about what is going on in the world, and especially what is going on within organized labor. It is impossible for labor leaders to form sound judgments without such information. And certainly, if we uphold the democratic principle, we must believe that only a well-informed rank and file is capable of choosing leaders able to meet successfully the issues which labor must face today.

I think the whole sorry mess now being unfolded by the Senate Select Committee on Improper Activities in the Labor or Management Field, popularly known as the Senate Rackets Committee, headed by Senator McCLELLAN, is a living demonstration of the truth in this advice of Barrow Lyons. I am confident that an overwhelming majority of all labor representatives are completely honest, as are the union members who elect them. What is needed is an honest labor paper to help them get at the truth and clean up their own situations—which they will do, make no mistake about that.

While there have been many proposals set forth as to how a labor daily newspaper can be firmly established, only two seem to me to be practical enough for further consideration:

First. There should be a national conference of trade union and civic leaders who believe ways should and can be found to establish an independent labor daily. Among ways and means that should be considered by such a conference are subsidies from a number of powerful international unions and moral support from those unions which cannot afford to give such financial support.

An independent national committee should be organized to supervise publication of the labor daily so that no single union or group of unions can dictate its policy to the detriment of other unions. Such a committee should include leaders from the communications industries who are familiar with the problems and idiosyncrasies of daily newspapers.

Second. Some national private foundation devoted to the theory that competitive freedom in the world of ideas is worthy of promotion should offer its services and financial support to any group or person who can set forth a sensible method to maintain a daily labor paper on a nationwide scale.

This suggestion was among those proposed by the Commission on Freedom of the Press in 1946. This commission included such outstanding members as Zechariah Chafee, Jr., professor of law, Harvard University; Arthur M. Schlesinger, professor of history, Harvard University; George N. Shuster, president, Hunter College; Reinhold Niebuhr, professor of ethics and philosophy of religion, Union Theological Seminary; and Jacques Maritain, president, Free French School for Advanced Studies.

Surely somewhere leaders will come forward to shoulder the burden of such a project which could go down in history as one of the great steps in the history of the free press in the United States.

This is an appeal for such leaders to step forth now before it is too late.

I am sure history will reward them for the foresight they show and the work they do in behalf of such a worthy enterprise.

Additional Judge Needed

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. LOSER. Mr. Speaker, I wish to call to the attention of my colleagues in the House a situation that vitally affects the administration of law in my district. The United States Judicial Conference has taken an adverse position with reference to our need for an additional Federal judgeship.

For some time we had two Federal district judges in middle Tennessee. One of them was a temporary judge. The regular judge died a few weeks ago, and, under the law existing at the time, the temporary judge became the permanent judge. We now have the one judge in the district. This presents an unfortunate situation. If the recommendation of the Judicial Conference is adhered to, justice in middle Tennessee will be interminably delayed. Litigants in our district are entitled to have their cases tried promptly. This cannot be done with only one judge. Judge Miller is capable, efficient, and handles the business of his court with dispatch, but the caseload is such that it is humanly impossible for one judge to dispose of the normal legal business in our district.

I want my colleagues to know about this situation.

An editorial in one of our great daily newspaper, the Nashville Tennessean, of March 22, 1957, points up the need in splendid fashion. I commend its reading to the Members of the House. It follows:

FEDERAL COURT LOAD HERE TOO HEAVY FOR ONE JUDGE

Congressman J. CARLTON LOSER, of Nashville, is justifiably shocked by the latest recommendations of the United States Judicial Conference regarding middle Tennessee's need for an additional Federal judgeship.

The people of middle Tennessee can well be shocked, too.

For the conference, made up of Chief Justice Earl Warren and the chief judges of each of the Federal circuit courts of appeals scattered throughout the Nation, has just recommended to Congress that no relief be granted this section.

The recommendation was made in the face of figures showing that middle Tennesseans now wait an average of 16 months for Federal court justice—more than three times as long as the wait in west Tennessee.

Yet the conference recommends that west Tennessee be awarded a second and permanent judgeship.

And in spite of the fact that middle Tennesseans wait an average of 6 months longer than east Tennesseans for a decision in their cases, the conference recommended a third and permanent judgeship for the east section of the State.

The conclusion reached by the distinguished conference is all the more surprising since it is a complete about-face from the considered judgment of precisely the same group less than a year ago.

Last fall, the conference recommended that the temporary district judgeship in middle Tennessee be made permanent, giving the central section of the State two permanent district courts. At that time, the jurists saw no need for any sort of relief—temporary, part-time or permanent—for the west and east Tennessee divisions.

The only significant change that has occurred since the conference made its last recommendation was the loss of one middle Tennessee judgeship through the death of District Judge Elmer Davies, Sr.

Thus, it would appear the conference reasoned that the need for a second permanent court in Nashville, so pressing last fall to meet the mounting caseload, died in a season with one of the district's judges. Obviously, however, Judge Davies' death did not halt the flow of lawsuits.

It is granted, as the conference points out, that much of the work accumulated in the middle division is attributable to Judge Davies' illness before his death. And it cannot be denied that Judge William E. Miller is young and energetic and doing a fine job in chipping away at the backlog of cases piled up here.

All of Judge Miller's youth and energy, however, cannot remove the fact that when he called his civil docket here March 11 there were exactly 54 more civil cases waiting than he had days available on his calendar for the term.

Neither should the conference overlook the fact that Judge Miller is the only Federal judge in the State who must hold court at three sites—Columbia, Cookeville, and Nash-

ville. , The other three have only two assigned sites.

No less than five varying recommendations have now been made concerning Tennessee's need for additional Federal judges. In addition to the two conflicting recommendations of the judicial conference, the judicial council, made up of the Sixth Circuit Court of Appeals, has made a pair.

It is significant that the council twice recommended a permanent judge for middle Tennessee. In its first study it also recommended a permanent judgeship for east Tennessee; in its second it suggested a roving judge between the east and west divisions.

Finally, the administrative office of the Federal courts recommended a permanent judgeship for east, a roving judge shared by middle and west Tennessee. The conference brushed them all aside with its latest recommendation, which normally becomes the administration's request of Congress.

If middle Tennessee Congressmen entertain any hopes of defeating the conference plan, and they have anounced plans to try, they may look in the interest of equity to a solution not yet hit upon by any of the study groups.

Why not two roving judges for Tennessee, one shared by the two district courts in east Tennessee, the other shared by the middle and west divisions?

This would appear to be a fair solution in the light of new cases filed last year. Between them, the two courts in east Tennessee had 1,101 new cases, civil and criminal, filed last year.

Middle and west Tennessee courts together had an almost equal number, 1,074.

It may be but a stopgap solution to a growing national problem but it would be better than that big, fully outfitted, empty courtroom yawning in the dark at Nashville's nearly new Federal building.

And if something isn't done to ease the situation here, more and more middle Tennesseans are going to cool their heels longer in the courthouse corridors, learning the meaning of that adage:

"Justice delayed is justice denied."

One Way To Cut Spending

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. MICHEL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Peoria Journal Star of March 19, 1957:

ONE WAY TO CUT SPENDING

Federal offers to bear half the expense of projects have a fatal fascination for State and local governments.

Even when local authorities know they only are getting their own money back, they find it almost impossible to resist a Federal proposal that the State "match" funds provided by the United States to build a road or a schoolhouse or to finance some welfare payment.

The result of this matching procedure is that the State frequently has to raise additional money it would not otherwise be spending in order to qualify as a recipient of the Federal aid. And the poor taxpayer pays twice, once to the Federal Government to help provide its share of the fund-splitting project and once to the State or local government for its half.

What looks like a bargain, therefore, often results in a boosting of taxes on the State or local level.

One State finally has decided to do something about the situation in which the Federal Government constantly is dangling tempting offers before it to pay half the cost, if you'll match our contribution.

The Nebraska State Legislature, by a vote of 38 to 3, has adopted a resolution calling on the Federal Government to curtail grants-in-aid which call for matching State funds. If a few more States would take similar action the custom of the Federal Government making contributions to State projects on a matching basis might be cut down materially.

The temptation of getting half of something paid for by the Federal Government is strong enough to tempt State legislatures into appropriating money for projects they might otherwise turn down. When you launch a project you wouldn't otherwise undertake just because the Federal Government will pay half the cost, you really aren't getting much of a bargain.

It took real courage for the Nebraska Legislature to take a stand against accepting Federal handouts. It is the kind of courage which will be necessary to cut State and Federal spending down to a reasonable level.

Resolution Endorsing Alaska-Hawaii Statehood

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to bring to the attention of my colleagues the following resolution endorsing Alaska-Hawaii statehood, adopted by the California Democratic Council at its conference in Long Beach, Calif., on March 16, 1957:

RESOLUTION ENDORSING ALASKA-HAWAII STATEHOOD

Whereas the United States of America has become the greatest power in the history of mankind because it is a united nation of equal and sovereign States and not an empire; and

Whereas the people of the United States devised a method and program of incorporating territories, which method, as a first step leading to the full privileges of statehood, imposes on the people of such territories the full obligations of the citizens of the several States, while withholding from such territorial citizens, the basic rights of self government and voting representation in the counils of the United States; and

Whereas Alaska and Hawaii have been incorporated as Territories of the United States for many years, and by the very act of such incorporation they have been promised the full privileges of statehood with first-class citizenship for their people; and

Whereas both political parties have recognized in their platforms and other party declarations, that every consideration of fairness demands that the people of these Territories be given the full privileges of American citizenship; and

Whereas the granting of statehood to these Territories will strengthen the United States immeasurably in human resources and in its foreign relations particularly as regards the great Pacific Basin area; and

Whereas we in California have a particular interest in and close ties with the people of Alaska and Hawaii: Now, therefore, be it

Resolved by the California Democratic Council, That we urge in the strongest terms that Alaska and Hawaii be admitted to the Union in this year 1957; and be it further

Resolved, That we request every Democratic assemblyman and State senator to vote for the resolution now pending in the California Legislature which requests favorable action by the United States Congress; and be it further

Resolved, That we request all California Democratic Congressmen to vote for bills admitting the Territories of Hawaii and Alaska as States of the Union' in 1957 (whether such bills are separate for each Territory or in the form of a consolidated bill for both).

Proposed U. S. S. "Arizona" Memorial

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. BURNS of Hawaii. Mr. Speaker, on March 11, 1957, I introduced H. R. 5809, a bill to provide for a United States Ship *Arizona* Memorial at Pearl Harbor, Hawaii. The distinguished gentleman from Tennessee, the Honorable J. CARLTON LOSER, and the distinguished gentleman from Oregon, the Honorable CHARLES O. PORTER, have joined in the sponsorship of this measure by introducing bills H. R. 5833 and H. R. 6100, respectively.

H. R. 5809 authorizes the Secretary of the Navy to cooperate with the Pacific Memorial Commission of Hawaii in developing a memorial and museum at or near the site of the hulk of the U. S. S. *Arizona*—the tomb of 1,102 of America's heroes—in Pearl Harbor.

The proposed U. S. S. *Arizona* Memorial would be part of the Pacific Memorial System which uses as its theme, "Out of an Honored Past—Toward a Better Tomorrow." The Pacific Memorial System was developed by the Pacific War Memorial Commission created by the legislature of the Territory of Hawaii.

For the information of the Members of Congress, I include an excerpt from the report of the commission explaining the system.

PACIFIC MEMORIAL SYSTEM—OUT OF AN HONORED PAST TOWARD A BETTER TOMORROW—TO HONOR THE DEAD AND BUILD FOR THE LIVING

This is a plan for a memorial to man.

Never mind what man. Call him Smith, Katz, Wong, Murphy, Kryzbsky, or Tomassini. And disregard his color—white or brown or black.

He was a man. And he's dead.

Died in the Pacific. By the thousands. Buried on Guadalcanal * * * in the deep of the sea off Tulagi * * * in scorched hills of Korea.

This is a master plan for memorial to man, to all men who died for an honored cause in the Pacific during World War II and the Korean war. Let it consecrate their memory by building toward the ideal they gave their lives for—peace and honor.

To honor the dead and build for the living—that is the object of the master plan for a Pacific memorial system you will find described in these pages.

It is a plan that summarizes more than a decade of thought and study as to why there should be such a memorial, what it should be, and where. These are no longer unresolved questions. Many minds working together have found answers. These answers have been approved by a large body of supporters in private, public, and official life.

The master plan for a Pacific memorial system is here presented with the confidence that it may fulfill the longing of so many, throughout so much of the free world, for a permanent, living shrine that will dignify man's sacrifice for his fellow men of the future.

THE ORIGIN

Ideas

Barely had the dust of Pearl Harbor settled before people began talking about a memorial. They wanted a living symbol raised to honor those who sacrificed their lives in the Pacific—for the world.

As the idea caught on and grew, it expanded. The originators felt a Pacific memorial must do more than passively honor the dead. It must be dedicated to the ideal they died for, a free world of the future, founded on peace and humanity.

That feeling was intensified during the bitter chapters of the Korean war. In time, the idea of a Pacific memorial system became encompassing. While originally conceived as a dedication to the heroes of free-Pacific nations, today it is thought of as a spiritual monument to all the forces in the world striving toward a goal of universal brotherhood.

The place

No doubt has ever existed that the best place for such a memorial is in Hawaii, where a Pacific and a World War erupted, but where peace is normally a part of life, like the sun and surf.

Hawaii is a land that practices the preachments of brotherhood and harmony. For democracy comes naturally to this smiling land where many nationalities and races live together in true harmony.

There are still other reasons.

Hawaii has understandably been called the "crossroads of the Pacific."

As a military base, it is a center of movement and an active headquarters for the far-flung operations of Uncle Sam's Pacific forces.

In civilian life, Hawaii is America's western gateway to Asia and the South Pacific. Its sea lanes are busy with ships of commerce and travel. Its airport is the Nation's 11th busiest.

Hawaii is a Territory of the United States and a lively candidate to become the 49th State. Thus Hawaii is American soil. The location of the Pacific Memorial System will enable thousands yearly to visit a place of deep inspirational meaning.

Action

When the idea for a memorial first took form, little could be accomplished in the midst of war. But immediately thereafter, in 1946, several groups formed for action. Among these, a Pacific Memorial Foundation was chartered by the Territory of Hawaii "to build * * * a suitable memorial to commemorate the illustrious services of our glorious sons who served in World War II."

In 1949, the Hawaii Legislature (act 288) created the Pacific War Memorial Commission as the sole war memorial agency of the Territory. The new Commission, consisting of seven members appointed by the Governor, was given powers to receive public lands and deal with Federal agencies. It was authorized to cooperate with the American Battle Monuments Commission, Pacific War Memorial, Inc., and similar organizations.

A week later the legislature adopted a joint resolution (J. Res. 29) requesting the American Battle Monuments Commission to erect a war memorial in Honolulu.

Plans studied

The Pacific War Memorial Commission at first became a meeting place for ideas. Nearly 100 plans for a memorial had been suggested and it was the Commission's task to study all proposals accumulated since 1946.

Advice from civic groups, veterans' organizations, national groups and individuals was considered. A design committee of the American Institute of Architects, Hawaii chapter, volunteered valuable help. Out of all this, the Commission outlined tentative plans for a Pacific Memorial System and in 1951 received the legislature's approval (J. Res. 37) to get the program underway.

Good beginning

The beginnings, though tentative, were good. During the 2 years from 1951 to 1953, the value of many ideas was proved. Those dropped were not necessarily unworthy, but simply unfeasible. The outbreak of war in Korea also affected the plans.

Finally, a refined master plan was evolved. A committee of 21 island architects chosen by the Hawaii AIA chapter in 1951 has designed a Pacific memorial system. The people of Hawaii, through a unanimous vote of their Territorial Legislature (S. J. R. 66, April 7, 1953) have approved, ratified, and confirmed these plans, an action then signed into law by the Governor of Hawaii.

Nation's gratitude

That system, the resolution stressed, is to "express the Nation's gratitude toward its fallen heroes and serve to inspire the living to build for a world without war—a world wherein there is peace with honor, respect for both the dignity of the individual and the rights of minorities—and where all peoples place their faith in God."

THE PLAN

Historic sites

The master plan for the Pacific Memorial System binds together several historic sites in a majestic setting in Hawaii.

It extends from Pearl Harbor, birthplace of World War II, to the National Cemetery of the Pacific in Punchbowl Crater, last resting place of 14,000 war dead—heroes all—and beyond that to Honolulu's best-known landmark, Diamond Head.

Memorial Boulevard

The unifying artery in the system is a Memorial Boulevard to be built along 2 miles of existing motor highway between Pearl Harbor and the gateway to the city of Honolulu.

No road could be more appropriately chosen. For along this very stretch many heroes of December 7, 1941 fell under a rain of machine-gun bullets that shocking Sunday.

The present road will be transformed into a broad, impressive avenue lined with arching banyan trees and gracefully landscaped. Each tree will be dedicated to one of the 48 States or a free nation of the Pacific. Both at the Honolulu and Pearl Harbor gateways will be dignified overpasses—symbolic portals that will represent living archways on the road to peace.

Military shrines

Along the Pacific memorial system, individual shrines will honor those who fell in the cause of freedom.

At the Pearl Harbor terminus of the system, the site of the sunken battleship *Arizona* will be developed as a naval shrine to the heroes of December 7, 1941.

The other armed forces headquartered along the boulevard, the Air Force at Hickam Field and the Marine Corps at Camp Catlin, have indicated their intention to adapt existing structures or build new ones to fit in with the memorial scheme.

The system also includes a memorial at the Army's Fort De Russy on Waikiki Beach, where an existing recreation center will be further developed.

At the National Cemetery of the Pacific in Punchbowl Crater, known in Hawaiian as Pouwaina (hill of sacrifice), the Commission is pledged to all-out effort to make this site a beautiful and lasting memorial to the 14,000 war dead who lie buried on the hillside. This effort includes continuance of the Commission's campaign for the restoration of the white crosses and Stars of David over the graves which were summarily removed in 1951.

Finally, Diamond Head Crater will be developed suitably as "nature's monument," a fitting devlopment for a landmark known the world over.

Other memorials

Elsewhere along the system, national veterans' organizations are invited to participate. On November 19, 1952, an executive order signed by the Governor of Hawaii gave the Pacific War Memorial Commission approximately 11 acres of land on Keehi Lagoon for development as a memorial site. Less than a month later, on the 11th anniversary of Pearl Harbor, the Disabled American Veterans conducted ground-breaking ceremonies for a monument to be built on this land, made available for the purpose by the Pacific War Memorial Commission and to become a part of the Pacific memorial system.

A second executive order giving another 10 acres of an adjacent site to the Commission has already been approved by the Governor and awaits only formal processing before the land can be utilized as another link in the system.

The memorial system will eventually include a memorial auditorium for Pan-Pacific meetings of representatives of the Pacific nations, and United Nations meetings on Pacific affairs.

Additionally, a Pacific House is planned as a repository for relics and historical documents and the showing of films and slides. Names of those missing in action in Pacific combat will be suitably memorialized.

Additionally, the American Battle Monuments Commission has committed itself to establishing a memorial in Hawaii—to be an integral part of the system.

Memorial scholarships

The University of Hawaii will become a part of the system, symbolizing education as a dominant force in promoting peace and understanding among peoples.

Through a system of memorial scholarships, the exchange of students of every free country of the Pacific with the United States will be encouraged. Such students may attend the University of Hawaii and other accredited American universities. The grants will be awarded after the pattern of Rhodes scholarships.

Aims restated

In embarking on the master plan, the Commission reaffirms its original purpose, which is to create and maintain in Hawaii a living memorial commemorating the sacrifices in the Pacific of the Nation's heroic war dead.

This includes not only the heroes of World War II, but those of Korea as well, or those who in the future may lay down their lives for their country in the Pacific area.

The memorial is to be one that can acquire international significance.

Hawaii is the natural place for such a memorial because of its role in Pacific affairs and because of the lesson in world brotherhood its people teach.

A challenge

As the Hawaii Legislature stated in its resolution of April 1953:

"The members of the Pacific War Memorial Commission (are) commended for the planning which is embodied in its Pacific memorial system, and are further challenged to exert even greater efforts toward the ultimate fulfillment of their high and lofty purpose, for and on behalf of the people of Hawaii and all of the liberty-loving peoples of the world."

Real Budget of United States Nearly $100 Billion for Coming Year

EXTENSION OF REMARKS
OF
HON. HUGH Q. ALEXANDER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Real Budget of United States Nearly One Hundred Billion for Coming Year," which appeared in the March 22, 1957, issue of the Stanly News and Press, of Albemarle, N. C.:

REAL BUDGET OF UNITED STATES NEARLY $100 BILLION FOR COMING YEAR

People of the United States have been hearing a lot about the budget of $71.8 billion proposed by President Eisenhower.

It is the biggest peacetime budget in the history of the country and one which has brought clamors from many sides for cutting the expenses of Government.

This $71.8 billion budget is not the whole budget, however, and does not accurately reflect the cost of Government services which we are paying for. It is a sort of net budget and does not tell us how much the Government spends nor how much the Government takes from the people.

The real budget for the next fiscal year is $95.6 billion and it is proposed to take from the taxpayers the tremendous total of $98.9 billion or almost one-fourth of the total national income.

What, then, is the difference between what is generally considered to be the budget and the real budget?

To arrive at the real budget, we must use instead of the commonly quoted figure of $71.8 billion the gross expenditures of $81.2 billion. The difference is that the gross expenditures include such receipts as stamp sales and other income of Government agencies paid by the people. These costs, however, are in the amount paid by the people for Government services.

To this total must be added the trust-fund expenditures which consist of money paid in to the Government, such as the social-security funds and the new highway trust fund.

These trust-fund payments by the Government for the coming year will amount to $14.4 billion, bringing the total gross budget expenditures to $95.6 billion.

The gross income for the budget is arrived at in the same manner, by adding to the budget receipt figures of $73.6 billion the applicable receipts for services of $8.4 billion and the trust-fund receipts of $15.9 billion.

In other words, the total budget is about $25 billion bigger than most of us had realized.

Even in these days when we speak of billions with a glibness never before experienced, expenditures of nearly $100 billion for the Federal Government should be enough to shock us into a realization that Government has gotten too big, that some halt must be called to the spending being carried on by Government in the name of rendering services to the people.

The Government is not a money-making organization. Every dime it spends comes from the taxpayers, from you and me. Ninety-eight billion dollars is a tremendous sum to be taking from the pockets of the people in a single year.

People should at least realize just what their Government is actually costing them and how big the real budget is.

Modern Republicanism — Defense of Eisenhower Budget Dishwater-Weak

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "It's Humphrey's Program, Really," written by Stewart Alsop, which appeared in the Washington Post and Times Herald of Sunday, March 24, 1957:

IT'S HUMPHREY'S PROGRAM, REALLY

(By Stewart Alsop)

Treasury Secretary George M. Humphrey seems likely to have his way in the end, as is his custom. In other words, the national program to emerge from the current session of Congress will probably be much more a Humphrey program than an Eisenhower program.

In the struggle within the Eisenhower administration which preceded the President's budget message, Humphrey, of course, fought and bled to hold down and cut back the budget. But his power in the administration is not quite what it was, and in this preliminary struggle he suffered a partial defeat.

For example, the requested fiscal 1958 Defense budget was up somewhat more than $2 billion over the sum requested for the current year. This is a lot less than the $6 billion increase which Gen. Nathan Twining, Air Force Chief of Staff, said last year would be necessary to maintain current Air Force strength. Even so, it is certainly more than Humphrey wanted to spend for defense.

It is too early to make any precise predictions about the defense budget which will eventually emerge from Congress. But the best guess of the best guessers is that defense, which was increased by $900 million by the Senate last year, will be cut back this year by between $1 and $2 billion. This is close to what Humphrey wanted in the first place.

Again, it is no secret that Humphrey is less than an enthusiast for foreign aid. He was no doubt disappointed when the Fairless committee, which was largely his creation, failed to propose cutting the liver and lights out of the program. But again, Humphrey seems likely to have his way in the end. Current estimates on Capitol Hill are that foreign aid will be reduced by between $1 billion and $1.5 billion.

Or take the Eisenhower-sponsored program for Federal aid to schools, with a price tag of just under a half billion dollars in the Eisenhower budget. The school aid bill is probably the most important item in the Eisenhower program of new Republicanism.

A few weeks ago it looked as though the school bill would pass rather easily, if the civil-rights hurdle could be overcome. Now there is an increasing tendency in both parties to shy away from the bill. The present prospect is that it will pass only if the President himself is prepared to make a real fight for it.

If the bill does not pass, it is exceedingly unlikely that George Humphrey, who is hardly an evangelical modern Republican, will shed tears for it. Nor will he weep very bitterly if the costly farm program, another modern Republican item, is cut back sharply, as also seems possible.

In short, something rather close to the kind of budget Humphrey wanted in the first place seems likely to emerge. The main reason is the pressure on Congress, the most intense in years, to cut spending. The man chiefly responsible for generating the pressure is, of course, George Humphrey.

Humphrey's famous curl your hair press conference, in which he attacked the administration budget head-on, was the real kickoff for the cut-spending campaign. The campaign, pushed by the chamber of commerce and similar organizations, has flooded congressional offices knee-deep in mail.

While the pressure to cut is much heavier than ever, moreover, the defense of the President's budget is dishwater weak. Ordinarily, an administration defends its budget with all the ferocity of a mother protecting a favorite child. But this administration is acting toward its budget more like a mother who leaves an unwanted child on a strange doorstep.

It is hardly surprising that the defense of the budget is weak, since the President himself, commenting on Humphrey's statement, seemed to agree with him. In the circumstances, the Republicans feel no obligation to defend the Eisenhower budget, and neither, naturally enough, do the Democrats.

Altogether, it is a queer situation, and a tribute to the power and pertinacity of George M. Humphrey, a man accustomed to getting his way. If Humphrey's getting his way means wrecking or watering down the whole Eisenhower program, in the defense, foreign aid, and domestic fields, no one seems to care very much, not even President Eisenhower.

Alaska and Hawaii Statehood

EXTENSION OF REMARKS
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. HEALEY. Mr. Speaker, the New York State Junior Chamber of Commerce convened in its quarterly board of directors' meeting at Syracuse on March 15-17, 1957. Under leave to extend my remarks in the Appendix, I include the following resolution adopted at the meeting, which was attended by 275 delegates representing 6,500 Jaycees:

Whereas our national heritage has developed upon the principle of the people having a duly elected voice in the affairs of Government; and

Whereas administration of Alaskan and Hawaiian Territorial affairs from the Nation's Capitol is less than adequate for the needs of the citizens in the upbuilding of the Territories; and

Whereas Alaskans and Hawaiians share the same standard of living to which we in the States are accustomed; and

Whereas the methods and forms of government for villages, municipalities, and the Territories are already functioning and are comparable to ours in the States; and

Whereas the people of Alaska and Hawaii are United States citizens paying Federal taxes, subject to military service, and generally subject to the same Federal statutes as the citizens in the 48 States, but do not have representation in Congress: Now be it hereby

Resolved, That the New York State Junior Chamber of Commerce, Inc., urge that our Representatives to Congress from New York State vote for pending House and Senate bills endowing statehood upon the Territory of Alaska, and the Territory of Hawaii.

Answer to Secretary Seaton's Recommendation for Acceptance of Pacific Gas & Electric Co.'s Proposal on Trinity River Project

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. ENGLE. Mr. Speaker, the recommendation of Secretary Seaton that Congress approve the so-called partnership proposal of the Pacific Gas & Electric Co. on the Trinity River project, whereby the company would build the powerplants and purchase falling water from the project, boils down to one more attempt to repudiate and reverse a half century of Federal Government power policy and at the same time load hidden charges on the power bills of California power and energy users, This proposed revision of the concept of reclamation whereby the project is operated for profitmaking purposes would also result in the partitioning of one segment of the project for construction and operation entirely separate and different from the rest of the project, would emphasize operation of the project for power production to the detriment of water consumptive use purposes and would result in additional costs of power to Federal installations in California. Acceptance of the recommendation would mean the end of public power in California. Following is a brief summary of reasons why Secretary Seaton's recommendation should be rejected and the Pacific Gas & Electric proposal disapproved.

COMPANY'S PROPOSAL VIOLATES AND REPUDIATES LONG-ESTABLISHED FEDERAL POWER POLICY

First. Acceptance of Secretary Seaton's recommendation and approval of the company's proposal would be a reversal of half a century of power policy in the Federal Government. The policy which has been established by Congress relative to disposal of electric power and energy made available through development of the Nation's water resources is set out in numerous acts of Congress, including but not limited to, the Reclamation Project Act of April 16, 1906, the Raker Act of December 19, 1913, the Federal Water Power Act of 1920, the Boulder Canyon Act of 1928, the Tennessee Valley Authority Act of 1933, the Rural Electrification Act of 1936, the Bonneville Act of 1937, the Fort Peck Act of 1938, the Reclamation Project Act of 1939, the Flood Control Act of 1944, the River and Harbor Act of 1945, the Eklutna Project Act of 1950, the Falcon Project Act of 1954, and the Small Reclamation Projects Act of 1956. This long-established policy provides that such electric power and energy be disposed of in such manner as to encourage the most widespread use thereof at lowest possible rates to consumers consistent with sound business principles, and that preference in such disposition shall be given to public agencies, municipalities, and cooperatives.

It appears that the decision to repudiate existing Federal power policy comes from the White House, as it is not consistent with Secretary Seaton's stated views to the Senate Interior Committee only 9 months ago. When asked if he believed "that the Department of Interior should adopt a policy, in harmony with Congress, to maintain the principle of public power" Secretary Seaton replied as follows:

Yes; I see no difficulty there. Whenever the people of a given area, whether it is a region or a State, want public power, it seems to me that they have the determining voice in the matter in any legislation which Congress has passed which makes it possible for those people to exercise their own right of choice. It is a matter which is entirely up to them.

* * * * *

So far as I am concerned, as long as the preference clause is part of the law of this country, as passed by the Congress, the Department of Interior, so far as I am able to see to it, will adhere to the letter of the law.

Now, only 9 months later, in his report to Congress, Secretary Seaton recommends a proposal which he recognizes cannot comply with long-established power policy and with the Trinity authorizing act:

I am not unmindful of the fact that acceptance of the company's proposal would render it impossible to comply with two of the restrictions contained in the act. The first of these is the provision which requires that contracts for the sale and delivery of the additional electric energy available from the Central Valley project power system as a result of the construction of the plants authorized and their integration with that system shall be made in accordance with preferences expressed in the Federal reclamation laws. The second of these is the requirement that a first preference be given to preference customers in Trinity County, Calif., to the extent of the 25 percent of the additional energy added to the Central Valley project as a result of the construction of the Trinity River division. Since joint development of the Trinity resource would add no energy to the Central Valley project power system, except to the extent that the company provides support under its proposed amendments to the existing sales and interchange contract, it appears that there would be no power from which to satisfy either of the two restrictions mentioned.

Secretary Seaton's recommendation would lay aside existing Federal power policy in the interest of a greater financial return to the Federal Government. The Secretary admits that, by so doing, preference provisions in the authorizing act could not be complied with and preference agencies would be required to pay $86 million more for power and energy over a 50-year period than under Federal development. If the San Luis unit, now proposed for authorization, is constructed, preference customers would have to pay $118 million more for energy.

If it were the policy of the Federal Government to exploit the power potential of Federal projects for profitmaking purposes, a less drastic measure but a more lucrative one would be to simply raise the project power rates. Power rates for the Central Valley project could be brought in line with the existing rates of the private utilities and return to the Federal Government, over the payout period, several times the additional $165 million which the Secretary claims from the P. G. & E. proposal.

There is another approach that might be considered if the project is to be put on a profitmaking basis. The value of the Trinity energy at load center is estimated at 13 or 14 mills per kilowatt-hour. Why should not the Federal Government go ahead with construction of the power plants, keeping the Central Valley project intact, and deliver the energy to the company at the load center at its stated value? The surplus to the Federal Government over the repayment period would be close to half a billion dollars.

IT IS THE POWER CONSUMERS WHO PAY

Second. Acceptance of Secretary Seaton's recommendation, and approval of the P. G. & E. proposal would load hidden charges on the power bills of northern California power and energy users. The homeowner, farmer, and businessman would find the P. G. & E. highly advertised generous payments to the Government on their power bills. Also on their power bills would be the costs to the company for construction and operation of the powerplants as well as the Federal, State, and local taxes, which the company claims that it would pay if it builds the power facilities. These are all costs to the company which would necessarily have to be passed on to the consumers. Specifically, the Pacific Gas and Electric Co. pays no money it does not collect on the electrict bills. The cost of the power houses, the money paid the Federal Government for falling water, as well as the Federal, State, and local taxes, would all be charged to the power users, and at a profit. To put it simply, if the P. G. & E. proposal produces $165 million more in surplus revenues over the payout period than under Federal construction and the P. G. & E. Co. pays $135 million in taxes, then the power consumers pay $300 million more, plus the company's profit.

It is pertinent to point out that just 4 days before Secretary Seaton made his recommendation, the Pacific Gas and Electric Co. submitted a petition to the California Public Utilities Commission asking for an increase in electric rates of almost 6 percent, which would average 37 cents per month per household. The company itself estimated that the elec-

tric rate boost affecting 1,735,000 California customers would increase revenues by $16,600,000 annually. Under a system where allowable rates are based upon costs plus a nice profit, why should the company hesitate to raise its offer for falling water by $1,100,000 per year or to place an additional $300 million burden on the power consumers?

PARTITIONSHIP NOT PARTNERSHIP

Third. The Central Valley project was not constructed for profitmaking purposes. It was constructed to meet the needs of the people of the Central Valley Basin for water, flood control and for low-cost electric power. Under the Secretary's recommendation and the company's proposal, one segment of the vast integrated reclamation project would be constructed and operated entirely different from the rest of the project. The Central Valley project is a whole integrated system of dams, resservoirs, canals, transmission lines, powerplants and so forth constructed by the Federal Government, all designed for comprehensive development of the basin to protect the people and land from floods, to furnish a dependable water supply for agriculture and defense purposes, and to furnish power and energy at lowest rates possible consistent with project repayment. This recommendation for partnership or partitionship, as it has been referred to, whereby one segment is set apart and operated different from the rest, just does not make sense. Acceptance of the Secretary's recommendation would irreparably disrupt existing operations of the Central Valley project and threaten future development.

ACCEPTANCE OF SECRETARY'S RECOMMENDATION WOULD MEAN THE END OF PUBLIC POWER IN CALIFORNIA AS A DETERRENT TO HIGH POWER RATES

Fourth. The great effort of the Pacific Gas and Electric Co. to put over this proposal goes, of course, beyond the specific facilities involved here. The real purpose of the company is to stop for all time the expansion of Federal power in California in order that it may monopolize the power market in that area. Acceptance of this proposal would set the precedent for future Federal development. Experience and history have shown that in areas of public power such as the TVA area, the Northwest, the Missouri Basin, and California, prevailing power rates, including the rates of private utilities, are lower than in areas where there is no Federal power. Compare, for instance, the prevailing electric power and energy rates in the Northwest with those in the Northeast.

Federal power, therefore, has not only resulted in low-cost power to public agencies, municipalities, and cooperatives, but it has had the effect of holding down the rates charged by private utilities in Federal power areas. Not only have the so-called preference customers benefited but all the users of electric energy in the area have benefited. If Federal power is cut off in California, it will be to the detriment of not only the potential direct beneficiaries of Federal power but also every user of electricity in the area.

PROPOSAL EMPHASIZES POWER OPERATION TO THE DETRIMENT OF CONSUMPTIVE USE PURPOSES

Fifth. Under the P. G. & E. proposal, the project plan of operation would provide for releases of water to maximize power and energy production. The proposed contract includes a very detailed schedule of releases designed to produce the maximum amount of power and energy for integration into the company's overall power system. Although, theoretically, the water needs of the project would retain priority, any time the Federal Government could not meet the schedule of releases for power because of interference with water consumptive use requirements, then the Federal Government would have to pay the company penalties for such noncompliance with the schedule. The proposed contract contains this paragraph:

If, by reason of (1) water supply conditions more adverse than those of record, (2) the authorization of additional divisions of the Central Valley project by Congress, or (3) changes or revision of the crop pattern of said project, the United States is unable to meet the irrigation requirements of said project through releases of water made available pursuant to paragraphs (a) and (b) of this article in combination with releases of all water available from the active storage capacities of Shasta and Folsom Reservoirs as defined below, and of such other reservoirs as may be authorized as part of said project the United States may, on advance written notice to Pacific and subject to the provisions of article 12 (d), make available for such irrigation requirements and for use through the powerplants of Pacific's project additional amounts of water even though storage in Trinity or Whiskeytown Reservoir is then less than that specified in table 5 above. Pacific may thereafter take such action as is necessary to provide, from the most economical alternative source or sources, dependable power capacity in lieu of the dependable power capacity which otherwise would be assured by the reservoir storage specified in table 5. If the release of such additional amounts of water by the United States or the action taken by Pacific to provide such capacity causes an increase in the cost to Pacific of furnishing electric power to its customers the United States shall compensate Pacific for such increased cost by direct reimbursement to Pacific or by appropriate adjustment of the payments provided for in article 13 or both.

The costs to the Federal Government which would result from penalties have not been considered in the evaluation of the proposal. Since the project operating plan is based on historical flows and therefore nothing more than an educated guess, conflicts are bound to arise from time to time between the needs for water to develop electricity and the needs for water to meet requirements of irrigation and municipal water supply. When this serious problem involves the substitution of dollars for water, I fear that it is the water users who may come up short. Even if the priorities are adhered to, I can visualize huge unforseen payments to the company. It seems to me that the basic purpose of the Central Valley project is the storing and releasing of water in the interests of irrigation and municipal water supply. I believe that, in the public interest, such purpose should be fulfilled without imposing payments on the Government of the United States for noncompliance with a specific schedule of operations designed to maximize power benefits.

"MORE FUNDS FOR POTENTIAL IRRIGATION" ARGUMENT NOT VALID

Sixth. Secretary Seaton states in his letter to Congress that acceptance of P. G. & E.'s proposal would "provide substantially more funds for potential irrigation and multipurpose development in the Central Valley project area."

He also states:

It seems to me that the development of power resources of the Trinity River division under a joint proposal such as that offered by the company would mean that power would become a better partner of irrigation development in the Central Valley project area than under all Federal construction.

Unfortunately, the Secretary overlooks two important factors which makes the first statement invalid and proves the second statement false. First, financial studies of the Central Valley project, based on Federal development, indicate surplus revenues sufficient to expand irrigation as fast as the need develops. The need for additional power revenues to assist irrigation development does not exist. For instance, the report of the Secretary indicates a surplus of about $114 million in the repayment analysis of the authorized features. With the San Luis unit added, a recent report indicates a surplus of about $100 million at the end of the repayment period. It is pretty clear that under the present power rate structure of the Central Valley project there will be sufficient power revenues available to carry forward future irrigation development as fast as it is needed. In this connection, in Secretary Seaton's report one of Commissioner Dexheimer's conclusions is as follows:

Construction of the Trinity River division either as an all-Federal undertaking or through the proposed joint development is feasible and justifiable from both an engineering and economic viewpoint. Under either arrangement there appears to be ample opportunity for expansion of the irrigation phase of the Central Valley project.

The second fallacy in the Secretary's statement is that he overlooks and does not consider the energy needs of the irrigation districts throughout California and the cost to the districts of obtaining necessary energy for pumping. It should be evident that any proposal which results in the irrigation districts having to pay higher rates for their pumping energy does not result in power becoming a better partner of irrigation.

TAKEOVER PROVISIONS NOT FAVORABLE TO THE FEDERAL GOVERNMENT AND WERE NOT CONSIDERED BY SECRETARY IN FINANCIAL ANALYSIS

Seventh. Consonant with the provisions of the Federal Power Act, the proposed contract between the Pacific Gas & Electric Co. and the Federal Government provides that the United States could acquire at the end of the 50-year contract period the power facilities constructed by the company. However, acquisition by the Federal Government would require payment for the company's net investment in the project, not to exceed the fair value of the property taken, plus severance damages. The

financial advantage which the Secretary claims for the company's proposal completely overlooks this matter of acquisition costs to the Federal Government. In other words, the analysis on which the Secretary's recommendation is based overlooks the fact that under Federal construction the Federal Government will own the power facilities at the end of 50 years while under the recommended proposal the company will own the power facilities. In connection with the Secretary's claimed surplus of $165 million under the company's proposal, the report of the Commissioner of Reclamation has the following to say:

> For comparison, these two figures require an adjustment that cannot be determined at this time. Under all-Federal development at the end of the 50-year payout period the Federal Government would own outright the fully amortized and operative Trinity River division power facilities, an equity of substantial value. Under joint development the Federal Government could acquire this equity only by payment to the company its remaining net investment plus severance damages. The effect of the retired adjustment would be to reduce the difference in surpluses shown above.

The recent experience of the State of California with respect to its negotiations for the purchase of Pacific Gas & Electric Co.'s Big Bend powerplant on the Feather River is an indication of what the Federal Government may be faced with at the end of the 50-year contract period. The Big Ben powerplant was constructed by the company sometime between 1908 and 1916, at a cost of about $7,700,000. This plant will have to be purchased by the State in connection with its construction of the Feather River project. In the negotiations for purchase of the plant, the company has advised the State that this powerplant is now worth $33 million.

It appears that the Federal Government is put in an unfavorable position with respect to takeover of the power facilities at the end of the contract period and that the Secretary has overlooked this in setting out the financial advantages of the recommended proposal.

ASSUMING A POLICY OF "THE MORE SURPLUS THE BETTER" THE AMOUNT OF COMPANY'S OFFER IS STILL TOO LOW

Eighth. When the Pacific Gas & Electric Co. appeared before congressional committees 18 months ago, its offer to the Federal Government for use of the falling water was $3.5 million annually. Since that time the company has increased its offer to $4,617,000 annually, or an increase of over $1,100,000 annually. Although on the surface this appears to be a generous offer, it is still too low if it is to be the policy to exploit the power resources to the fullest. Analysis of the offer indicates that it is comparable to loaning the company Federal money at about 3½ percent. The Bureau of Reclamation has allocated to power $94,693,000 of the construction cost of the Trinity River division joint-use facilities. The annual payment of $4,617,000 by the company would just about amortize this power allocation in 50 year at 3½ percent and pay a reasonable share of the operation and maintenance expenses. Therefore, it appears that the offer is not as generous as it may seem on the surface. If it is to be the policy to make money from the power operations, then the Federal Government should expect a return on its investment of better than 3½ percent. Other lending institutions get a considerably higher return.

Also, there is another approach that indicates the company's offer is not enough if the policy was to put the project on a profit-making basis. The Pacific Gas & Electric Co. contracts for bulk sales of electricity, such as the contracts with Sacramento Municipal Utility District, Southern California Edison, and various chemical companies, include a clause whereby the price of energy is tied to the cost of fuel. In other words, as the cost of fuel fluctuates the price paid to the company for energy will fluctuate. The company has been attempting for some time to get the California Public Utilities Commission to permit it to include a similar clause in its regular rate schedules. In recent years the price of fuel has gone continually up and the company's recent petition to the Public Utilities Commission for a 6-percent rate increase was based upon increases in the price of fuel oil. In this connection, the company, in its offer to purchase falling water, determined the value of the Trinity energy by a comparison with the cost of steam generation. Therefore, the value of the Trinity energy to the company likewise fluctuates with the cost of fuel, and as the cost of fuel increases the value of the energy to the company increases. Using the company's argument for including an escalator clause in its contracts for disposal of energy, whereby the price is tied to the cost of fuel, why should not a similar clause be included in a contract whereby the company, in a sense, is purchasing energy. In other words, as the value of the Trinity energy to the company increases, why should not the company pay more for it? It is my understanding that, with respect to the company's present offer, the energy was evaluated on the basis of fuel oil at $2 per barrel. The price of fuel oil today is in the neighborhood of $2.75 per barrel. Already, then, the value of the energy to the company is considerably more than the company reported as a basis for its offer. Over the 50-year contract period, if past economic trends mean anything, the price of fuel will continue to go up. If it were the policy, then, to put the project on a profit-making basis, it would appear imperative that the Federal Government would have to insist that any contract include an escalator clause tieing the company's payments to the price of fuel.

PREVIOUS CLAIMS BY COMPANY REGARDING THE ADDITIONAL POWER GENERATING CAPACITY UNDER ITS PROPOSAL ARE NO LONGER VALID

Ninth. At the time the Pacific Gas & Electric Co. appeared before the congressional committees its proposal called for installation of 130,000 more kilowatts of generating capacity than the Bureau proposed at that time to install. This higher capacity, of course, was based on integration of the power facilities into the company's overall system and the use of the Trinity facilities for peaking purposes. It was a little difficult at that time to understand how the company could claim this advantage in the face of the understanding we have always had that regardless of who constructed the power facilities the energy therefrom, along with the energy from the other CVP power facilities, would be integrated into the overall system for the benefit of both the company and the Federal Government. Since that time a firm agreement with respect to integration has been reached between the Bureau and the company and the authorized capacity of the Trinity division has been incerased to "not to exceed 400,000 kilowatts." Therefore, this argument in favor of the company's proposal is no longer valid and the operating plan will be the same regardless of who builds the powerplants.

SECRETARY'S RCCOMMENDATION DOES NOT MEET THE INTENT OF CONGRESS IN AUTHORIZING THE NEGOTIATION

Tenth. The authority in the Trinity authorizing act for completing the negotiations did not imply authorization for the Secretary to study proposals which would violate existing law and, as a matter of fact, language in the act itself. In other words, it was assumed that any agreement with the company would include protection for preference customers as well as protection for the power consumers against exorbitant power rates. To make this clear, the Senate report on the legislation carried this statement:

> The proviso is in no sense to be understood as an authorization to waive, in any negotiation for the sale of falling water, any preference in the sale or transmission of power as expressed in section 5 of the Flood Control Act of 1944, in the Reclamation Project Act of 1939, or in any other law.

In not following this instruction, there is a serious question as to whether the expenditures for the studies involved in this proposal have not been made illegally.

ACCEPTANCE OF RECOMMENDATION WOULD RESULT IN ADDITIONAL COST OF POWER TO FEDERAL INSTALLATIONS IN CALIFORNIA

Eleventh. Secretary Seaton's report indicates that if the company's proposal is accepted it would result in Federal installations paying about $30 million more for power over the repayment period, and this additional payment by Federal installations would be increased to $71 million if the San Luis unit is constructed. It just does not make sense for the Federal Government to build a project which includes the potential for producing power and to dispose of the power potential without any marketing restrictions while compelling its own governmental agencies to pay excessive private power rates for their required electric energy.

A good illustration of this comes to light in connection with the House Appropriations Committee's consideration of the independent offices appropriation bill. This bill includes funds for the Ames Laboratory in California which uses a rather extensive amount of electric energy. The installation expects to use 432 million kilowatt-hours during fiscal year 1958. The Ames Laboratory purchases all the energy it can from the

Federal Central Valley project. Its remaining needs must come from the Pacific Gas & Electric Co. Testimony given the Appropriations Committee indicates that the installation will have to pay about 13 mills per kilowatt-hour for the energy purchased from the company compared with 5 mills for the energy purchased from the Central Valley project—a difference of 8 mills per kilowatt-hour. Additional testimony indicates that the installation expects to purchase half of its energy needs for fiscal year 1958 or 216 million kilowatt-hours from the Pacific Gas & Electric Co. Based on the testimony given, 216 million kilowatt-hours would cost the Federal Government $1,728,000 more from the Pacific Gas & Electric Co. than from the Federal project. There is a growing indication, and this is an example, that Secretary Seaton has greatly underestimated the financial losses to Federal installations and public agencies which would result from acceptance of his recommendation.

Should FHA and GI Loan Program Be Combined and Interest Rates Made Flexible in Order To Make Government Assistance More Effective in Home-Building Program?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. JUDD. Mr. Speaker, there is a growing awareness that basic changes must be made in our FHA and GI home-loan programs if they are to accomplish the objectives intended for them. Particularly helpful, in considering these changes, are the views of those with long experience in the field itself.

Donald T. Knutson, president of a large construction firm in Minneapolis, Minn., has brought to my attention the carefully reasoned proposals of Mr. Harry Held, of the Bowery Savings Bank of New York. This recommendation represents a plan for merging VA loan activity into the FHA and reconstituting the FHA loan program on the basis of a free interest rate.

Mr. Held is not only recognized as an authority but is often referred to as the dean of the mortgage banking field. I believe this idea merits the thoughtful consideration of each Member, as we deal with this admittedly difficult problem.

Mr. Held's article follows:

PROPOSAL FOR MERGING VA LOAN ACTIVITY INTO THE FHA AND RECONSTITUTING THE FHA LOAN PROGRAM ON THE BASIS OF A FREE INTEREST RATE

This proposal represents an effort to evolve a plan whereby federally underwritten home lending would be combined in one agency and still maintain such preferential treatment as Congress may decide upon for veterans and further to reconstitute the FHA insurance program on the basis of a free interest rate.

Much has been written and much more has been said about the question of fixed interest rates on federally underwritten mortgages. In the case of FHA the fixed interest rate policy in connection with the insured loan program has been set forth by Congress since the inception of the National Housing Act in 1934. However, unlike the VA program, where Congress prescribed a low maximum interest rate, the FHA was empowered by Congress to set the interest rate administratively for FHA-insured mortgages within a limitation, which at present is set at 6 percent.

As of December 3, 1956, the FHA increased its interest rate from 4½ percent to 5 percent on small home loans and from 4¼ percent to 4½ percent on large-scale dwelling loans. The general reaction to this increase, in the light of existing circumstances, was that while lenders and builders mildly applauded the slight increase authorized on the terms of FHA mortgages, they felt that the step was too modest.

The New York Times of December 5, 1956, commenting editorially on this increase in rate, and further commenting on the reaction of people in the mortgage field who believe that the ceiling should be taken off FHA, felt that this argument had much logic behind it. The following quoted comment from this editorial we believe succinctly points up the shortcomings embodied in maintaining a fixed interest rate policy in connection with federally underwriten loans:

"Money is essentially no different from commodities, goods, or labor in that it is subject to the basic law of demand and supply. When there is a limited amount of savings it is going to be employed where it will bring the best price (i. e., the highest return). This goes far to explain why the major share of the decline in housing starts this year is to be found in those areas where mortgage rates are administered rather than in those areas where the conventional mortgage is used, with its completely flexible interest rates."

From the experience of the past decade and more particularly the last few years, it seems abundantly clear that if FHA mortgages are to be able to compete with other forms of long-term investments on a basis which will be successful in maintaining a reasonably steady rate of home building, these mortgages should be freed of a fixed interest rate.

Surely in the past history of FHA there is ample evidence that the fixed interest rate on FHA loans has not (except in short-run isolated periods) been truly an effective rate. In periods of generally low-interest rates FHA loans sold at premiums—in some cases very substantial premiums—and in the periods of high-investment rates FHA loans have sold at discounts reflecting the difference in required investment return and the fixed FHA rate. These situations have been detrimental to the home builders and/or permanent-mortgage investors and/or the ultimate home owner-purchaser. When premiums were paid for these mortgages it was disadvantageous to the investor and usually resulted in unjust enrichment to the builder, who generally did not pass on such premium to the ultimate home purchaser. Under the discount system the price structure of new housing was inflated to reflect the cost of money via the discount route to the detriment of the ultimate purchaser, with the permanent investor making the loan on a yield basis in competition with other forms of investment available to him.

Basically it would seem that all segments involved in the making of FHA loans, namely the FHA, the builder, the mortgage banker, the ultimate purchaser, and the permanent mortgagee, would be better served if a par market for FHA mortgages could be created. Proponents of the fixed interest rates lay considerable stress upon the fact that a fixed interest rate is obligatory on FHA mortgages because of the fact that they are fully insured by the FHA, that they have the full credit of the United States of America behind them, and that the ultimate purchaser should get the benefit of a lower interest rate than that available on conventional loans because of the Government insurance and the fact that the Government does all or most of the underwriting of the mortgage security. Such contention might be true if the interest rate on FHA loans were at all times competitive with other types of investments. Such adjustment as might be necessary to attain this goal under a so-called flexible interest rate system is well nigh impossible because of the long range considerations in connection with the development and building of homes. Mortgage financing must be arranged substantially in advance of the actual construction or sale of the proposed houses. Advance commitments for permanent financing are the generating power providing funds for the building of new homes. Available funds for such financing are in constant competition with other types of investment which are not subject to rigidly fixed interest rates. In order to eliminate the inequalities inherent in setting a fixed interest rate for FHA insured loans as outlined above, it would seem that we should consider a re-evaluation of the FHA program of mutual mortgage insurance, with the objective of seeking out a means whereby such insured loans would be freed from the fixed interest rate theory and a new theory adopted which would be based upon a free interest rate subject only to market conditions. It is therefore proposed that consideration be given to the following plan to accomplish these objectives:

1. That all loans insured by the FHA be made free of fixed interest rate control and that the rate of interest on such loans be governed only by the maximum rates of interest permitted on real estate mortgages in the various States of the United States.

2. That FHA, instead of insuring 100 percent of the principal amount of the loan, be required to insure only 50 percent of the amount of the loan approved by the FHA, such insurance to run on a proportionate basis throughout the life of the loan.

3. That the proposed mortgagee, upon filing FHA application for commitment, shall designate upon such application the rate of interest at which the permanent insured loan shall be closed, and further shall certify that no discount or premium is to be received or paid in connection with the loan transaction. The commitment to insure issued by the FHA shall further incorporate as part of its commitment to insure the rate of interest (as designated by the applicant for such commitment), which the insured loan shall bear and shall require as part of the closing documents, certifications, or other satisfactory evidence, that no discount or premium has been received or paid in connection with the loan transaction. FHA shall as heretofore continue to specify allowable fees and charges and may include therein a brokerage fee not to exceed one-half of 1 percent if required in arranging financing of the loan.

4. That, as suggested in a recent round-table discussion conducted by House and Home magazine (November 1956 issue), the FHA "substitute a single 2 percent premium for its present ½ percent annual premium and that the cost of this insurance should be added (as in England) to the cost of the house and the face value of the mortgage, i. e., it should not be added to the down payment." The insurance premium of 2 percent would be based upon the 50 percent of the mortgage which would be insured by FHA and would be paid to FHA out of mortgage proceeds at the time of endorsement of bond for insurance. The adoption of this

feature of the plan would have the following advantages:

(a) The homeowner's insurance cost under this plan, as compared with present procedures, would be substantially lowered, thereby reducing his monthly payments;

(b) The FHA would be able to eliminate costly billing procedures to collect its insurance premium, and would also secure an investment return on a full premium basis from the inception of its insurance.

5. That, in connection with defaulted loans, the FHA will adopt—in place of its present procedure—the procedure now in use by VA with reference to the conveyance back to the FHA of foreclosed properties. Under this procedure FHA would set an "upset price" on the property based upon FHA appraisal and would issue debentures to the mortgagee to be due 5, 10, 15 or 20 years from date of issuance at the mortgagee's option, with the rate of interest on such debentures to be based upon the 6-month average yield for United States Government bonds with maturities of 5, 10, 15, and 20 years. FHA would also include in debentures the foreclosure costs, including attorneys' fees, not to exceed $250, together with interest from the date of default at the debenture interest rate.

6. That the VA loan program, as such be eliminated and that the FHA, under title II, provide a special subsection for loans to veterans based upon the receipt of an eligibility certificate from the VA evidencing the veteran's eligibility under such subsection for such additional loan benefits as may be decided upon. Suggested additional loan benefits which might be provided under this subsection are as follows:

(a) With the FHA present loan limitations of 95 percent of value on the first $9,000 and 75 percent of value on amounts in excess of $9,000, a provision could be made for veterans which would give them loan benefits of 100 percent of value up to $9,000 and 90 percent of value on amounts in excess of $9,000 up to a total loan of $20,000.

(b) A waiver of the mortgage insurance premium outlined in No. 4 above or a payment to the FHA by the VA of such prepaid insurance premium.

7. That the Board of the FHA be expanded to include by appointment a member designated by each of the following trade organizations to serve for a 1- or 2-year term in a nonvoting advisory capacity:

National Association of Home Builders.
National Association of Real Estate Boards.
National Association of Mutual Savings Banks.
United States Savings and Loan League.
National Savings and Loan League.
American Bankers Association.
Life Insurance Association.
Mortgage Bankers Association of America.

Some of the benefits of the above proposal are outlined as follows:

1. The free interest rate approach to the federally underwritten mortgages would permit the housing industry to compete in the money market on an equal footing with other users of credit. The building industry would be competing for money on an interest rate basis, rather than on a discount basis. This would provide a sounder situation in the housing industry, as it has been evident in the past that while large-scale builders can absorb in one manner or another a fairly large discount, the small- or medium-volume builders are in an extremely disadvantageous position in a successively increasing discount market. Also, under the free-interest rate concept, the flow of funds would be determined by market forces and the construction of new houses would be made responsive to normal housing demands.

2. The homeowner should be able to benefit pricewise in the purchase of a home because of the elimination of a discount on his mortgage. The emergence of a par market for FHA loans should be reflected in a lower price for houses to the extent that discounts in various areas of the country are eliminated.

3. The home-building industry should benefit by the merging of the FHA and VA activities—first by the elimination of the need to deal with two agencies with greatly varying rules and regulations, and second by the cutting down of the amount of paper work required in dealing with two agencies, and third by a reduction in actual dollar expense in the processing of the loan as a federally underwritten mortgage.

4. The elimination of the VA home-loan program should result in a decided saving to the Government. This has been recommended by many Government commissions which have studied the question of Government agencies.

5. Under the proposed plan the FHA liability under the insurance program would be reduced from 100 percent to 50 percent of the amount of the principal.

6. There should be no objection to such a program on the part of permanent investors who presently, as part of normal lending operation, make conventional loans on a free interest rate basis. With the permanent lender having a stake in the mortgage to the extent of 50 percent, there would be little likelihood of relying on the guaranty rather than the security for the repayment of the loan.

The overall objectives of the housing policy of the Government are to provide more and better housing for its citizens and to maintain a high level of construction activity in the home building field. Such objectives can be reached only if financing is available for such home construction and purchase. Past experience has indicated that the fixed interest rate policy on federally insured and guaranteed loans has made such loans unattractive to local investors who could secure higher rates of interest on conventional loans without Government insurance and guaranty and to secondary permanent mortgage investors in periods of rising interest rates and yields on competitive types of investment. It would seem that if it is the housing policy of the Government to insure loans in amounts in excess of the amounts which may be lent by a local lender for mortgage purposes, the Government should be willing to—and required to—insure that portion of the loan which would exceed the amount of the loan which normally would be made without Government insurance. Under such circumstances it can be rationalized that the fixed interest rate, because of the Government guaranty, is an unnecessary restriction which limits the use of FHA-insured loans. Further, it could be argued that under the proposed plan, only 50 percent of the loan would be insured and therefore it would be unfair to fix the interest rate on the 50 percent of the loan on which the Government would have no liability.

The above proposal is submitted as one possible solution to the impasse which exists in the mortgage investment market whenever changes in interest rates or yields occur in other investment markets. Such proposal with reference to interest rates charged on mortgages would be in effect become self-regulatory, which has been the situation in the conventional loan market for many decades. Should mortgage funds become available in large volume, the interest rate at which mortgages can be secured would be reduced by competition; in periods when money is generally tight, builders and mortgage companies would at least be in a position of being able to finance their housing production by securing mortgage funds on a competitive basis.

In drafting this proposal, we have aimed at formulating a plan which would prove workable to all segments of our economy which are involved. It is also believed that now is the time to take stock of the whole program of federally underwritten mortgages in the light of past experience, with the idea in mind of setting up a fully workable plan to take care of the required financing of our housing needs now and in the future.

Tribute to Greece: 136th Anniversary of Her Independence

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BOLAND. Mr. Speaker, Greece today celebrates again the return to independence and freedom for which she is justly famous. The cradle of political freedom and self-restrained individual liberty, in the 5th century before Christ, Greece has a history and a record of influence on civilization which was not only unsurpassed in all the succeeding centuries but which has known no equal. This tiny country on the map of the world has spread its influence around the globe and down the centuries. Despite countless invasions, conquest, ravaging hordes, and superimposed dynasties, Greece has remained the captor of her conquerors, the victor over those who would vanquish her.

When the Archbishop of Petras raised the standard of revolt against the Turks on March 25, 1821, and led his people in the national struggle against tryanny he was but renewing the tradition of nonsubservience of the Greek body politic and reaffirming the indomitability of the Greek mind. Four centuries of domination by the Turks could not obliterate, could not dim the permanence of that quality of ancient Greece which insured that freedom would prevail.

President Monroe himself lent his voice to the cause. In his annual message on December 3, 1822, he stated our interest in the situation thus:

> The mention of Greece fills the mind with the most exalted sentiments and arouses in our bosoms the best feelings of which our nature is susceptible. Superior skill and refinement in the arts, heroic gallantry in action, disinterested patriotism, enthusiastic zeal and devotion in favor of public and personal liberty are associated with our recollections of ancient Greece. That such a country should have been overwhelmed and so long hidden, as it were, from the world under a gloomy despotism has been a cause of unceasing and deep regret for ages past. It was natural, therefore, that the reappearance of these people in their original character, contending in favor of their liberties, should produce that great excitement and sympathy in their favor which have been so signally displayed throughout the United States. A strong hope is entertained that these people will recover their independence and resume their equal station among the nations of the earth.

It is interesting that it was this Greek war for independence that occasioned the statement of Daniel Webster that the United States could no longer hold itself aloof from world affairs. He said:

As one of the free states among the nations * * * our side of this question is settled for us, even without our own volition. Our history, our situation, our character, necessarily decide our position and our course before we have even time to ask whether we have an opinion. Our place is on the side of free institutions.

In the following century, and in our own time, the Truman doctrine has been called the first real break in peacetime of the American public as a whole from isolationism. The aid was needed to maintain the independence of Greece and Turkey from Communist subversion. Referring to this situation, Lincoln MacVeagh, a recent Ambassador from the United States to Greece, wrote in 1955:

Since our declaration of the Truman doctrine in 1947, we have shown an understanding not only of the importance to us of the independence and territorial integrity of Greece, but also of the great step forward she has taken on the international stage in composing her age-long differences with Turkey and allying herself with that country on the present frontiers of freedom.

Thus the accent on freedom and independence has echoes from Greece through the world, through the centuries for more than 2,300 years.

Address by Assistant Secretary of Agriculture Ervin L. Peterson Before the 1957 Southern Forestry Conference of the Forest Farmers Association, Atlanta, Ga., March 15, 1957

EXTENSION OF REMARKS
OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. REECE of Tennessee. Mr. Speaker, the Honorable Assistant Secretary of Agriculture, Ervin L. Peterson, an able administrator who has rendered outstanding service to the agricultural interests of America, delivered an address before the 1957 Southern Forestry Conference of the Forest Farmers Association, in Atlanta, Ga., on March 15, which I feel justifies being put in the RECORD so as to make it available to the Members of Congress and the people.

The speech follows:

It is a pleasure to participate in this Southern Forestry Conference of the Forest Farmers Association. Your conference theme, "Soil, Trees, and Water—Their Role in the South's Economic Future," and the subject matter covered in your program are clearly indicative of the breadth of your interest.

Today there are great opportunities in all phases of forestry. In no section of the country are those opportunities brighter than here in the South. The growth cycle for most of your commercially important forest trees is relatively short. Earnings on investments made in forest properties begin to accure more quickly than in most other forested sections of the country. Here is a desirable combination of soil, climate and water for the maximum forest productivity.

People of the South are alert and responsive to their opportunities. It is, I believe, in recognition of these many desirable factors that wood-using industries have established themselves in your midst, creating for southern forest producers a readily available market outlet for your forest products. Also rapidly increasing economic values of forest properties resulting from accelerated public demand for forest products of all kinds has made it economically feasible for owners of forest properties to undertake the expenses and make the investments required to achieve better management and increased productivtness from their properties.

As in most cases, the opportunity before you and the expansion in forestry activities which have occurred bring with them problems and responsibilities. It is entirely fitting that meetings of this kind should bring people together to discuss a subject of such broad interest as forestry, not only here in the South but over the entire Nation.

The search after understanding, not only in forestry but in all facets of our national life, must be continuously pursued with vigor. A working democracy—a republican form of Government—wherein the powers of Government derived from the people requires for its best performance an informed, intelligent, alert, and responsible citizenry. It is in the pursuit of truth, of fact, through discussion and meeting together, that fuller information and understanding is disseminated, discussed, debated, and accepted. It is through such understanding, and through responsible and informed action that we, all of us, depend upon progress as individuals, as organizations, as States, as a Nation.

This Nation is singularly blessed with a great heritage of natural resources—our soils, water, forests, minerals, scenic wonders, wildlife. We have been profligate in their use. Some we have damaged greatly. Great forests have been harvested without provision for their regeneration. Many of our farm lands were all but destroyed for productive use. Our fish and wildlife resources are only a small fraction of what they once were. Many of our streams and rivers have been, and are now, heavily polluted. Even the air itself around some of our industrial sections is contaminated and impure. At times both public policy, or lack of it, and economic forces have added their impetus to the erosion of our vast natural heritage.

We have, as a people, awakened to the fact that our physical resources are not inexhaustible. We have come to realize the significance of the fact that all of these resources are encompassed within the physical confines of our country. With a rapidly growing population, now 170 million people, and estimated to possible reach 225 million by 1975, we are sharply conscious that the resources we now possess must be managed and used wisely if a growing economy is to be fully supplied with the raw materials necessary to satisfy the needs and wants of all our people. The need to conserve, to wisely use our resources of soil, forests, and water, is achieving ever widening recognition. This recognition did not come all at once. It has been developing over a 50-year period. Recognition of need too often results in the assumption that only Government can provide the means for meeting common objectives, and usually the Government meant is the Federal Government.

Our Federal Government is already big. It grows bigger. It consumes the preponderant portion of total tax payments. What role do we expect our Federal Government to play in the field of forestry? What responsibility should it assume in connection with resource use and development?

While the Federal Government is a substantial landowner and manager, and must discharge its managerial responsibilities as to these lands, the fact remains that the vast bulk of our land is owned by people in their private capacities. In the field of forestry, private industry has demonstrated that it has both the interest, the capacity and the understanding to achieve sound management, wise use and development.

Increasingly, too, the States have effectively demonstrated their capacity in this endeavor. Under our system of government, sovereignty resides in the people to be exercised through the respective States. The Federal Government possesses only those powers specifically granted to it in the Federal Constitution. Insofar as organized public effort is required in resource management, use and development, it seems to me that the States should assume the major share of responsibility. They are closer to the people. The immediate economic benefits of more productive lands come to the people in the States and in their local communities.

State administrations are usually more cognizant of the immediate local problems. They are usually more responsive to public attitude. State government, too, is usually more flexible in its organization so that it can respond more quickly to problems of local significance. If big government, big spending, and high taxes are to be brought firmly under control so that increasing proportions of private earnings can be reinvested in private enterprise and thereby contribute to the further building of America, the States, and the people themselves, must undertake greater responsibilities for achieving the objectives they desire whether this be in forestry or in other facets of our national life.

There is a real opportunity to develop a stronger and better America through the enlargement of our resource capabilities. Let us see to it that in realizing on this opportunity the role of government—local, State, and Federal—is a cooperative one with the citizens in their private capacities. When we think of forestry we must think of all forestry—private, State, and Federal.

Let us, however, emphasize private opportunity, private responsibility, for our economy itself is built around the concept of private ownership of property and upon the expectance of reward for private initiative, industry, and ingenuity.

If Government is to increasingly accept responsibilities for meeting the needs of people, whether it be in resource or in other areas, greater and greater amounts of the rewards which come to people in their private capacities from their own initiative and industry and ingenuity must be taken by the Government, for Government itself produces nothing. It is only a consumer of production and never can it return to the people as much as it has first taken from them.

Moreover, with all taxes taking approximately one-fourth of our gross annual product a sizeable portion of our business community is dependent on a high level of Government spending for its livelihood. These, in fact, develop some degree of competition for Government expenditures and for enlarged public programs of all kinds. This is not the kind of expenditure which develops new wealth—it uses that already created. Only you and all other citizens all over America can stop this trend. Under our concepts, people are the Government. If citizens continuously press for ever-increasing public responsibility in the many facets of our national life, only increased public spending and increasing taxes can result. I do not believe such a course is either necessary or desirable. If we believe that opportunity is more valuable than security; if we believe that we as individuals have the capacity, the intelligence, the industriousness, and the creativeness to develop our re-

sources to provide greater opportunities for all of us, then we will resist as individuals and as a people passing our future to the keeping of Government. The price of freedom is eternal vigilance. Economic freedom is important too.

I do not deprecate the contribution of Government—local, State, and Federal—nor do I minimize its responsibility in resource development and especially in forestry. Necessarily the Federal Government as a land managing agency has played, and will continue to play, a significant and important role in resource conservation and in forestry particularly. I am sure all of us recognize the very real and significant contribution of the Federal Government through the United States Forest Service, particularly, but through other Federal land managing agencies as well to better forestry management and better forestry practice, both public and private.

I do want to emphasize that in the Department of Agriculture, through the United States Forest Service, it is firm policy that we will not duplicate or compete with State Governments in rendering forestry assistance to their own citizens. It is our purpose to encourage State forestry departments and to help them improve their services to private forest landowners in fire prevention, in pest and disease control, in management practices, in all phases of forestry.

All of us are stimulated and encouraged by the fact that here in the South people like yourselves in your private capacities are assuming greater and greater responsibility for development of forestry which is so significant to the South's economic future and which, it seems to me, will become increasingly significant with the passage of time.

The continued development of forestry in the South will not be without problems. In the 15 Southern States, private forest landholdings are distributed among 2½ million different owners. This means the average ownership is small, less than 70 acres per holding. Most of these small holdings have in the past suffered from inadequate fire protection, the ravages of forest pest and diseases and destructive cutting.

In the aggregate, these ownerships represent almost three-fourths of all the private commercial forest lands in the South. On a nationwide basis, the small forest ownerships represent 74 percent of total forest properties.

It is clearly evident to all foresters and to the private forest industries that the small private forest landholder holds a key position in the future adequacy of our production of forest products. Many of these small holdings do not of themselves provide a base of income to their owners. Fortunately, many of these holdings are in association with farm ownerships. Income from forest products is supplemental to farm income.

Another factor of increasing importance is the rapid industrialization within the Southern States. Many small landholders have been afforded opportunity for industrial employment and through the income thus provided are able to continue as landholders. It will take intelligent and sustained public and private effort if the greatest productiveness is to be achieved from these many small holdings, both here, in the South, and nationally. More effective programs of research, education, and technical assistance can bring to the owners of these properties the understanding and know-how necessary to make of these many small holdings productive and valuable enterprise. Fortunately, education in farm forestry is gaining ground rapidly through the extension service of our several land-grant colleges.

Many, if not most, of the large wood-using industries are providing management assistance to small forest landholders. Several public programs also afford help to these people—cost-sharing, tree planting, and forest land management through the agricultural conservation program; the low-priced planting stock from State forest nurseries with assistance from the Federal Government in the production of the planting stock rendered to State forestry departments. Many private consulting foresters are also doing an excellent job with small forest ownerships. The several soil conservation districts, through their State and national associations and within the individual districts themselves, recognize the value of forest properties and are rendering real service in more effective forest management on these properties.

The forestry task ahead, private and public, is to develop and apply the techniques that make possible increased yield and intensified use to achieve all the opportunities afforded from the forest resource. Here again the question arises of, "What part shall Government play?" I believe that Government, Federal or State, should undertake only those tasks which the people as individuals cannot accomplish for themselves.

Two of the most important contributions which Government can make is that stemming from research and from education. From research comes the necessary technology; from education comes an understanding of how to use that technology. Insofar as Federal assistance is concerned with respect to forestry on private lands, it can best be performed in cooperation with the States through established State organizations. Awareness of the opportunities available is also important. In this connection, organizations such as yours, the Forest Farmers, the Forest Industries, credit organizations, and others, have a real opportunity to supplement and complement public forces at work.

I understand that considerable stimulus is given to tree planting as a result of the conservation reserve portion of the soil-bank program. This planting will, of course, take place on lands which come out of crop production. Other lands are planted with planting stock made available under the cooperative Clarke-McNary program, pursuant to which low-cost forest seedlings are made available to State forest nurseries.

Forest-fire protection must be provided for all of our producing forest lands, public and private. Research must constantly go forward to find better and more productive species, to find the most effective ways of producing the greatest yields per acre of land in production, to find new uses for wood products.

But forest lands have other values than the production of wood products. In this section of the country, nearly all of the principal watersheds, as well as the smaller ones, are covered with forests. The manner in which these forests are managed and harvested will have important effects upon both the quantity and quality of water accumulated within these watersheds. Nationally, water is rapidly becoming recognized as the No. 1 resource problem. In the intermountain regions of the West where forest landholdings are predominantly in public ownership, the forests in that locale are, in many instances, more important for their watershed values than for the production of forest products.

The manner in which the multitude of small forest properties are managed here in the South can have an important impact upon your water supplies. We need to know more about the behavior of water under various types of forest management. Here again research is necessary and is under way.

The relationship of stocking intensities to total fiber yield is important in the production of pulpwood. The impact of forest pests and diseases and methods for combating them needs more clear understanding. More economical harvesting methods and better end product utilization, as well as the development of new products, is important to our forestry endeavors. In most of these areas research and education will play an important role.

It is, of course, well recognized that there can be no healthy forestry program unless there is a healthy forest-using industry to utilize the raw forest products and market them efficiently and profitably. In short, there is no one part of forestry which is separable from all of the other parts.

Forests provide important habitat for many species of wildlife. The effect of forests upon streamflow and stream temperatures are important to the sports fishery. A growing population is increasingly turning to the outdoors for more and more of its recreational activities. Here, too, is a problem and a possible opportunity to forest landholders.

Yes, forestry is more than planting trees. This you are demonstrating every day here in the South, even though you lead the Nation in tree planting—588,000 acres in fiscal year 1956, 92 percent of which was on private land. While we know that the various parts of forestry, from the planting of the tree to the use by the consumer of the product, are not separable, one from the other, we do know that the trees must be planted, managed, grown, harvested, and manufactured if forestry is to have significance. I am told there are 19 million acres in the 15 Southern States which are now understocked.

So there is a big job ahead. There is likewise a big opportunity. Let us together see to it that this opportunity is understood, that it is grasped, and that the benefits will, in turn, create further opportunities for the reward of individual effort, enterprise, ingenuity, and inventiveness.

While we who represent Government can help, should help, and wish to help, it is not for us to undertake any except those responsibilities which people in their private capacities are incapable of assuming. By the record you have achieved here in the South, I am convinced there will continue to be demonstrated the American tradition that our peoples have the capacity to create and to build for themselves. This is the spirit which has made this country the great Nation which it is. This is the spirit to which we might all dedicate our efforts to sustain.

I congratulate the Forest Farmers Associattion for their Southern Forestry Conference. I encourage and commend your efforts to make soil, trees, and water of increasing reward to the South and thereby to the entire Nation.

SEC's Power To Enjoin Proxy Fights in the Public Interest

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. CHIPERFIELD. Mr. Speaker, the current proxy contest being waged for control of Fairbanks, Morse & Co., between the Penn-Texas corporation headed by Leopold Silberstein and the present management, headed by its president, Robert H. Morse, Jr., is of widespread public interest. It is of particular import to many people in my district who are officers, employees, and stockholders of the Fairbanks, Morse & Co.

I want to call attention to the application of the proxy rules as they are administered by the SEC.

The Commission is an independent agency which must be impartial in its examination of proxy material used by participants. Its guiding purpose is to see that public stockholders receive protection from false, misleading, and irrelevant statements to which they are entitled.

Early in 1956 the Commission revised its proxy rules to permit more effective control over proxy solicitation, especially in the case of contests for the election of directors. In recent years there have been many bitterly fought proxy contests between management and groups opposing, with the control of large corporations at stake. The Commission recognizes the legal relationship of a proxy holder to the security owner as that of being a fiduciary and that proxy holder is, accordingly, subject to legal concepts generally governing the conduct of directors who manage corporate affairs. Documents that are to be used for the solicitation of proxies must be filed with the Commission and be examined to see whether they comply with the Commission's standard of disclosure. The responsibility for the accuracy and completeness of the material used rests with the user of the material.

It is within the power of the Commission to institute proceedings to enjoin solicitation of proxies; to compel resolicitation or to restrain the voting of proxies where it has reason to believe that false or misleading statements are being used in seeking the support of stockholders. In fact, the Commission must turn to the court for plenary action since it has no administrative process for compelling false or misleading material to be corrected, nor can it by its own order stop a solicitation which violates these rules. The compelling force which the Commission may use is to seek Federal court action to prevent the use of material that is misleading or false.

In the bitterly fought Fairbanks, Morse proxy campaign the principal issue is whether all persons and institutions who should be named as participants have been named, and whether they have complied with the Commission's requirements for filing information as to the extent and nature of their interest. This question is particularly pertinent since large blocks of Fairbanks, Morse shares are reported as under contract of purchase by Penn-Texas through foreign banks or institutions who are admittedly only agents. Their principals are hidden behind the rule of secrecy, imposed by foreign laws. As it stands, persons or institutions who are probably actual participants have not been required to disclose their background, personal history, the extent of their ownership or the circumstances under which they became participants. Nothing is known as to the transactions by which their holdings were acquired or whether there are any understandings or arrangements affecting their disposition. The Commission has always regarded this type of disclosure as vitally important in protecting investors in corporate control contests. In this case, with the issues being so bitterly contested, it is essential to any fair decision. The admitted failure of the holders or beneficial owners of large blocks of stock to comply with requirements of disclosure prior to voting the proxies should be adequate basis for the SEC to invoke its statutory powers to restrain the voting of such proxies until there can be no question about compliance.

We Can Build Our Own Schools

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. JENSEN. Mr. Speaker, it is refreshing when a Congressman receives letters such as the following. It gives cause to at least hope that the American people still believe in the principles that made our country great—individual responsibility. I am proud to say that I receive very few letter from the people of the Seventh Iowa District in favor of Federal aid to education.

I congratulate Dr. Odell of his letter to me, which follows:

MARCH 11, 1957.

Hon. BEN F. JENSEN,
House Office Building,
Washington, D. C.

DEAR MR. JENSEN: I have been reading with much interest the accounts of the various attitudes and feelings, concerning Federal aid to school construction, on Capitol Hill.

I cannot know how the mail may be running from the Seventh District on this subject, but I would like to express my view on it.

I, as a member of the school board of the Red Oak Independent School District, have been vitally interested in schoolroom shortages. We are currently in the process of preparing our second schoolhouse bond issue in 10 years. We are going to have to build, as we are short of space and expect the load to be with us for a number of years. Our local taxes are quite an item now, as they must be everywhere. The competition between the Federal and local governments for the tax dollar is becoming greater each year, as you know.

I have felt for a long time that there are many things in our community living which we must assume more responsibility for ourselves, and here at home. Schools are among these things. We can build better and less expensively by doing it without help, and above that we must assume the responsibility for it.

Lack of financial responsibility, I am afraid, is a disease which most of the people in the United States have been victims of for about 25 years. Now it is becoming a disease of communities and of States. In my lifetime I think it may be entirely possible that the Federal Government will be responsible financially (through taxation, of course) for the birth, health, education, old age, and burial of all of us. I sincerely hope this will not happen—I am 34 years old.

We can build our own schools, and if we do, we can pay for them here. We must be responsible for something.

If your thoughts are along these lines, I would appreciate appropriate action on H. R. 1 and H. R. 3986 when they come up.

Sincerely,

JOHN H. ODELL, D. D. S.

A Petition To Get the United States Out of the U. N. and the U. N. Out of the United States

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. BURDICK. Mr. Speaker, I present a petition from citizens of Alabama and Georgia relative to the United Nations. It is obvious that I am not the only one who desires to get Russia out of that organization, or if that cannot be done, to get out ourselves.

Since the President has shown some 14 violations of the Charter of the United Nations by Russia, something should be done. As long as Russia remains in the organization with its well-used veto power, nothing will result in the name of world peace. Russia prospers on a cold war, and does not seek peace. She talks peace, but when a move is made for that which all people long for, the Russians stop the movement before it gets started. While Russia cannot veto action by the Security Council, they have control of that through a Russian Communst who is permanent Secretary of Military Affairs, and therefore are in a position to thwart security action. Here follows the petition:

We, the undersigned, citizens of the United States and registered voters in our respective States, respectfully submit that in the year 1945 the United Nations premeditatedly employed deceit, fraud, and misrepresentation to delude and seduce the Senate Foreign Relations Committee into ratifying the U. N. Charter, and thereby gravely endangering the sovereignty of the United States and the freedoms of the American people as guaranteed by our Constitution and Bill of Rights, to wit:

The United Nations Charter, section 7 of article 2, says: "Nothing contained in the present Charter shall authorize the United Nation to intervene in matters which are essentially within the domestic jurisdiction of any State."

Had it not been for this provision the Charter would not have been ratified by the Senate in 1945.

But immediately after the ratification the U. N. did wilfully and deliberately proceed to plot to transform itself into a super one-world government that would absorb the United States, destroy our sovereignty, and void and nullify our Constitution. To achieve those objectives the U. N. set up special agencies, such as ILO, the Economic and Social Council, UNESCO, etc, etc., through which they nullified various of our State and Federal laws. They further wilfully employed fraud and deceit in an endeavor to delude the Senate Foreign Relations Committee into ratifying additional "treaties," such as the "Genocide pact," the "Covenant of Human Rights" and 200 similar "treaties," any one of which would have forever destroyed the freedoms of the American people. They further wilfully and deliberately concealed the existence of secret agreements, not written into the Charter, one of which provided that the military head of the U. N. is always to be a Moscow Red—and we provide documentary evidence that 132,000 of our boys who fought in Korea were ambushed and trapped, mur-

dered, and maimed, as a result of the Red Chinese receiving advance information through that U. N. military head.

(NOTE.—Ten pages of documented evidence will be attached to the petition when it is submitted to the committee.)

Had the Senate foreseen these developments the Charter would have been overwhelmingly rejected in 1945.

Therefore we do earnestly and prayerfully beseech and implore the Foreign Relations Committee to weigh and appraise the documented and prima facie evidence submitted with this petition and to move to rescind and revoke the original ratification on the ground that it was obtained by fraud, deceit, and disrepresentation, with intent aforethought to destroy the sovereignty of the United States and the freedoms of the American people as guaranteed to us by our Constitution and Bill of Rights.

This petition was signed by 98 people from Alabama and Georgia and I have their names on file in my office.

The Menominee Indian Tribe

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. LAIRD. Mr. Speaker, I have today introduced a new bill which provides for a 2-year extension on the final termination date of Federal supervision of the Menominee Indian Reservation. I have been advised by the Wisconsin State Committee on Menominee Indian Affairs and the Menominee Indian Tribe that it will be impossible for a final termination plan to be placed in effect by December 31, 1958. For that reason, the new bill which I have introduced today provides that the termination date be extended until December 31, 1960, and the date for filing the termination plan be extended from December 31, 1957 to December 31, 1959.

Under unanimous consent I include in today's RECORD two editorials which appeared in the Shawano Evening Leader, Shawano, Wis., under dates of March 15, 1957, and March 21, 1957, which expresses the concern of many people in Wisconsin over the present termination date.

The editorials follow:

[From the Shawano Evening Leader of March 15, 1957]

THE INDIAN (BUREAU) PROBLEM

The Menominee Tribe of Indians has just completed 2 days of conferences and negotiations with Mr. Glenn L. Emmons, the United States Commissioner of Indian Affairs, and more than a half dozen of his top aids.

Now that it is over, there is cause for wonder just what this important delegation came to the reservation for to meet with our Menominee friends.

Surely if the Emmons Co. came to the Menominee Reservation to provide the answers to the many perplexing questions facing the tribe, they might just as well have stayed in the United States capital.

It has been a long time since our area has experienced the evasiveness and the coyness which characterized the 2 days of conferences at Neopit.

The Menominee people had some serious questions for the Federal officials. And how these questions will be answered affects them dearly.

Take for example, this intelligent query by Mr. James G. Frechette, chairman of the Advisory Council:

"We have arrived at a point where general research (on termination) has been completed. We need more time to complete plans for termination. We are compelled to ask the question, 'Where do we go from here?'"

In other words, the Menominee leadership wanted to know whether the high officials of the Indian Bureau were prepared to go to bat for them on acquiring an extension of time.

Commissioner Emmons' reply included this, among other things:

"We will thoroughly consider the facts when we get back to Washington.

"We want to give young Indian people the tools and confidence to go outside and get a job and succeed.

"American Indians make the best employees any industry can employ.

"Given the opportunity, Indians can do what any other people can do."

Nice words came from Mr. Emmons' lips, but no answer to the question.

He didn't even come close. Not one of Mr. Emmons' many aids arose to cover the ground the Commissioner so glaringly left uncovered.

Did not the tribe have a right to expect a crisp and definitive answer so that it could map its plans accordingly?

This is but one instance. There were others equally obvious. It required no perceptive powers to spot them.

Overall, the 2 days at St. Anthony's auditorium were friendly and cordial. But cordiality and good fellowship are not enough to solve the burning problems facing the Menominee people.

The Menominees have reason to expect concrete assistance, specific answers, and helpful suggestions from the Indian Bureau which has served as their supervisor for a century. Alas, how this was lacking Tuesday and Wednesday.

It leads one to the conclusion that the Indian problem would not be nearly so grave if it were not for the Indian Bureau problem.

[From the Shawano Evening Leader of March 21, 1957]

MORE ON THE INDIAN BUREAU

A number of citizens with a firsthand grasp of the facts have commented with favor upon this column of 6 days ago which dealt with the Indian (Bureau) problem.

It was pointed out then that—on the basis of the showing of the United States Indian Commissioner and a half dozen of his high-priced aids—the Bureau was fully deserving of a high ctiation for evasiveness.

The Commissioner and his assistants came to the Menominee Reservation ostensibly to help the Menominee people with their termination problems and to answer their questions.

The way it turned out, what concrete and substantial discussion resulted from the meeting came from the Indian people themselves. And they were left to answer their own questions.

The Menominee people have plenty to be dissatisfied about in the United States Indian Bureau. Their great protector proves out to be a spineless and weak-kneed agency instead of a defender of the people it is supposed to champion.

Now comes new data to bolster the Menominees' complaint against the Federal agency with which they must deal in their important termination negotiations.

The New York Times reports that an Episcopal minister who is a Sioux Indian "has brought home to New Yorkers something of the sense of desperation with which many American Indians must today be facing their future." Dr. Vine Deloria called for the adoption of a point 4 program to help the Indians of our own country.

The Times comments that a large portion of the Indians is suffering from lack of a clear and progressive policy on the part of the Federal Government.

"Such policy as there is has been satisfactory. The proposal, endorsed by Congress a few years ago, to terminate Federal responsibility for the Indian as rapidly as possible cannot and should not be carried out on any large scale. * * * The Federal Government is not going to make the Indian problem go away just by wishing it would. There is a deep and lasting obligation to help the Indian defend himself against the corrosive pressures of a civilization into which * * * he is not prepared to enter as an independent competitor."

The Times notes that 1,600,000 acres of Indian lands have passed out of Indian control in the Plains States during the last 4 years and that Indian landholders have not been able to withstand the temptation to sell their acres for immediate gain. It believes that the influence of the Federal Government ought to be brought to bear on this situation.

The leadership of every Indian tribe in the United States foresees the day that the United States Government will be out of the Indian business. And they see it ultimately as a desirable thing.

But why should a 40-year termination project be rushed to the extent that it must be accomplished in 4 years? And why is such pathetically little advice and guidance provided by the United States Indian Bureau?

Maybe some kind of point 4 program is needed. There is need for a program more definite and more inspiring than the United States Indian Bureau have provided to date. A new Federal program and new, dedicated leadership in the Indian Bureau are called for.

Good Plan To Aid Science Study

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. MCGOVERN. Mr. Speaker, Senator GEORGE A. SMATHERS, of Florida, and Congressman FRANCIS E. WALTER, of Pennsylvania, have introduced excellent bills which provide for the investment of certain funds obtained under the provisions of the Trading With the Enemy Act and also provide for the use of interest from such investments for scientific scholarships and fellowships for children of veterans.

The proposal would make available an additional $3 million a year for the National Science Foundation without any additional appropriation by the Congress. The foundation, established by act of Congress in 1950, would operate under existing law and would select students for scholarships on the basis of ability with the widest possible geo-

graphic distribution. The Veterans' Administration advises that there are some 2,500,000 children of veterans in the college age category who would be eligible to compete for scholarship assistance under the proposed program.

I have introduced a similar bill on March 21 with the conviction that the measure will not only contribute to our national defense, but will convert enemy assets dating from the recent World War II to constructive peacetime purposes. The editor of the Sioux Falls (S. Dak.) Argus-Leader has written an excellent editorial in support of this proposal dated February 20, 1957, which I include as follows:

GOOD PLAN TO AID SCIENCE STUDY

A proposal that deserves favorable consideration in Congress is the one advanced by Senator GEORGE A. SMATHERS, of Florida, to promote scientific education.

Senator SMATHERS would use a part of the proceeds obtained under the provisions of the Trading With the Enemy Act "for scientific scholarships and fellowships for children of veterans."

The funds involved are those obtained from the wartime confiscation of enemy property. There are claims of various amounts against these, but Senator SMATHERS believes that at least $100 million could be made available for the scholarships and produce a return of about $3 million a year for the purpose he has in mind.

Under the terms of the proposal made by the Florida Senator, scholarships would be determined on a basis of ability with a broad distribution throughout the United States.

There is much merit in this suggestion. Scientific education has been lagging in the United States, and Russia today is devoting much more attention to this type of education than this country. Unless we do something about it, we could find ourselves seriously handicapped in future years because of inadequate training in fields that are important to our security and well-being.

A question might arise, however, in respect to the limitation of the scholarships to children of war veterans. Perhaps it should be broadened to make eligible all children.

But, nevertheless, the general idea is an excellent one and it is to be hoped that Congress approves it.

Maryland Day

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. MILLER of Maryland. Mr. Speaker, today is Maryland Day and, in common with all sons and daughters of the great little Free State, I join in singing its praises and in pausing to review the great inheritance and inspiration that is to be derived in remembering the great debt we owe to those who have gone before us in its history of nearly three and one-quarter centuries. Maryland is still, and I hope always will be, a strong point in the structure that has made America great, an area dedicated to rugged individualism and the system of free enterprise, coupled with a high sense of moral values and the importance of tolerance.

Under leave granted, I include herewith the remarks of Maryland's Gov. Theodore R. McKeldin, prepared for delivery at the luncheon held today by the Maryland Society of Washington:

ADDRESSES OF THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND, MARYLAND SOCIETY OF WASHINGTON, MARCH 25, 1957

We Marylanders have always been a trifle careless about real estate. If the second Lord Baltimore could have been a bit more tenacious of his rights, all of Delaware and half of the city of Philadelphia would be in Maryland today; and if Maryland, in 1846, had demanded the retrocession of the river when Alexandria demanded retrocession of the land across the river, the District of Columbia today would be totally surrounded by Maryland, which, as things are, encompasses it only on three sides.

But the barons of Baltimore, apparently more peaceful than the Quakers, preferred to surrender 14 minutes of latitude rather than quarrel endlessly with Pennsylvania. Later Marylanders have not cared much that Maryland's ownership of the Potomac itself is interrupted from Little Falls to Jones Point. It relieves us of the responsibility of enclosing the District completely and, therefore, of having to provide means of exit to Virginia, whether for Government girls or for the Union Army.

Nevertheless, the three-quarters enclosure has had an appreciable effect on both the State and the District. The enforced intimacy has not always been comfortable for either, but it has had advantages for both and I believe that, on the whole, the advantages have outweighed the discomforts. In recent years, especially in the past quarter of a century, the presence of the National Capital within the body of the State has given to Maryland a cosmopolitan flavor that it could hardly have acquired otherwise. On the other hand, the fact that about one-third of the people of Washington are technically Marylanders has given the Capital a provincial flavor that it could not have retained otherwise.

I am aware that to some minds the word "provincial" has a derogatory significance; but that simply means that such minds have not understood the full meaning of the word. The United States is a Federal Republic, which is to say it is of a dual nature, and when a citizen forgets that he loses something of his Americanism. Yet when a man is employed by the Federal Government, especially if he is a career man who remains in the service for many years, his daily concern with affairs of national scope is likely to blunt his appreciation of the importance of local affairs. But if he returns at night to a neighborhood in which State citizenship is exercised to the full, the balance is restored. I believe that a lively interest in the public business of Montgomery or Prince Georges County, and the State of Maryland makes a man more, not less competent to deal with affairs of national scope.

In any event, the greatness of America is based as much on diversity as on unity. This is a historical fact that recent events have tended to obscure in the minds of many of us. Three times within the memory of living men we have had to face crises that threatened our national existence and in such a crisis, of course, unity is all important. Twice we have had to fight for the Nation's life against powerful coalitions of hostile powers; and once we had to face an economic collapse worldwide in its ruinous influence. Then indeed it was all for one and one for all; and after a triple experience of that kind it is easy to forget that diversity also has its uses.

Even today, as regards foreign affairs, we are facing a vast concentration of power, dangerous in its military strength and perhaps even more dangerous in its insidious ability to deceive and mislead the minds of men. So in foreign affairs we have realized that divided counsels are no longer permissible and have decreed, in theory at least, that politics shall cease at the water's edge and our policy abroad shall be bipartisan.

But in domestic affairs we have shown some tendency to carry that attitude too far. Some of us have conceived the idea that the unity that must be maintained in time of war, by force if necessary, is equally necessary in time of peace. Thus there has arisen among us a tendency to put down dissent on the assumption that all dissent is of the nature of sedition. But this attitude forgets or ignores two-thirds of the motto on the Great Seal and on every coin of the United States. It includes three words, not one. Its last word, its climax, is indeed, unum, expressing the unity that we have achieved; but before that come two others, e pluribus, describing the origin of our unity, which is based on the free consent of many.

I think it would be well for us in these stressful times to ponder the significance of one feature of our colonial history, a device that was invented in equally stressful times, and that served the country well. I refer to the Committees of Correspondence that historians agree did more than any other invention to knit the colonies together.

They were based on a realistic admission of diversity. It was necessary for Massachusetts to know what Georgia was thinking; it was necessary for Maryland to act with caution until the opinions of New York and the Carolinas were known. The Committees of Correspondence were in effect an admission that nobody pretended to know all the answers and that everyone had a right to be heard.

That is as true today as it was in 1772, when the first Committee of Correspondence was set up in Boston. James Otis, its chairman, was a man of strong convictions, but he did not on that account refuse to listen to what Charles Carroll, of the Maryland committee, had to say. The descendant of the Massachusetts Puritans and the pupil of the Maryland Jesuits doubtless abhorred each other's religious principles, but each respected the other's intelligence and patriotism, each knew that he needed the other's strength.

So do you and I today. It is in the battle of contending ideas that the false is exposed and the true discovered, for none of us knows it all. The very fact that in America we have every kind of man is the ground for our hope that by hearing them all we may find out the best. Of course our enormous population includes a certain number of fools and villains, and it is hard to be patient when folly and villainy are being shouted from the housetops. But it is necessary for the simple reason that hitherto unknown truth, when it is first proclaimed, always sounds like folly and often sounds like villainy. But the test of truth, as Justice Holmes remarked, is its ability eventually to get itself accepted in the market place against the competition of every kind of falsehood. By the market place Holmes meant the free field of ideas in which every man can express his opinion without let or hindrance.

That market place we must preserve at all costs. The fact that it is clamorous is annoying, but the annoyance must be endured. The fact that false leaders in the beginning may outshout the true, and for the moment gain the ear of the multitude, is terrifying, but the danger must be faced. Freedom is not, never has been, and never will be altogether safe; but to submit to tyranny is

always moral and intellectual suicide, and often physical suicide too.

We cannot ever be completely safe in this world; yet by accepting freedom with all its danger we have not only survived thus far but are at this moment by far the safest people on the face of the earth. Americans are constantly running risks and some of them die violent deaths every day; but so do other people. Can you think of any other place where the average man has a better chance of living tranquilly and dying in his bed than in this country where for nearly 200 years all kinds of dangerous ideas have been expressed with complete freedom?

More than that, it is my firm conviction that as far as the art of self-government is concerned we have discovered more of the truth than any other nation. I am not complacent about it. I know that we have a great deal still to learn—so much that we are far closer to the beginning than to the end of our political education. Nevertheless, the principle of free speech has served us magnificently for more than five generations; and it is my profound belief that it is capable of serving us still better in the years that lie ahead.

As a Marylander, it is my special pride that we began this process in Maryland. It is true that the colony established in 1634 extended tolerance only to religious ideas; but once established in that field its spread to all the other activities of the mind of man was inevitable. Where that great stone cross rears against the sky on an island a few miles down the river from Washington, the idea was introduced that eventually led to freedom of speech and freedom of the press, as well as freedom of worship.

So you members of the Maryland Society, in the enjoyment of a proud tradition, have also a great responsibility to carry. It is for you to make sure that the tradition is sustained. Far be it from me to deprecate the contribution of others; similar groups from other States also have their traditions, and with them their responsibility. I merely assert that the Marylander's first duty is to be a free man, especially in the realm of ideas.

It is in some respects an onerous duty. It is not easy to be free at a time when all the world seems to be afflicted by a great stampede from freedom. It is far easier and far safer to run with the herd. But it is not consonant with the traditions of Maryland. The blindfold over the eyes, the gag in the mouth, the fetters upon the wrist that will not permit the hand to write—these are the peculiar abhorrence of our State, these are the things against which we must contend; for to the fight against them long ago we pledged our lives, our fortunes, and our sacred honor.

Greetings to Walthall's New Publisher

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the March 18, 1957, issue of the McComb (Miss.) Enterprise-Journal:

GREETINGS TO WALTHALL'S NEW PUBLISHER

The Tylertown Times has a new editor and a new owner. He is Paul Pittman. Recently Lester Williams, former president of the Mississippi Press Association, who took over the Tylertown Times at the age of 23 to become the State's youngest editor, relinquished the field to its new publisher who at the age of 25 again gives Tylertown recognition as having the State's youngest publisher. It is interesting to observe that Editor Pittman takes over the Walthall County newspaper during the year of its golden anniversary.

Young Mr. Pittman will not have to go through a period of years becoming acquainted with his area. He is a native of Walthall County. He graduated from Ole Miss where he specialized in journalism. His wife, formerly Miss Betty Ann McDonald, is also a graduate of the University of Mississippi.

The former Navy Antisubmarine Squadron flyer is well qualified for his new post. Above all he has enthusiasm and a wholesome point of view toward the task of editing a newspaper. He wants most to give his people the best possible newspaper consistent with the resources of his country. He is interested in his town and area. He will prove to be a good newspaperman as well as an earnest community builder. There is, indeed, a close relationship between community development and the editing of a hometown newspaper. Mr. Pittman has that attitude toward his newspaper and his community which will benefit the people he has chosen to serve.

Walthall County is a progressive county. It is often referred to as a "good county"—one of the top agricultural counties of Mississippi. Our best wishes go to Lester Williams in retirement from the Tylertown Times. Our felicitations to Mr. Pittman and to the people of Walthall County—our congratulations.

If a President Collapses

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. EVINS. Mr. Speaker, the March 23 issue of the Saturday Evening Post contains a brilliantly considered article by its Washington editor, Beverly Smith, Jr., concerning the much discussed and unsettled matter of national interest which calls for considered legislative action. That issue is who, constitutionally, can act in case of the inability of the President to discharge the duties of his office.

Mr. Smith points out the two crises that almost developed in our history during the long illness of former Presidents Garfield and Wilson. In both instances Congress debated the issue but failed to act. The writer declares that in a nuclear and atomic age the hazards to the President are far greater than ever before and indicates that the absence of Presidential leadership, action, and power, in case of disability, may lead to far greater consequences. He discusses several proposals before Congress citing that our Constitution fails to spell out who can act for a disabled Chief Executive—and concludes that no thoughtful citizen can disagree with President Eisenhower's warnings that the doubts surrounding this question should be resolved.

Because this article summarizes so brilliantly the whole disturbing situation, I commend the article highly to my colleagues and ask that it be preserved in the RECORD.

The article entitled "If a President Collapses," follows:

IF A PRESIDENT COLLAPSES

(By Beverly Smith, Jr.)

(EDITOR'S NOTE.—Our Constitution fails to spell out who can act for a disabled President. Here are the many proposed solutions to a problem we can no longer neglect—including Smith's 2 Cents' Worth.)

On Thursday morning, January 19, 1956, I was 1 of 290 newspaper, radio and television reporters crowded into a room in the old State, War, and Navy Building, awaiting the arrival of the President. The atmosphere was tense, because this was Mr. Eisenhower's first large-scale news conference since his heart attack on September 24, 1955.

Promptly at 10:32 the President entered. He strode to the front of the room, to take his place under the dazzling lights of the cameras. He looked thinner than before his illness, but his step was firm, his blue eyes clear and steady.

Quickly the questions turned to the state of his health. He answered frankly and seriously, but with as much impersonal detachment as if he were discussing a weather report. Then came a question which made me strain my eyes and ears still further, to be sure of the answer. The question was asked by W. H. (Bill) Lawrence, White House correspondent of the New York Times. It was:

"Mr. President, have you considered what, if anything, should be done about the failure of the Constitution to specify when and by whom the disability of the President might be declared, and when and by whom it might be removed?"

Here was a question which has puzzled officials and students of American government since the Constitution was written. It must often have haunted the minds of our Presidents and Vice Presidents, especially since that July day in 1881 when President Garfield was shot, and then lingered on, helpless and frequently unconscious, for more than 11 weeks until his death. It was a question which, had it been cleared up before Woodrow Wilson's tragic collapse in 1919, might have permitted the entry of the United States into the League of Nations and thus—some historians believe—have prevented World War II.

It is a question, also, the solution of which grows ever more urgent. With every advance in the speed and range of planes and missiles, with every increase in the destructiveness of nuclear weapons, the possible perils of presidential incapacity in a time of crisis become more apparent. This has no special reference to Mr. Eisenhower, who, as this is written, is believed fully restored to health. But any President, however young and vigorous, can be unexpectedly stricken by illness or accident which utterly incapacitates him for days or weeks or longer. There are certain decisions which, under the law, only the President can make.

And so Bill Lawrence's question was a bold one, and a tough one, to put to a President just recovering from a critical illness. Some Presidents might have resented it. Mr. Eisenhower answered it readily and willingly. His answer indicated that he had pondered the matter deeply, and perhaps consulted with his legal advisers. He spoke earnestly. He said:

"Well, when you are as closely confined to your bed as I was for some time, you think about a lot of things, and this was one of the foremost in my mind. I do believe there should be some agreement on the exact meaning of the Constitution—who has authority to act.

"The Constitution seems to be clear the Congress can not only make the laws of succession but it can determine what is to be done. * * *"

Mr. Eisenhower then made a reference to the sentence in the Constitution which begins: "In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President——"

But, Mr. Eisenhower pointed out, the Constitution does not say who shall determine the disability of the President. "And," he continued, "we could well imagine a case where the President would be unable to determine his own disability."

Therefore, he said, he thought that Congress should study every phase of the subject "in its broadest aspects." He suggested that Congress advise with the Attorney General, and he offered any advice which might be helpful from the Executive Department. The doubt surrounding the question, he said, should be cleared up. And he concluded: "I think it would be for the good of the country."

Mr. Eisenhower's impressive admonition had its effect. Studies were begun in the office of the Attorney General, and hearings were held in Congress. EMANUEL CELLER, of New York, chairman of the House Judiciary Committee, who had circulated a questionnaire on the subject, made public the replies of a score of eminent authorities on government, including former President Hoover. Noted experts on constitutional law appeared before the Judiciary Committee and made their recommendations. But positive action was stalled by two events: the President's intestinal attack last June, and the subsequent presidential campaign. Members of both parties felt that discussion, right then, of presidential disability might be construed as raising the "health issue."

Now, with the President reelected, restored to vigor and reportedly as anxious as ever for a clear solution of the disability problem, the way seems open for congressional debate and action. A number of bills, varying widely in their approach, have already been introduced in the House and Senate, and have begun their tortuous crawl through the committees. Other bills are in preparation. Still other solutions have been proposed by jurists, journalists, and public officials.

The danger is that Congress, which has always dodged this problem in the past, will quietly brush it under the rug again before adjournment. Admittedly it may be difficult to obtain majority agreement on a solution. And the subject, thus far, hasn't developed much voter appeal.

FREDERICK G. PAYNE, respected Republican Senator from Maine, believes a statute would suffice. It would allow the Vice President, whenever he believes the President is so incapacitated that he cannot act upon his own disability, to notify the Chief Justice. The Chief Justice would then appoint a panel of 3 to 5 qualified medical specialists in civil life. If they unanimously found the President unable to perform his duties, the Vice President would take over until the President stated that he was able to resume.

Chairman CELLER has heard enough expert testimony on this subject to make your head swim. He believes the situation could be clarified by a concurrent resolution. It would authorize the Vice President, whenever he decides the President is incapacitated, to convene both Houses of Congress and announce that he has taken over the powers and duties of the Presidency. It would allow the President to resume his duties when he feels fit to do so.

Arthur Krock, veteran Washington correspondent of the New York Times, has been a shrewd observer of our Government's working since 1910. He remembers the dreadful and unsolved dilemma posed by Wilson's collapse in 1919. Appearing before Mr. CELLER's subcommittee, he commented severely on the proposal to allow a Vice President, on his own initiative and decision, to assume the mighty powers of the Presidency.

"Preposterous," he said, "* * * It is beyond credence that Congress, the courts or the people would accept such an arrangement."

Mr. Krock's own suggestion is, in brief, that Congress create a permanent Inability Council composed, ex officio, of 6 congressional leaders—of both parties and from both Houses—and of the 5 senior members of the Cabinet. This Council, if a serious question of inability were raised, would consult with an advisory panel of 5 leaders of the medical profession. If a majority of the panel finds the President incapacitated, in a written public report, the Council in turn, by majority vote, could make a report of inability which would be decisive. On recovery, the President could be restored to his duties by the reverse process.

You can see at once, from the above 5 proposals—and there are others—that we have here what is called a healthy difference of opinion. So healthy, indeed, as to threaten indefinite delay in agreement on a solution. And such delay might be unhealthy to the point of disaster.

There is a brighter side, however, which the above brief summaries fail to reflect. Most authorities, whatever their other differences, agree on certain fundamental propositions which, if they could be clarified by prompt congressional action, would dissolve much of the present perilous uncertainty.

The most serious uncertainty is this: If a President becomes disabled and the Vice President takes over, does he merely take over the powers and duties of the office (as acting President)? Or does he assume the office itself, and thus become the President? It makes a vast difference. If the Vice President becomes the President, then we have the absurdity of two living men, each President of the United States. And suppose the original President feels fit to resume his office, but the successor President—having tasted the power and the glory—declines to step down? Apparently he could then be removed only by impeachment proceedings—a long and messy process involving conviction of high crimes and misdemeanors.

The commonsense of the matter is that the Vice President should take over a disabled President's duties only as acting President. Many authorities believe that Congress could properly by law declare this to be the fact. But Congress has never got around to declaring it. Thus a doubt remains, which has caused trouble before, and could cause worse trouble in the future. Consider the past:

The semideranged assassin, Guiteau, shot President Garfield on July 2, 1881. Garfield lay desperately ill, much of the time in coma, until his death on September 19. Members of his Cabinet discussed the problem. At one time they agreed that it would be desirable to have Vice President Arthur become acting President until Garfield's hoped-for recovery. They took no action. What deterred them was the possibility that Arthur might thus become the President, thus excluding Garfield from office for the remainder—nearly 3½ years—of the term. Loyalty forbade their taking such a risk without Garfield's approval, and he was too ill to be consulted.

During Garfield's illness much public business was neglected, and our foreign relations took a turn for the worse, but the Nation—safe then behind its oceans—wobbled through without major mishap. The dilemma was removed, and soon forgotten, after Garfield died and Chester A. Arthur became President. Arthur, who had been acutely worried and embarrassed during Garfield's illness, urged Congress to take clarifying action. Congress talked about it and—did nothing.

After Woodrow Wilson's collapse in 1919, some of his associates, including Robert Lansing, his Secretary of State, considered whether Vice President Marshall should be asked to take over temporarily as acting President. Here again, doubt whether Wilson could later reclaim his position prevented any action. In Wilson's case there were so many complicating factors—which will be referred to later—that a simple law authorizing the Vice President to take over temporarily as acting President would hardly have sufficed.

But such a law, it is generally agreed, would be helpful in most ordinary cases of Presidential disability. And once this point is cleared up, a further useful provision would be in order—namely, that a President be authorized to announce his own temporary disability, thus "devolving" his duties upon the Vice President. (An ailing President could then do this with his mind at rest, knowing that his duties would be restored to him on his recovery.) Most authorities agree on this. The only objection I've heard is that a malingering President might take advantage of this to shirk his duties and responsibilities. The obvious answer is: If a President should become so sick of mind or poor in spirit as to do such a thing, his declaration of inability would be a blessing for the Nation.

There are also several minor points on which most of the experts seem agreed. One is that while there might be a finding of temporary disability, there should never be a finding of "permanent disability." First, because in these days of medical miracles it is always possible that the President may recover. Second, that because it would be an unnecessary and cruel blow to an ailing President to declare him permanently incapacitated.

Further, it is felt that when a Vice President takes over as acting President, he—as well as the ailing President—should receive presidential pay. When the President recovers, the acting President would revert to his pay and status as Vice President. Similarly, if the Speaker of the House, who is second in line of succession, were called up as acting President, his pay and status in Congress should be merely suspended, reverting to him upon the President's recovery. Otherwise the Speaker, after serving a few weeks as acting President, might find himself out of a job—a job which he had won by decades of public service. The same logic applies to the next in line of succession, the President pro tempore of the Senate.

All the above pesky underbrush could and should be cleared away. Then we reach the major obstacle in the way of a solution—the tough question posed by President Eisenhower himself—who shall determine the disability of a President, when the President is unable to determine his own disability?

The importance of the question has been veiled from the public by an extraordinary series of chances and events. Physicians tell me it is amazing, by the law of averages, that no American President has developed overt mental derangement. We cannot expect this luck to continue indefinitely. Mental illness, particularly a borderline case, would confront us with the most agonizing dilemma of all. Any procedure set up to determine presidential disability must embody the clarity, strength, and public acceptance to cope with such a situation.

Consider the case of President Wilson. Following his stroke and paralysis he did not suffer from mental illness in the ordinary sense. At times his mind functioned brilliantly. But his terrible physical illness produced a nervous and emotional instability, a reluctance to take the initiative, an invalid's seclusion from the events of the world, which certainly impaired his judg-

ment and his ability to deal with his fellow men. These side effects were as complex and tragic in their results as certain forms of mental illness might be. They persisted, in varying degree, through the remaining 17 months of his presidential term, and indeed until his death in 1924.

It came on this way: In the late summer of 1919, Wilson, already worn down in his battle for the League of Nations, decided to take the issue "to the people." Valiantly he set out on a punishing, nationwide speaking tour. His train left Washington on September 3. The weather was torrid. There was no air-conditioning in those days to keep out the heat, dust, and cinders. He made 1 or 2 major addresses, plus a dozen whistle-stop speeches, per day. The strain and fatigue increased. Racking headaches began to torture the President. He would not quit. In the early-morning hours of September 26 his body, less strong than his will, broke down. A stroke (or cerebral hemorrhage) paralyzed his whole left side from jaw to foot. He called to Mrs. Wilson, who quickly summoned Wilson's personal friend and physician, Admiral Grayson. On Grayson's order, the tour was abandoned and the train headed for Washington.

Now note this sad and fateful circumstance. Mrs. Wilson records in her memoirs that, as she sat near her husband at dawn on September 26, she felt: "From that hour on I would have to wear a mask, not only to the public but to the one I loved best in the world; for he must never know how ill he was." And Josephus Daniels, in his Life of Woodrow Wilson (1924) wrote that Wilson, soon after his collapse, "exacted a promise from his wife and doctor (Grayson) that his condition, if serious, should not be made known. The country knows how true they were to the promises."

Such affectionate loyalty inspires sympathy, but the result was that the facts of Wilson's illness were long concealed from the public, and even today few people realize how sick a man he was, not only in the weeks following his stroke, but in the months and years after his "partial recovery." Mrs. Wilson't words, above, suggested the possibility that Wilson himself never knew "how ill he was." If so, this presents the hard case, envisioned by Mr. Eisenhower, of a President "unable to determine his own disability."

The loyal secrecy surrounding a President has complicated the question of disability. The bulletins from Garfield's bedside were vague and overoptimistic. Even the forthright Grover Cleveland concealed from the public the fact that he had a cancer operation while he was President. The secrecy around Wilson's illness was so dense that the Vice President and members of the Cabinet were for a time kept in the dark. And President Franklin Roosevelt's intimates, from sometime in 1944 until his death in April 1945, knew far more about his failing strength than was divulged to the public.

One of Mr. Eisenhower's most useful and least appreciated services to his country has been in dispelling this dangerous secrecy which formerly shrouded presidential illness. Following his heart attack in September of 1955, and again after his intestinal operation in June of 1956, the medical bulletins, as well as the statements by his physicians, described the President's condition with unexampled clinical particularity. Some reporters grumbled because they were not allowed to cross-examine the doctors ad libitum, but certainly enough was revealed to permit intelligent judgment and comment. Credit for this public service must go to the patient; credit for an assist should go to his advisers, especially Press Secretary Jim Hagerty.

Now that Mr. Eisenhower has set the wise and courageous precedent, it seems unlikely that any future President or his entourage will dare disregard it. This open information policy will enormously facilitate the functioning of any lawful procedure set up to determine Presidential disability. But some procedure there must be.

For warning, let's look back once more at the case of Wilson and the league. Charles Seymour, president emeritus of Yale and historian, has written that Wilson's illness resulted in "a progressive breakdown certain to affect his judgment and his personal dealings wtih men. * * * [He] was thus divorced from political realities. * * * Wilson's illness led directly to the defeat of the treaty."

Col. Stephen Bonsal, noted foreign correspondent, diplomat, and confidential intermediary between Wilson and Colonel House, kept a diary of those days. Not until 1944 did he publish his book, Unfinished Business, based on the diary. He revealed that in early November of 1919, at House's suggestion, he had a friendly private conference with Senator Lodge (the elder), chief foe of the League. Lodge minutely went over the printed copy of the League Covenant and, in his own hand, made certain moderate changes, mainly of verbiage, and totaling less than a hundred words. These changes were far milder than the reservations Lodge had hitherto insisted on. Hastily Bonsal conveyed the precious document to Colonel House, who joyfully sent it on, addressed to President Wilson at the White House. There was no reply, not even an acknowledgment. Silence. Bonsal could not find out what happened to this historic document, or even whether Wilson ever saw it.

On November 19 the Senate voted against ratification. Bonsal estimated that if President Wilson had not been entirely out of touch with the situation, the treaty and the covenant, with only slight reservations, would have been ratified in the Senate by a vote of 81 to 13.

A few days later Colonel House spoke to Bonsal about the important question, that cannot and should not be avoided: Who was President of the United States during those crucial weeks? * * * Here is a situation which may occur again under, if possible, even more tragic circumstances. It is to be hoped that congressional action on the matter will not be long delayed.

Here was a grim warning, voiced by a man closely involved in the crisis, urging congressional action more than 30 years ago. Congress, as in Arthur's day, did nothing.

We cannot be absolutely sure that Wilson's illness or incapacity prevented America's entry into the League; we cannot be sure that the League, even with the vastly increased power and momentum of American membership, could have prevented World War II. These are hypotheses, speculations. What we can be sure of is this: the historic decision against the League was made when the American Government was not functioning normally at the top.

The Garfield and Wilson cases not only show the urgency of the problem; they also throw light on the merits and defects of the proposed remedies. Let's examine again the various proposals.

Former President Hoover would authorize the Cabinet to determine a President's inability, as well as his ability to resume his duties. This has the virtues of simplicity and clarity, and avoids the pitfall of allowing a disabled President to reclaim his powers at will, which would obviously be perilous if the disability were mental. The main objection to Mr. Hoover's plan is that members of the Cabinet are often bound so closely to the President, by ties of affection and loyalty, that we could hardly count on them for impartial judgment in a borderline case. The Cabinets of Garfield and Wilson were influenced by such loyalty. A more remote danger is that a President, if he felt disability creeping upon him, might remove the more independent Cabinet members, replacing them with pliant men. (This is not entirely remote. Lansing, who had dared to consider the possibility of the Vice President's taking over after President Wilson was stricken, was fired when Wilson had partly recovered, in February 1920. Secretary Tumulty quotes Wilson as saying that Lansing was disloyal: "Lansing sought to oust me when I was upon my back.") Another possibility, under Mr. Hoover's plan, is that an acting President might put his own coterie into the Cabinet—men who might be less than judicial about terminating the President's disability and incidentally endangering their jobs.

For these reasons, I think Mr. Hoover's plan might fail to command the public confidence so essential to a disability procedure. But it would be far better than the present utter uncertainty.

Congressman FRELINGHUYSEN's plan would, by constitutional amendment, place the final decision with the Supreme Court. Such a decision would be beyond effective dispute. The objections to this plan are (1) that it usually takes a long time to get an amendment ratified by the States; (2) that the Court should not be asked to pass upon a matter involving the political leadership of the Nation; (3) and—I think this is most serious—that by this plan the Court could not even consider the matter until authorized by a two-thirds vote of each House of Congress. In a crisis, and with the Senate's rules of unlimited debate, this could result in fatal delay.

But here again, I think, Mr. FRELINGHUYSEN's procedure would be a great advance over the present situation.

Senator PAYNE's plan would allow a final decision to be reached by the unanimous opinion of 3 to 5 qualified medical specialists, selected by the Chief Justice. I think this gives more power to a Chief Justice and to a small panel of doctors than the American people would grant. A Chief Justice is highly respected. But, however honest and learned in the law, he might have fads of his own about health and the medical profession.

Congressman CELLER's plan is simple and direct. It clears the air by allowing a President to declare his own disability, in which case the Vice President would act. The danger of the plan is that it also allows the Vice President, on his own initiative, to decide that the President is incapacitated, and to announce to Congress that he, the Vice President, has taken over the powers and duties of the presidency. I agree with Mr. Krock that such a decision should not be granted to or thrust upon a Vice President.

If the Vice President is a loyal and effectionate lieutenant of the President's—remember Vice President Marshall—it is too much to ask that he decide upon the degree of disability of his ailing chief. If he is unfriendly toward the President or overambitious—remember Vice President Aaron Burr—it is too great a power to grant him.

Mr. CELLER's plan would also allow the President to announce his own recovery and thus resume his powers at will. This would be obviously unwise in cases of mental instability. Suppose a President developed, as do many able and brilliant men, a maniac-depressive tendency. In his depressed phase he would be inclined to turn over his duties to the Vice President. A few weeks later, in his maniac phase, he might happily and overconfidently resume his full presidential powers. This could occur, I am assured, in a case far short of certifiable insanity.

Arthur Krock, as we have seen, suggests the creation of a continuing Inability Council, composed of 6 Members of Congress and 5 of the Cabinet. While I disagree with some details of his plan, I think the idea of a permanent commission, composed of ex officio of certain persons high in the Government, is practical and valuable. Other ex-

perts have thought along the same lines. Prof. Arthur Sutherland, of the Harvard Law School, suggests a commission of 5 members: the Chief Justice, the Secretaries of State and Defense, and the 2 leaders respectively of the President's party in the Senate and the House. Prof. David Fellman, of the University of Wisconsin, proposes a somewhat similar commission. David F. Houston, who, as Secretary of Agriculture and then of the Treasury, sat under the guns of indecision during Wilson's illness, concluded that the determination of presidential disability might properly be vested in "a commission * * * composed possibly of Supreme Court Justices, members of the Cabinet and Members of Congress."

Having thus canvassed the field, I will now throw into the pot of discussion my own plan entitled "Smith's 2 Cents' Worth." Even this title may claim too much, because the ideas expressed are not really my own. They are a distillation of the ideas of others, based on considerable study and on interviews with many men eminent in the Government and in constitutional law.

I would have Congress establish by law a Presidential Powers Commission of nine members. It would be composed ex officio of 3 members of the Supreme Court—the Chief Justice and the 2 senior Associate Justices—of 2 members of the Cabinet—the Secretaries of 2 senior departments: State and Treasury—and of 4 Members of Congress—the majority and minority leaders of the Senate, and the Speaker and minority leader of the House—but if the Speaker were next in line of succession, he would be replaced by the majority whip.

This Commission would be authorized to find as a fact, at any time, by a two-thirds vote in writing, that a President was suffering from a temporary "inability to discharge the powers and duties of his office." Thereupon, the Vice President would become acting President. When and if the Commission voted that the President's disability had been removed, he would at once resume his full powers and duties.

Such a commission would satisfy, I believe, the most vital requirement of all—general public respect and acceptance. Its members would represent, in the American tradition, the three great branches of our Government; both political parties; and checks and balances. Taken together, the group would embody a vast deal of ability, integrity, wisdom, and practical experience. There might at any time be a bad egg or two in the lot, but it is hard to imagine a plot or cabal involving 6 out of 9 such men.

The three Supreme Court members, secure for life in high honor and status, are as free from ignoble ambition and party bias as human beings can normally be. Of the remaining 6 members, 4—2 from the President's own party in Congress and 2 from his Cabinet—could be expected to prevent any unfair finding of Presidential disability. Any 4 of the 9 could block such a finding.

The four congressional leaders would bring to the Commission their practical knowledge of Government and of public opinion. They are always men of great experience, but long service alone does not carry men to the top of the House and the Senate. They must also be admired and trusted by their fellow legislators.

Some experts think the two Cabinet members would be too swayed by loyalty and affection for inclusion in the Commission. I disagree. I think it only fair that they, who are likely to know the President better than the other members, should take part in the inner councils of the Commission. If delicacy required, the two Secretaries could vote "No" or abstain, without blocking a two-thirds vote.

Some authorities feel that Supreme Court members should have no part in such a political matter. Again I disagree. A decision on presidential disability has political aspects, but, far more importantly, it involves the Nation's welfare and survival. The Justices would strengthen the public prestige of the Commission; they would add judicial dignity to its proceedings; they would contribute their invaluable experience in weighing evidence. For similar reasons, I think the Chief Justice should be ex officio chairman of the Commission.

The members of the Commission would serve without pay. Service on the Presidential Powers Commission would carry great honor and high responsibility. This in turn would have its influence on even a member inclined to partisanship. As Professor Sutherland has eloquently said, "We want this thing done soberly, reverently, discreetly, and in the fear of God."

As suggested earlier, I think the law should also allow the President to declare his own temporary disability. But with such a Commission established, he might well choose to advise with it before doing so. He should be allowed to resume his duties when he feels fit to do so. With the Commission functioning, there would no longer be the danger of a mentally unstable President reclaiming his powers. If he did so, the Commission, in touch with the Nation's best medical opinion, would simply intervene, with all necessary speed, and declare the ailing President "temporarily unable to discharge the powers and duties of his office."

I think the Commission should be provided with a paid administrative secretary and small staff, for two purposes: To handle the mail, some serious and some crackpot, which would flow to the Commission; and to keep available, on 24-hour service, the places where the Commission members could be reached in times of crisis. Also the whereabouts of their alternates.

Alternates? Yes. In case of sudden nuclear attack, regular members of the Commission might be atomized or themselves disabled. It would be simple to provide by law a clear line of alternate members. For the judicial members, it would run straight down the Supreme Court's seniority and then to judge's of the Federal Courts of Appeal. In Congress it would run down prescribed lines of congressional seniority. Similarly in the Cabinet.

Maybe I'm getting too gruesome, but why not, while we about it, provide for eventualities? Thus, short of universal cataclysm, we would always have an ascertainable, respectably constituted Presidential Powers Commission.

Returning to the more normal world, I think the Chief Justice should call occasional meetings of the Commission, however robust the President, to discuss procedures of disability and the problems of proper medical and other testimony. The meetings should be spaced at variable times and intervals, so that a critical convocation of the Commission would cause no premature alarm. The Commission should be given the power of subpena, though it would hardly need it.

But why try to advise a body of such able men? The law should make no attempt to prescribe their procedures or to lay down any precise definition of disability, which can take so many unforeseeable forms. It might be physical or mental. It might grow from severe nervous and emotional instability. If a President's plane were lost over the Arctic wastes, we might not even know, for days or weeks, whether he was alive. Or he might fall into the hands of the enemy in wartime. In all such cases we could trust the Commission's own good judgment whether to declare the President's "temporary disability."

One more point: Could Congress properly establish such a commission by ordinary statute? Or would the plan, to be fully effective, require the long process of a constitutional amendment? Most authorities feel that a statute would suffice; that Congress would merely be creating a fact-finding body to carry out the obvious and sensible intent of the Constitution. But some respectable authorities doubt this. One older constitutional lawyer, recognized as a leader of the American bar, told me recently:

"Your plan is the most practical I have heard of so far. I would like to see it in a statute, signed by the President, as soon as possible. I think it would command such widespread acceptance as to be followed without question by the officials involved if we were caught in a disability crisis in the near future. But to make doubly sure, I would also start it on its way—in its main essentials—as a constitutional amendment. This would nail the matter down beyond dispute."

Such, then, is my plan—Smith's 2 Cents' Worth. Since it is my brainchild—however numerous the other putative fathers—I fondly regard it as darn near perfect. What I am more seriously convinced of is this: Any of the other plans mentioned here—with certain stated qualifications—would be better than our present feckless, reckless uncertainty. I don't see how any sane citizen can disagree with President Eisenhower's earnest warning that the doubt surrounding this question should be resolved.

Jeffersonianism, 1957

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. McGOVERN. Mr. Speaker, much has been written and spoken on the themes of Jeffersonian democracy. Certainly, the concepts of the Sage of Monticello, that great architect of American freedom, have provided a continuing stimulus to each new generation.

Last Saturday night, March 23, a new Member of the Congress, FRANK M. COFFIN, of the State of Maine, offered a brilliant and timely interpretation of Thomas Jefferson. Displaying both a keen historical insight and a profound appreciation for democracy's contemporary challenges, Congressman COFFIN spoke to the problems of 1957 in the perspective of a century and a half of Jeffersonian thought.

It was a great personal statisfaction to stand by FRANK COFFIN'S side as we took our first oath of office together as new Members of the Congress in 1957. It was our able colleague from Maine who led the revival of two-party government in that great State as chairman of the Democratic Party in 1954 until the end of 1956.

After successfully directing the campaign that in 1954 gave Maine its first Democratic governor in many years, FRANK COFFIN was elected to the Congress in 1956. A distinguished graduate of the Harvard Law School and an able lawyer, Congressman COFFIN is the first Democrat to represent his State in the Congress in nearly a quarter of a century.

His address of March 23 follows:

ADDRESS BY HON. FRANK M. COFFIN, OF MAINE, BEFORE THE YOUNG DEMOCRATIC CLUBS OF AMERICA'S 25TH ANNIVERSARY DINNER, HOTEL MAYFLOWER, MARCH 23, 1957

The daily publication on Capitol Hill, the CONGRESSIONAL RECORD, is a repository of two kinds of entries: Actual debate and what we refer to for some unknown reason as extraneous matter. This could be correspondence, editorials, even poetry, book reviews, and magazine articles. Often these nuggets prove quite as valuable as the debate.

Tonight, I shall not attempt a speech. (Being accustomed to the 5-minute rule in the House, I do not see how I could possibly fill the 12 minutes allotted me.) I shall, instead, exercise my congressional privilege and insert some extraneous matter into the record of these proceedings. This extraneous matter is a rather remarkable document which has just come to my attention.

It is the fragment of a correspondence with Thomas Jefferson. This, in itself, is not remarkable, because the correspondence of Thomas Jefferson, by one count, ran to some 18,000 letters. Indeed, in his later years he complained that his letter writing kept him "at the drudgery of the writing-table all the prime hours of the day" and made him lead "the life of a mill-horse."

This fragment, however, is remarkable for two reasons. First, it is not included in any standard collection; and, second, it apparently is a correspondence between the Sage of Monticello and a present-day young Democrat. At first I viewed these fragments with skepticism. But I became convinced when I went to the Library of Congress and compared Jefferson's preliminary draft of the Declaration of Independence with the handwriting in the fragments. He still uses one of those very first post office pens.

Apparently the young Democrat had written him with some doubts in his mind, being born after 1932, whether the Democratic Party was really, as Republican canard went, like a mule "without pride of ancestry or hope of posterity."

Jefferson replied: "My dear young man, please excuse this old goose quill pen. It has been grossly overworked. But, poor as it is, it is infinitely superior to those I have seen in your present-day post offices. May I suggest that you go back to using geese for a source of pen points rather than administrative policy?

"Really, I am amazed that the party still exists. After I left Washington in 1809, it seemed to be falling apart at the seams. But somehow our party's performance always managed to exceed its promises. Even Old Hickory showed little promise at first although he voted for me twice. But he finally transferred his fighting ability to the cause of the farmer, the laborer, and the mechanic against the rich and the powerful. He was a great President.

"Jim Polk, from the Duck County Valley in Tennessee, liked politics from the beginning, but he was the first and the most unlikely darkhorse we've had. I never thought he would be his own man. But again I underestimated our party and its leader. Polk was one of the hardest working Presidents we ever had. And I want to remind you that he thought the job so important that he wouldn't take any time politicking for a second term. He made his Cabinet men stick to their jobs and forbade them to waste any time campaigning for him. I had hoped the same thing might happen a couple of years ago. But it didn't.

"I don't know how our party came back after the terrible War Between the States. But we did very well under Cleveland. Then along came that proper and earnest young fellow Virginian, Tommy Wilson, son of the preacher. You can imagine how I felt about him. He said I was a great man but not a great American. He wouldn't even come up the hill to see Monticello when he attended my own University of Virginia. He was 40 before he said a good word for me publicly. Even then he liked Grover Cleveland better. But he gradually came to understand the aspirations of the common people. His New Freedom was the voice of the small farmer and the small-business man raised against partnership of Government and monopoly. He helped us enter the 20th century.

"That squire of Hyde Park, Franklin Roosevelt, came closer to my personal tastes. But it seemed improbable that this patrician would sense the needs of the times and lead our country through its worst domestic and international crisis to a place of preminence in the world. But you knew him, too. And that cocky little infantry captain from Missouri. He had a great deal of Andy Jackson in him. His great accomplishment was to maintain our Nation's place in the world and our party's place in the Nation.

"So, I can't really see why you are worried at all about your background, except that the other party has begged, borrowed, or stolen everything you've thought up. I just wish Alexander Hamilton had felt the same way about my ideas. I am incensed, though, that the other party felt it necessary to take our name. * * * I thought it such a good one."

This seemed to satisfy the Young Democrat as far as "pride of ancestry" went. But apparently he wrote another letter inquiring about "hope of posterity." In due course he received a reply:

"My dear young friend, you flatter me by your continued attentions. You have asked whether there is still a job to be done by our party. To read your question I wonder if you are contemplating turning the donkey out to pasture. You sound almost old enough to be a young Republican—and I cannot imagine anything more ancient.

"No; this donkey may occasionally go out to pasture, but he doesn't stay there. He has an unquenchable instinct for harness. It was put to the test in the most distant part of the Commonwealth of Massachusetts. I believe it is now called Maine. Those good people in my day, being small farmers, artisans, and businessmen, were good Democrats. After the unpleasantness in Mr. Lincoln's time, they led the donkey out in the middle of their great pine forests and hoped to lose him. But look what has happened. Not only have they just reelected their fourth Democratic governor in 90 years by the greatest vote ever given any governor, but they have sent to Washington their first Democratic Congressman in a quarter of a century. This, to me, carries the same moral as the return of the tribes of Israel after the Babylonian captivity.

"You are concerned about what you call civil rights and what we used to call the rights of man. These rights are not quickly or painlessly achieved. I found that out even on my own plantation. That bloody War Between the States was only half the task. The other half is, in a sense, more difficult, more demanding of the highest order of sensitivity, patience, and determination that you can muster. I have seen the problem building up for two centuries. It cannot be solved overnight, but solved it must be.

"In your domestic economy I see the wheel has turned full cycle. Without being immodest I suggest that you read some of the things I wrote about the small farmer and the communities in which he lived. I am still convinced that they are the backbone of this country. But this backbone is vertebra by vertebra, being taken out by surgery. (As I look over the Nation today, I see that their place in society is challenged by those great forces that have so developed since my time. The party must meet that challenge by insuring that, given a reasonable amount of initiative and competence, the small farmer and businessman shall not be squeezed out of existence. I tried to tell Hamilton of this danger, but to no avail.) This challenge to our way of life has hardly been recognized. If it is to be met, there is only one party equipped by philosophy to take the leadership. You cannot reasonbly, expect those whose affections and loyalties are inextricably woven into the great industrial fabric of the age, to foster the cause of those smaller units which they have so long fought, acquired, or destroyed.

"I used to think that our natural resources were limitless. Yet even so I spent a good part of my life taking care of my land at Monticello. I confess to a sense of shame as I read of the devastation of our forests, the erosion of our soil, our floods and dust storms. I canot imagine how good husbandmen can allow a land of plenty to go to waste. This challenge, too, is yours, because these are the resources of all the people, not just a few. Again, you cannot reasonably expect this challenge to be met by those whose wealth has come from the exclusive use or abuse of these resources. Not, that is, unless human nature has changed since my time.

"One of the fields of my life work I remember with greatest pride was the education of our youth, particularly my work in establishing a public-school system and in founding the University of Virginia. That system has gone a long way. But when I read of what has been done in what used to be that remote barbaric land of the Czars, I realize that we have not gone far enough. It is hard for me to believe that the goal of providing enough good classrooms for our young people is a debatable subject. And I am dismayed to find so little thought about the other problems of education. Here is a challenge worthy of our party's mettle. In fact, so long as you have unsightly and unhealthy slums, bad roads, men out of work or slaving at poor wages, sick people uncared for, and old people living in indignity, you as a party face continuing challenges to your conscience as the heirs of a land of plenty.

"These things I hope our party will remember in Congress. I much admire its efforts toward economy in Government, but true economy means doing the job that must be done at the lowest cost. Simply to save money by not doing the job is merely to substitute human cost for financial cost. Beware the Trojan Horse of economy which carries within its hollow frame the forces of reaction.

"Finally, I have come to realize that an ocean is not an ocean. It is just a distance of a few hours by aircraft, or less by guided missile. The world has shrunk since my time, almost beyond recognition. You are faced with an awesome threat and an unprecedented opportunity. The threat is annihilation by total war. If my own experience in diplomacy means anything, I must say that this threat is not reduced by weakening our bonds with friends of long standing, by failing to think ahead of current crises, by vacillating in time of decision, by shifting the total burden of leadership to others, or by failing to keep commitments whether legal or moral. When I succeeded Dr. Franklin as Minister to France, I was careful to say that neither I nor anyone else could replace him. To entrust foreign matters to men whose replacement is regretted rather than desired is a goal toward which you should strive. I might add that neither Dr. Franklin nor I obtained our position because of any contribution to anyone's campaign.

"The opportunity you face is that of an imaginative, patient, and responsible leadership working toward a world of free peoples. This opportunity exists only if you can shake

off the bonds of smugness and self-centeredness. I had the great privilege of writing the Declaration of Independence for our young Nation. You have the supreme privilege of applying it to the nations of the world.

"My young friend, the party we both hold in common is—if you but have the faith, the energy, and the determination—entering upon its days of greatest service. I envy you the times in which you live.

"Your obedient servant.

"THOMAS JEFFERSON."

One Hundred and Thirty-sixth Anniversary of Greek Independence

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. KEATING. Mr. Speaker, today marks the 136th anniversary of the struggle of Greece for independence from Ottoman tyranny. On this day, Greeks and friends of Greece all over the world pay tribute to those heroes of the past who laid down their lives to win Greece's freedom from the rule of foreign despots.

In a larger sense, also, all of us pay tribute to, and give thanks for, the many contributions of the Greek people to the progress of civilization as we know it today. How different our world today would be without the philosophy, drama, medicine, literature, mathematics, astronomy, oratory, politics, and education which have, in large measure sprung from the Hellenic cradle.

Greek Independence Day this year finds the whole world concerned above all else with the life-and-death struggle with the forces of communism. It is fitting, therefore, that our thoughts linger longest on the noble traditions of freedom which repose in the Hellenic heritage.

From our earliest days, this Nation has felt a special kinship with the people of Greece. President Madison enunciated the sentiments of the United States well in 1822 when he said:

> The name of Greece fills the mind and heart with the highest and noblest sentiments. * * * The disappearance of this country for a long time under an aggressive dark yoke has profoundly agrieved the generous spirits of the past. It was therefore natural for the reappearance of this people in its original character, fighting for its liberty, to arouse enthusiasm and sympathy everywhere in the United States.

Having regained that freedom which had remained kindled in their hearts through long centuries of oppression, the Greeks rebuilt their nation on the principles of democracy which had first found expression in ancient Greece. It is those same principles, Mr. Speaker, which today inspire Greeks and all lovers of freedom.

Today, as 136 years ago, the people of Greece stand prepared to resist oppression regardless of its form or from what quarter it comes. In combating the threat of communism within their borders, in fighting side by side with other brave soldiers of the United Nations in Korea, the people of Greece have shown the continued strength of a culture and a tradition which finds its inception in the principles of human rights and dignity of the individual.

These qualities, combined with other attributes of their rich heritage, have made the sons and daughters of Greece who have come to America admirable citizens. Their perseverence, passionate love of freedom and abilities in myriad fields have made Greeks leading members of any American community where they have settled.

Through organizations such as the American Hellenic Educational Progressive Association—AHEPA—Greeks in America have kept alive the proud traditions of their homeland and harmonized them with the activities of their new land.

Mr. Speaker, we need have no fear about the future of Greece. As they fought in 1821, they are prepared to fight again and again to protect their freedoms against foreign aggression. That is the spirit which made them free. It is the spirit which will keep them free.

Mr. Shanley Shames the Devil

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. ABBITT. Mr. Speaker, on Sunday, March 24, 1957, a very revealing and enlightening editorial appeared in the Richmond Times-Dispatch. I wish that all of the people who pretend to be solicitors of good race relations, and particularly in the South, could read this editorial. It is self-explanatory.

In the hopes that at least some of the people who are in the forefront fighting to compel by judicial fiat a mixing of the races in the public schools will read it, I am including with my remarks the editorial referred to above:

MR. SHANLEY SHAMES THE DEVIL

"We have made more progress in the South in the past 4 years than was made in the previous 20 years. But the Supreme Court decision on segregation has set us back many years."

Who said that? Senator BYRD? Senator KNOWLAND? Representative TUCK?

No; this statement, incredible as it seems, came straight from the White House.

It was made Thursday night by Bernard M. Shanley, Mr. Eisenhower's appointments secretary and counselor, during a question-and-answer period following an address to 300 students at Fairleigh Dickinson University in Rutherford, N. J.

Later, during the question-and-answer period, Mr. Shanley emphasized his opinion in unmistakably strong terms.

"The Supreme Court's decision," he said, "has done a tremendous amount of damage and has set us back many years."

Mr. Shanley is not a southerner. He is a Jerseyman, educated in Newark, at Columbia, and Fordham Law School.

As you can well believe, the news of this startling statement made the wires buzz, not long after it had been made.

A Rutherford reporter phoned Mr. Shanley and asked him to clarify the statement.

Mr. Shanley did. He used an even stronger adjective to describe the harm done by the Supreme Court decision.

He said it was "incalculable."

Coming from an experienced lawyer, trained to weigh his words, they cannot be considered as careless or casual.

As a member of the official White House family, Mr. Shanley had to make it unmistakably clear that what he had said was "no reflection on the court."

He telephoned a Newark reporter with a further clarification. He said he "had not correctly conveyed his thoughts, because his answer to the original question (at the student gathering) had been cut short by a subsequent question. Undoubtedly considering the effect of what he had said on a much-harried head of state conferring in Bermuda on matters of worldwide importance, Mr. Shanley explained:

"I am not criticizing the Supreme Court decision. Were I a member of the Court I would have voted as the majority did." (There was no minority.)

Mr. Shanley may consider himself fortunate not to have occupied that exalted position. Had he been on the High Bench, and voted as he said he would have voted, he would feel personally responsible for the "incalculably tremendous" damage that has set back, he said, racial relations for "many years," thereby hurting the very people the decision was intended to help.

The Friday edition of New York's leading newspaper (ardently "integrationist") carried a picture of Mr. Shanley, with the caption:

"He said Supreme Court antisegregation ruling has 'set us back,' but later he explained and modified this."

That was inexcusably misleading.

Mr. Shanley did not modify his statement that the Court ruling "had set us back." He let that stand. He did "explain" that his statement was not made in criticism of the Court.

We are grateful to the President's aid for speaking the truth, and shaming the Devil.

Is Modern Republicanism Merely Disguising New Dealism?

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following article from the March 23, 1957, issue of National Review:

IS MODERN REPUBLICANISM MERELY DISGUISING NEW DEALISM?

There is something nerve-racking in the efforts of apologists for modern Republicanism to dodge the rhetoric they hurled years ago against the statism of the New Deal. They hurled it so hard, back in the days of Roosevelt and Truman, that it is still in flight, and it keeps them dancing around frantically to avoid being hit by it. Secretary of Commerce Sinclair Weeks told 1,200 Republican women last week that modern Republicanism is "the traditional party philosophy"—in modern dress, to be sure, but

decidedly not something brand new, dreamed up recently—as some folks think—by maverick stargazers. To begin with (Mr. Weeks pressed his case), most Federal spending goes for defense. For the rest, "We'll not go very far in reversing the trend in Government spending if everyone says 'Cut the other fellow's budget, but don't touch mine.'" Question 1: Whose benefit, then, is modern Republicanism proposing to cut? Question 2: What did the New Deal have that the new Republicanism hasn't got—except joie de vivre, and an intense pride in itself? Question 3: What is it us folks are supposed to think? That big government is bad only if administered by Democrats?

Let's Be Practical About Foreign Aid

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the Somersworth Free Press of March 21, 1957, entitled "Let's Be Practical About Foreign Aid":

LET'S BE PRACTICAL ABOUT FOREIGN AID

Let's take a practical view of so-called foreign aid.

We are, of course, a humanitarian people. We believe in helping others because we feel it is the right thing to do. But we must keep in the forefront the maintenance of our own security and our high standard of living.

The foreign-aid program of the United States is authorized in the mutual-security legislation. Its purpose is to associate ourselves with other free nations, because we have found that in a world threatened by international communism and by poverty, disease, hunger, and illiteracy, our own way of life is directly challenged and menaced. The more allies we have throughout the world who are willing to share the burden of defense and of building a peaceful world, the less the drain on our own citizens.

Top flight military leaders who have testified before congressional committees on the mutual security legislation have stated that the military aspect of our foreign-aid program is as much a part of our own defense as our own domestic military program. They have also emphasized the importance of economic aid. Admiral Radford, in testimony before the House Foreign Affairs Committee on foreign policy evaluation, stated: "I have often testified that as far as the defense effort is concerned, the military-aid program is an integral part of our overall defense program. The economic aid is a vital adjunct in our program to counter Communist aggression."

There is another practical side to this foreign-aid program which is illustrated by the relatively small amounts spent by the United States on foreign aid. In the proposed budget for the coming fiscal year, which begins July 1, 1957, $45.3 billion is requested for "protection." The foreign aid is $4.4 billion; $2.5 billion for military assistance and $1.9 billion for economic aid. The $4.4 billion to be spent abroad means, to put it in practical terms, that fewer American soldiers will be needed to protect our own interest abroad. Furthermore, between 75 and 80 percent of our foreign-aid dollars are spent in the United States and accordingly means more American business and more American employment. In addition, the dollars which go abroad always come back to their home—the United States.

If foreign aid is arbitrarily cut, it means cutting down on our own security and cutting down on the strength of the people who need to help us with the gigantic task of maintaining our world leadership. It means increasing the danger of international communism and that we may ultimately have to spend much more than the amount cut in order to gain a commensurate security for our own people.

Adding up all the practical effects and objectives of the foreign-aid program, foreign aid is just as much, if not more, aid by foreign nations for us as it is aid by us for them.

Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD a speech made by the Honorable SAMUEL K. MCCONNELL, JR., entitled "Federal Aid for School Construction" before the Penn Valley Parent School Association on March 19, 1957. In this address, Congressman MCCONNELL effectively and concisely analyzes the subject of Federal aid to school construction.

The speech follows:

DISCUSSION BY REPRESENTATIVE SAMUEL K. MCCONNELL, JR., ON FEDERAL AID FOR SCHOOL CONSTRUCTION, PENN VALLEY PARENT SCHOOL ASSOCIATION, PENN VALLEY SCHOOL, MARCH 19, 1957

Tonight, I will discuss a subject of vital and far-reaching significance to America. Because it concerns the welfare of our children; because it involves questions of fundamentals of government; and because it contains elements of emotional conflict, there is need for sober reflection and restraint.

Federal aid to education has been discussed for a number of years. The term "Federal aid to education" has been used rather broadly and loosely in arguments. Roughly, the subject can be divided into three broad categories.

1. Aid to school districts adversely affected by the impact of Federal activities (principally defense establishments). In these situations the Government acquires land for airfields, camps, arsenals, etc. After purchasing the land the Government will thereafter pay no rent or taxes for the use of the land. Obviously, some payment is due to the local authorities. Congress has overwhelmingly passed legislation for assistance to the affected school districts for a period of many years.

2. Aid for maintenance and operation of schools, for textbooks, teachers' salaries, light, heat, power, etc. This type of aid has been very controversial, resulting in arguments over aid to private schools, and control of the running of the schools of America.

3. Aid for the construction of school facilities. This type of aid has been somewhat less controversial, but arguments are occurring over assistance to districts and States failing to show intention to desegregate; over formulas for grants to richer and poorer States; and over the possibility of operation of schools later if such assistance is granted now.

The bills presently before Congress are for construction aid only, and therefore I will discuss that subject more fully tonight.

Why do we have classroom shortages at this time and how large are the shortages?

The depression period of 1929–33; two wars with attendant shortages of labor and materials; a rapidly expanding and shifting population with big increases in the birthrate; and the inflationary spiral which greatly increased the costs of construction; all contributed to a growing shortage of school facilities. States and local areas have been increasing their efforts to meet the situation. For example, in 1949–50, they spent about $1 billion to build 36,000 new classrooms; last year they spent about $2½ billion to build 62,600 classrooms; and this year they are attempting to construct about 69,000. They have done a creditable job but even at the present accelerated rate of construction it will take some years before the shortages will be eliminated.

Exact estimates of shortages and future needs are not easy to obtain, because standards vary in different States and matters of judgment are involved.

The latest figures available from the Office of the United States Commissioner of Education indicate a shortage in the entire country of 159,000 classrooms. This figure was obtained from State educational offices throughout the Nation; 80,000 classrooms for excess enrollments, and 79,000 to replace classrooms abandoned because of obsolescence, consolidations, fires, and other types of destruction of schoolrooms—a combined total of 159,000.

Practically all authorities agree that new enrollments will total 1¼ million children annually for the next 4 or 5 years. The new enrollments alone will require about 45,000 new classrooms annually. Abandoned schools yearly will total about 14,000 to 15,000. Thus about 60,000 new classrooms will be needed annually to keep abreast of current new demands. All above that figure would apply to past shortages of 159,000.

The job before us is to arouse greater State and local action in order to more rapidly eliminate the shortages. President Eisenhower has proposed a short 4-year program to supplement and encourage State and local effort, not supplant it; $325 million a year for aid to the States to be used for financially needy school districts to construct classrooms—the money to be divided among the States under a formula which takes into account the per capita income of a State and the school-age population. A bond purchase revolving fund of $750 million to purchase school bonds of districts not able to market their bonds at a reasonable rate of interest. Up to a total of $150 million to provide for one-half of a basic reserve fund to provide greater security for the bonds issued by a school financing agency. The purpose is to encourage States to establish such agencies. At the present time only four States, including Pennsylvania, build schools by means of school authorities or financing agencies. And $20 million for administrative expenses assistance to States in developing long-range plans to eliminate restrictions on school construction. The entire purpose of the program is to stimulate and encourage greater State and local action to handle their own school construction needs.

The Kelley (Democrat) bill is a 6-year program and calls for direct grants to States of over $600 million a year, and under a formula based entirely on the school-age population of a State. Financial need is not considered. The Kelley bill also provides for a bond purchase fund and a basic reserve fund contribution for school financing agencies similar in type and amount to the Eisenhower program.

What are some of the major arguments against the proposed school construction legislation?

Opponents of Federal assistance have argued that such a program would mean Federal control and domination of education in this country. I am strongly opposed to Federal control of education. I believe there is danger of such control when a bureau of the Government is providing maintenance and operation aid, but I cannot see that same danger from construction assistance. This is "brick and mortar" aid, and once a school is constructed, and the local authorities take title to the building the Government assistance would end and there would be no further contact or connection whatsoever with the school. The running of the school thereafter would be under the supervision of the local school authorities.

Opponents say "yes, but this program would be just a foot in the door." Actually the Federal Government has been financially aiding education in various ways for almost a century, and there is no Federal domination of education today. We have been aiding land grant colleges since before the turn of the 20th century, as one example.

Another contention is that large amounts of the proposed Federal funds would be required for administrative expenses. The fact is that the budget provides for only two-tenths of 1 percent of the proposed funds for administrative purposes. Even counting the cost of collecting Federal revenues and other overhead expenses, 99 percent of the proposed funds would be distributed for actual use by communities to help build needed schools.

There is a serious argument over the fact that the President's program would call for more money from the wealthier States than the poorer ones. That is true, because the program is based on an equalization principle. Many States have equalization programs which require heavier contributions from richer areas to help the poorer areas in their educational activities. Michigan, California, Pennsylvania, New York, and Ohio would pay out larger amounts than poorer States.

The administration's program would distribute grants on the basis of school-age population and relative financial income. The Kelley bill would distribute Federal funds according to school-age population alone.

A recent analysis by the Office of Education shows that the 12 wealthiest States in per capita income have an average of $10,655 in annual income to support each school-age child. They have more than one-half of all the income in the country. They are now building about 45 percent of all the schools being built in the country this year. And they have less than one-fourth of the actual classroom shortage this year; but, under the distribution system based on school-age population alone, these States would receive almost 40 percent of the Federal grants.

On the other hand, the 12 lowest States in per capita income have an average of only $4,416 income annually per school-age child. They have only 12 percent of the total national income. They are building only 16 percent of the rooms being built this year. And they have well over 35 percent of the current classroom shortage. And yet, if grants are distributed according to school-age population alone, these States would get only 22 percent of the Federal aid.

Under the administration's proposal, the 12 wealthiest States would receive 27 percent of the Federal grants, and the 12 lowest income States, where the shortage is most acute, would receive 32 percent of the Federal aid.

Opponents of any Federal assistance are attacking the accuracy of the figures concerning classroom shortages. Not a single authority that I know of claims that no shortages exist, but efforts are being made to discredit the shortage figures which have been obtained by the Office of Education from State educational departments who are closest to the situation and best able to get the facts. Those who deny the existence of a serious shortage offer no different figures of their own.

Every responsible survey of conditions has concluded there is a substantial and continuing classroom shortage in various areas of the United States. This was the conclusion from information received from State education agencies in response to a questionnaire last fall from the Office of Education. Also, from the School Facilities Survey undertaken more than 4 years ago, using different methods. And the conclusion from independent surveys made for the White House Conference on Education and National Education Association.

The Office of Education questionnaire last fall asked the States to estimate the number of children in excess of normal capacity of the schools in use. This was the third successive year in which the States have reported on this item. And for the third year in a row the figure was about the same—about 2¼ million children above capacity. These children are not imaginery. They are in school today, and can be counted with reasonable accuracy.

The States estimated 80,000 new classrooms were needed last fall just to accomodate this overflow of enrollment. Further, the States estimated 79,000 additional classrooms were needed to replace facilities unfit for use, or a total shortage of 159,000 classrooms.

One serious impediment to passage of a school construction bill is an amendment which will be offered by Representative ADAM POWELL. His amendment would deny aid to any State for school construction which fails to show compliance with the Supreme Court decision calling for an end to segregation in schools. Such an amendment would kill the bill, especially in the Senate.

While I can understand the desire of those favoring more rapid desegregation, nevertheless it does not appear necessary in a school construction bill. No Commissioner of Education could start to grant aid if a bill is passed, without the likelihood of a court challenge of his action. Then before aid could be given the courts would have to decide whether a State is complying or not. The Supreme Court in deciding the original case stated that decision as to compliance would be decided by the courts. It would not be decided by a department or an official of the executive branch of the Government.

One of the serious objections raised to this program is that it calls for Federal spending at a time when the budget is high. I believe the budget is high and can be cut. My past record would show that I have voted to reduce or eliminate many items, and I will continue to vote for lower amounts. I do believe, however, that provision for adequate classrooms for the children of America is of immediate concern to this Nation. Lost educational opportunities in the formative years can seldom be regained. In the complex world of today, such economy could be detrimental to our national security and a drag on the full development of our human resources.

In summary, I favor a relatively short-term Federal program, for a moderate amount of money, to stimulate, not supplant, State and local action to enable them to more rapidly eliminate the shortage of classrooms in this country. It would be a sound investment in the future of America.

Anselm Forum, of Gary, Ind., Celebrates Silver Jubilee

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. MADDEN. Mr. Speaker, the following article from the Gary (Ind.) Post Tribune reviews the outstanding work and accomplishments of an organization in Gary, Ind., which has contributed in time and service greatly to civic advancement and the advancement of tolerance in the city of Gary, Ind.

Every city, town, and hamlet in the United States should have an organization similar to the Gary Anselm Forum. The following article reveals the secret of its outstanding success and accomplishments:

Anselm Forum, of Gary, knows only one enemy: "Those who preach hatred amongst brothers, those who incite creed against creed, race against race, nation against nation."

A baby of the 1932 depression, Anselm Forum this year rounds out a quarter century of dedicated service in the field of human relations, a quarter century of practicing brotherhood, 25 years of living the golden rule and encouraging others to follow its example.

Gary Anselm observes its silver jubilee at 6:30 p. m. today with a banquet at the Hellenic Center, 11th Avenue and Jackson Street. The Reverend Archibald Carey, Jr., Chicago minister and former Chicago alderman, will be the guest speaker.

Anslem's first steps were unsure. Nine young men of varying backgrounds huddled over cups of coffee on Sunday afternoons and unburdened their depression fears. They concerned themselves with the petty prejudices they feared were undermining their town. They learned to respect each other's differences and opinions. They reached across the barriers of race and religion, joined hands, smiled and called each other "friend." And they meant it.

FORTY-FIVE ETHNIC GROUPS

The name and purpose of Anselm Forum were found in an Italian saint, St. Anselm, who was made Archbishop of Canterbury in 1093. The Forum adopted the name Anselm because the archbishop was a champion of brotherhood and had the courage to urge men to forget hatred and work for peace.

Anselm men are doctors, educators, newspapermen, legislators, scientists, steelworkers, physicians, businessmen, laborers. These men—125 strong—represent 45 different ethnic groups. Religiously, Anselm men are Christian, Jew, Mohammedan, Hindu, and Confucianist. There is an agnostic among them.

Anselm men subordinate their cherished prejudices and personal convictions to strive for better understanding among men. They respect each man's right to disagree and be different. They teach that disagreement and physical differences should not create hate or suspicion. Anselm men are happy when devoting their normal hours of leisure to the difficult and sometime thankless, task of furthering the cause of brotherhood.

The work of Anselm Forum has been a time-consuming task. Over 1,000 Anselm men have been members of the forum's panel teams and traveled hundreds of miles in the past 25 years to appear before over 200 audi-

ences in 30 or more cities in Indiana and Illinois. Discussions at these forums have included juvenile delinquency, world government, the atomic age, community crime, displaced persons, world affairs, and women in modern society. Anselm panels are not meant to answer questions or resolve differences. They are designed to stimulate thinking about basic issues—issues which eventually will resolve the question of the brotherhood of man.

PAMPHLETS, FILMS, BOOKS

Pamphlets do wonders and Anselm Forum uses them as an effective weapon in its campaign to foster better human relations. Anselm has been directly responsible for the distribution of nearly a million pamphlets dealing with 225 different subjects. Like the panel discussions the pamphlets have been all inclusive, treating such subjects as interfaith unity, mental health, the danger of communism and the cost of prejudice.

Film and recordings, too, have been enlisted by Anselm for its battle against prejudice and hate. A dozen films on human relations have been shown over 3,000 times to audiences totaling 225,000 persons. Dramatic and musical records numbering 80 have been played over a thousand times to over 35,000 students. Over 15 tape recordings have been used in human relations projects.

Anselm knows that books encourage the study of mankind's complex problems of learning to live together. So, the forum established the James H. Garnett Memorial Library at Indiana University Gary Center so students and others would have access to literature concerned with human relations. Intergroup workshops sponsored by Anselm and universities have furthered the cause of brotherhood.

The job of Anselm Forum has not been easy. When first organized, outsiders grinned and predicted the forum would not last over a year. Others were generous and gave the organization a life expectancy of 5 years.

There were internal problems, too. Convictions of members were put to the acid test, latent prejudices bounded to the surface when certain members of ethnic and religious groups were recommended for membership. A Negro was proposed for membership, and a Caucasian said if the membership was granted it would force his resignation. His resignation was accepted on the spot. Anselm tolerance wandered too far afield for another member of long standing who resigned when a Christian Scientist was accepted as a member. Another member who was greatly admired by the forum voluntarily left the group because a Mohammedan became an Anselm man. And Anselm Forum is not a religious organization.

This type of internal organization structure prompted a California professor to write: "Anselm tolerance is not wishy-washy goodwillishness. It is hardheaded intelligent good will. It is creative, dynamic. It is respectful of the next man's right to be religiously, politically, socially different. It seeks not conformity or compromise, but agreeableness."

Anselm Forum uses the quiet, unspectacular approach to issues. There is no getting hot and bothered about situations and adding fuel to troubled waters. Anslem men use the quiet, person-to-person approach. A person seeking to incite hate and prejudice is quietly shown that he not only is endangering an individual of different religious or racial identity but that he is sowing the seed that can choke the growth of the entire society of freeman.

* * * * *

It was at an Anselm Forum coffee clatsch that a white minister proposed the merger of Gary's Negro and white ministerial groups. It was at a coffee clatsch that Anselm Forum became concerned with the problems of the American Indian.

Anselm Forum makes public its views, too. It publicly supports slum clearance, endorses home rule, concerns itself with social diseases, supports Federal anti-lynching legislation, works for equalization and humanization of American naturalization laws, thinks fair employment laws are necessary, and deplores racial and religious persecution.

Anselm Forum work is done on a shoestring. There is no paid executive or file clerk. Nor, is there a high-pressure public relations expert to extol the achievements of the group. All work is volunteer.

Anselm Forum dreams of a world free of ethnic and religious prejudice, a world where humans live in harmony and peace, a world where there would be no need for an Anselm Forum.

And this world, Anselm Forum feels, could be named "friends."

How Many Aliens Can We Take?

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert the following article by Cy Peterman:

HOW MANY ALIENS CAN WE TAKE?
(By Cy Peterman)

We have just asked our Congressman a fair question: How many of Europe's people can the United States safely absorb? The question is prompted by a few progressive statistics.

In 1900, the population of this country was 75,994,575, of which around 10 million were foreign born. By 1950, United States population had almost doubled to 150,697,361. It has increased another 18 million in the last 6 years, and during 1957 the Department of the Interior assures us, there will be 4 million babies born to Americans, 1 every 8 seconds, according to the big dial on the Department's wall. (Next fall, college applicants will number 200,000 above last September's totals.)

With or without a slide rule, Junior, this means that in the dawn of the next century, more than 350 million will be clogging the jetways, throughways, pneumatic or electronic tubeways, and whatever other channels crisscross our 48 States. Moreover, plenty of those 4 million babies of 1957 will have to direct them, because in 2000 A. D. they'll be just 43 years old. Quite a prospect, eh, kids?

The subject of immigration has emerged anew from Comrade Khrushchev's modern version of the 1940 Hitler blitz, by which terrorized refugees were thrust upon the opposing side. Soviet tanks, spreading Communist culture by running down Budapest women, repeat the job of Goering's dive-bombers, driving patriotic thousands from their country to add to Western problems, while the Reds reenslave the balance.

Sympathetic Americans who by December 31 had welcomed 17,077 refugees—of which only 6,210 had visas hastily issued, the rest arriving on parole—will not debate on such sanctuary, and only wish they could take them all. But is this a solution?

Representative FRANCIS E. WALKER, Democrat, Pennsylvania, coauthor of the McCarran-Walter Immigration Act, and chairman of the House Un-American Activities Committee, doesn't think so. Immigration Commissioner, Gen. Joseph M. Swing, who was President Eisenhower's roommate at West Point, also has doubts. Together they went to Austria and over the Hungarian border to check. They report some things that an emotion-wreathed situation has obscured.

First, there is no overall plan for allocating the Hungarians, any more than with previous displaced persons. They cannot be sent to sparsely populated areas such as Alaska, which is crying for settlers. The Constitution forbids it, as it prohibits assigning anyone to a specific job, and except for quick Communist checks—without guaranties—there is little reliable screening, they say.

"I found there were three waves of Hungarian refugees. The first were mostly Hungarian Communists, scared stiff when the patriots seized power under Nagy and began squaring accounts with their oppressors. They rushed for Austria to save their lives, and when the revolt was crushed by Soviet arms, most of them went back," Mr. WALTER said.

"The second wave contained the real victims, bona fide anti-Communists who in turn were fleeing for their lives. Most of them were from Budapest and larger towns. A high percentage are students. A great many are professional people; there are few peasants in the refugee camps," he said. For these there is warmest sympathy and the hope of finding them new homes. Most of them fought for freedom, and with proper help might have won.

"The third wave has come along recently; contains plenty of infiltree Reds, and," says Mr. WALTER, "is filled with opportunists." He asked questions:

"I'm going to New York because business is better than in Budapest," one candidly told him. Another: "Hungary's finished. Why should I stick?" He had not fought.

Representative WALTER came back determined to have full hearings on the Immigration Act, with inquiries into the use of the Hungarian refugees to spark its liberalization.

Now that cold mathematics is entering the picture, perhaps our crowded citizens will ask: What's capacity?

Resolution of the Pennsylvania Bar Association

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Pennsylvania Bar Association Endorsing H. R. 9 and H. R. 10, now pending in the House of Representatives:

Whereas the Pennsylvania Bar Association has heretofore endorsed the proposal that the Congress of the United States should enact legislation to give self-employed individuals the right to defer income tax on a portion of income as an equitable method of tending to equalize the self-employed and employees benefiting from corporate pension plans under which money set aside by the corporation for the benefit of employees is exempt from income tax; and

Whereas Representative EUGENE J. KEOGH, of New York, and Representative THOMAS A. JENKINS, of Ohio, have introduced H. R. 9

and H. R. 10, in the 85th Congress to lessen the present inequity; and

Whereas there is general recognition of the fairness and necessity of such proposed legislation: Now, therefore, be it

Resolved, That the Pennsylvania Bar Association endorses H. R. 9 and H. R. 10, now pending in the House of Representatives of the Congress of the United States, and urges that both bills be enacted into law, as soon as orderly procedure permits; and be it further

Resolved, That the secretary of the association shall cause duly authenticated copies of this resolution to be delivered to each Senator and Representative from the Commonwealth of Pennsylvania in the Congress, to Representative KEOGH, to Representative JENKINS, and to the chairman of the Ways and Means Committee of the House of Representatives.

The Morale, the Organization, and the Ability of NATO

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. AUCHINCLOSS. Mr. Speaker, under permission granttd me to extend my remarks in the RECORD, I am very pleased to include a letter dated March 21, 1957, I received from an old friend of mine, William H. Baumer of the pharmaceutical company of Johnson & Johnson, New Brunswick, N. J., who has just returned as an Army Reservist from his active duty with the Supreme Headquarters, Allied Powers Europe.

Mr. Baumer, who is a man of keen judgment and of rare patriotism, brings to the people of America much encouragement in his report about the morale, the organization and the ability of NATO. Knowing him as I do, I feel well assured by his report and I think every American may take pride in the knowledge that our representatives abroad are working closely with the other nations to protect us and to preserve our free way of life.

His letter follows:

JOHNSON & JOHNSON,
New Brunswick, N. J., March 21, 1957.

Hon. JAMES C. AUCHINCLOSS,
House Office Building,
Washington, D. C.

DEAR JIM: Last Saturday I returned from my Army Reserve active-duty training with Supreme Headquarters, Allied Powers Europe. It was a memorable experience.

My military background and my continued civilian interest have been in foreign affairs. To see the Allied Command in Europe in action was one that thrilled me.

I came away with three definite reactions. First of all, a few years ago it would have been impossible to believe that 15 nations could live together so harmoniously as do the NATO military staffs. This mutual confidence practically assures that never again in history will one of these nations take up arms against a brother nation in the alliance. Practically knowing as much as they do about each other's arms strength, it would be a foolhardy move.

The second striking impression I got was one of intense realism. Every person was thinking in terms of the military reaction in a matter of hours to any enemy aggression as a cooperative venture.

The willingness to subordinate in-service competition to the common goal was the third matter of interest. It seems that I had to go overseas to find the finest type of in-service cooperation among American Army, Navy, and Air Force personnel.

I am writing to you as one of your constituents to tell you how intensely pleased I am on how well SHAPE is operating. It is a concept and a force that every American can be proud of. The problem, it seems to me, is to let every citizen know how their shield against communism stands guard every hour.

With kindest personal regards.

Sincerely yours,

Bill

WILLIAM H. BAUMER.

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. REUSS. Mr. Speaker, it is a matter of great pride to me that the first Member of Congress of Greek descent was a Democrat from the State which I am proud to represent today—the State of Wisconsin. Representative Lucas Miltiades Miller, a Member of this House in 1892 and 1893, came to the United States as the adopted son of an American colonel, who had gone to Greece as a volunteer in the Greek War of Independence, just as Greeks had come to the United States to fight under George Washington for our independence. Not only a Congressman, Miller became a prosperous businessman and himself a colonel in the militia.

All Americans can be proud of our country's support of the efforts of the Greeks to free themselves from alien rule during their great War of Independence which began 136 years ago today. Our faith in the rightness of their cause was a reflection of the deep roots of our own dedication to freedom—roots which in turn went back to the democratic heritage of the ancient Greek city states.

Greece is indeed the mother of western civilization and from her have come the basic values which animate America today—values which have drawn many Greeks to our shores seeking freedom and opportunity. These men and women have greatly enriched our common life. It is all the more tragic therefore that today our Nation's gates are barricaded so that we no longer welcome Greeks to our shores with open heart and hand. These barricades must be lifted. Moreover, our country again has an opportunity to assert its historical devotion to freedom by making every effort to assure self-determination for the people of Cyprus.

To these goals, let us repledge ourselves on March 25 as we once again celebrate Greek Independence Day.

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. FLOOD. Mr. Speaker, on this day 136 years ago, Greece declared independence from the Ottoman Empire. Today we are happy to join with the Greek nation and our own citizens of Greek heritage in celebrating this event. The American people have always held the warmest and most friendly feelings toward the Greek people. Throughout these years our spirits have been united in devotion to freedom, but today we are also allies in the North Atlantic Treaty Organization for the mutual defense of that freedom.

The American Revolution of 1776 served as an inspiration to the Greek people in their battle for national independence. In 1821 the United States was the outstanding example of a colony that had revolted, obtained its independence, and successfully defended it against a major European power, in the War of 1812. When the Greek people became one of the first to lift high the standard of liberty in Europe, Americans of all political parties were united in their hopes for Greek freedom. Not only did this seem to be a second case of a people seeking freedom from domination by a foreign power, but also Greece represented the source of historic wisdom in philosophy, literature, and art which was most highly prized by the Founding Fathers of our own Nation. As President Madison said in 1822:

> The name of Greece fills the mind and heart with the greatest and noblest sentiments. * * * It was * * * natural for * * * this people * * * to arouse enthusiasm and sympathy everywhere in the United States.

Our two countries were united in both World War I and the second world war, when Greece was a shining example of how tenaciously a freedom-loving people could fight to retain their independence. For a long time, the courageous Greek people battled the forces of Nazi Germany. Finally, Greece was occupied amidst a devastating destruction of many of the architectural gems of Western civilization. When, in 1944, Greece was liberated by the victorious allies she soon faced renewed threats to her freedom as well as the task of rebuilding her war-devastated land.

In 1947 this new threat came from the Communist guerrilla bands in the north which were actively aided by Russian-controlled Yugoslavia, Bulgaria and Albania. The Soviet Union thus sought to foment and support a Communist revolution that would add Greece to her growing number of satellite states. And at that very moment, when Greek peril seemed greatest, Britain's desperate economic straits forced the withdrawal of her troops from Greece. The United States, which had emerged from World War II with its great strength still in-

tact, responded with the famous Truman doctrine. The American people sent both economic and military aid to the embattled Greek Government which enabled it to successfully fight off this latest attack upon her independence.

It became clear there was a threat of a Soviet armed attack upon Western Europe that would last for a long time. It also became clear that it could only be successfully met by united action. Thus, in 1949, Greece joined with the United States and other nations of the general Atlantic area in founding the North Atlantic Treaty Organization. An attack upon any one member of NATO is considered an attack upon every other member. United States military might is committed to the defense of Greece. The brutal repression of the Hungarian revolution is only the latest proof that the Soviet threat is a continuing reality and that unity amongst the NATO powers is as vital today as any time since the founding of the organization. Today as we celebrate Greek Independence Day, it becomes increasingly vital that all members of the alliance settle their mutual differences by amicable means in the interests of continuing the united strength and common purpose needed to defend our basic independence in the world today.

Not for U. N.

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. BOW. Mr. Speaker, as I have previously pointed out, other nations are more solicitous of the welfare of their troops than is the United States. In the RECORD of February 14, page A971, I called attention to Canada's refusal to subject its troops to a status-of-forces arrangement in the Near East. Under leave to extend, I include herewith an editorial from the Chicago Tribune pointing out that the United Nations refuses to assent to any such arrangement.

NOT FOR U. N.

Mr. Truman, Mr. Eisenhower, and the State Departments of both of them (assuming there is any difference) have executed a number of "status of forces" treaties which subject American service men to criminal trial in foreign courts. These agreements deprive Americans abroad of the constitutional guarantee of due process and have been strongly criticized on that ground, in Congress and out.

Now the United Nations has an emergency police force, composed of Swedes, Finns, Danes, Norwegians, Indians, and Colombians, commanded by a Canadian, which has been dispatched to the Gaza strip and the Gulf of Aqaba.

This contingent of foreigners on alien soil is in a situation not unlike that of Americans sent to England, France, Germany, Japan, and other foreign duty stations, where they are exposed to criminal prosecution by the host country for offenses committed off duty or off military reservations.

Any distinction of status between the Americans and the U. N. forces is more apparent than real. The Americans are generally sent to countries with which the United States is in alliance, but that is no real distinction, for the U. N. forces are stationed in two countries which are also U. N. members and are there by agreement of these countries.

But there is one real difference in the protection accorded the two groups of troops. That is that the U. N. secretary general, Mr. Hammarskjold, refuses to assent to any "status of forces" arrangement exposing the U. N. troops to trial in the courts of the host states. He says that they are subject only to the criminal jurisdiction of the nations which lent then to U. N.

Thus the United Nations takes zealous care of the rights of forces committed to its jurisdiction for foreign duty, while the United States, in an excess of internationalist fervor, yields the national rights of its men who are sent overseas to protect other nations. That is, the United States Government insists on being far more internationalist than the world organization which is supposed to be the very embodiment of internationalism.

We submit this anomaly to the attention of our global salvationists and ask them why the American Government is obliged to surrender the rights of its nationals when the international body sternly upholds the national rights of troops assigned to an international mission?

Modern Republicanism

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. MAY. Mr. Speaker, it is interesting to note the opinions of the people as expressed by the Gallup poll published in the Washington Post of March 25. In the final analysis, the people are the ones that decide the policy of a government or a party. I think this survey is most illuminating in the search of the Republican Party to continually look to the future, a philosophy constantly advocated by President Eisenhower and national chairman, Meade Alcorn:

GOP RANK AND FILE SEES IT IKE'S WAY

(By George Gallup)

PRINCETON, N. J.—Where does the rank and file of the GOP stand on the question of "modern Republicanism"?

This is something political strategists are asking themselves as the congressional battle over the President's fiscal policies highlights the liberal-conservative division in the Republican Party.

Despite sharp opposition from some Members of his party on Capitol Hill, the evidence from the grassroots is that Mr. Eisenhower is winning his battle to establish his brand of "modern Republicanism" as the basic philosophy of the GOP.

The fact of the matter is that many elements of the President's new concept of Republicanism have already been accepted by a substantial majority of GOP voters across the country.

Such things as support of the United Nations, foreign aid, and Federal aid to education—to take three key issues which have been dividing the liberals and conservatives among congressional Republicans—have consistently been supported by substantial majorities of the rank-and-file GOP voters.

But perhaps the most conclusive evidence that so-called modern Republicanism has won acceptance from GOP voters is seen in the latest institute survey in which Republicans were asked to "choose up sides" when the leaders and basic philosophies of the two wings of the GOP were presented.

On this count, the President scores a telling victory—74 percent of GOP voters pick the "liberals" and their philosophies compared to 18 percent who prefer the "conservatives" and theirs.

The question was as follows:

The Republican Party contains two major groups which often fight each other:

1. One group includes persons like Mr. Eisenhower, Dewey, Nixon, and Lodge who want the Republicans to keep social security and welfare programs, to be active in international affairs and to support and strengthen the United Nations. This wing of the party is called the "Liberal Republicans."

2. The other group includes persons like Mr. Hoover, Knowland, McCarthy, and other followers of the late Senator Taft. In general, this group wants to cut down or reduce many social security and welfare programs; to get out of the United Nations; and to reduce spending both at home and abroad. This wing of the party is called the Conservative Republicans.

Now, of course, you may think that one group is right in one respect and wrong in another—but if you had to choose between the two groups—which would you prefer?

The results among all persons in the survey classifying themselves as Republicans:

	(*Percent*)
Prefer the liberals	74
Prefer the conservatives	18
Don't know	8

There is no question but what Congress has received a lot of mail from conservative quarters—particularly in regard to the President's new budget. But political observers know that mail is, in many cases, an unreliable index of public opinion, expressing more often the will of the "articulate minority" than it does any judgment of the population as a whole.

The Union Racketeering Probe

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Oil City (Pa.) Derrick of March 21, 1957:

THE UNION RACKETEERING PROBE

The evidence on alleged racketeering within American trade unions is, of course, not all in by any means. Nevertheless, the story already unfolded before the Select Senate Committee on Labor and Management Practices is so sensational that even blasé Washington, which is accustomed to investigations that make the headlines, has been shocked.

The testimony to date has dealt largely with activities of the giant Teamsters Union of which the crafty traveler, Dave Beck, is the head. It indicates some dubious actions in the upper echelons of the union, evidence of a hookup with racketeers and gamblers in the Northwest, and questionable manipulation and use of union funds.

But the probe is bound to spill over into other unions and other areas. For counsel for the Senate committee says that over 1,000 individual reports of racketeering have been received by the committee. The trail uncovered by the investigation will lead into many cities of the country.

Though the inquiry is just in its infancy, the shocking testimony already is sufficient to show that union monopoly provides a fertile field for operations of hoodlums and gangsters; that some unscrupulous characters have set themselves up in key positions in some labor organizations and fattened off everybody they could, including their own followers.

Witness after witness testified that west-coast officials of the teamsters union had made devious deals with racketeers and gangsters, had tried through bribery and otherwise to control law enforcement in Oregon, and had used union funds for purely personal gain.

Unquestionably the great majority of union officials are honest and busily concerned with carrying out the legitimate trade-union objectives of their members. But the inquiry testimony clearly is indicative that unscrupulous individuals have wormed their way into positions of authority in some unions, have placed themselves above the law, and unaccountable to their own union members.

Clearly, too, the inquiry shows that too many in the rank and file have not concerned themselves enough with matters beyond what shows up in the pay envelopes to watch out for those who would prostitute union solidarity to criminal ends. They fail to attend meetings, to vote in union elections, and to take an active interest in all union affairs. The result has been to place control in a handful of members not responsible to the will of the majority. Hence there is rule by a minority which makes easy the institution of corrupt practices.

And for too long, also, top leadership in the labor movement has been either unable or unwilling to exercise the authority necessary to discipline member unions that were known to have been infiltrated by racketeers or dominated by unscrupulous leaders. Consequently, it is not previous to say that these hearings could possibly change the climate of public opinion to a degree arguments of those promoting right-to-work legislation have not achieved.

The current inquiry is not, and it assuredly should not be, prejudicial to the union movement and the great body of good men and women involved in it. Rather, it is in the interest of labor as a whole and, significantly, most rank-and-file union people as well as the vast majority of honest union officials heartily approve it.

The investigation is long overdue. Out of it should evolve some checks and restraints to give the rank and file better control of union funds and activities and to help honest labor leaders keep their ranks free from racketeers and criminals.

Wilkes-Barre Selected as Convention City

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the committee for the State encampment of the allied organizations of the Grand Army of the Republic selecting Wilkes-Barre for its convention city in 1957:

MARCH 15, 1957.

Dr. CHARLES J. HIGGS,
Commander, Camp 169, Sons of Union Veterans of the Civil War.

Honorable COMMANDER: We the undersigned members of this camp and also members of the committee for the State encampment of the allied organizations of the Grand Army of the Republic, wish to present to you a resolution which we feel is vitally important at this time:

"Whereas the allied organizations of the Grand Army of the Republic has selected Wilkes-Barre as their convention city for 1957; and

"Wheras the allied organizations of the Grand Army of the Republic are the heirs of those men who offered and gave their great devotion to the cause that all men are created equal, and, who, at the call of that great President, Abraham Lincoln, many young men left Wilkes-Barre and went into service of this Nation and participated in many battles with one thought in mind; namely, that one Nation under God would enjoy the freedoms so perpetuated: So, therefore, be it

"*Resolved*, That we ask the honorable mayor of the city of Wilkes-Barre, Luther M. Kniffen, to declare the year 1957 'Memorial Year' in tribute to the Grand Army of the Republic; and be it further

"*Resolved*, That a copy of these resolutions be presented to the honorable mayor of Wilkes-Barre, and same to become part of the minutes of this organization."

A. M. BREDBENNER,
PAUL M. WINTER,
EDGAR M. POST.

Approved:

LUTHER M. KNIFFEN,
Mayor.

Federal Aid to Schools

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. BOW. Mr. Speaker, I commend to my colleagues an excellent statement of opposition to Federal aid sent to me by Karl Bodenbender, superintendent of schools of Bellefontaine, Ohio. I admire the firm statement of principle that impels Mr. Bodenbender to reject such federalization. Under leave to extend my remarks, I include the text of his letter. The letter follows:

BELLEFONTAINE CITY SCHOOLS,
Bellefontaine, Ohio, March 11, 1957.

Hon. FRANK T. BOW,
House Office Building,
Washington, D. C.

DEAR MR. BOW: Bellefontaine city school district, and most of the school districts in Ohio, have a difficult struggle raising enough funds to operate a good school program and to provide buildings and facilities for a good program. We could very well use assistance from the Federal Government for both building and current expenses.

However, I am personally of the opinion that (1) education is a function and an obligation of the State rather than the Nation; (2) each State in the Union is capable of financing a good educational system if they decide to do so; (3) it is much more expensive to provide aid through the Federal Government than it is on a State or local basis; (4) the Federal Government is now much too far in debt, and that we should make every practical effort to reduce this debt; (5) even though we in Bellefontaine would receive some assistance from a program of Federal aid, such a program is in the direction of further socialization of our Government and economy, and to that principle I am opposed.

My suggestion is that this problem of financing schools be turned back to the individual States. Ohio has not properly taken care of the situation, but we are better able to than is our National Government.

Sincerely,

KARL R. BODENBENDER.

Florida Jaycees Choose Alan S. Boyd as One of the Outstanding Young Men of 1956

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FASCELL. Mr. Speaker, recently the Florida Junior Chamber of Commerce in convention at Pensacola, Fla., recognizing the accomplishments and many worthwhile contributions to the welfare of Florida by an able, young Miami attorney, Alan Stephenson Boyd, presented him 1 of Florida's 5 outstanding young men of 1956 awards. Never before in Florida Jaycee history has this award been given to a more deserving individual.

Alan was born in Jacksonville, Fla., July 20, 1922. The major portion of his childhood was spent in MacClenny, a small north Florida community. He gained his elementary and high-school education in public schools in Florida, Massachusetts, and New York, later attending the University of Florida and the University of Virginia, where he obtained his law degree.

During World War II Alan served 4 active years as a pilot in the United States Air Corps, Troop Carrier Command. He participated in the French D-Day activities and in the airborne invasions of southern France, Holland, and the airborne assault across the Rhine in the spring of 1945. These activities brought him the Air Medal with 3 Oak Leaf Clusters, 11 battle stars—ETO—and two Presidential unit citations.

The United States Air Force saw fit to recall him during the Korean conflict where he again served as pilot in the troop carrier forces, and as wing staff operations officer in charge of all troop carrier participation in Western Hemisphere defense. Alan piloted 1 of 2 planes which were the first to land on the ice pack 300 miles from the North Pole.

The Miami Jaycees and the Florida Junior Chamber of Commerce, in submitting Alan Boyd's qualifications to their committee, listed briefly his activities and contributions to the State of Florida. The following is from their report.

PUBLIC

Chairman citizen committee for the development of aviation in Florida. Appointed member Florida Railroad and Public Utilities Commission 1955. Elected to 4-year term in 1956. Chairman Railroad and Public Utilities Commission (1956). Member executive committee, National Association of Railroad and Utilities Commissioners. Member Interstate Commerce Commission Joint Board to investigate national railroad passenger fare deficit."

ORGANIZATIONS

President and director of Kiwanis Club of South Miami 1956. Miami Jaycees. Miami-Dade Chamber of Commerce. State chamber of commerce. Member Advisory Committee Civil Air Patrol South Florida. Member advisory committee, State Democratic Party. National Conference of Christians and Jews. Pinecrest Elementary School Daddy's Club. University of Florida Alumni Association; University of Virginia Alumni Association and Law School Association.

OUTSTANDING CONTRIBUTIONS IN HIS VOCATION OR PROFESSION

Alan Boyd is very active member of all the bar associations that he belongs to and takes an active part in the affairs concerning attorneys in the State of Florida.

He is the former general counsel for the Florida State Turnpike Authority and was instrumental in setting up the legal machinery to make this project a reality. Mr. Boyd's efforts are worthy of consideration because of the time element involved in this matter.

He was appointed by Governor Collins to the Florida Railroad and Public Utilities Commission in 1955. The electorate of the State gave him its approval by voting him to a 4-year term in May of 1956. The other members of said commission elected him as its chairman in 1956, and he is now serving in that capacity.

OUTSTANDING CONTRIBUTIONS TO THE GENERAL WELFARE OF THE PEOPLE

Alan Boyd instigated the Federal Interstate Commission public hearing in West Palm Beach last year, concerning the FEC station in Miami. This hearing lasted 7 weeks. Mr. Boyd was instrumental in having representatives of the city in different categories to testify before the Federal Interstate Commission. The FEC station is one of the major problems facing the citizens of Miami.

Mr. Boyd is also a member of the executive committee of the National Association of Railroad and Utilities Commissioners, and has made studies comparing the methods employed in other States with the ones established in Florida.

Mr. Boyd is also serving as a member of the Interstate Commerce Commission joint board which is investigating the national railroad passenger fare deficit.

By being so primarily concerned with the different boards and commissions of which he is a member, Mr. Boyd is serving the State of Florida in an exceptional manner, trying to seek remedies to the present condition of our railroads and freight rates. By being actively interested in developing the aviation industry in Florida, Mr. Boyd also rates consideration for this award.

The Miami Daily News in an editorial dated Tuesday, April 24, 1956, said as follows:

RETURN ALAN BOYD TO THE RRPUC

When Richard A. Mack resigned from the State railroad and public utilities commission last year to become a member of the Federal Communications Commission, Alan S. Boyd was appointed by Governor Collins to fill the vacancy. During his short tenure in office, Boyd already has made a profound impression on Florida's citizens.

Boyd, an attorney, came to the board well qualified to serve the entire State. A resident of populous Dade since 1948, he is fully aware of the problems which face this community; on the other hand he still has strong family and friendship alliances in north Florida.

The RRPUC is responsible for the establishment and regulation of rates for all privately owned power, communications, and transportation systems operating within Florida including judicial, executive, and administrative powers in these industries.

Immediately upon taking office, Boyd proceeded to take a firm voice in matters before the commission. Just last week he traveled to Washington and spoke before a congressional committee in behalf of proposed legislation designed to enable the various States to enforce their railroad regulations, even though the railroad be in Federal bankruptcy proceedings at the time. The proposed legislation, if enacted, would give the RRPUC power to force the Florida East Coast Railway to start construction on a new depot and thus relieve downtown Miami of choking congestion.

At the time of his appointment to the commission, Boyd was serving as general counsel to the Florida Turnpike Authority. He is the first attorney to serve on the commission in over 50 years.

The people of Florida, by voting for Alan S. Boyd, should return this highly qualified, energetic man to the railroad and public utilities commission.

The Miami Herald of Saturday, April 7, 1956, endorsing Alan's candidacy for the State railroad and public utilities commission, said as follows:

UTILITIES BOARD NEEDS BOYD

An all-Florida candidate for the State railroad and public utilities commission is Alan S. Boyd, 33-year-old attorney.

He was born in Jacksonville, grew up in MacClenny and has lived in Miami since 1946.

As he said in announcing his candidacy, "I have had a unique opportunity to know and understand the requirements and feelings of citizens from vastly different sections of this State."

The three-man commission to which he seeks election is the most powerful agency of State government. It snared judicial, executive, and administrative responsibilities.

Its work determines how well the people are served by their public carriers and public utilities.

In performing their duties, the three commissioners must keep the people's welfare paramount and, at the same time, be fair to the businesses whose rates and services they regulate.

Boyd has the proper approach to this difficult task.

Many articles have been written about this outstanding young man, but the majority of them are not at my immediate command. Two, however, of which I have obtained copies were written by Allen Morris in his column titled "Cracker Politics." They appeared in the Tallahassee Democrat, a newspaper printed in Tallahassee, Fla. A portion of those articles follows:

Like many another returned veteran, Boyd, his wife and young son, Mark, faced an acute housing situation when he came back from service.

"I was making $175 a month and paying $100 a month for an unfurnished apartment," he reminisced. "Our savings were dwindling rapidly. So in spite of the fact that my carpentry experience was limited to putting up a shelf, a job where I had miscalculated by 3 inches, my wife insisted that we acquire a piece of property and build ourselves."

He now says he doesn't know for sure whether the house-building enterprise was a happy experience or a sad one. Except for the plumbing and electrical installation, Boyd did all the work on the house himself.

"I knew so little about it I had to do a great many things twice," he said ruefully. "In fact, you might say I built two houses to get one. But we're still living in the house. It's butchered but comfortable."

As for Alan Boyd, the postelection recognition of his talents came from Washington with what amounted to a tender of nomination (subject to President Eisenhower's appointment) of Democratic membership on the 5-man bipartisan commission which administers the country's nonmilitary airpower, the Civil Aeronautics Board, with a 6-year term at twice Boyd's Florida salary.

This bid to national office came by way of a telephone call at 3:30 of a recent afternoon. His answer had to be given by 9 the next morning. His reply—"No, thank you"—was ready at 5 minutes of 9. (The honor afterward went to another Miamian, Louis Hector.)

It was a hard decision, for the CAB is right in the center of Boyd's interests—flying. He has an excellent World War II record as a pilot in the Troop Carrier Command, plus additional duty during the Korean conflict. (He maneuvered the second flying boxcar in the flight which landed on the ice nearest the North Pole.) And however important to Florida householders the railroad and public utilities commission may be through its power to fix rates, including those of electric light and telephone companies, and to regulate service, there is undeniably more of a sense of true accomplishment in the determination of this Nation's civilian air destiny.

Yet Boyd turned it down, and without continuing regret.

He did so for a variety of reasons. He probably could not rank these in order but they included (1) a sense of obligation to those who had worked and voted for his election to the 4-year term on which he had just entered, (2) his wife's desire to stay in Florida, and (3) his own preoccupation with Florida people and places.

There are those who believe that Boyd may be governor some day. At 34, he has a good 20 years for the ball to bounce his way. But, like Justice O'Connell, he doesn't even like to discuss this possibility—he thinks such discussion might harm him in the job he is trying to do now. He doesn't want litigants and others to think his decisions as 1 of the 3 members of the commission are influenced by what may be someday. And he doesn't want his own subconscious to sway him in the making of those decisions.

But, again like Justice O'Connell, Boyd can't prevent other people from speculating.

Alan Boyd, although only 34 years old, has indeed compiled a very impressive record. All Florida is proud to count him among our leaders. We predict for him a still brighter and more promising future.

Spiraling Rise in the Cost of Living

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. VANIK. Mr. Speaker, in today's newspaper releases we see further evi-

dence of the spiraling rise in the cost of living. Excepting the New York Times, New York City newspapers in unison announced an increase in prices ranging between 20 percent to 100 percent.

Today, the New York Post announced a 100-percent price increase in raising the price of the newspaper from 5 cents to 10 cents. This announcement follows by several days the recent 100 percent increase in the price of the World Telegram and Sun and the New York Journal-American from 5 cents to 10 cents. The tabloids were more conservative in holding their price increases to 20 percent.

The newspaper industry, thoroughly united in multiplying newspaper prices, has utterly denied its paramount obligation to hold the price line. While newspaper editorials condemn creeping and runaway inflation, their publishers quietly seek to double the price of their product to the public. It appears therefore that newspaper publishers fail to be impressed by the editorials which appear in their own publications.

Newspapers are not alone. In the face of a continued reduction in the demand for steel because of lowered steel requirements by the automobile industry, the major steel companies recently put over a 4½ percent increase in the price of tinplate. This increase raises the price of tinplate about $7.70 a ton, effective April 30.

This rise in the cost of tinplate is not economically justified and results only because of a cutback in tinplate requirements by American canmakers. This price increase in tinplate will soon affect the canned food costs of every household.

Statement of George D. Riley, AFL–CIO Legislative Representative, Before Subcommittee No. 3 of the House Armed Services Committee on H. R. 4910 and H. R. 4911, To Amend the Federal Civil Defense Act of 1950

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith a statement of George D. Riley, AFL–CIO legislative representative, before Subcommittee No. 3 of the House Armed Services Committee on H. R. 4910 and H. R. 4911, to amend the Federal Civil Defense Act of 1950.

The statement follows:

The AFL–CIO appreciates this opportunity to present its views regarding the critical issue of civil defense.

H. R. 4910 and H R 4911 contain the administration amendments to the Federal Civil Defense Act of 1950 and, in our opinion, these amendments will bring to civil defense, for the first time, something akin to our thinking that civil defense—like the military defense of our country—is the responsibility of the Federal Government. The proposed amendments contained in the bills do not go as far as they might in establishing Federal responsibility; and yet we find no serious area of disagreement but, instead, feel reassured that these proposals constitute a step in the right direction.

We do not feel qualified to make extensive comments on all aspects of this proposed legislation. We are not experts in nuclear warfare or bomb damage. However, labor has always been particularly aware of the danger of Communist aggression. Moreover, as an organization with over 15 million members largely concentrated in the urban areas of the country, we represent the individuals in the Nation most vulnerable to attack. A vast number of our members are in great production centers, typically denominated as critical target areas. Our members are engaged in the operations of huge industries, practically all of which are above ground. They are actively producing much of the useful items or which could be converted in time of national stress.

When we think of civil defense, we instinctively think of medical supplies, including plasma, stockpiling of the essentials of life—water, clean air, sanitation, food, clothing, and provision for living quarters—all in shelters where survival can be considered a reasonable expectation.

AFL–CIO POLICY

It is appropriate to refer to a resolution titled "Civil Defense," adopted by the First Constitutional Convention of the AFL–CIO, in which it was stated that:

"Organized labor has supported civil defense from its very beginning in 1940. In the planning and programing of civil defense procedure, representatives of organized labor have been consulted. Representatives of organized labor have been called upon to help plan the protection of civilians and the restoration of industries and service facilities that may be destroyed or interrupted."

The same resolution continues by stating:

"Organized workers who work in plants and live in critical target areas cannot be regulated on the basis of State, county, or city lines. Leadership in developing civil defense programs for such industrial areas must of necessity come from plans developed by Federal Government authorities based on a knowledge of an enemy's ability to penetrate into such areas."

There were seven concluding points in the same resolution which read as follows:

"*Resolved*, That reality of the situation and the dangers we face make it mandatory that the first convention of the united labor movement under the banner of the AFL–CIO call upon the Congress of the United States to pass a new Civil Defense Act which will provide that:

"1. The primary responsibility for civil defense rests with the Federal Government in the same manner as provided in the United States Constitution for the Common Defense of the Nation.

"2. The Federal Government be responsible for giving direction, service, and financial assistance to the States, counties and communities for developing civil defense plans in line with the Federal responsibility.

"3. The Congress through the proper committees authorize and appropriate sufficient funds for these purposes.

"4. Congress authorize the Civil Defense Administrator to set up minimum standards of civil defense preparation and facilities to maintain them, such standards to be maintained subject to Civil Defense inspection in order to qualify for Federal aid in any respect.

"5. Congress be directed to provide proper protection, wages, and terms of employment, and workmen's compensation for civil defense workers who may be required to work or train in civil defense procedures prior to or after an attack on any community.

"6. Civil defense regional boundaries be revised to meet the reality of the Nation's critical target area and fallout potential as a result of the use of nuclear weapons.

"7. Direction of the civil defense programs will not be abandoned or delegated to the Armed Forces in the event of martial law or enemy attack."

RESPONSIBILITY FOR CIVIL DEFENSE

With this policy as background, may I mention a few specific points in the proposed legislation. First, our organization has not been satisfied with the degree of progress which this Nation has made with regard to civil defense preparations. While we recognize that many Federal, State, and local officials have exerted their utmost to perform a credible job, we feel, nevertheless, that they have been working under serious handicaps.

To begin with, the American public is notoriously lax in waking up to the possibility of attack. Our immunity from attack in World War II naturally has made it more difficult for individuals to grasp the necessity for civil-defense preparations. In addition, available funds have been quite limited; neither the Congress nor the legislatures have been willing to authorize extensive appropriations.

As a result, the AFL–CIO is keenly disappointed with the degree of readiness which has been achieved by our civil-defense organization. A major reason in our mind for this lack of preparation is the very cumbersome administrative machinery which was written into the Federal Civil Defense Act of 1950. As you know, the declaration of policy in that law stated the policy and intent of Congress that the "responsibility for civil defense shall be vested primarily in the several States and their political subdivisions."

The Federal Government thus was left as little more than a simple coordinator of State activities regarding civil defense. In effect, the States have all the responsibility and are supposed to do all the work.

UNSATISFACTORY RESULTS

The results have been quite unsatisfactory. Some States, particularly those including a number of important target areas, have moved promptly to meet this problem. Others have felt little responsibility. Consequently, the degree of our readiness varies sharply from State to State, and the quality of civil-defense preparations is very uneven.

In our view, the language written into the 1950 act by Congress was based on extremely faulty assumptions. It failed to recognize that the danger of attack is a danger to the entire Nation. While it is true that in the event of attack, possibly certain particular areas might be considered more vulnerable than others, the entire Nation would be involved. State lines will have little meaning. Areas outside the potential attack centers will have to be called on to give aid in the form of supplies, equipment, and manpower.

Yet, at present, there is little recognition of this fact. States which do not include prime target areas naturally are reluctant to spend money, simply to support target areas in another State.

ESTABLISHING FEDERAL RESPONSIBILITY

Clearly, the Federal Government must become more directly involved in the civil-defense process. This is exactly the direction in which H. R. 4910 is oriented. We, therefore, want to make clear our support of the changes which would affirm the Federal Government's broader responsibility for the Nation's civil-defense program.

The AFL–CIO feels that H. R. 4910, section 205, beginning on line 19 of page 4, meets one of the important needs of a strong civil defense. Since civil defense must be con-

sidered as part of our national defense, it would be a fair comparison to say that this section follows the same pattern as is now employed by the military in the National Guard, which secures financial assistance and the loan of equipment from the Federal Government in its training program.

Certainly, the education of Americans in the need and responsibility of so great a service as civil defense must be of paramount importance. Once the citizens of this great country of ours are properly aware of their responsibilities, a training and education program the like of which the world has never seen will become a fact and not a promise or a need. The usefulness of civil defense in peace as well as in times of war is a matter of record—records which show that the membership of the AFL–CIO has played a leading role with both financial contributions and contributions of manpower.

In this respect, Mr. Chairman, H. R. 4911 would remove the $100,000 limitation upon annual appropriations made for the purpose of paying the cost of students from States and cities attending FCDA schools. The need is for more students, if we are to go forward in our training program. New language in H. R. 4910 would cover the per diem and travel for students necessary to run FCDA schools.

CONCLUSION

I express the full appreciation of the AFL–CIO in having this opportunity to set forth for the record our position and sentiments in a subject which so vitally and completely potentially affects our population.

Each year, we request the Appropriations Committee to provide funds sufficiently adequate to enable the Federal Civil Defense Administration to function at its highest potential. We did the same at the time that agency was known as the Office of Civil Defense.

Members of our Civil Defense Committee in the AFL–CIO have given generously of their time and thought to the manpower phases, as well as shelter, stockpiling and many others.

Early in the concept of civil defense, we took the position that the prime responsibility lies with the Federal Government to provide leadership, coordination and facilities, the latter especially where State and local governments on their own initiative cannot or do not take action in behalf of the population.

It is gratifying to note that responsibility on the part of the central government has now been fixed in the thinking and the planning of practically all concerned.

We share completely the expression contained in the foreword of House Report No. 2946 of the 84th Congress, titled "Civil Defense for National Survival," issued by the Holifield Subcommittee on Military Operations, and which reads as follows:

"If a nuclear attack should be launched upon the cities of this Nation, millions of lives could be lost and the accumulated tangible assets represented by our homes, churches, schools, libraries, cultural treasures, industrial facilities, and other things we hold dear, could be completely destroyed.

"Such an attack now is possible by a potential enemy possessing atomic-hydrogen weapons and sufficient means to deliver them by airplanes and submarines."

It is because of these facts that labor has been doing everything possible to be on the alert. We recognize the destructive power of nuclear weapons, radioactive fallout, and our vulnerability to attack.

We hope that from these hearings can come a more effective Government organization to alert and prepare the American people for any eventuality that may lie ahead.

Cooperatives in South Italy

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. WIER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an article entitled "Cooperatives in South Italy," published in the Washington Post of Tuesday, March 19, 1957. The article is most timely and I believe will be of interest to Members of the Congress as well as all readers of the CONGRESSIONAL RECORD.

The article is as follows:

COOPERATIVES IN SOUTH ITALY

I have found at last what I had been hoping for in south Italy, namely a truly Christian social movement. I thought I saw the signs of such a movement in the agrarian reform movement last year but I could not catch all the implications. Here and there the settlers on the land were beginning to show new signs of life. On my last trip I saw all these signs standing out clearly. I saw them in the spirit and devotion of the entire staff of the operating personnel.

I participated in a large number of staff interviews in the field and I also participated in many group discussions with staff members and the new settlers on the land. I hear the questions raised by the new settlers. I found, moreover, that the leaders in the agrarian reform were in process of developing a new type of personnel in between the technicians and the ordinary people. I talked to a number of this group on the experimental farms. In formal education they were not too far removed from the ordinary people with whom they were dealing. Special courses had been set up for the training of this new personnel.

In previous visits to south Italy I was inclined to emphasize the technical limitations of the agrarian program. The availability of adequate water supply had not kept pace with the general program of land settlement. There was a lag of 4 years in the planting of fruit trees and full production. I learned on my last trip that their problems did not loom too largely in the minds of the settlers.

The settlers had a very good grasp of the advantages of cooperation. The cooperative for them had advantages not only for the sellers but also for the buyers. They sold their milk, their fruits and vegetables through the cooperative and they were able to buy their fertilizer, their seeds, and use of machines through the cooperative. In describing their present status they were not only thinking about the present but also of the future. I had the privilege of hearing the settlers discuss with the technicians the extent of their probable income at the end of the next 4 years when their fruit trees reached full production.

All through the high mountains of Calabria and the plains of Puglia and Lucania I found myself in a constant debate with the administrative personnel in regard to the new qualities of the settlers on the land. There was general agreement in regard to their feeling of independence. They were doing things for themselves.

The new settlers on the land in south Italy are looking ahead to complete ownership in a period of 30 years. After the 3 years' trial period they may reach the condition of permanent settlers. At this stage they begin to make their monthly payments to pay off two-thirds of the capital investment made by the government in the land. Up to date I had not found one single instance of real failure to keep up monthly payments. This is another evidence of the new independence of the people on the land.

In the new villages of Puglia and Lucania one can see the social aspects of the agrarian reform at their best. These are not villages in the old south Italian tradition in which people are crowded together in the poorest kind of housing without any health or social facilities. They have social centers with schools, clinics, adult education programs, offices for agricultural technicians, churches, social visitors, and religious teachers. They represent the best kind of team approach to the problems of the settlers who are scattered around in wide areas.

In my interviews with the technicians I learned that they were giving very special attention to the health of the new settlers. They recognized that health factors play a very important part in their lives. Clinical facilities were available for the people in all the villages. Health examinations were also given to all schoolchildren.

In my trek through the high Sila I was impressed by the development of a new cooperative program for the sale of Sila seed potatoes. This crop constituted a very large part of the income of the new settlers in the high mountains.

It was the general agreement among those interested in the agrarian movement that the cooperatives that had grown out of the movement had really laid the foundation for the development of an increasing number of small industries in south Italy. If the cooperatives can lay such a foundation they will have made a most significant contribution to the whole social and economic development of the entire region.

The south Italian agrarian movement is bound to receive more attention throughout the world than it has received up to date. In all probability it is the most significant movement of this kind to be found in any country. The experience of the Italian technicians will be most valuable to other countries that are facing the same type of problems.

The full development of the agrarian program in south Italy supplemented by a large development of small industries and possibly of a few somewhat larger industries will make far-reaching contributions to lifting the whole development of the economy of south Italy. However, there still will remain a very considerable area that must be served by programs of social assistance of one kind or another. Up to date these assistance programs have carried the largest part of the economic and social needs of south Italy.

Rt. Rev. Msgr. JOHN O'GRADY,
BARI, ITALY.

(Monsignor O'Grady is secretary of the National Conference of Catholic Charities.)

Congressional Watchdogs

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial

from the Ridgway (Pa.) Record of March 21, 1957:

CONGRESSIONAL WATCHDOGS

Congressional investigations, in theory, are supposed to provide a basis for intelligent lawmaking. They often do not. But even without that end result they may serve usefully as a kind of watchdog check on various phases of American life.

In this latter aspect there is danger of abuse. Some legislators seem to investigate for investigation's sake, figuring there is ammunition to be gained for the next election or notoriety achieved which can advance political fortunes.

The current Senate inquiry into racketeering in labor and industry may possibly lead to some healthy house cleaning by labor itself and at the same time produce new Federal legislation.

New laws mostly are in the talk stage now with not too many well-defined projects shaping up so far. One that is clear, however, is a proposal to compel union officials who manage union pension and welfare funds to make full and regular disclosure of fund finances.

Labor fought hard to win the allowances that make these funds possible. They were hailed as milestones in the improvement of the average organized worker's lot. It would seem automatic that such moneys should be guarded scrupulously.

Yet, this evidently has not always been the case. Reports of irregularities in the handling of pension and welfare funds are not uncommon. And, as Secretary of Labor James Mitchell says, they represent a great temptation to racketeers.

He estimates that these sums now amount to more than $26 billion, a huge reservoir indeed. To protect the million of ordinary workers who are the beneficiaries of this rainy-day money, Mitchell favors the proposed law demanding financial declarations.

It is hard to quarrel with the purposes of this measure. Responsible unions and honest union officials can have no fear of it. They cannot fairly brand it labor-busting legislation, since its aim is to aid the union rank and file.

The money steadily is set aside to ease the suffering and the old age of workingmen. There can be no excuse for shuffling it around behind closed doors, with no fair accounting. Big sums mean big responsibility, wisely borne. And $26 billion is a lot of money.

Chaplains' Day Resolution

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks, I include a Chaplains' Day resolution adopted by the New London Aerie, No. 594, Fraternal Order of Eagles, New London, Conn.:

CHAPLAINS' DAY RESOLUTION

Whereas on February 3, 1943, the S. S. *Dorchester* was sunk in the North Atlantic, during World War II, with the loss of more than 600 American lives, including four chaplains of three great religious faiths: George L. Fox, Protestant; John P. Washington, Catholic; Alexander L. Goode, Jewish rabbi; and Clark V. Poling, Protestant minister; and

Whereas these four chaplains gave up their lives that others might live, going down together on the deck of the S. S. *Dorchester*, to give to the world for all time a dramatic example of human brotherhood, courage, and selflessness, and an inspiring demonstration of inter-faith unity and understanding; and

Whereas in order that the meaning and significance of their heroic deed may be perpetuated each year, memorializing not only the supreme sacrifice of the four chaplains, but the supreme sacrifice of all chaplains who gave up their lives for others, inspiring all Americans by their example of faith and courage: Now, therefore, be it

Resolved, That we urge the Congress of the United States to set aside the first Sunday in February each year, as Chaplains' Day, and that the day be devoted to the dedicated memory of the four chaplains of the U. S. S. *Dorchester* and all chaplains who gave their lives for our country.

Above resolution adopted by New London Aerie, No. 594, Fraternal Order of Eagles, on Tuesday, March 19, 1957.

JAMES W. MORRIS,
Worthy President.
STANLEY M. COBB,
Secretary.

The Caudle-Connelly Case

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article from the Raleigh (N. C.) News and Observer, of March 21, 1957:

"CHUB" SEAWELL SAYS CAUDLE-CONNELLY CASE IS ANOTHER EXAMPLE OF GOP POLITICS PLAYING

CARTHAGE, March 20.—The Caudle and Connelly case is another example of administration politics playing, and of the personal vindictiveness of Attorney General Brownell toward Harry S. Truman, was the opinion expressed today by H. F. Seawell, Jr., "ex-Republican," in one of his increasingly high-rate commentaries on the current political scene.

"Chub" Seawell said politics had nothing to do with his pronouncement, that he felt he was expressing the feelings of right-thinking citizens everywhere—especially in North Carolina, where Lamar S. Caudle, convicted with Matthew S. Connelly of malfeasance in office by a Federal court in St. Louis, Mo., is widely known, respected, and loved.

But he charged that what Caudle may have done to bring on charges of favoritism in a tax-evasion case, while serving as Truman's Assistant Attorney General, is "no more than what is going on every day, only bigger and bolder, in Washington today." He predicted that it would backfire.

"Everything's good and proper except if a man was ever employed by Harry S. Truman," said the local attorney who, as head of the Republican Party in North Carolina, used to tongue lash Truman with the best of them. "In this case, the prosecution accomplished just two things:

"First, it helped to satisfy the egotism, the vanity, and vindictiveness and personal animosity of the Attorney General toward Mr. Truman, who told him one day he was going out and give him and Mr. Tom Dewey hell and it was so, and came to pass. When the Attorney General and his cohorts go out to speak, they will no longer have to raise Harry Dexter White from the dead, they can cuss out Caudle and Connelly, who are still living.

"Second, it well nigh destroys the usefulness of two well-educated good citizens of the United States, and plants the seeds of bitterness in the heart of a good mother and several fine children.

"Sometimes you can make the fire so hot for your enemy, you scorch yourself. History will prove that this prosecution was unwholesome and un-American."

As to Caudle and Connelly's chances if an appeal is taken, Seawell commented wryly that "what the Supreme Court of the United States might do about anything nowadays is as unknown and uncertain as Eisenhower's foreign policy."

The man who, as Republican candidate for Governor in 1948, polled more votes than any other member of his party ever had for any office in the history of the State (368,000), has withdrawn entirely from active politics.

Having quit the Republican Party in disgust at modern carpet-bagging methods, he has not yet quite leaped the chasm into the Democratic Party, but reserves the right to stand on the sidelines, prodding at both or either as the spirit moves him. He stays busy with his widespread law practice in several counties, and in evangelistic activities which take him into several States.

Equal Pay for Women

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mrs. DWYER. Mr. Speaker, 5 years ago, as a member of the Legislature of the State of New Jersey, I was privileged to introduce a bill for Equal Pay for Equal Work for Women. The bill was passed by both Houses of the legislature and became a law the same year. With passage of the bill, New Jersey became the 13th State in the Nation to adopt an equal pay law.

Since 1952, three other States have added such legislation to their statutes. Sixteen States and Alaska now have equal pay laws, but this progress by the States has been painfully slow. A large majority of our States still have not enacted equal pay legislation—a factor which, I believe, sharply emphasizes the need for Federal action in this field.

Today, at the request of the administration, I have introduced a bill calling for Equal Pay for Equal Work for Women. My distinguished colleague from Indiana, Congresswomen HARDEN, is introducing similar legislation. It is our hope that this legislation—based on President Eisenhower's recommendations—will receive just and favorable consideration during this session of Congress. Certainly, the time for such action is long overdue.

The demand for such legislation, of course, is not new. As early as 1868, the National Labor Union Convention adopted a resolution urging Federal and State governments to pass laws, securing equal salaries for equal work to all women employed under the various departments of the Government. Since that time, we know, the Federal Government, under the Classification Act of

1923 and the Classification Act of 1949, has come to recognize the validity of equal pay rate for the job, regardless of sex, for its own employees.

On the State level, Michigan and Montana were the first to enact equal-pay legislation applying to employees in private interstate industry. That was in 1919. Fourteen other States and Alaska have slowly followed suit.

On the Federal level, equal pay bills have been introduced in every congressional session since the 79th Congress in 1945.

These various bills have attracted wide interest and support by unions—both AFL and CIO; women's organizations and civic groups, as well as the United States Department of Labor and various State departments of labor. But no action has been forthcoming.

I do not believe this hesitation by the Congress can be justified.

More than a century has passed since women first were openly accepted as part of the labor force of our country. Today, more than 20 million women are included in our labor force. The earnings of these women contribute significantly to the well-being of their families and help to increase our national wealth.

This rise in the number of women in our labor force has been accompanied by an ever-widening range of occupations in which they are engaged. After all, the great majority of occupations and industrial processes today are neither exclusively men's nor women's fields of endeavor. There are only a limited number of jobs that women are not able to hold if given the training and the opportunity.

It has been said, by those arguing against equal pay, that men have the responsibility of supporting dependents. That is partially correct, but they do not have that responsibility exclusively. Widowed and single women often are the only wage earners in a family, and some married women carry the entire responsibility for family support. In 1953, for example, a woman was the chief breadwinner in nearly 4 million of this Nation's families—or about one-tenth of all families in the United States.

In addition, the continuing high cost of living has made it necessary for more and more married women to continue working in order to contribute to family expenses, to help pay for homes and to help educate children.

Yet, in the face of such indisputable facts, women still are generally paid less than men for their services. The average earnings of all women in the Nation who are paid wages or salaries is about $1,400 per year, compared to $3,200 for men, according to a study by the business and professional women—one of the strong advocates of equal-pay legislation.

The need for equal pay is a matter of simple justice. Women are contributing more and more to the economic life of our country; they are playing an increasingly important role in the support of their families. And yet they are expected to accept a second-class role as far as wages are concerned.

I believe equal pay is important to the economic life of our entire country.

Equal pay will protect both women and men workers. For the women, it means equality in wage treatment. For the men, it helps sustain wage rates and discourages employers from hiring women at lower rates. For employers, it means better labor relations and efficiency. For the community, it means increased consumer purchasing power, increased economic security for the families of workers and a prosperous, full employment.

The arguments against this type of legislation have been proven groundless in New Jersey and other of the States which have adopted equal-pay laws. These States have provided ample proof that such a law is workable. I hope this session of Congress will follow the examples of these States. We cannot correct injustice with inactivity; we cannot continue to apply outdated customs and traditions to the women in the labor force of our great and progressive Nation.

GOP Faithful Fade Away Into Fat Jobs

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. VANIK. Mr. Speaker, with all the talk about reducing the cost of Government, attention should be directed to the increased cost of the executive branch of the Government. While President Truman had 12 White House secretaries and administrative assistants, President Eisenhower has 38, an increase of over 300 percent. At the same time, total White House employment has multiplied over 200 percent—from 40 in 1953 to more than 300 to date.

The greater portion of the spiraling cost of executive service takes place in the Office of the Secretary of Defense. James G. Forrestal as Secretary of Defence had 8 principal assistants, no deputies and no under or assistant secretaries. Today Secretary of Defense, Charles E. Wilson, has a deputy, 9 assistant secretaries, plus 3 special assistants and a personal staff of 11. Each assistant secretary has from 3 to 23 special assistants. There certainly is a great need for automation in the Department of Defense.

Following is a very interesting article on the whole subject by Peter Edson, entitled "GOP Faithful Fade Away Into Fat Jobs," which appeared in the Cleveland Press on Friday, March 22:

GOP FAITHFUL FADE AWAY INTO FAT JOBS

(By Peter Edson)

WASHINGTON.—Any fear among the Republican Old Guard that the Eisenhower administration isn't taking care of the party faithful with fat jobs shouldn't be taken too seriously.

The payoff of contributors to Republican campaign funds of 1956 is proceeding apace. Since January there have been at least seven contributors appointed to high patronage jobs.

Here is the list, with the amount of their gifts to the GOP, as given by Senator ALBERT GORE's campaign expenditures report:

John Hay Whitney, $24,500; Ambassador to London.

Amory Houghton, $6,000; Ambassador to Paris.

James D. Zellerbach, $3,000; Ambassador to Rome.

Lewis W. Douglas, $2,000; reappointment to United States Advisory Committee on Information.

Robert Dechert, $1,000; General Counsel, Defense Department.

Leon Pierson, $900; United States attorney for Maryland.

Edward Foss Wilson, $500; Assistant Secretary for Health, Education, and Welfare.

To this list should be added the names of two of the appointees' wives.

Mrs. Whitney contributed $9,000, Mrs. Zellerbach $4,500. This brings the total of these jobholders' contributions to $53,400.

ALL GOT PAY RAISES

In addition to these recent handouts, it is, of course, a matter of record that during the first Eisenhower term political appointees to top policymaking jobs were given salary increases.

The Executive Pay Act of 1955 increased the salaries of 287 political appointees by a total of $1,250,000 a year. This was to carry out a campaign promise to economize. Natch.

Twelve Cabinet-level jobs were raised from $22,500 to $25,000 a year. Eleven Deputy Secretary rank jobs were raised from the $18,000–$20,000 level to $22,000–$22,500.

Twenty-two policymakers having the rank of Under Secretary were raised from $17,500 to $20,000. And 23 Assistant Secretaries were upped from $16,000 to $20,000.

Below these Cabinet and sub-Cabinet jobs, 184 directors, administrators, commissioners, and the like were raised from $15,000 to $20,000 and 35 more from $14,800 to $17,500.

TRUMAN WAS PIKER

All these increases were, of course, made to attract higher type executives to Government service. Natch.

What sticks out in all this, however, is how many more high administrative types the present administration needs to run the Government than the previous administration did.

President Truman listed 12 White House secretaries and administrative assistants. President Eisenhower lists 38. Total White House employment is up from 140 in 1953 to more than 300.

The late James G. Forrestal, first Secretary of Defense, ran the Pentagon with eight principal assistants, no deputies, no under or assistant secretaries.

WILSON HAS 24 ON STAFF

Today Secretary C. E. Wilson has a deputy and 9 assistant secretaries, plus 3 special assistants and a personal staff of 11. Each assistant secretary has from 3 to 23 special assistants.

Department of State used to have 6 assistant secretaries. Now it has 8. Treasury used to have 1 under secretary and 2 assistant secretaries. Now it has 2 unders and 3 assistants.

Justice used to have 7 assistant attorneys general. Now it's 9.

Army, Navy and Air Force used to get by with 1 or 2 assistant secretaries. Now each service has 4.

MORE TO COME

Agriculture, Interior, Commerce and Labor Departments formerly had 1 or 2 assistant secretaries. Now they have 3 apiece. There wasn't any Department of Health, Education and Welfare. Now there's a secretary, under secretary, and 2 assistants.

But this apparently is just the beginning. A letter has gone out from the White House telling all department and agency heads to make up new and bigger lists of top policy-making jobs which shall be exempt from the career civil service.

What they want is greater efficiency through more patronage plums. Natch.

Legal Problems in the Submerged Lands

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. WILLIS. Mr. Speaker, it is now a little over 3½ years since the Congress enacted the Submerged Lands Act and the Outer Continental Shelf Lands Act. I am certain that many recall the difficulties which we experienced in solving that perplexing problem. We found ourselves in a field where legal precedences were few, if any. One might say that we pioneered in the wilderness of the offshore lands.

Mindful of the fact that problems would arise in the future involving questions arising out of the administration and operation of those laws, I had taken upon myself a personal responsibility to closely observe and study the experiences of those handling this problem. At my suggestion a cursory study was conducted last year by the staff of the Committee on the Judiciary. The results clearly confirmed the opinion I had at the time the laws were enacted that many problems would arise which, at the time of enactment, could not be foreseen nor properly cared for, if foreseen.

Therefore, at the start of this Congress I urged that the Committee on the Judiciary be authorized specifically to conduct a study and analysis of the problems arising from the operation and administration of these laws. Fortunately, such authority has been granted the Committee on the Judiciary and the chairman the gentleman from New York [Mr. CELLER] has appointed a subcommittee comprised of myself as chairman, Messrs. TUCK, FRAZIER, KEATING, and HILLINGS.

Besides this action the question has also been approached in an excellent and scholarly manner by the School of Law of Tulane University. Last fall, at New Orleans, La., the lectures and forums of the professional study program for 1956 were devoted to the legal problems in the tidelands. These lectures encompassed such subjects as the Federal-State jurisdiction in the tidelands; the mineral operations in the tidelands; status of an employee in the tidelands, including discussion of State compensation, the Jones Act, the Death on the High Seas Act, article 2315 of the Louisiana Civil Code, admiralty remedy, and the Harbor Workers Act; and insurance in the tidelands, including discussion of the nature of marine insurance, types of underwriters, types of policy, analysis of the Policy Act and the perils covered, total loss, general average, particular average, cargo insurance, hull insurance, builders' risk, and reinsurance agreements. The lecturers for this series were outstanding men in their respective fields. They included United States District Judge John J. Shelly Wright, of the eastern district of Louisiana; George C. Schoenberger, Jr., Esq., an outstanding attorney of Louisiana, general attorney and manager of the legal department of the Shell Oil Co.; John W. Sims, Esq., a leading member of the Louisiana bar; Raymond H. Kierr, one of the outstanding maritime lawyers in the Nation; W. Ford Reese, Esq., a leading attorney in Louisiana and past president of the Louisiana State Bar Association; Purcell T. Baumgartner, an insurance specialist in maritime underwriting; Charles Kohlmeyer, Esq., a Louisiana attorney specializing in admiralty law; and Benjamin W. Yancey, Esq., another Louisiana attorney specializing in maritime and insurance law.

The proceedings of the program entitled "Legal Problems in Tidelands" were printed and distributed by the courtesy of the Offshore Co., Baton Rouge, La. I do not hesitate to recommend this study and wish to express my gratitude to the School of Law of Tulane University for its outstanding and excellent contribution.

A preliminary study points up many and varied problems to which the Judiciary Subcommittee will devote much of its time. There is the question arising in criminal law of double jeopardy because of violations committed in the Outer Continental Shelf area. Also, there is the question of possible mutiny when certain acts are committed in the Outer Continental Shelf region. There is the peculiar problem of contract law which results from the drilling and building operations in the Outer Continental Shelf area. These are merely some of the problems which result from these two laws enacted in 1953. There are many others.

It is my hope that the work which the subcommittee will undertake will gather sufficient facts and knowledge from the time and experience of operating under the laws so that a definite conclusion may be reached as to what, if anything, should be done in the way of amendments to existing law. It is agreed by most people that Congress made a very commendable effort in attempting to solve this difficult problem of submerged lands, but the true test of the success of that effort must be found in time and experience. The time has come to initiate a very necessary study in order that improvements may be made in the best interest of all parties involved, including the Government of the United States.

Indicative of the many ramifications of this problem is a recent article which appeared in the New Orleans Times-Picayune entitled "Outer Continental Shelf Poses Legal Problems." The remarks of United States District Judge J. Skelly Wright are most pertinent and under unanimous consent I include it with my statement.

The article follows:

OUTER CONTINENTAL SHELF POSES LEGAL PROBLEMS—JUDGE TALKS ON FIELDS OF JURISDICTION INVOLVED

The outer Continental Shelf of this country's coastal States presents numerous unsolved legal problems, Federal district judge, J. Skelly Wright, United States district court, eastern division of Louisiana, said Sunday night at the New Orleans Country Club.

These problems, he said, occur in the fields of criminal, contract, admiralty, and personal-injury law and involve State-Federal jurisdiction, mutiny, and double jeopardy.

Judge Wright was principal speaker at the annual banquet of the Tulane chapter of Phi Delta Phi, international legal fraternity.

He said that, according to the Outer Continental Shelf Act of 1953, the area of the shelf seaward from the 3-mile line or other recognized State boundary shall be under the exclusive control of the United States.

This control is exercised much in the same manner as a post office or fort, Judge Wright said.

But, he added, the civil and criminal laws of the adjacent State, where not in conflict with the law, are to be applied by the Federal district court to controversies "arising out of or in connection with" any mineral operations in the shelf area.

EXCEPTION CITED

An exception to the application of the State law in the area, Judge Wright explained, "seems to be that the Longshoremen's and Harbor Workers' Compensation Act supplants any State workmen's compensation statute which might otherwise be applicable."

The possibility of double jeopardy in criminal law, being tried twice in court for the same offense, is very much present in legal matters pertaining to the outer Continental Shelf, Judge Wright said.

The Supreme Court has ruled in a previous Court case "that the same act may be published under State and Federal law without violating the 14th or 5th amendments or any other constitutional provision," Judge Wright said. "The Court held that where there is dual sovereignty, there may be double jeopardy."

QUESTION ARISES

This poses the question of whether States can continue to punish offenses committed seaward of their boundries now that boundaries of States have been extended at least 3 miles into the marginal sea, Judge Wright said.

"If the doctrine of *Hebert* v. *Louisiana* is to be followed, a person may be punished by a State government under the State penal statute, and then the same penal statute may be used by the Federal Government to exact an additional, and perhaps identical punishment," he said.

The question of possible mutiny also arises in legal problems pertaining to the Outer Continental Shelf, Judge Wright said.

MUTINY POSSIBILITY

"If the floatable, submersible drilling platforms which are used in the tidelands are to be considered vessels, are workers on these platforms who engage in economic strikes guilty of mutiny?" he asked." It will be up to the courts to determine if these platforms are artificial islands or fixed structures."

An unsolved problem also occurs in contract law: To what extent is the building and operating of these drilling platforms subject to State or Federal law or has the Outer Continental Shelf Act made a change in existing approaches to the problem?

Judge Wright said that the Outer Continental Shelf Act "is not a utopian act but it is a creditable one. Time and experience will probably indicate the necessity of changing

it. Most people agree that Congress has made a commendable effort to solve a very difficult problem involving the tidelands."

Prior to Judge Wright's address, initiation ceremonies were held for 28 Tulane law students. Judge Wright received an honorary membership to Phi Delta Phi, which was presented by Malcolm W. Monroe, New Orleans attorney and national vice president of the fraternity.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Better Water and More of It

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an article entitled "Better Water and More of It," which appeared in the South Dakota Stockgrower magazine for March, publication of the South Dakota Stock Growers Association.

This article, which I prepared, points out some of the problems facing the Nation and the individual in regard to water. Desalinization of water becomes more important as our use of water is stepped up and as use outstrips the discovery of new sources. The increase of the quality of water will go a long way in solving the problems of quantity.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BETTER WATER AND MORE OF IT

(By United States Senator FRANCIS CASE)

Your Uncle Sam is concerned with the growing shortage of water.

President Eisenhower said to me a couple years ago that he regarded water as our most critical natural resource.

A table presented to our Senate Committee on Public Works gives these figures showing the increased water requirements of the United States:

Billions of gallons per day in United States

Type of use	1900	1955
Rural and farm	2.0	5.4
Municipal	3.0	17.0
Steam power	5.0	42.0
Private industrial	10.0	55.0
Irrigation	25.0	110.0
Total	45.0	229.4

And the projected use based on the trends of our industry and civilization indicates a total 1975 requirement of 377 billion gallons of water per day.

But we can bring the problem a lot closer to South Dakota than these statistics.

Is there a stock grower who has not at some time had a water problem?

Uncle Sam has some costly lessons on water—and so have individual farmers and ranchers.

A few years ago one rancher showed me a well on which he had spent $400 that had plenty of water but it was so strong his cattle would not touch it.

And I have seen horses at various times with crippled feet said to be due to alkali water.

Last week hearings before the Senate Committee on Public Works brought out that the Government had spent $7,500,000 on the Shadehill Dam and Reservoir on Grand River but that up to date, the experts are not ready to say the stored water can be safely used for irrigation.

Also that the Government had spent several hundred thousand dollars getting ready to build a dam on the Moreau River near Bixby but suspended operations when it was discovered that the twater was likely to make certain soils too tight for plant growth and limit the crops that could be grown on other soils.

So, it occurs to me to report a bit about what the Government is doing on this two-headed problem: the quantity and quality of stock water.

Quantity of water has always been the first question, of course.

From 1910–11 and from 1931–37, I have some vivid memories of wells going dry, shallow dams drying out, creeks turning into muddy pools few and far between.

And, within the past 3 years, a lot of springs that had been good for 50 years have turned into a clump of dry hoof tracks.

Along about 1937–38, the Government started measurably to help build stock-water dams.

That was my first term in the House of Representatives and, coming from "the short-grass country," I tried to do what I could to develop a useful program.

Dams that were deep did not dry out when August came. In the 20 years that it has been my privilege to boost this dam-building program, over 90,000 stockwater dams have been built in South Dakota. They will average about 1 acre each in surface area—together, 90,000 acres of water surface.

But, just as the deep-draw dams that called for heavy equipment to pack and roll the dirt replaced the disappointing dams that we once built with horse-drawn scrapers and fresnos, so now we are turning in many places to "scoop-outs" that are deeper in ratio to surface area and offer the least possible chance for evaporation.

But whether dam or scoop-out, most of these projects would be beyond the capability of the average farmer's equipment. So, through the ASC program which pays so much per cubic yard, or through the use of jointly owned equipment in a Soil Conservation District and its technical assistance, water facilities are being provided that individual farmers could not provide.

These programs should continue.

There is another problem. It was probably best expressed most graphically in that couplet of the shipwrecked sailor who found—

"Water, water everywhere,
But not a drop to drink."

Government attention is now also going to the quality of water as one way to increase the quantity.

That's the why of the desalination research program started by a bill which I sponsored in the Senate a few years ago and extended last year.

This program seeks to find answers, if such exist, to the problem of the rancher who spent the $400 drilling and hit a strong vein of water, plenty of it, but too strong for his stock to touch.

It is to find the answer, if it exists, for the farmer and the government who prepare to irrigate but discover that some water sours certain soils or makes them so tight in a few years that the water will not percolate through it—or possibly produces forage that seems to founder livestock occasionally if selenium is present. The Agriculture Yearbook for 1948 on grass says:

"Alkali disease, the chronic type of selenium poisoning, is characterized by dullness and lack of vitality, depraved appetite, rough coat in horses and cattle, loss of hair from the mane and tail of horses and from the switch of cattle, soreness and sloughing of the hoofs, and stiffness of the joints."

So—the program of research for the desalting of water has a real meaning for both the grower of livestock and the government when money is spent on increasing the quantity of water. The quality must be worth the effort, too.

Interior Secretary Fred Seaton has just sent me a report on the progress in desalination research for the past year.

The so-called membrane electrodialysis process, it is now believed, can take the salt out of water for about 50 cents per thousand gallons.

The rotary distillation process promises to run about the same in moderately sized quantities—but may be cheaper.

This distillation process, right now, however, must find a way to overcome the deposits of scale. It's like getting rid of the scale in mother's old teakettle. The membrane process has one advantage of turning out a sludge that carries away the salts.

Solar and freezing processes are receiving increasing attention. They would use cheap natural sources of energy, of course—the sun and the cold.

In solar processes, the trick is to catch the moisture that evaporates in the process which takes place when a pond dries at the edges and leaves that white alkali ring.

At the present, all of these processes are in the research state, but some of them offer considerable promise.

The time may come, however, when, as a result of this Government research, that the ordinary stockgrower may be able to run his water through some sort of a wringer and take out the salts, improve the taste and have the water so soft that his wife will not need extra soap powders or detergents.

Reduction of the Federal Budget—Power of the Purse

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. JOHNSON of Texas. Mr. President, we are all concerned with the problem of reducing the vastly inflated Federal Budget.

The New York Times, in an editorial published this morning, has commented on one aspect of the problem. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POWER OF THE PURSE

Amid all the shadowboxing between the administration and Congress over the size of the 1958 budget both sides must realize that Congress has actually lost much of its control over annual expenditures by the Federal Government. The obsolete way in which appropriations are handled by the national legislature means in fact that the people's "power of the purse"—one of the basic features of a representative democracy—has to a large degree been dissipated.

If Congress is to recover this essential feature of self-government, one vital step would be passage of a Hoover Commission recommendation on which House hearings will begin today. This measure would put congressional appropriations on an annual accrued expenditure basis, which simply means that Congress would vote funds for expenditures each year on the basis of estimates of goods and services actually to be received. Though this may seem the only logical way to keep a budget, it is not the procedure now followed, under which vast sums are voted that may not be paid out for years to come.

The proposed Hoover Commission bill would change present methods so that Congress would be in a position to review costs and expenditures each year and thus know whether or not additional funds were justified, as well as to recover funds not actually spent. A measure to this end passed the Senate last year, but was knocked out in the House; it again has strong Senate support, but faces a tough battle against the opponents of change, among whom Representative TABER, of the House Appropriations Committee, is one of the most prominent. The President is for it and so are the Nation's top fiscal officers and an impressive array of nonpolitical experts in budgeting and accounting. A special Presidential message to Congress would help immeasurably at this time if the White House is really interested in advancing the chances of this important bill.

Richard Evelyn Byrd

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. HILL. Mr. President, a few days ago the people of our country were saddened by the death of that intrepid explorer, that heroic pioneer, that great American, the conqueror of the land, of the sea, and of the air, the late Adm. Richard Evelyn Byrd. In the New York Times of March 13 there was a beautiful and richly deserved editorial written in tribute to Admiral Byrd, his life and service. I wish every American could read the tribute, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RICHARD EVELYN BYRD

Adventure calls to every man, but few have answered so aptly or won greater rewards than Richard E. Byrd. The lure of far-off places, to set one's foot where no man has gone before, to be the first to round the Cape of Good Hope, to cross the Atlantic, to circumnavigate the globe—such were the dreams of men until the chosen one came along and made them realities.

Richard Byrd was the first man to fly over the North and South Poles. The Antarctic has ceased to be an unknown sea largely because of his work. The loneliest of all continents is now peopled with men from the far corners of the world. It was Admiral Byrd, more than any one person, who made it known to the man in every street. As author and lecturer he literally popularized the Antarctic.

The United States is down there strongly because Richard Byrd drove the opening wedges and planted the American flag. The concept of polar defense—north and south—was based on his explorations, at least in the beginning. The preparatory work for the geophysical year in the Antarctic, now almost ready to start, was for several months partly under Admiral Byrd's direction as head of the United States Navy's Operation Deep Freeze.

He was to have gone to the Antarctic a few months ago to rejoin his expedition, but, as we know now, "Death was at his shoulder." It was ironical—and a bit sad—that such a man should die in bed. An explorer would want to go as the old Ulysses did—

"To follow knowledge, like a sinking star
Beyond the utmost bound of human thought."

Such men are not easy characters. They burn with a bright flame. They go their way alone, partly because they stand on a narrow summit. They do not belong to friends or even, in a certain sense, to their families. They are men of the world, the sort of men who carry the world forward, who open horizons, who make a mark on history's pages that can never be erased. Richard Evelyn Byrd was such a man.

Montana Legislative Memorials Stress Federal Indian Neglect

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. MURRAY. Mr. President, the people of Montana are concerned over the inadequacy of Federal policy regarding Indians. This concern was expressed in several memorials to Congress by the Montana State Legislature, which recently adjourned.

The lead editorial of the March 8 issue of the Great Falls Tribune deals with this subject, concluding that "a Federal program more responsive to Indian needs is highly essential."

I ask unanimous consent to have this editorial, entitled "Montana Legislative Memorials Stress Federal Indian Neglect," printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MONTANA LEGISLATIVE MEMORIALS STRESS FEDERAL INDIAN NEGLECT

In four joint memorials to Congress and the Secretary of Interior, the 35th Montana Legislature has given recognition to special problems relating to Indian welfare and employment.

In the manner of their passage these memorials given bipartisan endorsement to active efforts of Montana's Democratic Senators and Representatives in Congress to obtain more responsive Federal performance to deal with Indian family subsistence, health, education, and welfare.

Legislative memorials from small-population States may not have great impact on the whole body of Congress but these serve to emphasize a distress situation that is quite common to the whole Federal effort to shift American Indians from Federal wardship and reservation status to integrated citizenship in our social and economic life. This is a desirable longtime objective but it is one that cannot be realized by mere legislative or departmental decree.

Senate Joint Memorial No. 5 passed both the senate and the house of the legislature by unanimous vote. It requests that Federal money be made available to depressed Indian areas to be utilized in promoting employment of Indian citizens at or near reservation areas in Montana.

House Joint Memorial No. 6 requests thorough congressional study of the effect of promoting off-reservation migration upon the American Indians' family life, and the advisability of extending family assistance programs to Indians away from reservations. It applies specifically to the Hill 57 situation in Great Falls.

There is a bill pending in the United States Senate (S. 964), introduced by Senator PAUL H. DOUGLAS, of Illinois, and cosponsored by Senators MURRAY, MANSFIELD and others, designed to give Federal assistance along lines set forth in the Montana Memorial No. 5.

A Federal program more responsive to Indian needs is highly essential.

Responsibility of the Office of Defense for Mobilization in the Event of Nuclear War

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. JOHNSON of Texas. Mr. President, one of the recurring and deeply disturbing thoughts of our time is the tremendous responsibility which would be placed on our Government in terms of the survival of our population should an atomic war break out. That awesome responsibility has been placed upon the shoulders of Gordon Gray, of North Carolina. He is the man who must plan against such a catastrophe. Our prayers are with him for success.

The distinguished and perceptive columnist, Arthur Krock, of the New York Times, calls our attention to this problem this morning. I ask unanimous consent that his article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BARRIER TO CHAOS IN EVENT OF NUCLEAR WAR

(By Arthur Krock)

WASHINGTON, March 25.—The President was speaking relatively the other day when he described the job of the Secretary of State as the greatest and most important in the

world. The Presidency itself is, of course, greater and more important, and there are comparative aspects in the immediate work of certain military defense officials.

But what is not generally understood is that, in event of a nuclear weapons attack on this country, a Federal administrator who rarely comes to public attention will have responsibilities of such magnitude that only those of the Secretaries of State and Defense, of the overall military commander, and of the President himself will be comparable. And in a large degree their ability to function will depend on how well this administrator has planned and executes his herculean task.

ODM DIRECTOR'S DUTY

The reference is to the Director of the Office of Defense Mobilization in which Gordon Gray, of North Carolina, has just succeeded Dr. Arthur S. Flemming, of Ohio. To this office a number of statutes dating back to the emergency laws of the thirties, and seven Executive orders, have assigned the duty of maintaining the national economy and the continuity of the Federal Government, and its liaisons with State governments and the people, if and when a devastating atomic attack on the United States cripples the natural order and requires relocating the executive branch outside Washington.

Unless governmental and economic chaos is to follow such an attack, and the people—in the lack of visible government—are to be subject to the threat to their morale implicit in such a condition, Gordon Gray and his staff must be ready and effective.

SOME VAST RESPONSIBILITIES

To be ready and effective these are some of the accomplishments they must demonstrate:

The safe relocation of the President and his principal administrators in places and in circumstances where they can continue to function.

The transfer of defense industries and labor from ruined installations to other operating installations without disastrous loss of time and efficiency; and the maintenance of transport.

The establishment or maintenance of constant communications among all Government units, between these and the people and between these and the States.

A list of substitutes, who will be ready and trained, for officials lost, killed or disabled.

A shelter system for populations in the direct path of the attack or open to its radioactive aftermath. (The incredible, insoluble problems presented by the proposal of mass evacuation of cities inclines toward the probability that this shelter system eventually will be composed of single and group units in homes and multiple-tenant buildings.)

EVERYDAY AUTHORITIES

These are only a few of the responsibilities for which Gray and his staff must be prepared in event of an atomic attack which would call them into play. Not only does ordinary imagination stagger at contemplating the assignment; it goes out like a light. Yet unless these and other responsibilities of the director of the ODM are met, if and when, the ability of the United States to retaliate in kind on the aggressor, or even to inflict greater damage than received, will be of greatly reduced importance in determining the basic consequences of the war.

In the everyday, immediate work of the Executive branch the ODM also exercises a great number of important functions. The director acts for the President to direct, control and coordinate all the mobilization operations of the Government. These are not limited to manpower, production, procurement, stabilization and transport on the domestic front. He fixes the policies for establishing and maintaining an adequate stockpile of strategic materials, which makes him the arbiter of the flow of certain imports. He must approve the rate and pace of the exchange for agricultural commodities of strategic and critical materials acquired by the Commodity Credit Corporation. He coordinates policies and standards for the development of telecommunications; he assigns radio frequencies to Government agencies. And so on.

CABINET AND NATIONAL SECURITY COUNCIL

By statute Gray is a member of the National Security Council. By Presidential selection he is a member of the Cabinet. And because of the nature and variety of his functions there is hardly any subject, including the current discussions of legislation on Presidential "inability" to govern, arising in any of these groups to which the director of the ODM has no active relation. Yet, since he is the only member of the groups without a vested interest in some department or agency, his objectivity in council is established a priori.

As Washington agencies go, Gray works with the aid of a corporal's guard, through he is authorized to perform his functions through other agencies he may select. This is the equipment, and these are the terrifying responsibilities, of the quiet, very able, little heralded public servant from North Carolina.

Natural Gas Service in Minnesota

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. THYE. Mr. President, this morning I had a conference with Mr. Jerome Kuykendall, Chairman of the Federal Power Commission, relative to a question which is discussed in an editorial entitled "FPC Should Act," which appeared in the St. Paul Pioneer Press of March 22, 1957.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FPC SHOULD ACT

Minnesota continues to be deprived of the benefits of full natural gas service, especially in the Iron Range region, because the Federal Power Commission in Washington cannot seem to make up its mind on one important question. This is which American company is to be permitted to hook up with the Canadian gas fields and import fuel from there.

This indecision on the part of the FPC may result in higher prices for natural-gas consumers in Minnesota, North Dakota, Wisconsin, Michigan, and elsewhere. American distributing companies hold tentative contracts with Trans-Canada Pipe Lines for purchase of Canadian gas at specified rates. But some of these contracts run out later this year if not made permanent through approval by the FPC. If new contracts have to be negotiated later on, the Canadian wholesale price probably will go up. This would mean higher retail prices eventually.

Trans-Canada Pipe Lines is ready and willing to sell gas to American buyers at or near the Minnesota border. At least two American companies are ready to buy it on long-term agreements. But no deal can be consummated until the FPC in Washington decides which company gets official approval to proceed. Hearings have dragged out for more than a year. Long recesses taken by the FPC keep piling up the delays. Everybody concerned wishes to expedite proceedings except, apparently, the Government officials at Washington who must make a decision.

Governor Freeman, Senators THYE and HUMPHREY, and officials of other interested States have appealed for action. Still the FPC does not move.

Aside from the direct interest of this part of the country in getting additional gas supplies, there is a larger national stake involved. The Minnesota connection with the big Canadian fields would tie in the far-flung national network of gas pipelines in the United States with a new and valuable source of reserve fuel in event of a national-defense emergency. The sooner this is done the better. It is time for the Federal Power Commission to get off the fence and make Canadian gas available to a responsible American distributing company.

Passport Service Today

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appears in the March issue of Travel News, the official publication of the American Society of Travel Agents, Inc.

This article describes the tremendous changes which have occurred in the past year in the Passport Office and its field agencies in terms of efficiency and service to the public. Every Member of Congress will be interested in the improvements detailed herein.

I wish to congratulate the Passport Director, Frances Knight, for the unusually effective job she has performed.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PASSPORT SERVICE TODAY

Any travel agent who has helped a client to obtain a passport recently must have noticed the change that has come over the United States Passport Office. Just how deep and fundamental that change has been, however, few realize.

In a talk before the New York chapter of ASTA last month Frances G. Knight, Director of the Office since 1955, explained it this way: the new look in the Office emphasizes speed and courtesy, in addition to consideration of the general comfort and good service due an American citizen by a responsible Government agency.

The speed has come through the introduction of modern business machines and modern management practices. Now the average citizen receives his passport in less than a week; in case of necessity, he can have it almost immediately. Two-way teletype communications between Washington and the field offices permit clearance of an uncomplicated application in a matter of minutes and the passport itself can be made up on the spot.

ELBOW ROOM

The comfort is reflected in the Washington headquarters office, the new Los Angeles agency, the remodeled New York office and soon will be found in the Boston, Chicago, New Orleans, and San Francisco agencies. The New York office, for instance, has had 800 square feet added to its space. No longer does the man making out his application have his elbow joggled by the people waiting in line for an agent. The writing desks are now located in the entrance room, some distance from the information counter. This information counter, incidentally, takes mere inquiries out of the agents' lines and permits faster processing of applicants.

No longer do the witnesses, frequently elderly, have to stand while waiting for applicants to reach an agent. There are comfortable benches for them to sit on until needed.

Nor does anyone wishing an application blank now have to wait in an agent's line to obtain one. There are application forms in a rack beside the information counter to be taken as needed. (The travel agency which sent its messenger to the New York office for two application forms for its clients, only to have him return empty-handed because he was told applicants had to come in person for the forms, will not run into this difficulty today.)

PLEASANT COMFORT

The office, which is completely air-conditioned, is a pleasant place in which to do business. All but two of the walls are a light gray. One, at the end of the entrance area, is deep coral—almost rust color—and the wall opposite the agents' counter is covered with a sea blue, woven-design wallpaper. The benches in this room are upholstered in deep coral plastic material which can be wiped clean with a damp cloth. In each room there is a 9- by 12-foot United States Army map of the world on which the locations of American embassies and consular offices are marked. Behind the information counter is the seal of the United States, flanked by two United States flags. Miss Knight believes that those coming to the office should be reminded that this is a Government agency where one of the most valuable documents in the world today is obtained—a United States passport.

The thinking behind her use of color was described at the New York meeting by Miss Knight: "I believe it is generally agreed by those who have studied environment that certain colors have a psychological effect on people. I believe they call it 'color impulse.' I am not expert in this field. I only know that the colors usually found in Government offices depress me and I have been determined to brighten up passport agencies wherever they are not located in Federal buildings.

"One of the universities recently reported that colors have been found to have a physical as well as psychological effect on individuals and cited the results of one experiment which indicated that a shift in wall colors from buff to pale green helped increase efficiency of a group of Government employees by 5½ percent. The so-called cool colors keep people calm and collected while the vibrant colors animate people. I have selected cool colors for the decor of passport agencies with a spot of vibrant color here and there to keep people happy as well as calm."

ZIG-ZAG EFFICIENCY

Another feature of the New York office, which has proved popular with the public, is the zig-zag agents' counter, similar to those used in some banks. In this arrangement the conversation between applicant and agent cannot be overheard by those in the other lines. This same type of counter is planned for the San Francisco and Chicago offices; in Los Angeles plastic partitions were used.

Nor has the agent behind the counter been overlooked. His work space has been designed for ease and efficiency and his chair for comfort. (Incidentally, Miss Knight says she sat in chairs all over New York before she finally found the type she sought in a bank, where it was used by the tellers.) Good working conditions generally make for better public relations, for the employee works swiftly and in a pleasant frame of mind.

Here is a tip travel agents might pass on to their clients: tell them not to go to the passport agency at noon if they can avoid it. That is when the big rush is on, and agents have to eat lunch just like everyone else.

All passport agents are given a week of indoctrination in the headquarters in Washington. They see how the system works; they become acquainted with the people with whom they deal by phone, letter, or teletype. They learn the answers to many of the questions they are asked by the men and women facing them across the counter.

BEHIND SCENE CHANGES

These are the changes the passport-seeking traveler sees and appreciates. But the deeper-seated changes, the more important ones, have occurred in the Washington headquarters. The move from the antiquated Winder Building to larger, modern office space permitted the reorganization of the work along modern business lines. Take the matter of filing. Modern sorting devices now speed paper handling to the point that filing production has increased from 300 per day per clerk to 1,300.

Explained Miss Knight in her New York speech: "A backlog of one million unfiled or partially filed documents which were stored in scattered boxes and under tables, desks and on top of cabinets for lack of equipment, space and manpower, when I became director of the Passport Office, has now been filed."

A source of friction with the public has been eliminated in this way: "Birth evidence and other private documents are returned to applicants, reducing the need to refer to old files and making possible the disposal of old records. This new policy has also eliminated considerable argumentative correspondence between citizens who wanted their birth and baptismal certificates returned after they had been officially recorded and the Passport Office, which refused to do so."

Modern business methods of handling mail now bring answers to uncomplicated correspondence within a week or 10 days. "Complicated cases which involve legal problems or long searches in our files take much longer," Miss Knight said, "but these are being reduced as our correspondence training program progresses."

In the summer of 1955, 5,000 general inquiries were found that had not been answered for the lack of men, money, and machinery.

"To speed up and facilitate the handling of applications by the field agencies," Miss Knight stated, "we have installed Teletype facilities in our offices in New York, Boston, Chicago, New Orleans, San Francisco, and Los Angeles. The immediate result of this installation has been a 60-percent reduction in communication costs. It has also speeded up service to applicants who have required passports in an emergency."

TIME, MONEY SAVING TECHNIQUES

This is just one example of how modern techniques have not only provided better service but actually reduced costs. In a report to the United States Senate, the Committee on Government Operations summed it up in this way:

"While passport applications in 1956 increased 47 percent over 1952, the number of equivalent full-time employees increased 28 percent and the total salary cost (on a 1956 conversion basis) increased by only 28 percent. If the production per employee in 1952 were in effect in 1956 it would have taken 50 additional employees at a cost of $218,150 to process the applications."

The passport itself has been redesigned, and reduced from 32 to 20 pages as a result of a survey of expired passports which indicated that 88 percent used less than 16 pages. This not only resulted in a substantial saving in paper and printing costs but means less bulk in the traveler's handbag or coat pocket.

Changing the page on which the office must type the applicant's vital statistics from vertical to horizontal makes it possible for this work to be done on an ordinary typewriter. Formerly a special machine had to be used and a person especially trained to use it.

The one old-fashioned operation which the office has not been able to change, however, is the affixing of the photograph. This is still done by hand with a glue pot and electric iron. Anyone who can lick this problem at a cost of less than a new atomic submarine should communicate with Miss Knight immediately.

A machine which does away with irritating delays in answering inquiries is the Roll-Dex Trans-Dex file. "This machine," said Miss Knight, "is used in our telephone and public inquiry section and will hold as many as 580,000 individual status cards at one time, making available for quick reference the name of the applicant, the receipt date of the application, and its current status. Thus, our information clerks and operators are now able to tell, in a matter of seconds, whether a passport has been issued, when it was mailed, where it was sent, or whether the application is being held for further information."

One activity of the Passport Office, which can be of direct benefit to travel agencies, especially when dealing with clients making their first trip abroad, was outlined by Miss Knight. "All literature issued by the Passport Office," she said, "has been revised, rewritten, or revitalized with new formats in the past year. We are cooperating with other agencies of government to make travel information better known to the public. We have placed in all passport agencies large posters advising applicants of passport fees and requirements in brief. We have issued a pocket-size folder entitled 'You and Your Passport' for distribution to the public in passport agencies. This gives general guidance to the applicant with regard to obtaining proof of American citizenship, photographs, passport fees, vaccinations and inoculations, care of the passport, visas and other entry documents, and general tips on getting along abroad. The brochure is for sale by the Superintendent of Documents, at the Government Printing Office in Washington."

COMPILATION OF APPLICATIONS

An innovation which is important to the entire travel industry is the statistical unit which the Passport Office has established. "Statistical information is now being compiled on the basis of a tabulation of 80 percent of the applications received by the Passport Office" which "gives us the data required to chart our future in terms of service to the public as well as the transportation and travel industries," explained Miss Knight.

As the wife of Wayne Parrish, publisher of Official Airline Guide and other aviation publications, Frances Knight understands the travel industry's point of view as well as that of the Government. "I am very anxious to establish and maintain a close relationship with all segments of the travel industry," she told her New York audience, "in order to afford us the opportunity to discuss our

mutual problems and exchange ideas on the improvement of services to traveling Americans."

GIANT-SIZE INCREASE

Again, at the close of her talk, speaking of the introduction of jet transportation in commercial aviation, Miss Knight said: "With such speed and volume of traffic literally around the corner in terms of fiscal year planning, the Passport Office stresses the need for vision in its role as a public service. I strongly advocate a close liaison with the travel industry and a coordination of all activities in the Federal Government which influence or pertain to overseas travel * * *. We forecast the receipt of 814,000 applications in fiscal 1960 or an increase of 45.2 percent over the applications received in fiscal 1956. Industry sources indicate that this prediction is too conservative. In any event, I firmly believe that it is our job to chart the future and be prepared to service American travelers with speed, courtesy, and efficiency."

Crises Are Chronic in the Middle East

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26, 1957

Mr. JOHNSON of Texas. Mr. President, on the current situation in the Middle East, I believe that the American people are developing a high degree of understanding. As one contribution to that understanding, the Fort Worth Star-Telegram, one of the most influential newspapers of my State, recently published an excellent editorial. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CRISES ARE CHRONIC IN THE MIDDLE EAST

Peace again is on a precarious perch as the threat of hostilities between Egypt and Israel persists over the Gaza strip and the Gulf of Aqaba area. Middle East crises have become more or less chronic since Egyptian President Nasser was enraged by cancellation of United States aid for the Aswan Dam project.

The United Nations forces are in a delicate position between the forces of the two rival countries in the Middle East. Egyptian troops are in the Gaza strip by reason of the 1949 armistice agreement giving Egypt control of that small area. But Israel is apprehensive lest the strip be used as in the past for Egyptian raids on Israeli territory.

The other critical area, the Aqaba Gulf region, developed dangerous potentialities from the time Egypt in 1951 took over the Tiran Islands at the mouth of the gulf, fortified them and blocked passage of Israeli ships through the straits. Now, in another adroit move, the Tiran Islands have been restored to Saudi Arabia to which they belong. Saudi Arabia denies Israel has any rights in the waters around the islands.

It is patent that Israel should have protection from Egyptian raids from the Gaza strip and should have an outlet from the Gulf of Aqaba for shipping. By no means incidentally, tankers bearing oil for Western Europe should have the same access route to the pipeline being constructed across Israel to the Mediterranean.

Virtually all the oil in the Middle East lies in the Arab States, which may side with Egypt against Israel in instances where they already have not done so. This is the difficult situation in handling Nasser as circumstances otherwise would warrant.

The key to the Egyptian leader's recalcitrance may well be found in the precarious economic condition of his country. Nasser's government sorely is in need of finances, and the Soviet Union is loath to fill that vacuum after having extended him military aid and advice. The rubles are needed at home.

Nasser's course not too faintly resembles an effort at blackmail. He should not be allowed to make a farce of the United Nations and to push aside its troops, committed only to preventing war in the Middle East. At the same time, Israel should not be thrown to the wolves in the Middle East so that Western Europe may have its oil. The crisis there should not be oversimplified, and it calls for the ablest diplomacy with a resolute stand.

Are Corporations Big Enough?

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26, 1957

Mr. MARTIN of Pennsylvania. Mr. President, at this time there is much discussion in regard to big business and small business. We who live in the United States are interested in both.

In the March 23, 1957, issue of the magazine Business Week appears a very interesting summary of a statement made by Mr. Roger Blough, chairman of the United States Steel Corp. The summary is entitled "Are Corporations Big Enough?" I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE CORPORATIONS BIG ENOUGH?

This is an age when big business is deprecated—and often deplored—simply because it is big.

Yet Roger Blough, chairman of United States Steel Corp., has stepped to bat with an arresting question. He asks: Are our big corporations big enough to do all that the American people expect of them?

Blough starts with the proposition that the great enterprises of America are the result—simply and solely—of the great expectations of the American people. Through history it has been the nature of man to have great expectations—and he has created the instruments through which those expectations could be realized.

Today the United States has more than 4 million businesses designed to meet the wants and needs of people. Many are small and their number is growing as the variety of demands made on them increases. A few are very big—and their size is growing as the expectations of people soar.

Blough points out all of these businesses have been created by the American people themselves—by their actions as consumers, investors, and workers. By simply withholding their patronage, their investment, or their services, these people can regulate—or destroy—these businesses.

Over the years, these expectations have led businesses to develop from the entrepreneurship to the partnership to the modern corporation, "where hundreds of thousands of persons provide the necessary capital and share the risks involved."

Blough thinks he sees the next significant step already taking form: the corporations joining with each other in partnerships.

He cites the development of raw materials. It has become "so expensive and involves such risks, that a number of large steel companies have had to band together to develop faraway iron resources."

Blough also points to the instances where several companies have joined to create the titanium industry, to the utilities going into partnership to develop atomic power for peacetime use, and, finally, the joining together of the great oil companies to develop Middle East oil.

Clearly, as the United States population grows, as we have to go farther for resources, as technology continues to expand in every direction, and as expectations grow, there's the possibility of more and more of these joint ventures.

Blough doesn't attempt a prophecy on whether joint ventures or the big corporations will grow.

He does point out that in the past bigness hasn't developed into the threat many people expected. United States Steel in 1909 represented 22 percent of all the assets of the 100 largest industrial corporations. United States Steel has more than doubled its assets since. But new industries and new companies have risen. United States Steel's assets now represent only 4 percent of the assets of the 100 biggest corporations.

And Blough does believe that any arbitrary limitation that may be placed on corporations must automatically place similar limits upon the realization of man's expectations.

The whole question of bigness and how you measure it is one of the most tangled in economics. The smallest auto company is a giant compared to the biggest companies in many industries.

There are also many limitations—tangible and intangible—on the growth of corporations. These are evident enough so that there is no serious move underway today to reduce the size of corporations. Nevertheless, the picture Blough raises will raise questions in the minds of many people.

We think the chairman of United States Steel has done the country a real service in casting the controversy over bigness in realistic terms. He may well have helped to reduce the controversy over measuring bigness—and to expand the effort to fulfill the evergrowing expectations of Americans.

Bar Endorses Hastings for United States Judge

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 26, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Bar Endorses Hastings for United States Judge," which was published in the Indianapolis Star of March 23, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BAR ENDORSES HASTINGS FOR UNITED STATES JUDGE

The Indianapolis Bar Association's board of managers yesterday announced endorsement of John S. Hastings, of Washington,

Ind., for judge of the Seventh Circuit Court of Appeals at Chicago.

Howard P. Travis, president of the local bar, reported that he sent letters of notification to Senator JAMES O. EASTLAND, chairman of the Senate Judiciary Committee, which makes recommendation on the judicial appointment to the Senate. Letters also were sent to both Indiana Senators.

PRESIDENT EISENHOWER

President Eisenhower nominated Hastings to the Federal bench a week ago.

Hastings, a Washington lawyer since 1924, is president of the board of trustees of Indiana University. He would replace Judge Earl Major, of Illinois, on the appeals court bench.

A Constitutional Flaw

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include three articles by James Reston in the New York Times of March 19, 20, and 21, 1957, entitled "A Constitutional Flaw—I, II, and III":

[From the New York Times of March 19, 1957]

A CONSTITUTIONAL FLAW, I—A DISCUSSION OF THE HISTORICAL ISSUES INVOLVED IN A PRESIDENT'S INABILITY

(By James Reston)

WASHINGTON, March 18.—Attorney General Herbert Brownell, Jr., has started a fascinating and possibly historic debate by recommending action to remove what is perhaps the most serious flaw in the Constitution.

This is article II, section 1, clause 6, which raises, but does not answer precisely, a number of questions about what happens in the "inability" of the President to "discharge the powers and duties" of his office.

The language is clear enough that the Vice President should substitute for the President, but it does not answer beyond serious challenge these questions:

What constitutes "inability"?

Who is to determine when an "inability" exists and when it ceases? The President himself, who might be unconscious, or deranged, or captured in time of war? The Vice President, who is an interested party? Or some third distinguished and disinterested group?

What does the Vice President take over during a President's "inability"—the "powers and duties" of the Presidency for the duration of the President's "inability" or the office itself.

A LIMITED ANSWER

John Dickinson, of Delaware, raised this problem at the Constitutional Convention in Philadelphia. Mr. Brownell now proposes to answer, and his answer is limited: Amend the Constitution, he says, in two respects—(1) make clear that the President himself has the power to declare his own "inability," and (2) most important, clarify, in any case of "inability," that the President does not forfeit his office, but merely hands over his powers and duties temporarily for the duration of his "inability."

The root of the problem is that article II, section 1, clause 6 makes no clear distinction between what the Vice President does in the death of the President and in the "inability" of the President. It says:

"In case of the removal of the President from office, or of his death, resignation or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected."

COMPLICATED BY PRECEDENT

Many distinguished constitutional lawyers have argued that the phrase "until the disability be removed" clearly implies that the Vice President should take over, not the office of the Presidency, but merely the temporary exercise of the powers and duties of the office.

Constitutional precedent, however, has complicated the issue. Although many experts think the Founding Fathers intended the Vice President to be merely an acting President when the President died, John Tyler succeeded to the Presidency itself after the death of William Henry Harrison in 1841. And, of course, six other Vice Presidents from Tyler to Truman, also took the Presidential oath of office after the death of the President.

WHAT LAWYERS ARGUE

This has led to the argument that the Vice President cannot become acting President but actually takes over the office and displaces the President. And because article II, section 1, clause 6 fails to make a clear distinction between death, removal, resignation and inability, this is the way many constitutional lawyers have argued:

The Constitution does not provide for 2 but only for 1 President.

The Vice President becomes the President when he takes over Presidential duties.

Since there cannot be two Presidents at the same time, assumption of the President's powers and duties by the Vice President is equivalent to removing the former from office.

Once the Vice President takes over these Presidential duties, he cannot be replaced by the previous President.

This line of reasoning has, of course, been sharply challenged since it was first made, but the point is that as long as it has any support and validity, sick Presidents and their Cabinets and staffs always hesitate to risk a temporary grant of power lest they get involved in a bitter constitutional argument.

For example, the three Presidents confronted with any question of inability through illness—Presidents Garfield, Wilson, and Eisenhower, avoided any temporary grants of power to the Vice President concerned lest such action provoke a constitutional crisis.

AFTER GARFIELD WAS SHOT

President Garfield performed only one official act during the 80 days after he was shot in 1881. This was the signing of an extradition paper. There was much urgent business to be performed at that time and his Cabinet agreed unanimously that it would be desirable to have Vice President Arthur act as President during the President's "inability."

However, 4 or the 7 Cabinet members thought the powers and duties of the President could not be passed to Arthur without displacing the President altogether. Since the President was too ill to weigh the question himself the Cabinet decided that it was not fair to risk the danger of abdication.

Ruth C. Silva, of Pennsylvania State University, and Everett S. Brown, of the University of Michigan, who have written definitive studies of this problem, agree that "there can be no question that Wilson was unable to perform his Presidential duties much of the time from September 25, 1919, to March 3, 1921."

AFFAIRS ALLOWED TO DRIFT

During this period, Wilson was partly paralyzed. He did not met his Cabinet for 8 months during his illness. During the special session of the 66th Congress, 28 bills became law because of his failure to act on them within the prescribed period of 10 days.

Again there was much talk about passing on responsibility to Vice President Marshall, but again the affairs of state were allowed to drift while members of his family, Cabinet, or staff debated the ambiguities of article II, section 1, clause 6 of the Constitution.

Immediately after President Eisenhower's heart attack on September 24, 1955, the question of Vice President NIXON's role was raised. But here again, the constitutional issue worried Attorney General Brownell, and a decision was made to avoid any new grants of power to Vice President NIXON but to leave what could be done, instead, to the Cabinet and the White House staff.

Since then, at the request of President Eisenhower, Mr. Brownell has been studying the question. His recommendation of a limited constitutional amendment, now in the White House, is bound to lead to a revival of one of the oldest and most intriguing questions in the history of the Presidency.

[From the New York Times of March 20, 1957]

A CONSTITUTIONAL FLAW, II—AN APPRAISAL OF THE PROBLEMS POSED WHEN A PRESIDENT BECOMES DISABLED

(By James Reston)

WASHINGTON, March 19.—In the current constitutional debate over who runs the administration when a President is disabled, President Eisenhower has played a responsible and disinterested role.

Like all his predecessors—including Presidents Garfield and Wilson, who were also stricken in the White House—he has been aware that the Constitution does not state clearly what constitutes presidential inability or who is to be the judge of when it exists and when it ends.

Unlike his predecessors, however, General Eisenhower has taken action to deal with the problem. Fourteen months ago, he told a news conference that doubt should be removed about the inability question for the good of the country.

And at his urging, Attorney General Herbert Brownell, Jr., has come forward with a recommendation for a constitutional amendment that would deal with at least part of the problem.

Mr. Brownell is convinced that the main thing is to amend the Constitution. He wants it made clear that the President himself can, during any serious illness or other disability, delegate the powers and duties of the Presidency to the Vice President temporarily without risking the possibility of not getting them back again.

SOME VEXING QUESTIONS

His view is that any attempt to try to settle all outstanding questions—as to what consitutes inability, of whether a Vice President is authorized to make a finding of presidential inability and of what is to be done if a President cannot declare his own inability—would merely lead to an endless constitutional wrangle settling nothing.

Therefore, it is important to define what the Attorney General is not trying to do. He is not proposing to define what constitutes inability. This includes so many things—loss of ability to see, to hear, to move, etc.; capture by an enemy in wartime; physical unconsciousness; mental derangement; tem-

porary absence in a crippled and grounded aircraft, etc.—that Mr. Brownell has apparently agreed with those who oppose any attempt to define the term.

He has avoided also the highly controversial subject of whether the Vice President, or the Cabinet, or the courts, or some disinterested commission should make a finding of presidential inability.

All of these, to one degree or another, involve the question of personal advantage or the dangers of political bias—at least in the minds of many people. Therefore, Mr. Brownell has decided to limit his recommendation to issues that will raise a minimum of controversy.

THE GARFIELD CASE

In 1881, when President Garfield lay helpless and dying after he was shot, most constitutional authorities seemed to agree that it was the Vice President's duty to determine when the President was disabled.

This view was based on the theory that, since the Vice President was called upon to act for the President in certain conditions he was obliged to decide the question of presidential inability if the President did not do so.

It was noted during the illnesses of both Garfield and Wilson that, while the Constitution was vague about what constituted inability and who should decide it, the language was not permissive or optional but mandatory in saying that the powers and duties shall devolve on the Vice President.

Nevertheless, for reasons of propriety and public confidence, Vice Presidents Arthur, Marshall, and Nixon did not take effective action to assume Presidential responsibilities.

Consequently, Attorney General Brownell has reached the conclusion that it is necessary to remove the Vice President from the delicate position of seeming to usurp the President's powers—an act that would almost certainly divide the country and make it difficult for the Vice President to govern.

Many experts seem to agree that it is questionable whether the Congress or the courts have power to deal effectively and legally with the question.

EXPERTS DOUBT COURT'S POWER

In their testimony to the House Judiciary Committee last year, two experts on the subject, Everett S. Brown, of the University of Michigan, and Ruth C. Silva, of Pennsylvania State University, stated:

"It seems almost certain that no court has power to issue a writ of mandamus to the Vice President * * * directing him to act as President during the latter's inability, because a court can only order performance of a ministerial function * * *

"Whether Congress has power either to determine actual inability or to provide a means for deciding such cases is questionable. Opinion on the matter is divided, but the weight of opinion seems to be that Congress has no such power."

This is the sort of wrangle Mr. Brownell is trying to avoid by recommending merely that the Constitution be amended to give the President himself the clear right to hand over his powers and duties temporarily without fear of not getting them back when he recovers.

The House Judiciary Committee held hearings on this question 37 years ago when President Wilson was paralyzed. Three bills and one constitutional amendment were considered to declare his "inability." But they brought out what seemed to be insurmountable constitutional difficulties, the most difficult of which was whether the transfer of powers to the Vice President would mean the abdication of the President.

Consequently, as Mr. Brown and Ruth Silva reported last year when the question was revived, "public affairs were conducted (when Mr. Wilson was ill) much as they had been during Garfield's illness. Either Presidential powers and duties were not discharged in such manner as the Cabinet, the President's family and his personal entourage could devise."

At that time, state papers were given first to Mrs. Wilson. If she had any doubt about them, she would show them to Dr. Grayson, the President's physician. If he thought they might upset the President, they were passed on by Mrs. Wilson to Secretary of the Treasury Houston or somebody else in whom Mrs. Wilson had special confidence.

Secretary of State Lansing protested against this exercise of Presidential powers by persons not elected to public office. He proposed that Vice President Marshall take over Mr. Wilson's duties. Mr. Lansing was charged by Joseph Tumulty, the President's secretary, with "disloyalty" and finally ousted by Mr. Wilson on this ground.

Mr. Brownell, after an exhaustive study of all this, has concluded that the best thing to do is to make it easy for a disabled President to hand over his powers and duties temporarily, and this he has recommended to General Eisenhower.

It seems likely, however, that once the administration agrees to seek a constitutional amendment, the wider question of what happens if the President is unable even to declare his own "inability" will come up.

This will raise a whole series of proposals.

[From the New York Times of March 21, 1957]

A CONSTITUTIONAL FLAW—III—AN EVALUATION OF THE PLANS SUGGESTED FOR WHEN A PRESIDENT IS DISABLED

(By James Reston)

WASHINGTON, March 20.—The crash of President Magsaysay's plane in a Philippine jungle last weekend illustrates the most troublesome aspect of the constitutional controversy now under discussion in Washington.

Once President Magsaysay's body was found, the Philippine Constitution clearly directed the transfer of his powers and duties to Vice President Carlos P. Garcia.

But what if the plane merely had been lost? Or what if President Magsaysay had been found in a state of semiconsciousness or prolonged unconsciousness, unable to direct that his duties be transferred to the Vice President?

Here the Philippine Constitution, which follows the United States Constitution word for word on the Presidential disability question, would have left the country in a quandary. For neither Constitution states clearly what constitutes Presidential disability, or who is to be the judge of it, or whether the president can get his powers and duties back once he has handed them over to the Vice President.

In the two previous articles in this series it has been shown that there is general agreement, inside and outside the administration, that the President should be able to delegate his powers and duties to the Vice President for the duration of any Presidential "disability" and that he should be assured of getting his duties back once he has recovered his health.

Where there is no agreement on what should be done if, in a clear case of Presidential disability, the President cannot or will not agree to hand over the direction of his office to his Vice President.

MANY IDEAS ON SUBJECT

For example, of more than 20 distinguished constitutional lawyers, statesmen and journalists who testified for the House Committee on the Judiciary on this subject in the last session of Congress, almost every one had a different proposal for removing the constitutional dilemma.

Former President Herbert Hoover proposed that "the determination of disability and its termination should rest with the Cabinet, and the Executive powers should be executed by the Vice President during any such period."

Representative EMANUEL CELLER, chairman of the Judiciary Committee, after listening to many hours of testimony and submitting a questionnaire to many learned political scientists all over the country, favored a concurrent resolution that would authorize a Vice President to determine the "inability" of the President and announce to both Houses of Congress that he was assuming the powers and duties of the President.

Many students of the problem have rejected these proposals, however, on the ground that public opinion would reject such a course of action. Arthur Krock, the distinguished Washington correspondent of this newspaper, for example, described the Celler proposal to the Judiciary subcommittee as "preposterous" on the ground that "it is beyond credence that Congress, the courts or the people would accept such an arrangement.

On the other hand, Sydney Hyman, historian and student of the institution of the presidency, told the Judiciary Committee:

"What gives the whole question of presidential disability its real significance * * * is a disability that coincides with an hour of national and international emergency. In that sort of hour, it is inconceivable to me that a Vice President who found a seriously disabled President in the White House, who declared him to be such on the basis of proofs that would stand microscopic inspection, and who then proceeded to do what a President must do to save a country when it is in danger * * * it is inconceivable to me that the people, the parties, the court, and the Congress, would assail him or deny him those marks of esteem to which he would be entitled."

INABILITY COUNCIL URGED

There has been considerable testimony in favor of the creation by Congress of a presidential commission or, as Mr. Krock proposed, an inability council composed of congressional leaders from both parties, of senior members of the President's Cabinet, and in some cases, of members of the Supreme Court of the United States.

For example, Beverly Smith, Washington editor of the Saturday Evening Post, in an excellent review of this whole problem in the current issue of that magazine, has proposed the establishment by Congress of a presidential powers commission to determine when a presidential inability has taken place.

Mr. Smith's proposed commission, which has some support in the administration, would be composed of the Chief Justice of the United States and the two senior Associate Justices of the Supreme Court; the Secretaries of State and Treasury; the majority and minority leaders of the Senate and the Speaker and minority leader of the House.

"This commission," he suggests, "would be authorized to find as a fact, at any time, by a two-thirds vote in writing, that a President was suffering from a temporary inability to discharge the powers and duties of his office. Thereupon, the Vice President would become Acting President. When and if the commission voted that the President's disability had been removed, he would at once resume his full powers and duties."

The trouble with all this is that, while almost everybody who has studied the problem agrees that, in this day and age, the Constitution leaves the Nation open to paralyzing dangers, the proposed remedies are so numerous and varied that the chances of getting consent for a total solution are not good.

ABUSES HELD POSSIBLE

For example, those who think Congress should have the power to determine when a President is disabled are met by the argu-

ment that giving Congress power to suspend or end the President's duties would alter, in an important respect, the present distribution of powers between the executive and legislative branches.

Similarly, while some authorities favor the creation of a presidental powers commission, others feel that drafting any new mechanism into our constitutional system might lead to political abuses in the future.

Those who fear this, for example, think that a disability commission, once established, might one day be used unfairly as a concealed impeachment weapon—to be used, as Mr. Hyman has suggested, "against a President on the pretext of his disability."

Mr. Hyman does not suggest that this would, but he observes:

"Even if the use of that concealed weapon failed in its ultimate objective, the bringing of it into action would split the Government, foster bitter dissensions, lower the dignity of the Presidency, weaken its authority, distract the public mind, and by this means, produce a toxic effect throughout our whole system of responsible power."

Thus, the more the problem has been studied in the Department of Justice, the more it is realized that there is indeed a potentially disastrous uncertainty in the Constitution, but one that probably ought to be dealt with one step at a time.

Attorney General Herbert Brownell, Jr., is not averse to seeking a total solution to the problem, including, as President Eisenhower himself has said, "a case where the President would be unable to determine his own disability." But Mr. Brownell is mindful of proceeding in such a way as to limit the controversy as much as possible and retain in the end the greatest possible public support for whatever steps are taken.

OPPONENTS OF CHANGE

Already he is confronted by the fact that powerful legislators, including Speaker SAM RAYBURN in the House, are skeptical if not actually hostile to the long, intricate business of changing the present system.

Thus, for the time being, Mr. Brownell is concentrating on making clear that the President himself can delegate his powers and duties to the Vice President, without risking the loss of the Presidential office itself.

Such a move might not deal clearly with the possibilities of such an accident as befell President Magsaysay, but it would go part way. And the Justice Department's view is that, once it was clear that the Vice President was merely exercising the powers and duties of the Presidential office temporarily, it would be easier for the Vice President to initiate a finding of temporary inability during any grave national emergency.

Research Keeps Business Busy

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Research Keeps Business Busy," which was published in the Indianapolis Star of March 23, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RESEARCH KEEPS BUSINESS BUSY

Huge amounts currently being spent by American industry for research and development may be a major factor in doing away with the boom-and-bust pattern of business activity which has prevailed in the past.

This was pointed out by Dexter M. Keezer, vice president of the McGraw-Hill Publishing Co. and director of its economics department in an address before a luncheon session of the 11th annual alumni conference of the Indiana University School of Business yesterday.

Theme of the conference, which was held in the Student Union Building at the Indiana University Medical Center, was "Business Research and Business Horizons."

Keezer called the annual expenditure of more than $5,500,000,000 for research and development the most dramatic thing about American business today. This is 20 times the amount being spent for this purpose a generation ago, he added.

This mammoth research program means a steady flood of new and better products, processes, and equipment, Keezer declared.

And it is at least a good sporting proposition that handling this flood will keep business so busy right along that there won't be either time or cause for severe business letdown," he said.

Keezer explained that business ups and down will not disappear entirely, but it can be reasonably expected that serious plunges like that of the thirties are a thing of the past.

He also was optimistic about business prospects in the immediate future. Consumer income, business investment, and Government spending all are at alltime highs and going higher, Keezer said.

The nearly 400 alumni members attending the all-day meeting elected J. Evan Stiers, of Indianapolis, president of the School of Busines Alumni Association. Robert L. Boyd, of Kokomo, was named vice president, and Prof. J. Douglas Snider was reelected secretary-treasurer.

The Tax Load on Americans

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. GOLDWATER. Mr. President, an awakened and interested America is responsive to the unusual and uncalled for high budget presented to this body. One of Arizona's outstanding newspapers, the Mohave County Miner, has made some editorial comments on the fiscal situation in this country. I believe that our colleagues should read it, and for that reason I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAX TIME

This is the time of year when all American citizens take a look at their hole card and settle up with the Federal Government. The look they take is at their income taxes.

The next look they take later on concerns State, county, municipal taxes—and every day they pay luxury, sales, and other taxes.

The simple truth of the matter is that today, as never before, Americans face a tremendous tax load. Everybody faces it from the richest man in town to the fellow just struggling along.

It has always been our contention that about the only kind of taxes we pay that do us much good are county and municipal taxes. We are in a position of being able to watch the expenditures of these echelons of government and making our complaints felt if we feel they are unreasonable.

Just to set the record straight we sincerely believe that the city and county give us dollar for dollar in value received for the taxes we pay.

But do we get the same treatment from other echelons of government.

Five years ago the voters turned out the Democrats and brought forth a so-called economy-minded Republican administration. One of their primary pledges was a balanced budget and an end to deficit spending. The same pledge was reiterated in the campaign of 1956 when the GOP was again returned to the White House.

But what do we find? We find a budget submitted to Congress that makes Harry S. Truman look sick. Never in his wildest days of spending and planning did he come close to the Eisenhower budget of today.

Amid the hue and cry of the press and the populace the President tells Congress, "you cut it"—the Congress replies by resolution "tell us where." It is political buck-passing at its very worst.

We find an evergrowing American policy of spend, spend, spend. Not only at home, but throughout the world the Government is showering our dollars on people who don't like us, never have and never will. We are, in effect, trying to buy friendship and every youngster who ever tried to buy off the neighborhood bully knows it won't work.

Foreign aid, we believe, is unconstitutional. Where does the Government get the right to take from its own citizens and give to citizens of other countries? Governor Lee, of Utah, tried his best to test this matter and was ridiculed out of public life.

The Congress of the United States should accept the Eisenhower challenge and assess the good done by the Dulles policies of foreign aid.

Foreign spending should and can be stopped—or drastically dried up. This would be an excellent place to start cutting the monstrous Federal budget.

For no tax relief can be given to the American public until the spending ways of politicians in office—be they Democrats or Republicans—is trimmed and made to stick.

Family Allowances by the Government

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. NEUBERGER. Mr. President, the next forward step in social legislation should be a program which helps secure for the youth of America a happier, healthier, and more abundant life. More than 8 million American families are making less than $2,000 a year and the children in these families face an insecure future.

In the first session of the 84th Congress, I submitted a resolution in the Senate to provide for a study of family allowances such as that adopted by Canada and many other countries. Children are the most precious wealth of any nation. Under the Canadian family allowance plan, allowances are paid monthly to mothers who have children up to and including 15 years of age.

I was indeed pleased to see that the 25th Annual National Catholic Family Life Convention, at their recent convention in Milwaukee, Wis., urged the Federal Government to study the possibility of adoption of a family allowance program.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by Casper Nannes which appeared March 22, 1957, in the Evening Star of Washington, D. C., reporting the resolutions adopted by the recent National Catholic Family Life Convention.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOVERNMENT ALLOWANCES SOUGHT FOR BIG FAMILIES

(By Casper Nannes)

MILWAUKEE, March 22.—The 25th annual National Catholic Family Life Convention at its concluding session yesterday urged the Federal Government to study the possibility of providing allowances for large families of low-income brackets.

The Reverend Donald N. Webber, assistant director of the Family Life program, Milwaukee Archdiocese, presented the statement for the resolution committee of the convention.

Those attending the meeting represented education, research, and study, and family policy groups in 73 of the 132 Catholic dioceses in the United States.

The statement pointed out that more than 8 million families in the Nation are making less than $2,000 a year and a majority of these families have more children than those making larger salaries.

MANY NATIONS HAVE PROGRAM

The Right Reverend Irving A. DeBlanc, of Washington, at a press conference, explained 33 countries in the Western Hemisphere have family allowance programs.

"We are the only country in the Western Hemisphere without one," Monsignor DeBlanc said. "Many think welfare projects take care of the problem, but numerous people do not want to take money this way because it hurts their dignity and pride."

He noted that while these people make too little money to file income-tax returns, they still were subject to all hidden and indirect taxes and to sales taxes.

While no specific figures were proposed, the 1955 Family Life Convention at St. Paul, Minn., suggested that $6 a month be allowed for the third child in a family with perhaps a larger sum being given to each additional child. The allowance would continue until the child reaches the age of 18.

TWO OTHER RESOLUTIONS

Another resolution called on the Government to study ways of keeping military personnel with their families, not only in the United States and Europe, but particularly in Asia.

By doing this the Government would encourage a reverence for sex and provide a climate for morality, the motion stated.

Also adopted was a resolution assailing international traffic in pornography. It said the Family Life Bureau had received complaints from abroad that obscene literature was being sent from the United States to other countries, as well as being received here from nations overseas.

Still another resolution suggested that the State use its power to increase the stability of marriage by devising a suitable law further to protect it. Such a law, it said, might require premarriage instruction and also insist upon a cooling off period of at least 90 days if a separation is applied for, stipulating a marriage counselor must be visited during that period.

American Agriculture Called Solvent and Sound

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "American Agriculture Called Solvent and Sound," which was published in the Journal and Courier, of Lafayette, Ind., of March 22, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN AGRICULTURE CALLED SOLVENT, SOUND

Indiana bankers and farm leaders received assurance here that despite the cost-price squeeze and materially lower income, American agriculture is financially solvent and sound.

Howard G. Diesslin, assistant managing director, Farm Foundation, Chicago, made the statement in a luncheon speech concluding the 13th annual agricultural clinic at Purdue University.

More than 400 persons attended the 2-day event sponsored by the Indiana Bankers' Association and Purdue's School of Agriculture.

Diesslin said that total farm debts, now near $20 billion, are double the prewar level. However, assets have more than tripled in value since 1940.

The ratio of debts to assets in agriculture is much lower than any time during the 1920's and 1930's in the United States, he went on.

"Agriculture has and should continue to get its share of credit to produce efficiently, even in spite of the tight-money market of recent years," Diesslin asserted.

"Informed and up-to-date credit policies have and should continue to forestall further Government intervention in the agricultural field," he declared.

PANEL OF BANKERS

A panel of Hoosier bankers took up the question, A Farm Representative for Your Bank? Participants were R. Earl Miller, Corydon; J. B. Crosby, Greencastle, and Earl F. Hammond, Shelbyville. T. P. Axton, Lafayette banker, was moderator.

Irrigation and water rights were brought to the attention of the clinic.

D. Woods Thomas, Purdue agricultural economist, asserted that irrigation, under a specified set of physical and economic conditions, can be highly profitable on certain farms in humid regions such as Indiana.

The practice provides an opportunity, Thomas went on, for lending institutions to assist agriculture in the adoption of new, more efficient technologies.

The economist called across-the-board extension of credit for irrigation highly risky but added:

"Extension of credit for irrigation purposes to those individuals possessing the bundle of recourses needed for the profitable use of irrigation is no more risky than other uses of farm credit.

John C. O'Byrne of the Iowa University agricultural law center, told the group that water requirements of Hoosiers, both privately and industrially, are expected to double in the next 20 years.

"Good sense, good planning, and good law can meet these demands," he asserted.

Indiana's existing riparian doctrine is resulting in "anarchy, chaos, confusion, and disorder," O'Byrne declared.

"Riparian law purports to give all lands along a watercourse equal, but undefined, rights to water use and flow. This nebulous measure, this equality of uncertainty where every man's right is defined only in terms of all other potential water users—this is the anarchy of the present system."

O'Byrne said a sound water law for this State must be rooted in Indiana history and must follow or be contemporaneous with intensive physical research and the articulation of a comprehensive, statewide water policy.

Avoiding the Maginot Psychology—Importance of National Inventors Council

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. WILEY. Mr. President, I was interested to read in the Monday, March 18, issue of the Milwaukee Journal a most interesting writeup concerning a now almost forgotten chapter in the history of modern warfare.

I refer to the so-called Maginot Line, which was constructed by our French friends at a cost of around a half billion dollars as a so-called impregnable barrier to German aggression.

I cite this chapter in history now for one reason, and one reason only.

I ask, "Are we, perhaps, inadvertently developing—even in part—a modern counterpart of the Maginot psychology?" In other words, are we mistakenly putting our military eggs in a basket which is now totally inappropriate? Are we in the process of preparing against the danger of World War II, working to too great an extent with weapons which were basically appropriate for World War II, instead?

I think that, fortunately, the answers to those questions are largely "No." I think that the Pentagon is working with might and main, with ingenuity and resourcefulness to come up with answers to tomorrow's type of warfare. But this is a question of degree, a question of all-around adequacy.

Therefore, I think we cannot too often stress the absolute importance of the fact that war has been revolutionized and is being revolutionized today by scientific inventiveness.

That is one of the reasons why I have been especially interested in the work of a small group of a great research and engineering talent which is available to America in the form of the National Inventors Council of the Department of Commerce.

It is this group of men who, from the days of World War II onward, have been responsible for helping to generate and then to sift and pass along to the Defense Establishment the inventive ideas of America's own private citizens. This Council costs a mere pittance in relation

to our $72 billion budget—a mere $90,000 for its expenses. But it repays its cost manyfold.

I was pleased to read that the Inventors Council's incoming mail is growing with an improved quality and quantity of inventive ideas.

The Council is, of course, by no means the only or the main source for generating new military ideas, processes, and products.

But it is so available to all comers that it is the foremost channel for this process open to the private citizens of America.

Through citizens' fresh approaches may come constant new results which will make sure that America will not have a Maginot psychology.

I send to the desk the text of the Journal article of March 18, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN FRANCE PREPARED TO FIGHT LIKE A MOLE—RECENT NEWS RECALLS UNDERGROUND MAGINOT LINE, HALF BILLION DOLLAR FOLLY WITH WHICH FRENCH HOPED TO REPEL GERMANS IN WORLD WAR II; NAZIS MADE FORTS USELESS BY FLANKING THEM

(By Gerald Kloss)

According to recent announcements, the final and farthest north of three radar networks—the DEW line, or Distant Early Warning line—will be completed in July and go into full operation by the end of the year. Cost of the 3,000-mile DEW line, designed to warn of enemy bomber attacks over the North Pole, is estimated at close to half a billion dollars.

If for no other reason than the cost figure, this may remind us of another defense line—constructed before World War II as an "impregnable" barrier to German aggression. The elaborate system of underground fortifications running 200 miles along the French-German border was named after its chief proponent, Andre Maginot, French minister of war in the 1920's and early 1930's. The Maginot line also cost about half a billion dollars, at a time when the franc was worth more than 10 times what it is now.

There the resemblance ends, however. The Maginot line was outflanked by the German panzer forces in their drive through Belgium in 1940, and fell to the enemy within weeks. The French had placed too much reliance in fixed defense; in the months of the "phony war" before the German blitz, they were enslaved by the "Miginot line psychology."

Perhaps because of that monumental failure, our defense officials have taken care not to give the same illusion of impregnability to our radar networks and other defenses. They have candidly admitted that some enemy bombers might slip through the protective screen and have stressed the point that no fixed defensive system can offer complete security.

THE DEVIL HIMSELF CAN'T BREAK THROUGH

How different it was before the spring of 1940. If there was anything certain, thought France and much of the world, it was that the Maginot line could not be cracked. "We must build a wall that the devil himself can't break through," Maginot had urged after World War I, and this mighty chain of underground fortresses was the result.

Unfortunately, Maginot—and France—forgot that instead of breaking through a wall, an invader might decide to go around it, or even fly over it.

Maginot had based his plans on the success of the French forts in staving off the Germans in World War I. Artillery was the queen of battles in that stationary war, and, obviously, the best protection against artillery was to go underground. So the Maginot line went underground with a vengeance.

Work started in the late 1920's. To stress the point that the system was purely defense, the French built the line several miles behind the actual border. More than 1,600,000 cubic yards of concrete were poured into the fortification, and some 50,000 tons of steel plate went into the underground works.

The turrets and pillboxes above ground were carefully camouflaged and blended into the landscape. To the layman, at least, the scene looked as peaceful as any other stretch of countryside.

EVEN UNDERGROUND RECREATION HALLS

But under the grassy slopes and leafy glades lay what some military experts called the greatest monument to military engineering the world has ever seen.

The entrance to a typical fort was a huge steel door in the side of a ridge.

Subterranean tunnels led to gun emplacements overlooking the front. Another corridor, with railroad tracks down the middle ended at an elevator which went some 200 feet below ground. The fort might have 8 underground levels, for barracks, messhalls, power stations, ammunition magazines and even recreation halls.

Small electric trains ran on the tracks, bearing food and ammunition for the men in the turrets. Remembering the poison gas attacks of World War I, the French provided air conditioning systems that would increase the inside air pressure to keep out the fumes. Switches could be thrown to flood the ammunition chambers with carbon dioxide in case of fire or explosion.

The line was not continuous, like a trench, but the fortresses and pillboxes were placed so that they could, theoretically, cover every foot of ground along the border with a curtain of fire. The underground fighters were spared the dirt and discomfort of World War I trench life—as well as the danger.

The statistics were impressive, and the French made no secret of them. In the prewar years, they allowed photographs and movies of the fortifications to be shown, giving away whatever surprise value the carefully camouflaged casemates and gun turrets might have had. In articles on the Maginot line before the war, its length varied from 200 to 450 miles, the number of soldiers manning the system ran from a few thousand to a few million and the tally of pillboxes ranged from 14,000 to 22,000.

Why didn't the Maginot line work out in practice?

For one thing, it didn't go far enough. It started dribbling out along the French-Belgian border, on the assumption that Belgium would have its own defense system to ward off German attack. The fact that the Germans had swung through Belgium in World War I apparently did not register strongly enough with the French high command.

MEN UNHAPPY IN SUPERTRENCH

Another basic flaw was the failure to realize that a new war would not necessarily be fought with the weapons of the previous one. The Maginot line was, essentially, a supertrench. If it could be overrun at one point, the whole system would be outflanked. There was no defense in depth to take care of such an emergency, no chance for maneuver or counterattack.

And while the soldiers in the Maginot line were comparatively safe in the early months of World War II preceding the blitzkrieg, they were not happy. Living like moles hundreds of feet below ground, they were cut off almost entirely from outside life. They knew that the Germans were only a few miles away, but they couldn't see them or hear them. Wild rumors swept through the underground fortresses, subsided and gave place to new rumors.

Not to see daylight or feel the breeze on one's face for weeks at a time was a morale shattering experience for many of the poilus. In one fortress, a soldier painted a landscape on a wall, showing a sunny scene of trees and flowers and hills. It became the most popular room in the whole fort.

Despite these drawbacks, the Maginot line itself was not broken by the Germans. It was simply outflanked by the panzer attack through the low countries. Not one major fortress in the system was captured until the whole of northern France was in German hands. Peace terms were signed before the Maginot line could be put to the test.

GERMANS MADE PLANE ENGINES IN FORTS

The Germans took the large artillery pieces from the turrets and placed them along the French coast of the English channel. When Britain and the United States started bombing Germany in earnest in 1943, the underground fortresses were converted to factory space for manufacture of airplane engines and propellers. German inscriptions still remain in parts of the Maginot line.

After the Allied dash across France in 1944, the line again came into French hands. They found it in poor condition, with some of the underground chambers flooded by the retreating Germans. But in the postwar years, it was cleaned up and renovated—possibly for use as bomb shelters in an atomic war.

So once again the Maginot line is operating, although no Frenchman would claim that it is "impregnable" against attack. Its counterpart across the Rhine river, the German Siegfried line, has been turned around to face east, as part of a defense in depth system against possible Russian aggression.

But even if the Maginot line might prove its worth in the future, the French are not proud of it. Writer Joseph Wechsberg, who toured a section of it in 1951, conjectured:

"Being utterly realistic, they know only too well, now, that the Maginot line, 'that impregnable mass of concrete and steel, the flaming curtain of death,' was doomed to failure from its start. No one likes to be reminded of past mistakes, and the Maginot line was one of the costliest mistakes the French ever made. It has become a skeleton in the closet of France's national pride."

Mr. WILEY. I append the list of the distinguished membership of the council. It worked, I may say, through the Commerce Department's Office of Technical Services, whose director is John Green.

I ask unanimous consent that the list of membership be printed in the Appendix of the RECORD.

There being no objection, the list of membership was ordered to be printed in the RECORD, as follows:

MEMBERS OF THE NATIONAL INVENTORS COUNCIL

Dr. Charles F. Kettering, chairman, General Motors Research Corp., Post Office Box 188, North End Station, Detroit, Mich.

Dr. Oliver Buckley, vice chairman, 13 Fairview Terrace, Maplewood, N. J.

Mr. Lawrence Langner, secretary, the Theatre Guild, 23 West 53d Street, New York, N. Y.

Dr. Roger Adams, department of chemistry, University of Illinois, Urbana, Ill.

Mr. George Baekeland, 35 Park Avenue, New York, N. Y.

Dr. Alvan L. Barach, 929 Park Avenue, New York, N. Y.

Dr. George W. Codrington, Post Office Box 506, Edgewater Branch, Cleveland, Ohio.

Dr. William D. Coolidge, 1480 Lenox Road, Schenectady, N. Y.

Mr. Watson Davis, Science Service, 1719 N Street NW., Washington, D. C.

Rear Adm. Luis de Florez, de Florez Engineering Co., 116 East 30th Street, New York, N. Y.

Dr. Hugh L. Dryden, National Advisory Committee for Aeronautics, Room 601, 1724 F Street NW., Washington, D. C.

Mr. Homer H. Ewing, development department, E. I. du Pont de Nemours & Co., 10th and Market Streets, Wilmington, Del.

Dr. Frederick M. Feiker, 1235 34th Street NW., Washington, D. C.

Rear Adm. Rawson Bennett, Chief of Naval Research, Department of the Navy, Room 1804, T-3 Building, Washington, D. C.

Dr. Webster N. Jones, director, College of Engineering and Science, Carnegie Institute of Technology, Pittsburgh, Pa.

Maj. Gen. R. P. Swofford, Jr., director, research and development, Headquarters, United States Air Force, Room 4E344, the Pentagon, Washington, D. C.

Mr. Henry J. Rand, Rand Development Corp., 13600 Deise Avenue, Cleveland, Ohio.

Brig. Gen. T. J. Conway, office, Deputy Chief of Staff for Research and Development, United States Army, Room 3B483, the Pentagon, Washington, D. C.

Mr. Brooks Walker, suite 203, Alexander Building, 155 Montgomery Street, San Francisco, Calif.

Hon. Robert C. Watson, Commissioner of Patents, Washington, D. C.

Mr. James C. Zeder, engineering research, Chrysler Corp., Detroit, Mich.

Dr. Edgar C. Bain, United States Steel Corp., 525 William Penn Place, Pittsburgh, Pa.

Mr. Lawrence B. Biebel, president, American Patent Law Association, 802 National Press Building, Washington, D. C.

Dr. C. S. Draper, director, Instrumentation Laboratory, Department of Aeronautical Engineering, Massachusetts Institute of Technology, Cambridge, Mass.

Mr. Wallace H. Martin, chairman, section of patent, trademark, and copyright law, American Bar Association, 60 East 42d Street, New York, N. Y.

Dr. Jerry McAfee, Gulf Oil Corp., Gulf Building, Pittsburgh, Pa.

Mr. Alex F. Osborn, president, Creative Education Foundation, 1614 Rand Building, Buffalo, N. Y.

Hon. Bernard J. Berry, Mayor of Jersey City, Appeals to the Congress of the United States

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. SIEMINSKI. Mr. Speaker, I have just received a wire from the dedicated and conscientious mayor of Jersey City, Hon. Bernard J. Berry. Jersey City, as well as all municipalities engaged in urban redevelopment, needs help in mortgage financing.

The forthright appeal of Mayor Berry follows:

JERSEY CITY, N. J., *March 26, 1957.*
Hon. ALFRED D. SIEMINSKI,
Member of Congress,
House Office Building,
Washington, D. C.:

In the interest of our most important national fight against some slum decay in cities, I respectfully request you extend maximum assistance to Jersey City's special redevelopment counsel when he meets with you Wednesday, March 27. I need not emphasize how urgent this matter is to all the United States urban areas. Please help in every way possible.

BERNARD J. BERRY,
Mayor, City of Jersey City.

Mr. Speaker, the mayor of Baltimore, the Honorable D'Alessandro, it is said, has done a unique thing. He has reacquired land from the Government when its funds were not forthcoming for housing development. Then the mayor, through private financing, carried forward the housing projects his people so sorely needed.

Review by George E. Sokolsky of the Book The Enemy at His Back, by Elizabeth Churchill Brown

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. GOLDWATER. Mr. President, a valuable book, entitled "The Enemy at His Back," recently came off the press. This contribution to our literature was written by Mrs. Elizabeth Churchill Brown, the wife of a distinguished columnist, who is brilliant in her own right.

The complete documentation of this work indicates its authenticity and adds to its interesting treatment of this subject. What Mrs. Brown has said should be read by all Americans.

I ask unanimous consent to have printed in the Appendix of the RECORD a column written by George E. Sokolsky and published in the New York Journal American of September 27, 1956, commenting upon this book.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A BOOK BY WIFE OF A COLUMNIST
(By George E. Sokolsky)

The life of a wife of a columnist is not an easy one but Elizabeth Churchill Brown has found time to do a book out of her experience in following the Washington scene either in company with her husband, Constantine Brown, or alone.

The book, The Enemy at His Back, is a study of available but elusive information, most of which has already been published here and there. Liz Brown brings it all together and proves a point; namely, that we have for 20 years or so been governed by men without a sense of history, whose greatest ability seemed to be to cover up their errors or the errors of their chiefs. In fact, they wrapped them up in such delicious language that they ceased to look like errors.

DECISION WEIGHED

For instance, the book cites the occasion of the decision to publish a document on the American policy toward Japan, particularly toward the Emperor. There were those in the administration who wanted the Emperor abolished, which others held would prolong the war indefinitely. So there were numerous conferences to consider the wording of a statement. There was endless talk but no one was quite willing to denounce the document because no one wanted to be responsible for guessing wrong, but Gen. George Marshall postponed further discussion by say the publication would be "premature." The one word did the job which it took all of Gen. Douglas MacArthur's ingenuity later to undo.

However, the document which on May 29, 1945, was declared to be premature was actually issued on July 26 of the same year, which surely is not a great lapse of time. The answer undoubtedly was that there was considerable pulling and pushing in the State Department and in the White House and there were all sorts of experts and authorities who have proved, in the long run of history, not to have been experts or authorities about anything, surely not about the Far East and beyond doubt not about Japan and the role of the Emperor in Japanese history. Most of these experts have been forgotten by the American people, but they still fill little niches in universities where they teach small phases of great subjects to admiring students.

Mrs. Brown's book establishes beyond doubt that from the available data it is certain that Japan was defeated long before the atom bomb was hurled at Hiroshima and that Japan was suing for peace. It is possible also to reach the conclusion from the data she presents that surely the Pentagon and the State Department and probably the White House were aware of the fact that Japan sought peace and that if the President was not fully informed, he and the American people were betrayed by those whom they trusted. It is a conclusion that it is inevitable from the available material.

There is a further point to be made on this subject. Prince Konoye kept a diary and I have been told authoritatively that his diary fully covers the period discussed in this book. I have also been informed that the Konoye Diary is in the United States. Mrs. Brown apparently has not had access to this diary, she not giving it in her extensive and carefully compiled bibliography. However, in an appendix there is a considerable quotation of a conversation between Prince Konoye and the Emperor of Japan, which fully upholds the hypothesis that Japan wanted peace before the bomb was thrown at Hiroshima.

EXCELLENT JOB

Liz Brown has done an excellent job of research and reporting in The Enemy at His Back. It is a book to which one can refer not only for the needed fact, but also for easily accessible references to the sources, so that each statement, each quotation may speedily be checked. The unusual device is employed of putting the references in the margin close to the statement to which they refer. Senator WILLIAM KNOWLAND wrote a foreword for the book in which he says:

"The Enemy at His Back will be of value to all individuals anxious for a free world of freemen. We must recognize that in dealing with the Kremlin, the road to ap-

peasement is not the road to peace. It is only surrender on the installment plan."

This is the thesis and the book might help those who really are interested in why so many things that look right, go wrong.

The Major Role of United States Business in Latin America's Economy

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 26, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Herbert Bratter, which appeared in the March 1957 issue of Banking magazine, entitled "The Major Role of United States Business in Latin America's Economy."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAJOR ROLE OF UNITED STATES BUSINESS IN LATIN AMERICA'S ECONOMY

(By Herbert Bratter)

A preview of a forthcoming Commerce Department survey of the role of United States business in the Latin American economy is published in the February issue of the Survey of Current Business. The article, written by Samuel Pizer and Frederick Cutler, applies the economic tapemeasure to the length, breadth, and depth of American enterprise "south of the border" and uncovers more significant information than could be gathered in a year of personal travel in the hemisphere. Every traveler in Latin America knows that American firms occupy positions of great importance there. This article tells us, and our good neighbors, just how important that position is.

In 1955 United States companies contributed $8.5 billion of net gain to Latin America's economy. The gross contribution included the production in agriculture, mining, oil, and manufacturing; $2.5 billion of goods for use within Latin America; $1.3 billion of goods exported to the United States and paid for in dollars; and $800 million of other exports producing dollar exchange. In addition, new capital brought into Latin America by these companies approximated $100 million.

From the aggregate yield of these items only $600 million went to the United States as income and fees earned by our firms. Another $500 million was spent for imports from the United States. All the remaining $3.5-billion was a net gain to Latin America.

Of the nearly $4.3 billion paid out in Latin America by American companies in 1955, the largest expenditure was $1.8 billion for local materials, supplies, and equipment. Local payments for wages and salaries and for taxes constituted the bulk of the $4.3 billion, however. These direct payments comprise a considerable part of the incomes of the area and in turn generate other activity when spent by the recipients.

United States manufacturing, oil, and trade enterprises are the biggest buyers of local materials and supplies, the oil companies being the heaviest contributors of local tax revenues. All United States firms combined pay out more in taxes and other levies than in salaries and wages. For materials and supplies in 1955 they spent there $1.8 billion; for taxes and other payments to governments, $1.1 billion; for wages and salaries, $1 billion; and otherwise, $400 million. The heaviest tax collections from United States companies are garnered by Venezuela and Chile—oil and mineral producers.

Exports produced in Latin America by United States firms constitute some 30 percent of the area's total exports and about a third of its exports to the United States American companies account for about 20 percent of the net output of Latin America's industry, including mining, oil, and manufacturing. The $2.5 billion of goods those companies sold locally in Latin America constituted a major contribution to the standard of living in 1955; for otherwise most of these goods either would have had to be imported and paid for in hard currency or not be obtained at all.

Employed in Latin America by United States firms in 1955 were 609,000 persons, only 9,000 of whom had been sent from the United States, mostly supervisory, professional, and technical people. Of the 609,000, agriculture accounted for 162,000 and manufacturing 154,000. Oil, far and away the biggest income and tax producer there, accounted for only 60,000 employees. American tax payments amount to about 15 percent of all Government revenues in the area and about 35 percent of all direct income and profits taxes.

The Commerce Department survey clearly reveals the vital role which private United States enterprise plays in the economy and well-being of the Latin American countries. The data reflect not only Latin America's preponderant economic orientation toward the north, but also, indirectly, our heavy dependence upon Latin American raw materials, so important to our own standard of living and the defense of the free world.

Penn-Texas Corp. Versus Fairbanks, Morse & Co.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. FLOOD. Mr. Speaker, a titanic struggle of interest to everyone in the business world will probably culminate this week in Chicago. I refer to the fight between the leading industrial corporation, the Penn-Texas Corp., and Fairbanks, Morse & Co.

From reading some of the accounts of this matter in the newspapers, and indeed in the CONGRESSIONAL RECORD, one would assume that it is a reprehensible thing for one company to attempt to take over another. I deplore the unfair and uncalled for attacks which have been made on Leopold D. Silbertstein, head of the Penn-Texas Corp.

I would like to aline myself with my colleagues from Pennsylvania, the Honorable FRANCIS E. WALTER and the Honorable HERMAN P. EBERHARTER, who, like myself, are aware that Mr. Silberstein came into our State and took over a failing company and within 1 year was able to report substantial profits.

Thus began, in the State of Pennsylvania, what may be termed his meteoric rise. With that as a base, he followed the American traditional pattern and has expanded his activities. Inevitably, such a rapid rise draws attention, creates comment and also opposition. With that opposition I am not concerned. I am concerned only with trying to keep the record straight to the effect that every American is entitled to the benefits of his ingenuity and ability and that a man's activities so long as they are honorable, as they are in this case, should not be smeared and particularly when the sole purpose is to gain a financial advantage.

Mr. Silberstein and his Penn-Texas Corp. is rapidly nearing the end of the corporate struggle with the Fairbanks, Morse & Co. for ownership and management of the latter. I have no interest in the outcome of this fight, provided the efforts of both sides are in conformity with the rules and regulations of the Securities and Exchange Commission, but I do have an interest in clean and aboveboard fighting, whether in corporate struggles or in other human endeavors.

Therefore, Mr. Speaker, I, like my colleagues from Pennsylvania, am concerned because the evidence in this case indicates that methods are being used which are not in keeping with American standards of fair play. The Penn-Texas workers are engaged at this moment in making millions of dollars worth of vitally needed national defense products so secret that, I am told, the Secretary of Defense could not get inside the plants without a special pass. In several other States, particularly Michigan and Connecticut, I am informed, the Penn-Texas people are busily engaged in major national defense projects.

Now that this matter is before the court, I am sure that neither I nor any other Member of the House would make any statement that in any way could effect the outcome of this highly publicized proxy contest. I am equally sure that all of us in both Houses do have an interest in seeing to it that outside the courtroom this contest is carried on according to the rules and regulations of the Securities and Exchange Commission which has jurisdiction over such contests.

Mr. Speaker, it seems to me that this matter has reached a point where it should be focused in proper perspective. As fas as I can gather from the press and the statements made in the CONGRESSIONAL RECORD, the principal charges against Mr. Leopold Silberstein are these:

First. He, an immigrant from Germany and a recently naturalized citizen of the United States, has built up a small company into a large one, namely, Penn-Texas Corp., and through Penn-Texas is trying to acquire control of Fairbanks, Morse & Co. by buying its shares on the open market.

Mr. Speaker, since when has it been illegal—when no monopoly or restraint of trade is involved—for one company to acquire control of another?

Second. Mr. Silberstein and the Penn-Texas Corp. are condemned because they have bought Fairbanks Morse shares on credit. Mr. President, since when has it been illegal to purchase securities in the open market on credit? Our economy is largely built on credit. If no law or regulation has been violated why

should there be any criticism of stock purchase made on credit?

Third. Mr. Silberstein and the Penn-Texas Corp. are accused of some nebulous wrongdoing because they have purchased shares of Fairbanks stock in the United States from certain Swiss banks and that the Swiss banks under the laws of Switzerland are not permitted to reveal the beneficial ownership of the shares which they have sold.

Mr. Speaker, the laws of Switzerland are entitled to full faith and credit. Is Congress prepared to legislate against American stock ownership by the banks of Switzerland unless Switzerland—a nation with whom we maintain cordial relations—is prepared to repeal her bank secrecy laws which have formed a part of that nation's policy for over a century? Is Mr. Silberstein or Penn-Texas Corp. to be held accountable for the laws of the sovereign state of Switzerland?

Mr. Silberstein and the Penn-Texas Corp. have been accused of violating the rules and regulations of the Securities and Exchange Commission.

Mr. Speaker, if there has been any such violation, the Securities and Exchange Commission has the power to seek an injunction against Mr. Silberstein and the Penn-Texas Corp. or to prevent their solicitation of proxies in the Fairbanks-Morse contest. It has done neither.

Mr. Speaker, does any Member of either House of Congress suggest that this excellent agency of our Government has failed to perform its duty as required by law. No such insinuation has been called to my attention and I know of none.

Mr. Silberstein is a good and decent citizen. We should give him the benefit of the American tradition of fair play.

I have every confidence that Mr. Silberstein can meet all such unwarranted attacks, but I think it most incumbent upon the Congress to fully investigate the circumstances surrounding the present struggle and thus provide that in the future responsible persons can carry on their business activities under ground rules of fair play which will preclude a repetition of what is going on in the case of Mr. Silberstein.

Government Employee Pay Raise Legislation

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to point up the failure of the present administration to take one of the basic steps necessary to increase the efficiency of the operation of the Federal Government and to contribute to real economy. Faced with the President's budget, which calls for spending money in such huge amounts as to frighten the average intelligent citizen, it seems to me that the board of directors of any well-run business would fire the executive responsible for presenting such a program if he had not first done everything possible to pare it to the bone and to eliminate waste. Yet this administration and its Chief Executive have neglected in any of their proposals to Congress to date to recommend action in the most elemental and fundamental area where economy in either business or Government must start. That area is, of course, the organization and maintenance of a personnel staff trained to do the job efficiently, and given pay and working conditions adequate to maintain high morale and a low turnover rate. In other words, the Government employees with whom, regardless of commission recommendations or executive orders, economy begins and ends.

The business community long ago woke up to the fact that the best way to run a business is to maintain the best personnel program. It sometimes took a little educating to convince hardheaded business men of that fact, and I helped in some cases, but they know it now on the basis of profitable experience. Yet, faced with an extremely high turnover rate, and tremendous difficulty in finding and keeping qualified people to fill any kind of a Government job in the face of competition from industry which pays far more and provides far more benefits, the President has done nothing to remedy this basic cause of waste. I have searched the state of the Union message and the budget message in vain for any evidence of a concrete program of Government employee legislation. As a matter of fact in the budget message the President specifically states that "at the present time, I do not contemplate proposing an extensive program of personnel legislation." He did make 2, and only 2, recommendations. One to set up a system of health and medical insurance for Federal employees, with which I certainly concur, and the other to authorize the training of Government employees outside of the employing agency. This is what I call making a molehill out of a mountain.

People qualified in industrial relations work will tell anybody, including the President, that one of the primary methods of attracting and keeping qualified people on the job is to pay them adequately. That's elemental. As a matter of fact he has been told just that by the Advisory Committee on Professional and Technical Compensation—the so-called Cordiner Committee, which dealt specifically with Department of Defense pay scales but whose findings are equally applicable throughout the Government. But the President, it is reported, advised of the findings of the committee staff that substantial salary increases would be required to make Government jobs as attractive as industry jobs of a comparable nature, privately indicated that he would not approve such a report. The formal issuance of a report has been delayed. Whether the President's reported attitude has anything to do with this delay I do not know. But I shall bear in mind the President's indication in his budget message that legislative recommendations would be forthcoming as a result of the Cordiner report and watch for such recommendations with interest. It will be particularly interesting to note whether the committee's formal recommendations square with the staff study released to the press some time ago.

Presumably, administration reluctance to recommend or approve wage increases for Government employees is based on the false premise that the initial increased cost to the Government could not be justified. The administration apparently does not know or has shut its collective mind to the facts which I have pointed out, namely, that a satisfied, permanent work force pays for itself and returns dividends in increased efficiency and reduced numbers. The Civil Service Commission informs me that the annual turnover rate in Government jobs throughout the country reached a rate of 21.2 percent in 1956. In other words, better than 1 out of every 5 civilian employees of the Government had to be replaced in 1956. There were a total of 460,585 separations from jobs for the year. Almost one-half of these were outright quits. On February 4 of this year former President Hoover, who I am sure even the administration will acknowledge is a good authority, stated in a speech that "it costs about $3,000 to process and to give a year's training to a new employee." Now suppose that through improved personnel policies we were able to reduce the turnover by 200,000. It does not take much figuring to calculate that as much as $600 million could be saved by this means alone. The total civilian payroll of the Government in the United States last year was about $10,800,000,000. That is quite a saving if the administration is really interested in economy.

Presumably, the President's thinking on the matter of Government-employee legislation is indicated in his state of the Union message when he warned of the inflationary tendencies of wage increases. He urged that such increases should be "reasonably related to improvements in productivity." If that is the criterion he is applying in determining not to ask Government employee wage increases, and indicating opposition to them, his thinking is typically naive and uninformed. In the largely unmechanized Government jobs productivity, and the consequent saving therefrom, is directly governed by the employee and his satisfaction with his job. Job satisfaction is directly related to his pay and working conditions. So long as the Government employee is underpaid, as he now is, and restricted on fringe benefits, as he now is, increases in productivity in any appreciable amount are just not in the cards. Wage increases and improved working conditions must provide the necessary incentive.

The President does not seem to have been nearly as much perturbed over the inflationary tendencies of his enormous budget as he apparently is over the relatively minor effect any Government wage increase would have. Nor does he seem to be concerned over the moral and prac-

tical obligation to keep the Government, as an employer, within at least a respectable distance of the private employer in its treatment of its employees. I am sure that the Government worker and his family, struggling to keep up with the high cost of living induced by the inflationary-price policies of the big-business interests with whom the Eisenhower administration is so closely allied, would rather swallow an Eisenhower grilled steak than his lame reference to inflationary tendencies as a reason for not offering enough pay to maintain a decent living standard.

Mr. Speaker, I have introduced a number of bills in the House for the benefit of Government employees because I know from long experience that any employer, Government or private, must keep abreast of the times if he does not want to lose his employees wholesale, as the Government is now finding out. In this connection I have received letters from a number of Government employee groups commending me for my stand and pointing out the weakness of the administration position. I ask that these letters be printed at this point in the RECORD:

AMERICAN FEDERATION OF GOVERNMENT EMPLOYEES,
Washington, D. C., March 11, 1957.

Hon. JACK SHELLEY,
House Office Building,
Washington, D. C.

DEAR MR. SHELLEY: In the absence of National President Campbell, who is away from the city, I am acknowledging receipt of your letter of February 27, 1957.

On behalf of the entire membership of our federation, I would like to express their sincere appreciation of your sponsorship of these important measures.

It is most reassuring to know that Federal employees have friends in Congress, such as yourself, who are vitally interested in seeing that the Federal Government as an employer provides pay and working conditions commensurate with those utilized by progressive employers in private industry.

Much work is being accomplished now by our members to advance the legislation you have offered. Our efforts will intensify as time progresses.

As trade unionists, all of us in the AFGE are keenly aware of the excellent work being done by Members of Congress who are associated with the labor movement.

We are most happy to number you as a friend in this category.

Again, a hearty "thank you" for your cooperation in sponsoring the bills enclosed with your letter. They will be a source of great encouragement to all members of the federation, but particularly those in the San Francisco area.

Sincerely,

JOHN A. MCCART,
Legislative Representative.

NATIONAL FEDERATION OF POST OFFICE CLERKS,
Washington, D. C., March 1, 1957.

Hon. JOHN F. SHELLEY,
House Office Building,
Washington, D. C.

DEAR JACK: Thanks for your letter of the 27th and for the introduction of a number of bills in the interest of postal and Federal employees.

I am sure you know that postal employees particularly appreciate your action which is thoroughly in line with your past record in support of their interests.

I appreciate also your appraisal of the current situation and I am forced to agree with you that current delays result largely from the failure of the administration to recommend a program and their apparent strong objection on the grounds of economy to necessary salary increases. It is a strange thing, but apparently true, at least in the minds of some administration spokesmen, that price increases thus far have not been inflationary but wage increases that would permit postal and Federal employees to catch up would be a danger t othe entire economy. I am always surprised when I hear about private industry waiting for postal employees to get salary increases before they raise prices or wages. I must be listening to the wrong radio and television programs and reading the wrong newspapers because I certainly get an entirely different slant on this problem.

I am attaching herewith a current issue of the Union Postal Clerk containing an editorial I have written on this subject which you may find of interest.

With kindest personal regards and all good wishes, I am

Sincerely yours,

E. O. HALLBECK,
Legislative Director.

[From the Union Postal Clerk for March 1957]

HERE WE GO AGAIN

A few years ago it was perfectly correct to say that "nothing is certain except death and taxes." In these times we can amplify the quotation to "nothing is certain except death, taxes, and opposition to postal salary increases."

It seems that simultaneous with the introduction of a bill to bring postal salaries into line with salaries paid in private employment, we are certain to hear the claim that such increases in pay would be inflationary and would destroy the Nation's economy. This cry of "wolf" is repeated time after time despite the very obvious fact that increases granted in the past did not prove inflationary as forecast by the calamity howlers.

We are becoming rather accustomed to having certain administration spokesmen raise vigorous objections, and weep copious tears about the dangers to the national budget every time postal salary increases are mentioned. We have, in fact, come to expect such objections. Private business does the same thing every time the unions seek wage increases. We suspect that Congressmen are also coming to expect such claims from the administration and have come to recognize this cry of "wolf" as a fake designed to becloud the issue.

This year something new has been added. We still hear the same doleful claims from the official spokesmen but with a new twist. They have added volume to their cry of "Wolf" by having others shout it for them. At the moment it is the United States Chamber of Commerce and its president, John S. Coleman, who are doing a lot of public worrying about inflation.

The February 6 issue of the chamber's paper, Washington Report, features an editorial "Postal Workers Pay Hike Clue to Inflation Binge" which offers the ridiculous theory that postal wages are the harbingers of inflation and that the granting of a postal salary increase would "set off clamorous demands by labor union officials upon business and industry for wage hikes covering millions of employees across the Nation." One wonders just how silly an argument can get. It must certainly be news to people in private industry, be they on the side of management or labor, to learn that the contracts negotiated in the past 2 years did not provide wage increases but that increases are being held in abeyance until such time as postal employees receive an increase. That will surely be news to the Steel Industry, to those in the Automobile field, and to industry generally. What world is the United States Chamber living in? Since when has labor or industry waited for postal wage increases to raise wages and/or prices? Since when has government set the standards either in pay or working conditions? Postal and Government workers generally are the victims of what inflation exists and surely cannot be considered the cause of it. Those who state otherwise are probably the same type of people who, living in the days of the Roman Empire, worried about the poor lions and the effects on their digestion, rather than the helpless Christians.

INTERNATIONAL ASSOCIATION OF MACHINISTS,
Washington, D. C., March 1, 1957.

Hon. JOHN F. SHELLEY,
United States House of Representatives,
Old House Office Building,
Washington, D. C.

Subject: Federal-employee legislation.

MY DEAR CONGRESSMAN SHELLEY: I am in receipt of your communication dated February 27, 1957, along with copies of H. R. 4700, H. R. 4701, H. R. 4703, H. R. 4704, and H. R. 4705; all bills relating to important and much-needed improvements in the economic status and working conditions of Federal employees and those on the civil-service-retirement rolls.

Your evaluation of the inert attitude of the administration as it applies to the much-needed improvements in the Federal civil service, is very appropriate. It appears that every maneuver in the book is being used, and some new maneuvers have been devised, for the purpose of deliberately stalling the enactment of intelligent and progressive legislation which is designed to raise the Federal employee from the substandard wages and working conditions.

We deeply appreciate your interest in these matters, and we sincerely hope that the Democratic-controlled committees will not await the administration's belated proposals, if any, and immediately proceed to enact many of the good bills presently in the legislative hopper.

By taking the initiative, the Democratic-controlled Congress can place "the monkey" squarely upon the shoulders of those responsible for such unseemly attitudes, for all the public to see and, especially, that segment of the Federal employee group which has not as yet recognized the impact of the great harm being predicated upon them and their families by the administration.

In your position as a member of the Appropriations Committee of the House of Representatives, you can provide a splendid service to the taxpayer and the Federal employees employed by the Defense Department activities by taking the lead in a battle to preserve the jobs of these employees, who are in grave jeopardy of losing same by virture of the administration's active efforts to curtail or close down Government owned and operated navy yards, air stations, and arsenals.

The Federal Government has invested huge sums of money for equipment and trained personnel to operate these activities in the interest of protecting the taxpayer against the unconscionable profit gouging of armaments and ship-manufacturing combines. If the administration's present policy is permitted to go on unchallenged and unbridled, we will be lending our country into a situation where these unconscionable combines will be able to dictate warlike policies to the administrators of our Government.

I would be most happy to discuss this subject with you in greater detail at your convenience.

Our organization deeply appreciates your interest in Federal employee problems, and we have notified all of our affiliated locals in the State of California, as well as through-

out the Nation, of the bills introduced by yourself and other legislators who have taken an interest in the economic lot and working conditions of Federal employees.

With best wishes, I remain,

Sincerely and fraternally yours,

WILLIAM H. RYAN,
President, District No. 44, International Association of Machinists, AFL–CIO.

WESTERN REGION PUBLIC HOUSING,
LODGE NO. 922,
AMERICAN FEDERATION OF
GOVERNMENT EMPLOYEES,
San Francisco, Calif., March 7, 1957.

Hon. JOHN F. SHELLEY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SHELLEY: We appreciate your interest and courtesy in sending us copies of your several bills in behalf of Federal-employee benefits; pay raise, health insurance, and annuitants' increase.

There is a growing tendency to adopt a retrogressive philosophy toward Federal employees which must be countered and subverted by progressive legislative action. Programs and studies are delaying tactics. Legislative action is necessary on all progressive fronts.

Federal employees are not second class—they are first line, loyal citizens. Their work merits the worth of their hire and a 20-percent differential below that of comparable positions in private industry reflects the penury of some legislators not as favorable to workers and their welfare as you have proven to be.

We are appreciative of your continuing efforts and cooperation and trust you shall be successful in our behalf with all the benefits you recognize are due Federal employees.

Sincerely yours,

JOHN W. COLLINS,
President.

As a final point, Mr. Speaker, I have just received from Senator OLIN JOHNSTON, chairman of the Senate Committee on Post Office and Civil Service, a fine report by the Citizens' Advisory Council to that committee. The advisory council has as its members 7 outstanding people, including leading businessmen, educators, and only 1 representative of organized Government employees. The final recommendation of the council is worth quoting in full because it substantiates to the hilt the things that I have just said. It applies equally well to all branches of our Federal Government as well as to the Post Office at which it is directly aimed.

This is what the council says:

Improvement in postal service and better working conditions for postal workers can only come about if wages are adjusted on the basis of merit and economic conditions, and not tied to postal rates or postal revenues.

Dedication of New Church

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News commenting on the dedication of the new St, Casimir's Roman Catholic Church in Hanover Township, a suburb of Wilkes-Barre:

ST. CASIMIR'S DEDICATION

To Americans of Lithuanian extraction and to their neighbors as well, next Sunday will be a milestone because of the dedication of St. Casimir's Roman Catholic Church in the Lyndwood section of Hanover Township.

The new edifice replaces the old one in Larksville, damaged beyond repair by mine subsidences. Incidentally, this house of worship was not the original structure, erected in 1889, but one that was built after a fire in 1902.

Thus, two generations have been confronted with misfortune and, in both instances, they have triumphed. The new church in Lyndwood offers impressive testimony that the spirit of the congregation was not adversely affected by this second blow in a half century.

Rather, the people under the leadership of their pastor, the Reverend A. J. Sinkiewicz, accepted the challenge as an opportunity to give expression to their faith by erecting a modern edifice with which to carry on in the footsteps of the forebears.

It is reassuring to note the completion of the new St. Casimir's Church which is a link not only with Wyoming Valley's past, but with the old country, for it was in St. Casimir's that so many immigrants worshipped after their arrival in America. Many of these early families now are affiliated with St. Casimir's two daughters, Holy Trinity in Wilkes-Barre and St. Mary's in Kingston. The Reverend Father Sinkiewicz, who has been pastor since 1924, was baptized there in 1894.

Aid to Poland

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. BATES. Mr. Speaker, few, if any, countries have paid a greater price for liberty than Poland. Conquered many times, she has never been silenced. Her love for freedom and her willingness to bear the pain and anguish for those God-given rights of human dignity mark her history as an epic of courage and determination perhaps unrivaled in the pages of civilization.

For almost 20 years, she has suffered under the oppression of tyrants, but her indomitable fortitude has not been suppressed. Perhaps it is in recognition of these valiant characteristics, that Russia has recently tended to be more lenient with her in the vain hope that she will not be as persistent in her hopes and desires.

However, our admiration is not enough nor will it assuage her grief nor erase the problems which she now experiences. Consistent with the interests of our own country, we should do all we can to assist her in this hour of difficulty. It is my pleasure to introduce into the RECORD a resolution toward that end which was unanimously adopted by the St. Joseph's Society of the Polish Roman Catholic Union of America, No. 604, of Salem, Mass.:

Whereas Poland, who throughout the centuries has been the bastion of western civilization has again, by itself, shaken if not entirely the fetters of Communist domination and is taking the initial steps in the very shadow of Russian guns towards independence; and

Whereas Poland is now seeking our economic help to further aid her in securing economic independence as a prelude to freedom and a mission from Poland is in Washington to obtain such aid; and

Whereas this country through Yalta and through passive acquiescence is in a measure responsible for Poland's present plight; and

Whereas in the past we have rendered economic and material aid to countries less deserving and to whom we have not been in any measure indebted:

Now, therefore, we the members of the St. Joseph's Society, No. 604, of the Polish Roman Catholic Union of America here assembled on the 58th anniversary of its founding, do hereby go on record as being in favor of giving such economic and other aid consistent with the best interests of our great United States and thereby help Poland to consolidate the gains she has recently won at great sacrifice, and we further urge our Representatives in the Congress and the United States Senate to express themselves in favor of such economic aid.

Communism and You

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BOYLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

COMMUNISM AND YOU

(Address by Maj. Gen. Joseph F. Carroll, U. S. Air Force, Deputy Inspector General for Security, Fourth Degree Knights of Columbus, exemplification and banquet, Marquette province, northern district of Illinois, February 24, 1957, Conrad Hilton Hotel, Chicago, Ill.)

Mr. Toastmaster, Your Excellency Bishop Hillinger, Monsignor, Reverend Fathers, Your Honor Mayor Daley, distinguished guests, Sir Knights, I must admit that my mind is diverted, temporarily, I hope, from the subject matter of my talk. As I heard myself being introduced in such kind and glowing terms, I could not help but think of something I read a long time ago to the effect that there are three things in life which are difficult to do: one is to climb a fence which is leaning toward you, another is to kiss a pretty girl who is leaning away from you and the third is to acknowledge with becoming humility an overflattering introduction.

Now, despite these more than incipient gray hairs of mine I will admit that I still aspire to a modest degree of success on the first two, but the third one has me stumped. I suppose in a way, the recipient of an overflattering introduction should feel something like the bachelor girl who has been eligible for matrimony for lo these many years, but no takers. And then one day a rumor began to circulate in her home town to the effect that she was engaged to be married. When confronted with this report she said, "Honesty and modesty compel me to tell you that the report is not true, but thank God for the rumor."

Now, anyone who presumes to accept a speaking engagement hopes that he may

say something interesting in order that he might hold attention, and if his subject be a serious one, as is mine, he hopes that he may say something constructive in order that he might be helpful. Well, I too hope that I may say something interesting and constructive. But as I look at you seated here before me almost as far as the eye can see I must confess to a feeling of misgiving and a sense of humility as I realize the high honor which you have accorded to me in inviting me here to participate with you in this most magnificent and most inspiring affirmation of our faith.

As you look at me standing here before you, you see a man wearing the proud uniform of one of the armed services of the Department of Defense. What does that signify to you? Well, it might signify this: The Department of Defense is that agency of your Government which is striving mightily to develop and maintain a posture of power; modern military power. But that power represents a force so incredible that it is capable of utterly devastating vast segments of the earth upon which we live and bringing unbelievable misery, suffering, anguish and death to millions and millions of men, women and children all over the world.

Now, by what right do we do this? How in conscience and under God can we develop and maintain such a power? Well, the answer is, of course, that in accord with the will of the American people we are developing and maintaining a power for self-protection; that during this international crisis in which we live we are developing and maintaining a power for self-defense in the hope that it may deter aggression. In a word, we are developing and maintaining power for peace.

Power for peace. Those two words standing together seem incongruous, don't they? They sound a discordant note. Down through the ages mankind has known power in such forms as the Asian hordes of Genghis Khan or the barbarous Huns falling upon the civilization that was Rome, the mighty Napoleon bending Europe to his subjugation or, in more recent times, the marching legions of Adolph Hitler crushing the proud peoples of Europe beneath their boots. Yes, all too often power has been synonymous with rape and plunder and bloodshed. It has been the heel of the conqueror driving and grinding human dignity into the dust of the earth.

How then can we justify, how can we reconcile power with peace; peace which in the minds of man means the peal of church bells, the laughter of little children, a farmer gazing pridefully across his fields of grain, or a family gathered together for thanksgiving dinner? What does power know or care about such things as these?

Well, the power for peace may be incomprehensible to the unfortunate peoples of many other lands, but we Americans should understand it well because with us it has been a tradition. As we look back across the span of years to an earlier day in our history we see Americans at Lexington and at Concord taking up arms for the first time in the pursuit of freedom and in the establishment of rights not thereafter to be alienated; and each passing American generation since that memorable day has been called upon to take up arms and to make a necessary albeit a reluctant resort to power, but always in that same tradition, that of protecting right and endeavoring to preserve the peace.

And now today a new menace threatens the peace of the world; the menace of communism.

As you know, the Soviet Union boasts of vast land armies which are numerically superior to those of the free world. They have developed and they have in being tremendous air and naval power which actually rivals that of the United States and all of its allies. This impressive military array is backed by vast natural resources, a surprising technological capability, and perhaps the most rapidly expanding industry in the world. This represent power; real power, terrible power. Considering the world-domination aims of the Communist movement, it is not power for peace but aggressive power.

When we talk of power today we must relate it to the realities of modern power and of modern-day warfare. For example, deeply etched in the pages of history is the tremendous airpower developed by this Nation during World War II. Nazi Europe and Japanese imperialist Asia can attest to the tremendous force of that power. The thousands of sorties which we launched, the thousands and thousands of bombers which we used over and over again, the tens and tens of thousands of bombs that we dropped all added up to the most incredible display of devastating force that had ever been visited upon mankind. This was power in capital letters. This was power the like of which had never been seen or even conceived of before. And yet, because of tremendous, fantastic technological and scientific developments in the last few years, that tremendous destructive force represented in our World War II power amounts to nothing more than a snap of the fingers when compared to the power existing in the world today; the power of atomic energy, the force of atomic and thermonuclear weapons. Thus, today one United States Air Force plane carrying an atomic weapon can deliver on a selected target much more force than all of the bombers used during World War I, World War II, and the Korean conflict. Or, to put it another way, today one, just one, Air Force plane carrying an advanced atomic weapon can deliver much more destructive force, it represents much, much more destructive power than all of the bombs in accumulated total that ever have been dropped from the air since the invention of the airplane.

This is a sobering thought, isn't it? And it is one that becomes truly disturbing to contemplate when it is realized that this power is now in possession of the Communist world. They have it now, at this very moment.

This nuclear weapon air delivery capability of the Soviet Union represents a truly terrible threat to the free world. Never before in our history have we been confronted with a threat so immediate in nature and so potentially catastrophic in scope. Never before in our history have we been confronted with the alarming realization that an enemy attack, if ineffectively deterred, can result in wiping out most of our population centers throughout our beloved country from north to south and from east to west, and all in less than a single day.

Now, I have touched upon power; our power for peace and the Communist power for aggression; power in military terms. However, most of the truly great accomplishments in life have stemmed not from the exercise of superior physical force but rather from the spirit of determination, from the fires that burn within a man, from devotion to belief and from dedication to cause. And since this is so, let us make a brief review of certain tangible aspects of the spirit of communism.

Revolution in permanence, dictatorship of the proletariat, abolition of religion, destruction of democracy, conquest of the whole world. These are often repeated communistic expressions which I know you have heard many times. But what are they really? Are they, as some would have us believe even today, the insipid meanderings of the insane, the grandiose ravings of the fanatic, the blustering big talk of the bully, or mayhap the to be ignored bombast of the intellectual crackpot?

Well, let's take a look. Let us take a look first of all at that small handful of men, not even 10 percent of those who are gathered here tonight, at that small handful of men who met in London in the fall of 1847 to draw up the Communist Charter which was published the following year as the Communist Manifesto. Then began what Marx and Engels have so aptly described as a revolution in permanence; then began communism as we know it today.

Just th'nk of what this small handful of men dared to undertake. Atlas is renowned in Greek mythology because he undertook to hold the sky on his shoulders. Well this small handful of men in their Communist resolutions dared to undertake to overthrow by force and by violence all of the social, all of the economic, all of the governmental structures in all of the countries of the world. They literally arrayed themselves against the whole world; just a small handful of men against the whole world and all of its institutions.

Never before in history have opposing forces been so ill matched. Truly the Communists embarked on this titanic struggle of theirs from a posture of almost absolute weakness. They were crazy. They were foolhardy, weren't they? They did not have a chance. And yet communism took root, and it began to grow in many countries in the world. Then Communist Parties all over the world received a tremendous practical impetus with the revolutionary establishment in 1917 of the Soviet Union. Then for the first time individual Communists around the world were provided with a fatherland, a fatherland to which they could transfer their loyalties and allegiances from the land of their accidental physical birth to the land of their chosen ideological birth. Then for the first time Communist Parties around the world were provided with a model party, one to which they could look for guidance, the Communist Party of the Soviet Union. And they get guidance. Specifically they get four things: they get international leadership; they get international recognition, which is so important to any cause; they get international cohesion; and, above all, they get an international blueprint for world conquest.

Now, the success of this Communist idea in action is available for all to see in many ways. Perhaps the most frequently cited is found in merely looking at a map. After observing the vast expanses of the Soviet Union, then note what has happened to Lithuania, Latvia, Estonia, Albania, Hungary, Czechoslovakia, Yugoslavia, Eastern Germany, and the like, observing at the same time the Communist conquest of China and Communist inroads elsewhere in the Orient. And they are still going, as witness what has transpired in North Korea, in Indochina, and what they are endeavoring to do now in the Middle East and elsewhere in the world. This is the point to which that small handful of men who met in London in 1847 have been able to project themselves today, to the point where, as you know, more than one-third of all of the peoples in the world are suffering under the direct political domination of communism; to the point where millions upon millions of other people around the world, such as you and I gathered here tonight, are affected one way or another by communism. Truly, as was described by Pope Pius XI, from small beginnings the Communists have grown to a satanic scourge.

Now, to me the most significant thing about that small handful of men who met in London in the fall of 1847 was not the brazenness of their challenge to the world nor even the shamelessness of their objective, but rather this: The spirit of determination, the firm confidence, the almost absolute faith with which they embarked on this

global task. And, in the light of what has transpired, it does appear, doesn't it, that they had some basis for that belief? No wonder rank and file Communists all over the world today believe it when their leaders tell them "The victory of the proletarian revolution is assured; the formation of the world into a Union of Socialist Soviet Republics is approaching." In the light of what has transpired, who among us can say they do not have some basis for their beliefs?

Surely it is clear, is it not, that as our Communist antagonists maneuver in the arena of conflict they are strengthened by a most firm determination and a dynamic dedication to cause?

Just what is this communism that we hear so much about? There is no simple definition of commmunism, and time does not permit my developing a comprehensive definition during the course of this talk. However, I can offer a description of communism and what it means to our way of life.

If we study the guiding principles of communism, if we try to understand the economic and social development theories of communism or if we just observe communism in action now and for the past 30 years we can see that communism is not merely a political or an economic or a social phenomenon. It is not a mere holding and sharing in commmon of the great productive forces of life. It does not merely represent the abolbition of private property. It is not a movement that seeks the usual advantages which governmental control brings to political parties in power. No, it is much more than all of that. It seeks a power monopoly; a power monopoly that extends to every phase of human life, not only to those ranges of experience that are traditionally associated with politics but to art, education, religion, science, industry, agriculture, recreation, family life—to every facet of human existence. It is truly a complete philosophy of life. It claims man body and soul.

The Communists have developed a materialistic concept of the universe. This is a universe of substance and form without God.

In this law of nature of theirs there is no countenancing of the concept of God and therefore there can be no relationship between the individual and God.

Communism is materialism, yes; but it is distinguished from all other forms of materialism because it is a positive and dynamic materialism. I do believe that it is the most militant and the most aggressive materialism of all time. You see, communism must be universal and it must be forced upon all of the peoples of the world. In their concept of the law of nature the course of history is predetermined and man, whether he wills it or not, whether he likes it or not, is being moved inexorably toward a Communist world.

Communism is truly totalitarian. This is totalitarianism in the fullest and the most complete sense of the word. As a matter of fact, in comparison with the totalitarianism of Hitler and Mussolini becomes the insignificant toy of juvenile delinquents.

Now, if we reflect on all of this, on Communist power and Communist aims, we should see clearly that we live in an age of peril in which not only our national existence as a political entity is at stake but our culture, our civilization, our very lives as well. It should be evident that this Communist enemy seeks in victory not merely to plunder and to loot our homeland but to extinguish its light, to convert it into a dark prison and to wash from the minds of our young every concept of decency and dignity and to drive God from their souls.

Now, the Communist dogma which forms the basis for this description of communism which I have just offered is not something that is buried in the aging pages of Karl Marx, it was not entombed with the bodies of Marx or Engels or Lenin and Stalin; it is alive and vibrant in the minds and in the actions of the Communist leaders today.

This was very simply and succinctly expressed for us just a few months ago, last November I believe, by Nikita Khrushchev, the present top dog in the Communist hierarchy. I am sure that many of you will recall that at a public function, a formal function at the Polish Embassy in Moscow, Khrushchev insulted the Western diplomats present, including our own Ambassador. And I might say this: he was not only addressing himself to the Western diplomats there, he was talking to you and to the rest of the people of the free world.

Let us hear the man talk. Thus Khrushchev spoke: "Whether you like it or not, history is on our side. We will bury you. The situation is favorable for us. If God existed we would thank him for this." I would like to repeat that because these words are so full of meaning. "Whether you like it or not, history is on our side. We will bury you. The situation is favorable for us. If God existed we would thank him for this."

Now, these were not just the angry words of a cantankerous old man. Khrushchev was frankly voicing basic Communist belief and determined Communist intent—intent to bury us.

At the time of the American Revolution just when this country was being born as a nation, a distinguished Englishman, Edward Gibbon, wrote an eight-volume masterpiece entitled "The Decline and Fall of the Roman Empire." In these luminous pages he traced centuries of Roman rule and he compressed between these covers perhaps the greatest narrative ever told of this once great people.

Now, history is not a set of books. History is human experience; it is people who live, who struggle, who love, who hate, who aspire and who finally die. A set of books only records these facts. And may I presume to remind you that like the people of old Rome we at this very moment are living in the midst of great history in the making. We are participating in it and we are aiding in shaping its course. We do not hold with the Communist theory of historical determinism. We know that man by the exercise of his free will determines the course of history. And we must will it, that our cause will be sustained in this conflict with the Communist cause. Whatever form the struggle takes we must meet it with a superior spirit of determination and a more fervent dedication to cause. We have got to do this else some day, somewhere, some historian may begin the narrative of the United States with the words, "Once upon a time."

Now, in this all-out conflict with communism in which we are engaged, we can take pride and comfort in the knowledge that our cause is right and just. But this in and of itself does not mean that our cause shall surely prevail. We know that communism seriously rivals us as a military power, we have seen that the Communists are truly formidable foes in the political arena, we know that the Soviet Union is making tremendous strides in the technological and industrial fields, we have seen that they are fortified by a great spirit of determination and it is obvious that they are contesting for supremacy with us in every field of power—except one. The one great and dominating asset which we have on our side is God if we will but earn and thereby merit His help.

The Communist is anticapitalist, he is antidemocratic, he is anti-Christian, but to give the devil his due, he is more than that; he is pro-Communist all the time. And we have got to be more than just anti-Communist, for a negative philosophy will not sustain us, not in this conflict. Like the Communist we must live a positive philosophy and our faith must permeate all of our actions and it must be clearly evident in our conduct of national affairs. Today the horror and the possibility of atomic war plagues the mental well-being of people all over the world. Mankind cries out for peace, but peace can be attained only if man learns to conduct human affairs in the light of basic moral principles.

The United States is the most powerful and the most influential nation in the free world, hence, it is our responsibility as a nation to give moral leadership to the rest of the world. But the capacity of any nation to show leadership in displaying moral responsibility exists only in direct proportion to the moral character and the individual moral responsibility of its citizens.

In this giving of our spiritual substance in our struggle for peace it behooves all of us in this country to give thought from time to time to an old scholastic adage which I vaguely recall. "Nemo dat quid non habet," no one gives what he does not have. And since these spiritual assets are our main weapons in this conflict it behooves us as a nation, a prudent nation, and as individuals who cherish our way of life, to take occasional stock, occasional inventory of our arsenal of faith.

In this conflict our Government needs the patriotic support of all its citizens. The mere willingness to pay taxes or even to fight and to die for our country is nbt enough. A secular or civic patriotism will not suffice. What is needed is a patriotism which embraces the spiritualistic concepts of democracy and the relationships of man to his God. What is needed is a patriotism which receives its origin in and its strength and inspiration from a combined love of country and love of God.

It is not very often in considering great and complex problems that we find an absolute formula of success already in being, but such a formula does exist. It is gloriously alive in the lesson of the fourth degree Knights of Columbus; the lesson of patriotism. This lesson of patriotism which characterizes your order, and the pledge which you have taken today make it clear that you have made a firm resolve to practice a patroitism which embodies the love of country and the love of God. I know that each member of the fourth degree realizes that he not only has been accorded an honor and a privilege but that he has assumed a solemn responsibility to display in his public life what Cardinal Mercier so aptly described as "patriotism going hand in hand with religion."

But this kind of Christian patriotism which must characterize our national and our individual efforts must be continual, it must be constant—not something sporadic, not something which we haul out of the attic and dust off for special occasions—because our problem is constant. The problem of communism is with us all the time.

If we are properly to understand this problem of communism we must abandon the conventional concept that wars begin only when armies begin to march or that wars are always fought by a trained and a uniformed soldierly, because in the communistic scheme of things war is not always confined to the organized and the calculated violence of the battlefield. The battleground is often in the hearts and the minds of men and the assault is upon the intellect where there is no suggestion of the carnage of war. The weapons used frequently bear no resemblance at all to the conventional weapons of the battlefield, but it is war nonetheless. And in the Communist scheme of things it is total war.

War does not become total merely because all of the assets of the nation, human and physical, are devoted to war and dedicated to victory nor even because the home front becomes the scene of bloodshed and suffering just as surely as the advance post of the military. No. War becomes total only when the prize for which the war commenced

is total, the world itself. And the Communists have told us, oh, so many times that they are engaged in a revolution in permanence to conquer the world. This is evident in all of their teachings, it is even evident in the chorus of their song, "The Internationale" when they sing, " 'tis the final conflict, let each stand in his place, the Internationale Soviet shall be the human race."

Today we are at peace. At least it so technically qualifies. But in the Communist scheme of things there is no peace, only war. Lenin and his disciples completely accept the famous Clausewitz thesis that politics is a continuation of war by other means. But to this Lenin added the unconventional corollary that peace is a continuation of war by other means. Ponder on that for a moment. Take it home with you if you can. Peace is a continuation of war by other means. This precept is deeply embedded in Communist military and political doctrine. It shapes national attitudes and national behaviors. It even explains Communist intransigence and stubborness at the counsel table because, since there is no peace and only war, they are always dealing with an enemy and they must be guided accordingly. Addiction to this thesis that peace is a continuation of war by other means makes it necessary for the Communists to wage war even in times of peace. They are in the anomolous, the unusual position of being at war with those who are at peace with them.

Now, I have mentioned this point of Communist philosophy merely to indicate to you that with them this is indeed a serious business, and we have got to make it a serious business with us. With them this is not just a job from 8 to 5 or for the duration of an assignment. It is now and forever, until they have achieved their total end. Communist leaders have expressed this for us very well when they said of the Communists, "We demand of them not their spare evenings but the whole of their lives." I do believe that this is the reason why that small handful of men who met in London in the fall of 1847 has been able to project themselves into the power and the strength that is communism today. This is what these people are willing to do for their cause. Should we, can we, if we want to survive, do any less for our cause?

You may recall with me that it was Thomas Jefferson who said, "The God who gave us life gave us liberty at the same time." And in the same era, across the seas, a thought of vital significance was added to this by the Irish statesman John Curran when he said in a speech in Dublin in the year 1790, as I recall it, "It is the common fate of the indolent to see their rights become prey to the active. The condition upon which God hath given liberty to man is eternal vigilance, which condition if he break, servitude is at once the consequence of his crime and the punishment of his guilt."

From this statement from John Curran there has come ringing down to us through the ages that famous quotation which acts today as an admonition which we dare not ignore. "Eternal vigilance is the price of liberty."

Thank you very much.

MAJ. GEN. JOSEPH F. CARROLL BIOGRAPHICAL SKETCH

Maj. Gen. Joseph F. Carroll was born in Chicago, Ill. He attended Nativity and Visitation parochial schools and Quigley Preparatory Seminary in Chicago. He studied at St. Mary of the Lake Seminary, Mundelein, Ill., where he received a bachelor of arts degree. He received a doctor of jurisprudence degree from Loyola University in Chicago in 1940, being awarded the Chief Justice Edward J. White Award for consistently leading his class scholastically during the 4-year course.

In October 1940 he joined the Federal Bureau of Investigation, and after being assigned to various field offices of the FBI, he was transferred to its Washington headquarters in 1944. In September 1945 he was loaned by the Director of the FBI to the Surplus Property Administration where he organized and served as Director of the Compliance Enforcement Division, remaining in this capacity when the organization was redesignated the War Assets Administration. Completing this assignment he returned to the FBI in 1947.

During his assignment to the FBI headquarters he progressively served as a supervisor, Chief of the Criminal Section, Assistant Chief of the General Investigative and Accounting Division, and Inspector.

In December 1947 he was loaned to the United States Air Force to assist in reorganizing the worldwide investigative and counterintelligence activities of the Air Force. In February 1948 he was commissioned a brigadier general in the United States Air Force Reserve and immediately ordered to active duty, serving as Director of Special Investigations. He was promoted to major general on August 1, 1950, and the following month was appointed Deputy Inspector General, United States Air Force. On February 28, 1952, by special act of Congress, General Carroll was integrated into the Regular Air Force Establishment. The Office of the Provost Marshal, United States Air Force, as well as the Office of Special Investigations, is a part of the organizational family of the Deputy Inspector General for Security, United States Air Force, in which capacity General Carroll presently serves. He has been awarded the Legion of Merit and the Distinguished Service Medal.

(He is married to the former Mary Morrissey of St. Gabriel's Parish in Chicago. They have five sons.)

NATO Needs Spain's Troops

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Evening Star, Washington, D. C., of Friday, March 22, 1957:

NATO NEEDS SPAIN'S TROOPS—BRITISH AND FRENCH OBJECTIONS EXPECTED TO BE WITHDRAWN

(By Constantine Brown)

Britain and France, which have been the main stumbling blocks to admission of Spain into NATO, are now expected to withdraw their objections, which were based on emotionalism and domestic politics rather than on international realities.

Earlier this month, New Hampshire's Senator STYLES BRIDGES introduced a concurrent resolution declaring that it was "the sense of the Congress of the United States that the Department of State should use its good offices toward the end of achieving the earliest possible participation by Spain in the North Atlantic Treaty and as a member of the NATO."

The State Department wasted no time in fully indorsing the move in a letter to Senator GREEN, chairman of the Foreign Relations Committee. The matter has already been expedited in the House Foreign Affairs Committee and it is expected that before the end of this month the "sense of Congress" resolution can be used by the State Department as an additional argument to induce the other NATO members to receive Spain as a full-fledged member.

As a matter of fact, as things stand now in Europe and the Middle East, it is the Madrid government which is doing NATO a favor. The military forces of that coalition have seriously declined in the last few months. The French withdrew their best troops and sent them to fight the rebels in Algeria. The British withdrew the equivalent of a division which was used in the sorrowful expedition into Egypt. Some of these elements are said to have returned to their stations in West Germany.

But at the Bermuda meetings, Prime Minister Macmillan will inform President Eisenhower that his government must redeploy a number of troops in overseas garrisons for the sake of economy and because of the shaky domestic situation in the United Kingdom. The redeployment will affect 2 of the 4 divisions in Germany, the understrength battalion in the United Nations command in Korea, and some contingents in Hong Kong and Malaya.

Germany is a full-fledged member of NATO and had hoped to provide 12 divisions for that organization. But on account of the opposition of the German people, who are loath to see their prosperity interfered with, the Adenauer government has not been able to muster anywhere near that force. The Bonn officials hope that by the end of this year they will have some 100,000 men in the ground, naval and air forces of the West German Republic. This number by no means compensates for the withdrawal of the British and French and the reported planned reductions of Norway, Denmark, and Holland.

Those aware of the real conditions of western defense in Europe do not take too much stock in some of the official statements that the new weapons with nuclear heads and the new guided missiles make the presence of large forces unnecessary. Even before the British and French began to withdraw their ground troops from Germany there was a great disproportion between the forces of the free nations and the Reds.

The Supreme Command hoped that the new weapons and our retaliatory air forces at bases all over the world would be an adequate equalizer. But, now that the British are serving notice that they will withdraw about half of their military strength and the French have already done so, NATO is in dire need of more armed manpower. This is nowhere available in Europe except in Spain.

The alternative—if the British and French had insisted on ostracizing that country—would have been additional American divisions. This they were told, was inconceivable. This country would never stand for an increased draft in order to satisfy the mood of Socialist groups in Britain and France who are opposing the regime of Generalissimo Franco.

The State Department is convinced that after its hand is strengthened by the concurrent resolution introduced by Senator BRIDGES, even the token opposition of our partners in the Western coalition will disappear.

Admission of Spain into NATO may cost the American taxpayers an additional dozen or so million dollars. Spain has a standing army of about half a million men with twice as many trained reserves. But only a couple of Spanish divisions have modern equipment. The rest are armed and being trained with antiquated hardware—some of it pre-World War stuff. However, the expense, considering the present state of the world, will be worth while.

Trial by Jury

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith two very timely editorials condemning the civil-rights program submitted to the Congress by President Eisenhower both in the 84th and the present Congress.

These editorials, one from the New Orleans Times-Picayune and the other from the New Orleans Item, point out that the legislation, if enacted, would circumvent one of the fundamental rights of free Americans—the right of trial by jury.

The right of jury trial is one of the cornerstones upon which this Republic rests. It is astonishing to me that the Attorney General of the United States and others would question this right. Certainly, the fight against this proposal is not a regional one, but one based upon the liberties of citizens in every corner of our great country.

The editorials follow:

[From the New Orleans Item of March 22, 1957]

TRIAL BY JURY AT ISSUE

President Eisenhower's civil-rights proposals have produced a strange spectacle in Washington.

Men who profess themselves liberals are leading an onslaught against one of America's most cherished ideals—the right of the accused to trial by jury.

That is what the proposed provision authorizing the Government to seek Federal court injunctions to prevent civil-rights violations amounts to.

No single feature of the civil-rights omnibus measure is more hotly contested by southern leaders than this.

This proposal is no regional issue. Its opponents are making a determined effort to safeguard a constitutional guaranty for all Americans.

Briefly, this is what is involved in the provision on injunctions:

When an individual feels his civil rights have been violated in one way or another, he may go into court and file suit seeking redress.

Under ordinary procedure, the person he accuses would be entitled to trial by jury.

But not under the injunctive provision of the proposed civil-rights measure.

For it is provided in this bill that the Federal Government may move in and make itself a party to this kind of private suit. And by doing so it may obtain an injunction against the alleged offender.

What is this injunction? And what does it mean?

It is a set of rules laid down by a court, to which compliance is ordered. The injunction can extend to persons not parties to the suit and can turn a private controversy into a means of establishing a code of conduct for an entire community.

But that is not the worst.

Suppose, after an injunction has been issued, someone disobeys it. The court which issued the injunction then has the power of bringing contempt action against the offender and the judge can try him without a jury.

In other words, a single judge would be able to issue the injunction, make its initial interpretation, determine who has violated it and inflict punishment for contempt.

Is the offender under a civil-rights injunction the most dangerous criminal in the land? Appranetly, under this provision, since persons accused of murder, burglary, and all other crimes are entitled and guaranteed a trial by jury.

Our Founding Fathers knew the inequities inherent in depending solely on judicial temperament for justice.

In the Declaration of Independence they said:

"The history of the present King of Great Britain is a history of repeated injuries and usurpations * * * He has obstructed the administration of justice * * * He has made judges dependent on his will alone * * * He has combined with others to subject us to a jurisdiction foreign to our Constitution * * * For depriving us, in many cases, of the benefits of trial by jury."

It is true that in the history of our Nation, some jurisdictions have adopted the right of contempt proceedings without a jury trial, basing their position on English common law, and quoting Blackstone, the eminent Birtish judicial authority.

However, it has been discovered that when Blackstone referred to "the method, immemorially used by the superior courts of justice (of England) of punishing contempt by attachments" (without jury trial), his only authority was an opinion written but never rendered.

Even if such an opinion had been rendered and used "immemorially" by British courts, the fathers of this country made it clear in their Declaration they wanted no part of such a system.

We should remember, further, as Senator ERVIN, of North Carolina, has pointed out, that our founders established constitutional guaranties—"because they loathed bureaucratic and judicial tyranny more than they loved bureaucratic and judicial hate."

[From the New Orleans Times-Picayune of March 24, 1957]

DEVICE FOR EVADING TRIAL BY JURY

Southern Members of Congress and other informed people who charge the liberals and the Department of Justice with seeking to circumvent the right of trial by jury through the proposed civil-rights bill, have a real issue. It is not a "phony" as some liberals would have people believe.

A reading of the bill leaves no doubt that jury trials could be omitted in injunctions cases—and would be omitted if current court practice were followed. That is so even though it would be a contradiction of the plain reading of the Bill of Rights and still another article of the Constitution.

Attorney General Brownell's own testimony shows how the skipping could be done, and one of the fervent civil-rights Senators told the Senate committee he favored dropping jury trials in these cases.

Isn't it a bit odd that hot-under-the-collar liberals who so frequently shout about "constitutional rights" should be so willing to have the plain, unobscured provisions of the Constitution circumvented?

Here is the set-up for by-passing the constitutionally prescribed jury trials: The Federal code says that in contempt cases, the defendant, on demand, shall be entitled to "trial by jury" but "this section shall not apply in any suit or action brought in the name of, or in behalf of the United States." Mr. Brownell's proposed bill says that injunction proceedings shall be instituted, not in the name of the real plaintiff who thinks he has been prevented from voting or exercising some other right, but in the name of the United States. The Department of Justice says the substitution of names in these suits "is accepted practice in criminal contempt cases."

The jury skipping provision in the code is frequently explained, we believe, as a device to enable judges to take summary action to preserve courtroom order, protect threatened damage to United States property, and so forth, but what is the urgency in so-called civil-rights injunctions and contempt cases? Yet, it is sure that if the Brownell bill passes, making the United States the complainant, Federal judges will have the option of denying jury trials.

The Constitution makes no exceptions to jury trials on criminal charges except "impeachment." Article III, section 3 says: "The trial of all crimes, except in cases of impeachment shall be by jury, and such trial shall be held in the State where the said crimes shall have been committed." As if this was not plain enough, it was added in the Bill of Rights that: "In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial by an impartial jury in the State or district wherein the crime shall have been committed."

This civil-rights bill, like all the Federal force bills, proposed in recent years is political in that it is intended to benefit politically its backers in their particular districts. It is not needed because civil rights, including voting rights, are better protected and observed than they ever have been in the history of the country. The people and the States are sovereign, and the central government infringement on their rights is repugnant to the Constitution. It is not surprising, therefore, when Congress or the Government undertake something so repugnant that they should be willing to cut corners with the Constitution in other respects.

The Jenkins-Keogh Bills, H. R. 9 and H. R. 11

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to bring to the attention of my colleagues the following resolution by the Southern California State Dental Association in unanimous support of the Jenkins-Keogh bills, H. R. 9 and 10:

SOUTHERN CALIFORNIA
STATE DENTAL ASSOCIATION,
Los Anegles, Calif., March 14, 1957.

Hon. JAMES ROOSEVELT,
House of Representatives,
House Office Building,
Washington, D. C.

HONORABLE SIR: This association, numbering nearly 4,000 ethical dentists, respectfully submits the following resolution in unanimous support of the Jenkins-Keogh bills H. R. 9 and 10.

"Whereas there are now pending before the Congress, H. R. 9 and 10, commonly referred to as the Jenkins-Keogh bills, which bills would grant to self-employed persons substantially the same tax benefits as are now available to employed persons participating in corporate pension plans; and

"Whereas common justice demands that self-employed citizens of the United States have available to themselves the same tax

benefits as are provided for employed persons:

"*Resolved*, That the Southern California State Dental Association in annual session assembled, urges the 85th Congress to enact the said proposal into law.

"*Resolved further*, That a copy of this resolution be sent to each Senator and Representative from California and to the Vice President of the United States."

We earnestly hope that you will be willing and able to place this resolution in the CONGRESSIONAL RECORD.

We shall be very grateful to you, sir, for all that you may do to advance so wholesome and so worthy a cause.

Sincerely yours,

JOHN J. WHITE, D. D. S.,
President.

Poland Needs Moral and Material Help

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following translation from the Polish language of an address by Mrs. A. Lagodzinska, president, Polish Federation, at a meeting of the federation:

[From the Dziennik Chicagoski (Chicago Daily) of January 19, 1957]

POLAND NEEDS MORAL AND MATERIAL HELP

(Mrs. A. Lagodzinska, president of the Polish Federation)

"Poland needs our material and moral help." "When the Poles get help, they will be able to manage their internal problems." "We lost spiritual contact with the Polish people." "We need a uniform position of the Poles at the present time."

These are the main ideas of the over 1 hour lasting address of President Adela Lagodzinska a the Polish Federation (Federacja Polonii) last Saturday. Mrs. Lagodzinska talked on her impressions from her last-year trip to Poland.

STRENGTH OF THE POLISH PEOPLE

Mrs. Lagodzinska is of the opinion that the Polish people have shown so much spiritual and physical strength in getting through the past period that they will be able to settle their internal problems in the spirit of their ideas in the future. However, moral and material help of the American Poles is needed, backed by uniform action and solidarity.

In Mrs. Lagodzinska's opinion, unity of the Polish group [outside of Poland] would contribute much to strengthening the willingness to help Poland and to make this help more effective.

"We have been complaining that the Polish emigrees of London keep quarreling," Mrs. Lagodzinska said. "London, on the contrary, complains that the American Poles are divided and keep quarreling. But at the same time, at Czestochowa (Poland) a mass of 1½ million of Poles clearly demonstrated their unity in their ideological aims."

Mrs. Lagodzinska criticized the viewpoint of the Polish group in Washington, where the opinion is growing that the American Poles do not know themselves what is their aim in the present situation of the Polish people; that people above all need material help and moral support of the United States.

Mrs. Lagodzinska demonstrated by vivid examples how the population [of Poland] reacted to her visit in Poland, and she expressed her view that mass contacts of the American Poles constitute an important factor in strengthening Poland's feeling of belonging to the West. Therefore, the Association of Polish Women [in America] resolved to organize a trip to Poland this year.

Mrs. Lagodzinska ended her address by stressing her belief in the Polish people. About 150 people came to hear the address in spite of the great cold.

A GIFT OF $1,000

President Edward Piusdrak presided over the meeting. He stressed Mrs. Lagodzinska's courage in carrying out her trip which would be considered as breaking through the Iron Curtain.

Acting on the motion of Mrs. Emilia Kowynia, seconded by Mr. Wojciech Babioz, the federation resolved to donate $1,000 from its funds for the help of the Polish people, giving this sum at the disposal of the council of the Polish group [in America].

THE PROBLEM OF IMMIGRATION QUOTAS

The problem of new immigration quotas for individual nations was broadly discussed at the meeting. Mr. St. Pictrowich raised the question by quoting from the paper Polish Courier (Kurier Polski) of Milwaukee, Wis. The paper revealed that in distribution of the immigration quotas the Poles were neglected again, whereas the Germans were favored too much. It was resolved to intervene in this matter with the chairman of the House Foreign Affairs Committee, Representative THOMAS S. GORDON, Democrat, of Chicago.

How Big Are Farm Subsidies?

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. COAD. Mr. Speaker, in the recent debate on farm legislation there were certain statements made from this floor which would tend to slant public opinion against the farm program. This was done by pointing to the budget of the Department of Agriculture as being nearly one-half of the total income of the American farmers. This certainly is a supposition which cannot be substantiated in fact and an editorial appearing in the Des Moines Register of March 24, 1957, adequately replies to the question.

The editorial follows:

HOW BIG ARE FARM SUBSIDIES?

Apparently one of the main reasons why the United States House of Representatives rejected all plans for revising corn-acreage-control and soil-bank programs for this year was concern about the size of the Federal budget. The proposals would have increased the amount of spending for the soil bank or for corn price support.

The estimated expenditures by the Department of Agriculture in the Eisenhower budget for the next fiscal year add up to about $5 billion. Many city people (and city Congressmen) assume that this big chunk of money all goes to farmers as "subsidies." In fact, some critics of the budget have implied that farmers get nearly half their income from the Federal Government—since net farm income totaled $11.6 billion in 1956.

Nothing could be further from the truth.

A large part of the $5 billion agricultural budget is for loans. About $1.24 billion are for restoration of capital impairment of the Commodity Credit Corporation. This is not all net expenditure. Some of it will be recovered from the sale of commodities accumulated by CCC under price support operations. And some will be recovered by repayment of loans on farm products.

Nearly half a billion dollars in the budget are for loan authorizations for the Rural Electrification Administration and the Farmers Home Administration. In the past loans made by both of these agencies have been repaid almost 100 percent on schedule. It is not correct to call these loans expenditures or subsidies.

But the biggest error in references to the Department of Agriculture budget is of another sort. Critics usually assume that the genuine expenditures in this budget are strictly aid to farmers and therefore a cost to city people. Actually, most of the spending for farm research and education is of more benefit to city people than to farmers.

The many activities of the United States Department of Agriculture directed toward lower production costs and increasing output per man in farming (including the conservation payments of $230 million a year) tend to expand total food production. Consumers benefit in lower food costs. The gains from this process of improving agricultural efficiency are transmitted to the general eating public very quickly.

A rise of 2 or 3 percent in total food production usually causes a drop of 8 to 12 percent in prices received by farmers. The demand for food is highly inelastic in this country. Farmers get less net income from a large supply than a small one.

To charge expenditures for expanding food production up as farm subsidies is incorrect public accounting. These expenditures should be classed as general welfare expenditures like all other education and research.

Aid to Schools in Bitter Fight

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. MAILLIARD. Mr. Speaker, the following editorial from the San Francisco Chronicle may be of interest to Members concerned about classroom shortages in their districts:

AID TO SCHOOLS IN BITTER FIGHT

The Chamber of Commerce of the United States, backed up by the Council of State Chambers of Commerce and by various local chambers—including San Francisco's—is fighting a multipronged campaign against President Eisenhower's $1.3 billion school-building program.

By publication, by letter, by direct testimony, by clinics, and by all other means at its disposal, the national chamber is striving to block the appropriation of Federal funds to make up an estimated shortage of 159,000 classrooms in the 48 States.

The chamber and its affiliates are, of course, well within their rights in opposing the proposal. But we believe their course a mistaken one, and their methods have come under sharp criticism from various groups and individuals, notably the National Education Association and Marion B. Folsom, Secretary of Health, Education, and

Welfare. Secretary Folsom is, himself, a former director of the national chamber.

Arguments brought forward against the Federal construction program allege that no serious shortage in classrooms exists, that no emergency assistance from the Federal Government is required, that Federal aid to schools presages Federal control, that some 16 States—including California—would contribute more in taxes to a Federal building fund than they would receive in return.

Secretary Folsom has accused the national chamber of distorting facts and of making seriously misleading and inaccurate statements in its publications. In particular, he declares himself surprised and deeply disappointed by the chamber's use of questionable figures designed to indicate that an abundance of classrooms is already available.

The chamber alleges that in the decade 1947–57 some 490,000 classrooms were built whereas only 291,000 were needed to take care of increased enrollment. Such statistics, indicating overbuilding by almost 200,000 classrooms, overlook obsolescence, population shifts, school consolidations, and losses from fire and other disasters—which factors, alone, would require from 140,000 to 200,000 new classrooms over the period cited.

As a matter of fact, a recent survey by the Office of Education disclosed a present shortage of 159,000 classrooms and found that the school population is larger by 2,295,000 than the capacity of present facilities.

In reply to fearful prophecies that Federal building aid will mean Federal control, Secretary Folsom observed that for a century or more the Federal Government has been supporting education in various ways without imposing its domination. Furthermore, President Eisenhower has frequently expressed a conviction that Federal aid must be administered without Federal control of schools, and has specifically offered the assurance that the current legislation has been tailored to prohibit any Federal direction of education.

The argument that some States may give more than they receive in connection with the construction program is one that might be levied against almost any project involving the expenditure of Federal moneys. It strikes us as of little relevance. So does the corollary argument that some States may be well able to build an adequate system of schools without Federal aid.

The circumstance exists that classrooms fall short of present needs and are not being built fast enough to make up the deficit. The White House Conference on Education has verified the shortages and the need for emergency Federal aid. The facts, we submit, clearly refute and outweigh the opposition marshaled by the chambers of commerce.

A Flag

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times, which discusses the question of how big a flag should be:

A FLAG

The question has been raised in a recent news story in this paper as to how big is a flag. There is no standard-size American flag. The main criterion is that the flag's width be two-thirds of the length. We think that there are certain general dimensions, however, that should be observed.

A flag is a symbol, of course, and as such it should represent the qualities for which it stands. Consequently it can be large or small. It should be large enough to deserve respect and allegiance wherever it is flown. But it should not be so big that it can serve as a ready shield for scoundrels, the intemperate, or the ignoble. It must not be so small that it is easily forgotten in the times or places where liberty is a dim and distant thing. It must be large enough to win a place dear to the hearts of its sons and daughters. But it should not be so big that its sight strikes terror and fear where it is shown.

It should be large enough to cover all its people, not just the few. It should not be so small that it is easily waved in moments of wild, careless enthusiasm for causes that in a more sober, reflective moment would be rejected as unworthy. It matters little if a flag's history is long or short, its colors bright or pale, its design simple or complex. What matters is that where the banner waves those who live under it dwell in peace, in liberty, and in justice.

Tom Tandy Retires After 75 Years in Vanishing Occupation

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. PRICE. Mr. Speaker, one of the last of the practicing blacksmiths in my section of the country, Tom Tandy, of Edwardsville, Ill., is the subject of a story in the Alton Evening Telegraph. Until a year ago—even at the age of 88 at the time—he shod horses. His active career covered a period of more than three-quarters of a century.

Mr. Tandy suffered a stroke about a year ago and he no longer is able to work at his trade. But he still maintains an interest in life and pleasant memories of his services to his customers.

Under permission to revise and extend my remarks, I offer the story on Mr. Tandy for the RECORD:

TOM TANDY, EDWARDSVILLE, SHOD HORSES AT COUNTY SEAT FOR THREE-QUARTERS OF CENTURY

(By Mel Wiener)

EDWARDSVILLE.—When Tom Tandy laid down his hammer beside his anvil about a year ago, it marked the end of a career as a horseshoer which spanned more than three-quarters of a century.

According to many older residents around here and 89-year-old Tandy himself, he was the last practicing horseshoer in Madison County.

Except for the fact that he suffered a stroke about a year ago, the native Madison Countian would still be hammering away at the ancient craft, he said, for "I never felt so bad as when I had to tell a man I couldn't do a job for him."

Tandy, who lives with his wife on Schwarz Street, began work as an apprentice horseshoer in 1880 and throughout his life worked at no other job. All during that time, he says, he would "eat breakfast every single day at 5 a. m. and then start working."

After some years he went into partnership with another smith and finally had his own shop on Main Street. He has shod horses all over the country though, for when he was 30 years old, he said, he wanted to "see the world" and went around the country shoeing horses.

About 15 years ago he gave up his Main Street shop and went into business in a building set up in the backyard at his home.

Most of the equipment there has been sold and the shed is not used for anything now. Only about 3 or 4 horseshoes are in evidence, compared to years ago when Tandy bought them by the ton. But his old hitching post is still in the backyard under a shade tree where Tandy would fit the shoes to the horse's hoofs.

Though Tandy can still get around fairly well now, he needs to use a walking cane. His speech, due to the stroke, is hampered, and he spends most of his time in the house watching television.

But his favorite type of show is not the "western" which its abundance of horses, but professional prizefights which he avidly follows.

Mr. and Mrs. Tandy are the parents of 3 children and they have 13 grandchildren and 10 great-grandchildren. Nowadays he eats breakfast about 6:30 a. m. each day and spends the rest of the time loafing around the house.

It certainly is a change after so many years of a rigid schedule, he says.

"In the old days," he says wistfully, "I could handle a horse with this hand," as he slowly extends his semiparalyzed right arm. "But now, my cane feels heavy in it."

Forty-second Anniversary of the Incorporation of the City of Miami Beach

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FASCELL. Mr. Speaker, March 26 marks the 42d anniversary of the incorporation of the city of Miami Beach. From a tiny fishing village of barely 600 population Miami Beach has grown to a thriving city of 60,000 which plays host to 1¾ million visitors annually. I want to take this opportunity to extend my heartiest congratulations to all the officials and citizens of Miami Beach who have helped make this fabulous growth possible.

Only a few years ago Miami Beach was generally thought of as only a winter resort. Today the advantages of its spectacular location and unsurpassed climate have made it famous the world over as a year-round vacation spot. The vision and foresight of the early city fathers has been more than vindicated. Where formerly there had been only mangrove swamp and sand dunes there is now a modern resort city of palm-lined boulevards, multimillion-dollar hotels and apartments, fine shops, and beautiful homes.

Since 1935 more hotels have been built in Miami Beach than in most of the rest of the entire United States. Today Miami Beach has over 370 hotels, with a total of 30,000 rooms. The city itself owns 706 acres of public parks, including eight beaches and 15 play-

grounds. With its two municipal auditoriums, many hotel meeting rooms, and outstanding accommodations for visitors Miami Beach has become America's most modern convention city.

All this, plus an absence of soot, smoke, smog, or snow, makes Miami Beach an ideal place whether for permanent residence or for a relaxing vacation.

It is a pleasure to extend birthday greetings to one of the truly fabulous cities of the world.

Our Post Office Worries

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article entitled "Our Post Office Worries" which appeared in the Boston Daily Globe on March 22, 1957:

OUR POST OFFICE WORRIES
(By Uncle Dudley)

The postal system of the United States has been described as the largest public utility in the world. Perhaps no service of the Government touches the lives of more citizens more often. From feeble beginnings—it was almost strangled at one time by private competitors—it has attained a size that can be described only in terms that are astronomical. It has become customary now for it to have as well a substantial deficit.

In 1952, the last year of the Truman administration, the deficit was $702 million. It has not reached that figure since, but in 1958 it will have climbed to at least $651 million, it is estimated, unless Congress ups the rates. Postmaster General Summerfield, who has asked the increases, contends that if it were not for the economies and efficiency he has introduced the deficit would now be more than a billion dollars.

Given the increases requested, the deficit for 1958 would be reduced to less than $200 million. But even then ahead of the Department lies a building and modernization program and, more than likely, a larger and continuing deficit.

The first Postmaster General of the United States, Samuel Osgood, Esq., set out from Boston by stagecoach with a sword cane, a powdered wig and the hope that the mails might be made to pay for themselves. The attempt to realize that hope did no more than encourage private competitive systems, lead to fluctuating rates and generally make for disorder and dissatisfaction.

Inviolability of the mails and public service in the sense of national service grew to fullness only with the close of the Civil War. Second- and third-class mail came into being not as poor relations of first-class mail but as partners taking up the slack period of the labor force necessary if first-class mail was to get its preferential treatment. The special services today are expanding, air mail most of all, with private industry collaborating with the Government instead of competing. Automation will aid economy and efficiency.

There can be no thought today of making the system pay for itself. Receiver as well as sender benefits from the use of the mails. To try to break even would, in effect, be calling upon a certain class of citizens—those who use the mails the most—to pay for the franking privilege Congress uses for the benefit of all and to make up the loss suffered on all Government mail. A deficit is inevitable and generally accepted. But how much of a deficit? Where to start and where to stop?

Our postal system cannot be compared readily with those of other countries of the free world. In most of these, postal system, telegraph, and telephone are in one government department, and the loss from one is offset by the profits from another. Our postal system stands alone.

With the growing recognition of the mails as a public service of the first order may come a solution that will relieve the annual distress over deficit and rates.

In an age of statistical wisdom and the magic of cost accounting, experts might well find a relationship between deficit, dollar value, cost of living, and volume of business and would provide a general satisfactory and continuing formula. This in turn would free post-office executives and other citizens from deficit worries and the chore of recurrent lobbying.

Still Knocking

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BARTLETT. Mr. Speaker, I take pleasure in calling to the attention of the House an editorial regarding Alaska statehood entitled "Still Knocking," which appeared in the Boston (Mass.) Herald of February 6:

STILL KNOCKING

You might call it baked Alaska politics.

Every year for the past 20 years the major political parties have lovingly inserted a clause into their platform stating that practically their first act on assuming office would be the admission of Hawaii and Alaska into the Union.

The reception in the convention hall is always frenzied. Enthusiasm is a mild word. The 49th State plank is always adopted unanimously—and just as quickly squelched after either the Republicans or Democrats assume office.

Once again the eternal promise is being tested in committee before reaching the floor of the Senate. The Alaskan and Hawaiian Senators-elect have been introduced to a thunderous wave of applause from their would-be colleagues. Speeches of welcome were read, the unbounded good feeling of the conventions still prevailed.

Realistically speaking, the whole thing is apt to be another instance of soured optimism. Except for the time element the circumstances regarding Alaska and Hawaii have not changed a whit. Fear governs the arguments against admission; the southerners fear votes against civil rights; the Democrats fear Republican Hawaii; the Republicans fear Democratic Alaska; everyone fears the influence of statehood on defense. The issue is inevitably treated in a partisan manner.

But time and time again the arguments against admission have been refuted. And the fact remains that the citizens of Hawaii and Alaska are required to exist under the same conditions from which America revolted in 1776. How long can they go on knocking at the door, taxed without representation, unable to elect their own governors?

It's time that the fine promises of election became something more than shameful campaign oratory. The knocking has grown so loud that America cannot afford to listen with a deaf and partisan ear.

Milk Market "Bigs" Battle the "Littles"

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. COAD. Mr. Speaker, there is an obvious amount of uncertainty among the dairy producers and dairy operators in Iowa concerning whether or not actual free trade is being exercised in the dairy industry in our State. An item appearing in the Des Moines Register, March 24, 1957, brings to light some of the aspects of this condition.

The item follows:

MILK MARKET "BIGS" BATTLE THE "LITTLES"

The Iowa milk market is churning, with rugged economic battles reported between "big dairies" and "little dairies."

A supermarket was selling milk from a distant "little dairy" at three half-gallons for $1. Since a week ago Saturday, the supermarket sells only milk from a nearby "big dairy" at three half-gallons for $1.26.

The supermarket manager's mind was changed when a group of protesting farmers who sell milk to the big dairy came in that Saturday and bought up the store's entire stock of milk that came from the small "outside" dairy.

"When they came in and bought us out, we quit," said the store manager. "We don't handle that (small dairy's milk) anymore."

The manager said he received protests from some customers with large families that buy a lot of milk. "We have to string along with the farmers because they're a big part of our business," the manager said.

One Iowa supermarket operator reportedly was given $500 by a dairy to sell only that dairy's milk.

In another instance, the pressure came from the supermarket operator. This store manager, in northern Iowa, reportedly offered a dairy representative exclusive rights in his store if the dairy would put a new Buick in my driveway in place of the old one that's there now.

This reported deal did not go through.

TELEPHONE THREATS

"I've received telephone threats that they'll put milk down to practically nothing in my area if I don't stay out of their area," said the operator of a southwest Iowa dairy.

There have been reports that restaurant operators were given free milk-dispensing machines in return for selling a certain brand of milk.

"A lot of milk has been given away" under competitive pressure, said another dairy operator.

The sharp competition for milk markets reportedly extends to schools which, with Federal subsidies, buy large quantities of milk to serve to pupils.

"The independent operator doesn't object to competition," said Bill Oberg, Fort Dodge dairy operator. "The only thing he would like is fair competition to avoid complete monopolizing of the dairy industry."

DAIRIES RUINED

Oberg is president of the Independent Milk Dealers Association, organized about 7

months ago with a membership of 30 to 40 operators of smaller dairies.

"We formed this organization for the purpose of trying to keep the small independent operator in business," Oberg said.

Oberg said poor business practices and failure to maintain milk quality have ruined some small dairies, but, "I think the whole darn thing is a matter of these larger companies coming in and not playing fair with the small dairies."

"It's really getting out of hand," said Earl Johns, Sr., Corning dairy operator and a member of the independent dealers' group.

Roy W. Nelson, manager of the Des Moines Cooperative Dairy (which supplies milk to a number of Des Moines dairies) said he believes reports of sharp competitive practices are exaggerated.

"The milk business has always been competitive," he said. "As far as I know there's been nothing different than it's always been."

NO FORMAL COMPLAINTS

About the Independent Milk Dealers Association, Nelson said, "I didn't even know such an organization existed."

President Oberg of the independent dealers' group said that early this year an "FTC (Federal Trade Commission) man met with us and we told our problems." The organization has not filed any formal complaints with the FTC, he said.

"We're just going to sit back and watch what happens," he said. He referred to FTC complaints filed last October against three of the Nation's largest dairies.

The FTC has charged the 3 with violating Federal monopoly laws by acquiring a total of 251 dairy companies since 1951. The 3 are the Borden Co., New York; Beatrice Foods Co., Chicago, Ill., and National Dairy Products Corp., New York.

Borden and Beatrice own or operate some dairies in Iowa.

The number of dairy plants in Iowa has been cut in half since the end of World War II.

There were 527 dairy plants in Iowa in 1946, and 269 at the end of 1956. Dairies owned by one company are still counted separately in these figures, from the Iowa Department of Agriculture.

Elizabeth Haili Among

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BURNS of Hawaii. Mr. Speaker, on Monday of last week Elizabeth Haili Among, a valued constitutent and a long time personal friend for whom I have always had the highest respect and admiration, died of cancer in Honolulu.

Mrs. Among had long known she was going to die, and it was entirely characteristic of her self-forgetfulness and of her absorption in the welfare of others, that only a few of her closest friends knew of this. Her death is a great loss to the community, her friends and family, and to me personally.

I include herewith a copy of a wire I sent to her family last Thursday:

Elizabeth Haili Among more than deserves to be honored among the outstanding and distinguished citizens of Hawaii. Her completely unselfish devotion to the good of the community, marked by deeds and great personal effort as well as by words; her constant effort to improve the lot and opportunity of the so-called forgotten and common man; her untiring and ceaseless endeavor to build a society wherein the God-given dignity of man would have meaning and would have reality for every human being demonstrated her complete and unswerving belief in the principles and ideals of the United States of America.

Her life is an outstanding instance of that generosity and that greatness of soul which is so characteristic of the native Hawaiian, and which it is his glory, more than anyone else's, to have contributed to our unique Hawaiian democracy.

Haili understood and sympathized deeply with human weakness and with human faults. They made her only all the more ready to help others in their struggle to begin anew. No one who needed her help was ever refused, no matter who he was. She never condemned anyone or spoke in hatred of anyone. She spoke well even of those whose ideas or whose programs she strongly opposed. Haili did much for the "least among us." Unassuming, seeking neither credit nor glory, she gave of herself freely to her fellowman, and by her tact, her understanding and her intelligence gave him much more than she will ever be credited with.

She lived among us, and she gave us strength. In memory she lives among us still, and as long as we remember and love her—and we will always—she will continue to give us strength.

I extend my deepest and heartfelt sympathy and understanding to her family. We, who live, must and will go on inspired by her example. May God have mercy upon her soul.

Congressman Morano Brings Credit to the Congress on Trip to Guatemala

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. CRETELLA. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Bridgeport (Conn.) Post of Sunday, March 24, pertaining to my Connecticut colleague, Representative AL MORANO.

All of us have heard of the wonderful reception accorded our colleague when he addressed the officials and the people of Guatemala in their native tongue.

As the editorial points out, Congressman MORANO has contributed greatly to good relations and better understanding with our Latin American neighbors.

I believe, as do many of my colleagues, that AL MORANO should be called upon again and again by our State Department for similar missions where his forceful talents may be utilized for the furtherance of inter-American relations and a greater understanding of our motives and ideals.

The editorial follows:

AL'S LINGUISTIC TRIUMPH

A group of Congressmen, members of the House Foreign Affairs Committee, recently returned from a study mission to Guatemala, a key country in hemisphere relations. In a report to President Eisenhower the goodwill members said their mission had been successful.

The report pointed out to the President that one of their Members, Congressman AL MORANO of our district, "has enhanced the prestige and standing of the United States and has increased good will toward the United States to a remarkable degree."

The Members called particular attention to the work of their Republican colleague for his fluent Spanish addresses, in the local idiom, which "won the hearts of the people." He addressed the Guatemala Congress and received a standing ovation. The Foreign Affairs delegation also hailed Congressman MORANO for "his profound understanding of Latin America, its people and its psychology, and his ability to tell the story of the United States" to them.

The congressional delegation visited Guatemala as the guests of President Castillo Armas and were received in plenary session of the Guatemalan Congress. They were invited to see what Guatemala had done with $15 million in United States aid in the 1955–56 period, following the crackdown on Communist rule in the Republic.

El Espectador, Guatemala City newspaper, lauded the visitors but also singled out Congressman MORANO who endeared himself to the people and their political leaders for speaking to them frankly in their own language. This is most unusual as few Congressmen have any knowledge of the languages of the countries all over the globe which they visit so frequently. In this country our legislators and political officeholders are so accustomed to hearing foreigners speak English they don't bother to learn another language.

All the Russians who have come and gone since our recognition of the Kremlin mob have been able to speak English. They speak it in Washington and in the U. N. How many of their United States counterparts speak Russian? Knowledge of foreign languages has long been neglected in this country, simply because most Americans are not called upon to use other tongues.

Representative MORANO's Democratic colleagues were quick to see the advantage he had, and the good that he accomplished by his ability to speak the language of the Guatemalans. Through that medium he was able to state the United States position clearly and simply—and they liked it.

Our Congressman is to be congratulated not only for his linguistic ability but in knowing how to make friends in Latin America. He has the honor of being the first Congressman to address a native legislative body in its own language.

Construction Loans to Veterans

SPEECH
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4602) to encourage new residential construction for veterans' housing in rural areas and small cities and towns by raising the maximum amount in which direct loans may be made from $10,000 to $12,000, to authorize advance financing commitments, to extend the direct loan program for veterans, and for other purposes.

Mr. MULTER. Mr. Chairman, may I be heard on the point of order?

The CHAIRMAN. The gentleman may proceed.

Mr. MULTER. Mr. Chairman, may I supplement what the gentleman from Oklahoma just said in support of the amendment and against the point of order by pointing out to you the very title

of the bill we are considering provides in part, "to extend the direct loan program for veterans." The gentleman's amendment would do just that. It would extend the direct loan program for veterans. It does not amend the National Service Life Insurance Act because what the gentleman is doing in providing the amount which shall be used for this purpose of extending the direct loan program is merely a limitation of how much money will be used to extend the program. He uses that as a guide as to the amount to be used. I urge that the point of order be overruled.

Career by Chance

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 10, 1957

Mr. FISHER. Mr. Speaker, under leave to extend my remarks, I include an article written for the San Francisco Examiner, dated February 5, 1957, by Fleet Adm. Chester W. Nimitz. It is entitled "Career by Chance," and was written to help the Edgewood Home for Boys and Girls in San Francisco.

Admiral Nimitz, a native of Fredericksburg, Tex., located in the district I have the honor to represent, is now living in Berkeley, Calif., where in his retirement he continues to make his vast storehouse of knowledge, experience, and wisdom useful for the country. He now serves as special assistant to the Secretary of the Navy in western sea frontier, serving in an advisory capacity. And he serves the public interest in many other capacities.

In order that the article written by Admiral Nimitz may have the fullest coverage, I include it in the RECORD. I am certain that his millions of admirers and friends everywhere will be pleased to read this very interesting and inspiring story about some experiences that occurred early in his life.

The article follows:

CAREER BY CHANCE

Fifty-seven years ago, in the small town of Kerrville, Tex., a 15-year-old youth worked feverishly at his studies in algebra, geometry, history, geography, and grammar, fired with determination to win an appointment as a cadet at the United States Military Academy, at West Point, N. Y.

What sparked that activity? It was the presence of Battery K, 3d Field Artillery, encamped in the hills close by Kerrville and engaged in routine training and gunnery practice. Each summer that battery departed its normal base at Fort Sam Houston, Tex., for field exercises, as did several troops of cavalry which wheeled and maneuvered on the plain just south of Kerrville. These detachments brought a measure of prosperity to the merchants of the community and added greatly to the excitement and entertainment of the youngsters and small fry of the area.

Especially admired in their spanking new and well-fitting uniforms were two newly graduated West Pointers, Second Lieutenants Crulshank and Westervelt, who, on their way to join Battery K, stopped a few days at the St. Charles Hotel, where the above-mentioned youth worked as a desk clerk, janitor, and general handyman outside of school hours in exchange for board, lodging, and $15 per month.

By now, it must be apparent that in the foregoing are a few paragraphs of my own autobiography. You may be sure that I lost no time in becoming acquainted with those smartly turned-out young Army officers, who, in my opinion, had everything. Coming from a poor family, I could foresee no prospect of an education beyond high school. I had already formed vague plans to seek employment as a surveyor's assistant to learn that skill as I carried his chain.

But here were two young men who had been educated by the Government and I was determined to follow in their footsteps. "Write to your Congressman and ask for an appointment to the United States Military Academy," I was told. It was also suggested that I ask for a description of life at West Point after one has successfully passed the strenuous physical and mental entrance examinations.

My Congressman, the late Hon. James L. Slayden, of San Antonio, promptly informed me he would have no appointments to the Military Academy for several years, but that he had a vancancy for the United States Naval Academy, at Annapolis, Md., in the coming summer of 1901. If I could meet the physical requirements he would permit me to participate with a number of other applicants in a competitive examination to be held in San Antonio in the spring of 1901. An Army doctor at Fort Sam Houston quickly assured me that I could meet the physical requirements.

The time has now come for me to admit that I had never heard of the Naval Academy, but, because it gave me the opportunity for further education, I determined that I would work hard for the competitive examination. Such ignorance on my part concerning the Navy was not strange in my part of Texas, which was well acquainted with the Army because Fort Sam Houston, on the outskirts of San Antonio, was one of the largest military establishments maintained in the South.

Now began that hard grind in preparation for the competition. For several months every available moment was devoted to study. My stepfather, William Nimitz, who assisted in the management of the hotel, was an excellent coach and quiz master. He tested me constantly with sample entrance examinations sent out by the Naval Academy authorities to illustrate the difficult character of the entrance requirements. The principal of the Tivy High School, where I was a student, tutored me in algebra and geometry, in which he was a specialist. A very fine teacher and a wonderful woman, Miss Susan Moore, took over the remainder of my preparation. My mother, also employed at the hotel and in charge of the kitchen, gave me daily encouragement.

My day-to-day routine may interest present-day youngsters. School hours were from 9 a. m. to 4 p. m. after which my janitorial chores began with lawn care and raking followed by splitting cedar for kindling, filling wood boxes and attending some dozen or more stoves and fireplaces, which occupied the time between the end of school and supper. After supper I took my turn as clerk at the desk until about 10 p. m., when everyone had retired and I could occupy my lodging. This consisted of a cot set up in the ladies' parlor of the hotel. I arose at 3 a. m. to study until 5:30 a. m. when it became time to light fires, attend stoves and call early risers. After breakfast I was free to go to school.

For the competition that April there were about 7 who completed the 3-days of examination, although double that number started. In due time I was informed that I was the winner and that the appointment to the Naval Academy was mine. Early in July 1901, my Congressman, Mr. Slayden, accompained me to Annapolis where I entered the Wernts Preparatory School for 2 months of further drill and preparation for the entrance examinations in late August. These I passed with no difficulty. On September 7, 1901, I entered the Naval Academy and was sworn in as a Naval cadet, a designation later changed to midshipman.

From that day until this moment I have enjoyed my naval service which encompassed duty in many types of naval vessels in many parts of the wrold, and in ranks from the lowest, naval cadet 4th class, to fleet admiral. The Navy has given—and is giving—me a good life. On September 7, 1956, I remarked to M. Sgt. George E. Cozard, United States Marine Corps, that "Today is an anniversary for me—a very special day because it was on this day 55 years ago that I entered the Navy." After considering the statement for a moment Sergeant Cozard asked, "Well, Admiral, do you think you will make a career of the the Navy?" I replied in all sincerity, "Yes, I think I will." I meant just that.

Although I originally set my sights on an Army career, circumstances over which I had no control diverted me to the Navy. I am glad it turned out that way. The Navy has been my life and will continue to be my life—as long as I have life left in me.

Price Discrimination in the Petroleum Industry

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. COAD. Mr. Speaker, the fact of whether or not there is price discrimination in the petroleum industry to jobbers, retailers, and others is being widely debated especially as it relates to H. R. 11. I have a recent letter from a constituent who is engaged in this business, being a retailer, which points out the conditions of price discriminations in Iowa at the present time.

The letter follows:

MARCH 20, 1957.

The Honorable MERWIN COAD,
Member of Congress,
Old House Office Building,
Washington, D. C.

DEAR CONGRESSMAN COAD: As per our conversation while you were last in Boone, I am setting down some of the inequalities as they exist in gasoline pricing in this area.

At the time you were here, the gasoline market at Jefferson 28 miles to the west of us, was selling to dealers at 26.3 and to the farmer at 24.9. Now this is bad enough but when you take into account that the agent which delivers the gas is paid from 2 to 2.5 cents to deliver to the farmer and only 0.4 to 0.5 to deliver to the dealer it makes the companies selling gas to the farmer for as much as 3.9 cents less.

Most anyone in the business knows that the average dealer will buy as much in 1 week as the average farmer buys in 2 years. At the same time at Ames and Boone Standard Oil Co. dealers were displaying the price of gasoline to the consumer at 30.9—yet the dealer cost at Ames as 25.4 and at Boone 25.7. There is no freight differential between the two towns.

The claim that the companies have of selling at one price to the same type outlets is not true and can be proven upon investigation. I am wondering if the Federal Trade Commission is aware of these price discriminations. I am sure that all of these statements can be substantiated upon investigation.

We never have a price change except when Standard Oil Co., Indiana, makes one and then every one follows. I have asked my supplier why that is, and they tell me they have a gentleman's agreement that Standard Oil Co., Indiana, is the market maker in this area and other areas are assigned to other companies depending upon the amount of business each one has.

Thank you for your time and if I can serve you in any way don't hesitate to let me know. I feel that at last we have some one to represent us who is taking an interest in our problem.

God bless you and yours,

ERNEST JACKSON.

A Tribute to Lawrence J. Keefe

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mrs. DWYER. Mr. Speaker, I was saddened this week by the passing of an old and trusted friend—Mr. Lawrence J. Keefe, the distinguished dean of New Jersey's political writers.

I would like, at this time, to pay tribute to Larry—and I am sure all other members of the New Jersey congressional delegation join with me, for we all knew and loved and respected him.

For nearly a half century, Mr. Keefe was a newspaperman and a political columnist in New Jersey. His integrity, his penetrating and unbiased reporting, his respect for confidences typified the highest standards of the journalism profession.

I know there are many in public life in New Jersey who, like myself, were helped and encouraged during our early years by Larry's sound advice. I know that, among Republicans and Democrats alike, he made friendships that endured through the years of heated political campaigns and partisan differences.

During the years of my friendship with Larry, I never once knew him to do a small or mean thing, or distort facts for the sake of a story, or use the power of the press for personal advantage. Larry was a gentleman, and one of the keenest students of politics it has been my privilege to know. It can be truly said that Larry Keefe enriched the world in which he moved; that there was a meaning and a purpose and a striving for the goodness of truth in the life of Larry Keefe.

This week in the Elizabeth Daily Journal where Larry began—and ended—his distinguished career, an editorial was written in his memory. This editorial, I believe, should be perpetuated in the records of the Congress of the United States as a fitting tribute to a man who served his profession well.

I respectfully request that this editorial be entered in the RECORD:

A HISTORY LEFT UNWRITTEN

Larry Keefe's last column has been cast. In a moment now, it will be clamped somewhere among the cylinders of a great modern newspaper press. A thoughtful man in inkstained gear will stand by. On signal he will press a button and the immediate roar will herald a new edition. That will be finis. It will be "30," the epitaph of all newsmen—"30" for a career that deserves to be bracketed among the memorable of New Jersey newspaper history.

There was no indication that the man who eventually would be acknowledged the dean of the Garden State's political writers had reported for work the day Lawrence J. Keefe, new out of Rahway High School, joined the staff of the old Elizabeth Times. He was a tall and gangling adolescent, but he was already gifted with a talent for observation, a quiet humor, and the product of a family background that should have forecast the shadow of coming success.

Young Keefe was already displaying marked aptitudes when he came under the indelible influence of the late John Mitchell as a Journal man a half dozen years before the first World War. For Mr. Keefe it was a fortunate partnership in which he ripened quickly to attract the attention of former Union County Assemblyman Joseph Gunn and who, as Newark Star city editor, was in need of a promising youngster he might school for the duties of his paper's legislative correspondent at Trenton.

But, schooling exceptional ability is never much of a job. Rare gifts have a way of coming to the surface of themselves. And at Trenton Larry Keefe found the stage and the vehicle which, until his terminable illness, was to demand attention for every line of political opinion that came from his typewriter.

For almost two score of years the mighty political generals hearkened and were guided by the asute, penetrating appraisals to which he gave wing. The voter and the gambler, too, fixing his odds, missed no line of trend or prognostication he wrote.

Newark Star, Star-Eagle, Sunday Call, Ledger, the Port Authority, even, harvested the considerable benefits of his talents. And then, in the renaissance that so completely changed the course of the Elizabeth Daily Journal and gave it a state audience, Lawrence J. Keefe was weaned back to the typewriter of his early successes. The "voyager at last was home again, "among old friends and old surroundings and still to write some of his most sparkling columns.

But this evening, the friendship of a lifetime ends as our voyager lands "now upon the farther shore." Larry Keefe has gone. It is too bad that he has gone without writing the 20th Century Political History of New Jersey which he was so signally equipped to set down. It is too bad that so many masterpieces of political observations he recorded with such facility have not been preserved as textbook items in the schools where journalism is taught.

DAV Is 25 Years Old

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Lynn Telegram-News, Lynn, Mass., on March 25, 1957.

DAV IS 25 YEARS OLD

This marks the 25th anniversary of the granting of a congressional charter to the Disabled American Veterans. This charter carries certain obligations which the DAV has not taken lightly.

Since its beginning in 1920 the DAV has served without charge millions of disabled veterans, their widows and dependents. During the last 11 years its national service officers have obtained more than $220 million in benefits for the war handicapped. This free service was possible through projects, especially the idento-tag program—miniature individual license plates for keyrings.

The DAV is justly proud of its devotion to furthering the cause of the war disabled. These efforts have resulted in a fine national program of rehabilitation for the wartime disabled. All eligible veterans should be interested in joining and helping improve the lot of veterans who have suffered injury or disablement in wartime service to their country.

Waging Peace

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. SCHWENGEL. Mr. Speaker, I wish to take this opportunity to invite the attention of the House to a recent book by Mr. Claude Maxwell Stanley entitled "Waging Peace." I realize that few of us have adequate time for reading, but I think this book is especially worthy of your attention.

This is not a book by an expert. The author calls himself an amateur in the field of foreign relations. He is an engineer—a businessman. But this book, Waging Peace, is not an amateur's work. It is the work of an American who has given what I consider to be a stimulating contribution to our thinking about foreign affairs. Gentlemen, I believe that this book will have a great influence. It is a tight, comprehensive presentation of the desires, objectives and objections of a perceptive and brilliant citizen. It is indeed seldom that one may find an analysis of our problems that cuts through the morass of grandiloquent speech and shadowy thought so penetratingly. Mr. Stanley pinpoints the problem in American foreign policy which all of us in our own glimpses of the "whole picture" have, at one time or another, felt. That is the inescapable inadequacy of the way our goals and aims have been defined and our seeming inability to anticipate problems. He says our problem is, and I quote:

(That) we jump from crisis to crisis, usually late and often inadequate. We appear to change our minds without reason, to waver and to delay. The result is often diplomatic defeat. We cannot afford the luxury of politics and diplomacy as usual in the nuclear age. The consequences are too great if we fail to avert nuclear war or to stem the onward march of communism.

And a bit further on, Mr. Stanley says:

We dare not wait for the slow-moving reaction of an oppressed people to change their government. We cannot count upon a change of leadership to alter the path of the Soviet Union.

In short, gentlemen, Mr. Stanley decries our failure of will, of courage, if you will, and our failure to wage peace with the earnestness and aggressiveness that waging war warrants. For the waging of peace is a vital, indeed an inescapable task of this great Nation in which we cannot afford to fail. We must seize the initiative. Foreign policy by counteraction is inadequate, degrading and dangerous.

Mr. Stanley has seven specific principles on which a program for waging peace should be based. I will not attempt to elucidate these in this short space, but will leave them for your own reading. Let me only say that Mr. Stanley points out that our first responsibility is the preservation of our freedoms, and to preserve these freedoms in the immediate, pragmatic sense, we are obliged to maintain our strength. We cannot legislate evil out of existence. The differences between the two dominant philosophies of the world today, communism and democracy, can best be emphasized by our exemplary conduct. This book, Waging Peace, stresses the transitory nature of military might, and rather places its strongest reliance upon the ramifications flowing from other instrumentalities of diplomacy and foreign policy.

This book has the refreshing capacity to reflect in depth on the whole picture of what America is and means. Gentlemen, both as inheritors of a rich full heritage and culture, as well as representatives of the people of this Nation, we have an unflagging, dogged obligation to administer its governmental affairs in such a manner as to clarify, as well as prevent the undermining of, our deepest traditions and philosophy. There is a time for reflection in the lives of all of us, and I know of no more important time in the history of our Nation or of the world for reflection and reevaluation than the present. We must seek direction and unity in our policies. Mr. Stanley shows us one such direction, and this direction warrants review. It is a viewpoint which should be understood by most, and must be recognized by all Americans. Regardless of whatever position on world affairs any one of us may hold, every American, I earnestly feel, should read this book.

DAV Protest to Army's Annual Attempt To Close Murphy Army Hospital

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very comprehensive letter received from Mr. Anthony D. Tieso, past department State commander, Disabled American Veterans, 198 Manchester Street, Mattapan, Mass., which presents the protest of the Disabled American Veterans to the Army's annual attempt to close the Murphy Army Hospital at Waltham, Mass.:

DISABLED AMERICAN VETERANS,
Boston, Mass.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: The Department Executive Committee of Disabled American Veterans, in its meeting held on March 9, 1957, resolved to protest the Army's annual attempt to close Murphy Army Hospital. Department Commander Jerome P. Troy has appointed me to handle matters concerning the proposed closing of Murphy Army Hospital at Waltham, Mass.

Needless for me to tell you that this is the only Army general hospital within the New England region and it has been serving the population of the whole area. The next such general hospital to the New England area would be the one located at Valley Forge, Pa.

The permanent-type building construction and the most modern medical services available at Murphy Hospital make it the equal of any other such hospital in the United States. As you will recall, the Defense Department, last year and the year before last, did not request funds to continue the operation of Murphy Hospital; but the House Appropriations Committee did so with express direction to the Army to keep Murphy Hospital in continuing operation.

The Defense Department is again persisting in their long attempt to close the hospital and they intend to discontinue all the medical facilities for New England unless legislation is introduced by the Massachusetts congressional delegation and the Appropriations Committee again approve funds for and direct the continuing operation of the hospital.

If you recall, the Defense Department stated that they need the hosptal space to accommodate the housing of the officers of the New England Division of the Army Corps of Engineers, certain Air Force personnel and to conduct an electronics research project. But the facilities at Boston Army Base could have been used by the Army Corps of Engineers at much less cost than it would cost to house them at Murphy Army Hospital. We have been told that space at Boston Army Base would have cost the Army engineers approximately 35 cents per square foot to maintain, whereas Murphy Army Hospital maintenance cost of occupancy by the Corps of Engineers would approximate, and might exceed, as much as $1 per square foot.

We do recall just a few months prior to the Korean war when the Defense Department was forced to reopen this hospital at an unnecessary cost to the American taxpayers. We daily read about the mounting tensions and increasingly threatening war dangers in the Middle East and the many other trouble spots in our confused world of today. It seems that these same officials still persist in wanting to make the same mistake that they did just before the Korean outbreak, when there was much less possibility of war than there is today.

As this time no one can foresee the dangers of tomorrow—not even the Defense Department itself. It would be false economy to close the Murphy General Hospital and of no savings to the Department of Defense. The permanent type of buildings are already standing there; wards, laboratories, and operating rooms already established there; medical instruments, and X-ray machines, whirlpool baths, and so forth, and investment valued at more than $6 million.

At a meeting held at Kenmore Hotel, Boston, on March 7, 1957, by the Federal Employees Veterans Association, attended by representatives of the American Legion, Disabled American Veterans, military dependents, and civilian employees of Murphy General Hospital it was stated that the Army's claim that there are adequate facilities for accommodating servicemen and their families at five other installations in Massachusetts is violently incorrect. There are many stations or dispensaries (not hospitals) in New England. I have been told that these stations are at the Army base, Boston; Hanscom Air Field and Westover Air Base, and at Dow Air Base in Maine and at every military installation throughout the area; but these are comparatively small institutions, designed to care for the emergency needs of the men and women stationed there. Severe cases have always, whenever possible, been transferred to the general hospital which is equipped with laboratories, fine operating facilities and equipment, staff surgeons, and expert medical men.

As I have stated, the nearest such hospital when Murphy General Hospital closes down will be at Valley Forge, Pa. Therefore, the Department of Disabled American Veterans and its chapters have no intention of quitting the fight to keep Murphy General Hospital open and we Disabled American Veterans request the Massachusetts congressional delegation to introduce legislation and the Appropriations Committee to again approve funds and direct the Army to continue operation of the Murphy General Hospital.

Yours sincerely,

ANTHONY D. TIESO,
Past Department State Commander,
Disabled American Veterans.

Tight Money and Inflation

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mrs. GRIFFITHS. Mr. Speaker, the following resolution concerning House Resolution 85 was adopted at the convention of the Democratic Party of Michigan on February 22 to 23, 1957, in Grand Rapids, Mich. I request that this resolution be printed in its entirety:

TIGHT MONEY AND INFLATION

The tight-money policy which the Eisenhower administration has been following for the past 4 years has resulted in a crisis of severe proportions. Rising interest rates have been accompanied by increasing corporate profits, dividends, and interest income, while farm and small-business income have been deflated and consumer-purchasing power has lagged behind.

The increase in interest rates has created windfall profits to moneyed interests. This has imposed an undue burden upon the general public by increasing costs on home mortgages, school-district construction loans, highway-construction loans, and city and municipal improvements. Higher interest rates have precipitated an alarming number of small-business bankruptcies, which reflects the Republican policy of making big business bigger.

The resulting tight-money squeeze demands a full-scale study of the Nation's monetary and credit policy. This is an ines-

capable constitutional duty of the Congress. In order to legislate wisely, Congress must be informed and there is no substitute for firsthand inquiry and observation.

Therefore be it,

Resolved, That we support House Resolution 85 authorizing the House Committee on Banking and Currency to conduct a full and complete investigation and study with respect to any matter or matters in the field of national monetary and credit policies and the financial structure.

Statement by the Honorable George Bell Timmerman, Jr., Governor of South Carolina, Concerning Federal Aid for School Construction, Prepared for the Subcommittee of the House Education and Labor Committee, House Office Building, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. DORN of South Carolina. Mr. Speaker, I commend to the House the following most excellent statement by Gov. George Bell Timmerman, Jr., of South Carolina, opposing Federal aid to education:

STATEMENT BY THE HONORABLE GEORGE BELL TIMMERMAN, JR., GOVERNOR OF SOUTH CAROLINA, CONCERNING FEDERAL AID FOR SCHOOL CONSTRUCTION, PREPARED FOR THE SUBCOMMITTEE OF THE HOUSE EDUCATION AND LABOR COMMITTEE, HOUSE OFFICE BUILDING, WASHINGTON, D. C.

Public education is recognized as one of the big problems in most, if not all, States. South Carolina is no exception.

For us the financial burden of public education is a peculiarly heavy one. We are 46th in the Nation in per capita income and second in the Nation in the percentage of schoolchildren. In other words, only 2 States have a lower per capita income and only 1 State has a higher percentage of schoolchildren. We must educate approximately 30 percent more children in proportion to population than the average State. And this 30 percent greater burden must be borne by 19 percent fewer adults.

Despite our disproportionately heavy educational burden, we in South Carolina are meeting our school needs.

Since 1951, South Carolina has allocated more than $170 million for the construction of approximately 8,000 new classrooms. These new classrooms are sufficient to accommodate 240,000 pupils or 44 percent of our total school enrollment. Of the total allocation, more than $89 million has been allocated for Negro school construction and approximately $81 million for white schools.

Our credit rating is double A and we have no difficulty in selling our bonds at the lowest marketable interest.

South Carolina, with its low per capita income, its small number of taxpayers, and its relatively high percentage of schoolchildren, has been able to accomplish this without Federal aid.

We in South Carolina are opposed to Federal aid for education. It is folly to think that Federal aid will not mean additional taxation.

It is inconceivable that the Federal Government would cut its vast expenditures for national defense, foreign aid, public-welfare assistance, and debt service which it cannot cut, in order to return money to the States for local school purposes.

The Federal Government might rely on deficit financing for a short time, but as the States become dependent upon the Central Government, additional heavy taxes will be imposed. Inevitably, the heavier burden will fall upon those least able to pay—the small farmer, the wage earner, and other low-income groups.

The effect of Federal taxation for State services is illustrated in the field of highway user taxes—taxes levied in the name of better roads. In reality, much of the revenue from this source goes to support other Federal programs. That is one of the reasons additional heavy Federal taxation has been proposed for Federal highway construction.

I cannot agree with the claim of an acute shortage of school buildings that necessitates Federal aid. South Carolina and some of the other States have tackled the problem head on and are fast alleviating their shortages.

In fact, more school buildings have been constructed in America within the last decade than during any other comparable period. We have more schoolhouses and better schoolhouses than any country in the world.

Some States may have failed to do all that they could do in the field of school construction, but that is a poor pretext for Federal aid. All needs can be met by the several States without aid from Washington.

The control of our public schools always has been in the States. It is a matter primarily of local concern.

The public schools of our State, and I am sure in most States, are an integral part of almost every family with children of school age.

I can conceive of no better way to destroy local control over our schools than for the schools to become financially dependent upon the Central Government.

Federal taxation for school purposes is the opening wedge for central control of our public school systems.

Central control of education inevitably will lead to thought control.

If the Federal Government can tell a State where and how to build a school, it can tell a State who can teach in that school, and it can tell a State what can be taught in that school.

One of the most important considerations is that the parent is the natural guardian of the child.

The parental right to determine what is best for the child is fundamental. It is a divine right. It is a basic law of nature that no man, no group of men, can successfully destroy. It finds expression among all living things.

The public school exists for one basic purpose. It is to help the parent in the education of the child.

Educational assistance is the only justification for taking the child from the home and placing him in the public school.

Nothing is more vital to the successful operation of our public schools than support on the community level—support of the parents.

The surest way to undermine the public school is to deny to the parent the right to a voice in the school which his child attends.

The surest way to deny that right is to permit the responsibility of operating the schools to be shifted from the community to the Federal level.

Without parental support the public school cannot survive.

Speech of Congressman Elmer J. Holland, Democrat, Pennsylvania, Given on March 18, 1957, Before the Members of Local 1272, United Steelworkers of America, on the 20th Anniversary of the Signing of the First Contract for Collective Bargaining Between the Union and the Steel Industry

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SPEECH OF CONGRESSMAN ELMER J. HOLLAND, DEMOCRAT, PENNSYLVANIA, GIVEN ON MARCH 18, 1957, BEFORE THE MEMBERS OF LOCAL 1272, UNITED STEELWORKERS OF AMERICA, ON THE 20TH ANNIVERSARY OF THE SIGNING OF THE FIRST CONTRACT FOR COLLECTIVE BARGAINING BETWEEN THE UNION AND THE STEEL INDUSTRY

Mr. Chairman, Mr. Abel, and distinguished guests and brothers and sisters of the labor movement. Mr. Jones, you have missed what I believe to be one of my most important assets in your introduction of me—and that is—I am a dues-paying member of local 1272 of the United Steelworkers of America. I am very proud of that fact and I am always glad to have others join with me in that pride.

Mr. Abel has, very ably, recalled to your attention many of the events that have occurred since the first steel contract was signed 20 years ago.

Now, I would like to take you back a little further—say 20 years before the birth of the United Steelworkers of America. That would be before the First World War. And, I would like to recall some things that happened right here on the South Side.

My parents settled here in the 16th ward when they came over from the old country and all of my brothers and sisters and I, there were nine of us, were born right here within a stone's throw of the mills. The first Hollands arrived about 90 years ago and we have seen many changes right here in our own front yard during those years. Of course, I wasn't around all 90 of them, but I have firsthand information on what occurred before I arrived on the scene.

I had started to work in the mills before World War I, but I must admit my period of employment with them was not too long, for I did not hesitate to criticize the working conditions and even went so far as to suggest that we workers organize a union. Need I add that when the reports of such a conversation got to the proper individuals, I received notice that my services were no longer needed.

That really wasn't anything new in our family, though.

My father, before me, had been a member of the Amalgamated Association of Iron, Steel, and Tin Workers, and had taken part in the now famous and historic Homestead Strike.

Because of his interest in the union and his participation in that strike, he was not only fired, but he was blacklisted, as were many of the union men of those days, and could not secure employment at any mill in the United States.

It is hard to believe today that such a condition ever existed in this country of ours, but it did, and this is how it worked.

The mills, in those days had on their payrolls agents of the Pinkerton Detective Agency and even if a man changed his name and moved to another town to get work, he was discovered and fired immediately upon discovery.

The families of these men suffered too. They were hunted and hounded like criminals if they dared ask for food or help.

The industrialists kept their mills running by using immigrant labor which they brought in. These poor individuals were shipped in with numbers on them. They could not read or speak or understand our language. All they knew was work, work, work.

Most of them came from the Balkan and Mediterranean countries. They knew nothing of our standard of living—they did not know the value of American money—they were assigned to beds in overcrowded rooming houses, and when they weren't sleeping from sheer exhaustion, they were working. And they worked for practically nothing.

Hundreds of them were killed in the mills or crippled and maimed for life.

Here on the South Side, when I was a child, it was a familiar sight to see the old horse-drawn wooden wagon careening up Carson Street to the hospital and back for another load of workers. It was called the butcher's wagon by the workers.

The company lawyer apparently had a "district office" in the hospital, for as the poor worker arrived at the hospital he was there with a paper to be signed—and Joe and Mike and Steve and John put their "x" on the line. When they recovered sufficiently to get out of the hospital and go back to work—then they found out they had signed a statement saying that "through their own negligence they had been injured and the mill was not responsible" and their job was gone.

On paydays you would trip over cripples at the 27th Street Gate for the only way they could get any money to live on was through begging from the more fortunate workers.

Back in those days you didn't have to be injured to lose a job. If the boss had a friend or a relative who needed work * * * you could be fired without cause and replaced without recourse.

In 1917 we went to war, the one that was being fought to "save the world for democracy."

We on the South Side contributed much in manpower to that war. Most of the families from this district had large families and many of the sons of these families went overseas. In fact we had a larger percentage than most communities, and most of us from the South Side, coming from poor families and working homes, had a few ideals that we were fighting for. Among them was that "we were going to make the world a better place in which to live."

Times were good at home, as they always are during a war.

Employment was high, wages were high, and living costs were higher. The workers actually were not making any more because the price of everything had gone up.

The war ended in 1918 and the boys started to come back.

They were happy with the thought that they had won the war, and the world would be better because of their victory.

The workers in the mills had seen steady work during the war years. They had seen millionaires made from their sweat and toil, and, they had decided it was time for them to organize and get better working conditions and a small share of the enormous profits the companies had secured.

They knew that once war orders ceased work would fall off, and jobs would be scarce. They decided they wanted some protection from the whims of the boss so that he could not fire them if he so desired.

In 1919 the Amalgamated Association of Iron, Steel, and Tin Workers started a campaign to try to organize the workers.

I had just returned home from France and was asked to come down to 27th and Carson Street and make a speech on the advantages of belonging to a union. I accepted and my father helped me get my speech ready.

You must realize, of course, that the company did not take this organizing campaign lying down. They had brought in coal and iron police, and thugs whom they had sworn in as deputy sheriffs, and these gentlemen kept people moving on the streets of the South Side. You were not allowed to stand around in groups and talk. If you did you could be jailed for loitering.

Meetings that were scheduled were broken up, even in private homes, and these paid thugs dragged men who attended them from their homes, beat them up, and you always landed in the South Side police station.

As I was on my way to make my speech I saw these hired thugs, with their tin badges, forcing everyone to move on.

I started to speak and paid hirelings from the mills appeared from all sides. They pushed and jostled anyone who might stop to listen.

I asked one, "What's the idea? I just returned from France from the war that was to make the world safe for democracy. Is this how I am to be welcomed home?"

One said, "Oh, fresh guy, are you?"

And since you all know my reputation for having such an even temper, you can imagine what happened next.

The fight was on, and I landed in jail.

I got out, of course—came back—and we had a repeat performance. The whole thing over again. Even another ride—another sojourn in jail.

It's hard to believe, I know—but I know it did happen and it was right here on Carson Street in 1919.

We failed in our attempt to organize the mills, and, once again, many men were blacklisted as they were when my father was a young man. Time had not changed any in the eyes of the industrialists.

Then came the roaring twenties.

The Charleston days—the speakeasy days—the days of the skyrocketing stock market. Fortunes were made overnight—cars were manufactured on assembly lines and Fords sprouted like toadstools after a rain.

The boom was on.

Then someone lowered the boom—1929, and the bottom fell out of everything.

Depression enveloped our land from coast to coast. It also enveloped the whole world in general.

People were desperate, families were starving, adults and children alike were ill clothed, ill housed, and ill fed.

The financial wizards of the world had—by their own greediness to get more and more and more—failed to see that if the average man didn't get enough money in wages, he could not buy what was being manufactured, and, if no one bought, there was no need to manufacture.

The little people were grabbing at anything that would give them food and shelter and clothes.

Banks had failed and life savings were lost.

Soup lines were everywhere.

Apples were sold on the corners.

Churches and private charity agencies tried to help, but the job was beyond them.

During those years Hitler took over in Germany and became their idol with his Nazi theories.

Mussolini moved in on Italy—and he got the trains running again. His Fascist theories were followed willingly.

Stalin and Lenin saved the peasants of Russia, so they thought—and their communistic theories were followed.

In America, we elected Roosevelt.

1933—when Roosevelt took office as President, the people of America would have followed in anything he had suggested—socialism, fascism, natizism, communism. They had nothing to lose—for they had nothing left.

We were fortunate though.

Roosevelt like out capitalistic system. He wanted to make it work, and to make it work he knew that all the people had to share in it, not just the few as had been the practice in the past.

He knew the workers and Labor in general had to be recognized as a component part of that system.

To assure Labor of its place in our economic system, Roosevelt—and a Democratic Congress—passed the Wagner National Labor Relations Act.

With that law on our books, Labor had the right to bargain collectively for the sale of its only product—labor.

We, of the South Side, remember well the day at the gates of the Jones & Laughlin Steel Corp., at 27th and Carson Streets—the same place I had attempted to speak from in 1919—when the campaign began to organize the workers into the Steel Workers Organizing Committee.

The Pennsylvania State Police were there.

They were there because a Democratic governor of the State of Pennsylvania, George Earle, had ordered them to protect—not the strike-breakers this time—but the organizers of the union.

The coal and iron police were there, too, but they were not permitted to touch anyone outside the mills.

Then a strange thing happened. For the first time in the history of any labor dispute—anywhere in the United States—a car drew up to the gates and out of this car stepped the governor of Pennsylvania.

I will always remember the words he spoke.

"You were brought here today," he said to the State police, "to avoid bloodshed and disorder. Above all, I want to warn you—you are not here to give protection to this mill in its effort to break the strike. These workers have the right to organize into a union of their choosing, and you are here to protect their rights."

A few days later, the Steel Workers' Organizing Committee was recognized as a bargaining unit for the Jones and Laughlin Steel Corporation.

Mr. Abel has told you the story from that date up to the present.

I must warn you, however, that to keep the gains you now have and for which these thousands of men before you fought to give you, you must not becme indifferent to what is happening around you.

I know, as well as you, that management has made many statements that they are not against unions—that they are willing to negotiate with your representatives. We have heard these many times.

But statements and actions are two different things.

We just have to look at the record of the 20 years Mr. Abel has covered.

I told you about the strike of 1937 when we first organized the steelworkers.

During the war years, World War II, that is, organized labor was loyal to our country.

Wages were permitted to be frozen, although the profits of the corporations were not.

After the war, the United Steelworkers asked for an adjustment of wages, and we got a 4-week strike in 1946 in order to get that adjustment.

In 1949 we asked that those who had spent their lives in this mill and made possible the profits the company had made be given

a pension. We got the pension after a 6-week strike.

In 1952 we asked for a wage adjustment and an improvement in fringe benefits. Again we got what we wanted—after another 6-week strike.

In 1956 we were fortunate, we were out only 1 day.

In 1956, last year, we had to go out on strike for 4 weeks in order to get our increases and benefits.

Management's statements that they are not against the union—and they are always willing to negotiate—are true apparently after they are forced to do so.

Incidentally, there is an interesting sidelight to our 1956 strike, and I think I should tell you why I believe it was a political strike.

In January of 1956 the Wall Street Journal, Business Week, and Newsweek magazines began to run articles pointing to the large stockpile of steel that had been accumulated. They predicted that on or about October 1 there would be a 30-percent layoff in the iron and steel industry.

Now, this was a presidential election year—and a layoff in October, right before election, would play havoc with the Republican chances to win the presidency in November.

It has been stated by a number of columnists that this strike, which we were forced into, should never have occurred—for, according to them, the steel companies were willing to grant the requests made by the steelworkers.

There was rumored to have been a meeting of top Republican politicians and leading industrialists—and it was decided there to put the blame on the union and force a strike for about 4 weeks.

While the strike was in progress, the companies could then get rid of the stockpiles and the mills could reopen with full employment and keep working right through election time.

You can't help but wonder if this rumored meeting didn't really take place, for that is exactly what happened.

Let me warn you, as your Congressman and a former State Senator, don't be taken in by the "honeyed words" of management—for their words and their actions do not coincide.

Management has learned they cannot defeat or destroy your unions by forcing you to strike.

So—they are turning to other methods.

They can defeat you and they can destroy your union by legislation—by taking a little each year until you have nothing left.

Propaganda, coming over my desk in Washington day after day, contains speeches made by anti-union industrialists. These speeches are printed and distributed by advertising companies that receive huge fees—and—its done for only one purpose—to weaken your union.

This sort of thing causes me to fear for your future.

They couldn't break you on the picket line—so now they will do it by law.

They have succeeded in getting 18 States to pass the so-called right-to-work law. This law was not passed to help the individual or the union, it was passed to destroy the union movement in America, State by State, and they now have 18 of the 48 States in their corner.

Many of us, in the union today, are not fully acquainted with the battles we were forced to fight in order to get what we have.

The working conditions we now enjoy are results of the fights the union waged in the past.

Vacations with pay.

Pensions in addition to your social security.

Holidays with pay.

Hospitalization, which assures your wife proper medical care at childbirth.

These are all benefits the union has fought for—for you.

Life insurance; 40-hour week; security of employment, so the boss can't replace you with one of his relatives just because he happens to be out of work.

If you had tried to discuss a grievance in the old days, you would have been fired for complaining to the boss.

Workmen's compensation protects you when you have been injured.

Unemployment compensation feeds you during a layoff.

And above all your union has given you dignity, as an individual, rather than just another number on the payroll list.

Our fight still goes on.

We cannot let down.

Today, you are working in a war economy. All of us pray for peace—but—do you realize what would happen to the economy if the Government suddenly stopped spending for defense?

Millions would be laid off in the change-over from wartime to peacetime production.

The productivity during the war did not just happen.

It was planned.

First—the brains of America were brought to Washington. Men representing labor, capital, management, and Government, sat around a table in Washington and worked out an answer to the question "What was needed to win the war?"

The military decided they needed thousands of planes, ships, submarines, tanks, guns, bombs, and all other weapons.

They didn't ask where the money for these was coming from—they were needed; we had to have them.

Plans were made to get this great productivity at once.

Mills, mines, factories, plants, all were ordered "full speed ahead."

Wheels turned day and night.

It was a must.

I know that many of you must have asked yourself this question: "Why is it the wheels of industry only turn 24 hours a day when they are making the weapons to kill, to lay waste, to destroy, and to bring sorrow to the world?"

And here is another question we all want answered: "Why can't this be done in peace as well as in war?"

These are the questions that you, as a member of your union, must help to answer.

In peacetime there are no stirring speeches made on winning a peace.

Everything goes back to the humdrum existence of "am I working tomorrow or next week?"

Government forgets about that great productivity they hammered at us during the war.

In peacetime they worry very little about having a job for every man to do. No rousing speeches come over our radios or TV about absenteeism or part-time work. It is the old story of layoffs.

The loss of jobs is shunted aside with expressions like this: "There are only between 2 and 3 million unemployed."

But if you are 1 of those 2 or 3 million, it is not so simple to you. You have house payments to meet, car payments to meet, grocery and meat bills to meet, youngsters to clothe—are you worried?

If 2 or 3 million were unemployed during wartime, our Government would move from top to bottom to place them in necessary jobs.

The greatest answer our Government can give to the people of the world in general—and the Communists in particular—is that we can have full employment in peace just as we did in war.

That kind of propaganda would be understood by workers all over the world.

How can it be done?

Just as easily in peacetime as it was in wartime.

Call back to Washington the brains of America—labor, management, capital, and government. Let them gather around that same table and plan to win the peace as they planned to win the war.

Let them determine how many jobs are needed to have full employment, and then start the wheels once more.

Let them find out what we need now, and the answer could easily be:

Houses are needed for our people.

Schools are needed to have adequate room for our children.

Surgical and medical hospitals are needed so that immediate attention can be given to our ill.

Mental institutions are badly needed so that our mentally ill, so long neglected, can be treated and cured and rehabilitated.

Roads are needed to relieve the present over-crowded conditions on our highways and provide safe means of transportation.

These are only a few of the many things that could be planned that could contribute to the winning of the peace.

You, as members of labor, should play a big part in demanding that this be done.

America is at the crossroads.

The Communists are saying to the world that America must have war to have prosperity.

We must prove otherwise.

Let us all, each and everyone of us, work for this new peacetime goal.

Let us prove to the world that we, who in war could keep the wheels of industry going 24 hours a day making the weapons of war, can again keep the wheels of industry going 24 hours a day making the necessities for a life worth living.

The United Steelworkers of America must and shall do their part.

Corn Belt Taking the Rap

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1957

Mr. SCHWENGEL. Mr. Speaker, in view of the failure of the House of Representatives to pass legislation for a corn program so far this year, I note with interest the editorial in the Des Moines (Iowa) Register of recent date which outlines the burden under which the corn-hog farmer operates with relation to the other segments of our agricultural economy. I commend it to the study of all my colleagues.

The editorial follows:

CORN BELT TAKING THE RAP

"Prospects for any new corn legislation this session were at low ebb," reported Charles Bailey, of our Washington bureau, after the defeat in the house of several proposals for changing the present acreage control and soil-bank laws.

For the first time in several years, city Congressmen of both parties joined in voting down plans for increasing corn-acreage allotments or expanding soil-bank benefits. The legislative maneuvering on farm bills this session has been so complex that many city representatives may have voted "no" out of sheer bewilderment. We couldn't blame them for that, and we hope this vote does not

reflect a lack of appreciation or sympathy for Corn Belt farmers' problems.

Feed grain and livestock producers are undergoing severe downward pressure on their incomes from a steady rise in output exceeding the rise in demand for their products. Prices decline more than enough to offset the bigger volume. This "built in" tendency for supply to increase faster than demand has been accelerated by the shifts of cotton and wheat farmers to livestock production.

The corn-livestock sector of agriculture is bearing the lion's share of the cost of adjustment to advancing farm technology.

Without any change in the Government programs affecting feed grains, we can expect a further growth in feed output which will mean more livestock later. Corn allotments are so low (and the price support has been reduced) that relatively few farmers are likely to comply with the allotments, except in severe drought areas. Few farmers, therefore, will be eligible to put land in the corn acreage reserve.

In short, the changes in the farm program this year have (1) lowered price supports for feed producers, (2) reduced the incentive to curtail output and (3) decreased the possibility of supplementary income through the soil bank.

It is getting late to do much about it, with corn planting only a little over a month away. But a substantial increase in soil bank payments would help.

Construction Loans to Veterans

SPEECH

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4602) to encourage new residential construction for veterans' housing in rural areas and small cities and towns by raising the maximum amount in which direct loans may be made from $10,000 to $12,000, to authorize advance financing commitments, to extend the direct loan program for veterans, and for other purposes.

Mr. AYRES. Mr. Chairman, will the gentleman yield?

Mr. MULTER. I yield to the gentleman from Ohio.

Mr. AYRES. Now I think we are getting down to the real crux of the issue. Are you going to put the Government in the lending business or are you going to let free enterprise do it? Are you going to increase the budget or are you going to cut it? I think the gentleman was a party to a resolution that was sent down to the President trying to get advice from the President as to where the budget should be cut. I can say to the gentleman if he does not want it increased $2 billion, he should withdraw the amendment. If he wants to put the Government in the lending business, he should make it $5 billion so that all the veterans can get loans.

Mr. MULTER. Mr. Chairman, if what the gentleman has said really had me in a box I would ask leave to withdraw the amendment. The fact of the matter is this amendment is a temporary measure to make $2 billion available only to June 30, 1958. It is less inflationary than any measure that has been sent up to us by the administration and which the Secretary of the Treasury has told us was not inflationary. It is a lot less inflationary than the billon dollars you voted a few days ago at the instance of the Secretary of the Treasury for FNMA.

If you are serious, if you have been serious since 1954, and I have before me the RECORD of March 24, 1954, where you were all protesting how anxious you were to help the veteran, how you were going to put money back into the veteran's mortgage market by keeping his interest down so he could buy a house at a reasonable price with reasonable financing, you must vote for this amendment. If you meant all that you will have to vote for this amendment. It is not the Democrats who are on the spot; it is my friends on the left side of the aisle.

If you really want to help the veterans this is the way to do it. You have over $7 billion in the veterans' reserve insurance fund. The amendment that was ruled out of order a little while ago required that that fund be used for this purpose. My amendment does not require it to be used for this purpose. If the Secretary of the Treasury does not want to add any more to the budget or does not want to increase the interest rate, he may use the veterans' money out of that fund for loans to veterans. Under this amendment he has the discretion to do that.

Mr. TEAGUE of Texas. Mr. Chairman, will the gentleman state exactly what his amendment does? Is it to end direct loans?

Mr. MULTER. This extends the direct loan program. This brings in another $2 billion to the direct loan program throughout the country so that the city boy and the farm boy, if he is a veteran, can come in and get his direct loan if he cannot secure it through private financing. It does not put the Government in the lending business in competition with private enterprise. The amendment simply says that if the veteran cannot get his loan from private sources at 4½ percent interest, he can apply to the Veterans' Administration and the Secretary shall make available to the Veterans' Administration up to $2 billion for that purpose until June 1958. If these big bankers mean what they say that the mortgage market is going to ease up and things are going to get easier and veterans will be able to get mortgages again, they need not fear this amendment. As soon as they come back into the market with their guaranteed mortgages, this program ceases. As long as they stay out of the mortgage market for veterans, the Veterans' Administration can say to the veteran: "Come in here. If you have a good house and you qualify under this program and you cannot get the money privately, the Government will lend it to you at 4½ percent interest."

This is the veterans' own money. It is the same money that is bringing the Government 2½ percent but which we will lend to the veteran at 4½ percent, earning for the veterans' reserve fund an additional 2 percent return.

I would like to see the program enacted with a provision that would provide that the veteran should not pay any more for his mortgage than the Government pays for borrowing money. But, I know you would not be able to get that kind of an amendment through, so I have taken a middle course. By these direct loans the veterans could get money at a fair interest rate.

Mr. SHEEHAN. Mr. Chairman, will the gentleman yield?

Mr. MULTER. I yield to the gentleman from Illinois.

Mr. SHEEHAN. Under the program the gentleman is proposing now, can any of his constituents in the city of Brooklyn get any money out of his program?

Mr. MULTER. Yes.

Mr. SHEEHAN. How would they go about it?

Mr. MULTER. All they need to do is come in and show that the veteran qualifies for a loan and he cannot get it from private industry; he cannot get it from a savings bank or insurance company, and he will get it from the Veterans' Administration. The same for your people in Chicago.

Mr. SHEEHAN. We cannot build a home in Chicago that a veteran would get a $13,000 mortgage on.

Mr. MULTER. But I covered that, too. My amendment increases the amount up to $20,000. He can do that, can he not?

Mr. SHEEHAN. That is right.

Mr. MULTER. He can do in in New York. The limit under this amendment is $20,000. This gives equal treatment to the city boy and to the farm boy, who are veterans.

Atomic Energy and Free Enterprise

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. McDONOUGH. Mr. Speaker, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD an article entitled "Atomic Energy and Freedom of Enterprise" by Prof. John D. Garwood, of Fort Hays Kansas State College. This article presents an excellent résumé of the development of atomic energy for peacetime use, its possibilities, the role of government in relation to private enterprise up to the present day, and the future cooperation which will be necessary between private enterprise and Government in the full development of atomic energy for peacetime uses, and should be of interest to all Members of Congress.

The article follows:

ATOMIC ENERGY AND FREEDOM OF ENTERPRISE

(By John D. Garwood, professor of economics, Fort Hays Kansas State College, Hays, Kans.)

INTRODUCTION

Let us suppose you had lived in 1900 and somehow were confronted with the problem of seeking a solution within 56 years to any of the following problems:

1. To build and maintain roads adequate for use of conveyances, their operators, and passengers.

2. To increase the average span of life by 30 years.

3. To convey instantly the sound of a voice speaking at one place to any other point or any number of points around the world.

4. To convey instantly the visual replica of an action, such as a presidential inauguration, to men and women in their living rooms all over America.

5. To develop a medical preventive against death from pneumonia.

6. To transport physically a person from Los Angeles to New York in less than 4 hours.

7. To build a horseless carriage of the qualities and capabilities described in the 1957 advertising folder of any automobile manufacturer.

Without much doubt you would have selected the first problem as the one easiest of solution. In fact, the other problems would have seemed fantastic and quite likely would have been rejected as figments of someone's wild imagination. Yet 57 years later which of these problems remains unsolved? What accounts for the 1957 automobile and other fantastic accomplishments? Government did not preempt these activities.[1]

A little more than a decade ago a new source of energy thrust itself with dramatic emphasis upon the world. Its political and economic ramifications are almost beyond comprehension. Nuclear fission may well become the chief source of industrial energy as well as offering numerous other benefits to mankind.

It would seem that we must now consider the role of the Government and private enterprise in developing peaceful uses of atomic energy. Some have expressed a belief that the decisions dealing with atomic power in industry, commerce, and in the military are too important to be left to the traditional frame of reference of a free competitive society. They postulate governmental direction at the helm. This at once poses a question as to whether such direction will maximize welfare in the categories indicated.

Our ideology is that of a freely competitive society. Traditionally, in our ideology the role of the government has been that of the maintenance of the rules of the game in which private initiative, private property, freedom of contract, the profit motive, and competition have been relied upon to maximize the private and public weal. Historically this kind of an economic system has been eminently successful in that it has provided its adherents with the good things of life, yet at the same time has afforded them a considerable measure of freedom and opportunity to exercise their talents.

The system has poured forth a myriad of new products at competitive prices. It has enabled new territories to be opened up with amazing rapidity. It has fashioned an economic colossus the like of which has not been duplicated anywhere else in the world. In a word, our society achieves its potential through a free-market mechanism.

In the field of energy man progressed from animal and human power to the use of coal, waterpower, oil, and electricity. Each step forward in the field of energy has increased man's command over his economic future.

AGE OF THE ATOM

In the area of atomic power it has been estimated that were complete fusion of a pound of uranium 235 to occur, the heat generated would be equivalent to that generated by 2½ million pounds of coal. This to the layman is Buck Rogers material. Incidentally, a pound of uranium 235 is about the size of an inch cube. In addition, there is the possibility of combining atoms which is the opposite of the fusion process.

[1] John C. Sparks, "If Men Were Free to Try," Foundation for Economic Education, Clippling of Note, No. 63; also printed in Reader's Digest, July 1954.

With our ever-increasing demand upon our energy sources it does not appear unlikely that, in the not too distant future, electricity produced from atom splitting may be competitive from a cost standpoint with electricity generated from the other energy sources. This frame of economic reference will be different from country to country.

Sir John Cockraft, director of the Atomic Energy Research Establishment at Harwell, England, noted that by 1975 the British Isles will obtain half of its total electricity from nuclear energy.

Further, the products of atomic materials are utilized in the fields of agriculture, food processing, medicine, industrial production, etc. Besides these direct applications of the atomic materials there are the indirect ramifications of this new source of power; i. e., education, legal services, sales services, waste disposal, insurance, investment, transportation, etc. In short, this new source of energy means investment, private or public, of billions of dollars annually.

All of this brings us to the question of public versus private ownership and/or control. From 1933–55 federally owned electrical generating capacity increased from several hundred thousand kilowatts to approximately 12 million kilowatts. Percentagewise, federally owned facilities have increased in the last 22 years from two-thirds of 1 percent to about 15 percent of the total.

THE GOVERNMENT AND THE ATOM

The military direction given our atomic development during the war years and in the decade following 1945 placed our Federal Government in a commanding position in the development of this giant of energy. In October 1945, President Truman sent a message to Congress requesting legislation "to fix a policy with respect to our existing plants, and to control all sources of atomic energy and all activities connected with its development and use in the United States."

This message resulted in the Atomic Energy Act of 1946. It is a matter of record that the executive branch of the Government had already developed a proposed bill. The act provided for a general advisory committee composed of scientists and technical experts, a military liaison committee, and a congressional Joint Committee on Atomic Energy composed of Members of both House and Senate.

Fissionable materials are owned exclusively by the Government, thus:

"The Commission as agent of and on behalf of the United States shall be the exclusive owner of all facilities for the production of fissionable material * * *. All right, title, and interest within or under the jurisdiction of the United States, in or to any fissionable material, now or hereafter produced, shall be the property of the Commission."

The policy of secrecy in the development of atomic devices has further solidified Government direction and influence in this field. Initially, and to this day, the development of atomic energy has been primarily governmentally directed and inspired.

Yet, it was through private industry that the Government program was first carried out in terms of plant construction, production, and research. As of April 1955, of the 116,000 persons employed by the Atomic Energy Commission, 110,000 persons were employed under private industry. This represents about 95 percent of the total.

To summarize, private industry from 1946–54 was prevented from developing peaceful uses of atomic energy because:

1. Military requirements were given priority on the technical know-how.

2. The Government owned the fissionable materials.

3. Security and secrecy regulations are Government costs; private venture capital does not like to incur these costs.

4. Atomic energy patents under the Atomic Energy Act of 1946 were retained in a Government-controlled pool.

5. The provisions of the act of 1946 were oriented toward Government monopoly, a position in keeping with the political party in power.

Changes in the executive branch of the Government and the appointment of Lewis L. Strauss as Chairman of the Atomic Energy Commission was indicative of change for an increased participation of industry in the development of atomic energy.

The Atomic Energy Act of 1954 revised the act of 1946. It gave emphasis to the peaceful uses of the atom in that industry was encouraged to participate in the development of nuclear power. The ownership question was not definitely settled, however. It now became possible to license private industry, or State or local power groups, to use nuclear materials in research and power reactors. Further, access to restricted data was permitted. The area in which a private firm could claim a patent was broadened. Security clearance was made less stringent. Nonsensitive information was to be made available.

All release of scientific and technical information concerning atomic information is governed by the Atomic Energy Commission. The decision of the Commission is final. In addition, the thorny problem of personnel security is under Commission jurisdiction. The law of 1946 requires an investigation by the FBI of all employees of the Commission and private industry connected with atomic research and production. Out of 503,810 persons investigated since 1947, only 494 persons or one-tenth of 1 percent have been denied the highest or Q clearance.

The field of research and development has taken place in Government-owned facilities; i. e., Oak Ridge National Laboratory, private or public educational institutions, and private or industrial research institutions. As of June 1955, 90 universities, colleges, and research institutions were doing physical science research.

The domestic information and education program of the Commission has resulted in two training schools, one at Oak Ridge Institute of Nuclear Studies which conducts intensive courses in the safe and efficient handling of radioisotopes, while the other, the Oak Ridge School of Reactor Technology, offers graduate study to private industry. The Commission also makes an effort to provide speakers and information for conferences, symposiums, conventions, and other gatherings.

Following the 1954 law, the Commission supplied certain technical information to industry. Some 2,000 Atomic Energy Commission declassified reports are now or soon will be available for purchase. Depositories for unclassified reports are kept in the Atomic Industrial Forum in New York, the John Crerar Library in Chicago, the Stanford Research Institute in Stanford, Calif., and at the Georgia Institute of Technology in Atlanta.

Special publications are distributed to libraries by the Commission. Appendix 6 of the 18th Semiannual Report of the Atomic Energy Commission lists these publications.

The atoms-for-peace program represents an attempt to export our atomic know-how as well as atomic materials. Apparently, it had its inception with President Eisenhower's speech to the United Nations, December 8, 1953. Thus, an International Conference on Peaceful Uses of Atomic Energy was held in Geneva, Switzerland, August 8–20, 1955. A United States built research reactor was shipped to Geneva and exhibited.

Technicians and students from other countries were also trained in nuclear science and 23 foreign doctors and surgeons toured United States medical installations.

During 1955 the United States negotiated bilateral agreements with 27 countries for the mutual exchange of information on peaceful uses of atomic energy and on construction and operation of research reactors.

Thus it becomes plain that the atoms-for-peace program looks first toward an exchange of information; secondly, technical instruction; and, lastly, aid in the construction of research reactors including the sale or lease of small amounts of uranium 235.

For the past 5 years the AEC has conducted a power reactor research program in terms of (1) choosing the best reactor type, (2) production of experimental reactors, (3) encouragement of study by private industry, and (4) encouragement of production and generation of full-scale central station reactors.

Experimental reactors have been constructed by Westinghouse at Shippingport, Pa., by the Sumner Sollit Co., Inc., at Argonne National Laboratory and at Oak Ridge, and at Santa Susana, Calif., by North American Aviation, Inc.

The Commission hopes to get private industry to construct and operate nuclear powerplants of greater capacity than the experimental plants. Thus, at the present time five major power demonstrator reactors are built or being built—the Nuclear Power Group in Illinois, the Yankee Atomic Electric Co. in Massachusetts, the Detroit Edison Co. group near Monroe, Mich., the Consumers Public Power Group in Columbus, Nebr., and one proposed in New York by the Atomic Power Development Associates Group. In addition, smaller reactors have been approved for Massachusetts, Florida, Ohio, Michigan, Alaska, and Minnesota.

In the field of new material exploration, the AEC has encouraged exploration and extraction of the uranium ores through the media of price. In addition, maps, research programs, and opening of the public land have facilitated the development of the uranium ore industry.

In the area of processing of nuclear materials the AEC has spent tremendous sums in separating the uranium atoms into uranium 235 and uranium 239. The investment in this type of plant is in the neighborhood of $6.6 billion.

Radioisotopes have been made available by the AEC for use in cancer research and therapy. Some have been sold and some have been made available without charge.

CONCLUSION

It must be obvious from the foregoing that the atomic-energy industry is not at present one where we may expect private industry to carry on alone. The Government is too intricately involved from the standpoint of military purposes to throw the gates open completely to free enterprise.

Louis H. Roddis, deputy director of the Reactor Development Division of the AEC, in speaking before the Ohio Conference on Peacetime Uses of Nuclear Energy in August 1956, noted that by 1970 25 million kilowatt-hours annually would be produced in nuclear powerplants in the United States.

He estimated that by 1975 the figure would top 80 million kilowatt-hours annually or about 20 percent of total American power production. One may well ask what part private industry will have in all of this.

The writer would call attention to the opening lines of the "If Men Were Free To Try" cited at the beginning. It is clear that we now have in our hands a source of energy which is capable of performing tasks of undreamed-of magnitude. Let us resolve to use it to the fullest extent.

In the past we have looked to private enterprise to provide us with our innovations and our production of goods and services. Let us no abandon our traditional and tried way of getting the job done.

We are heading in the right direction. Let us hope for a continuation of the program initiated in 1954–55 in which private industry has been given a larger share in atomic development.

Eventually we may hope for an evolution of the AEC from a body commanding our atomic development to a regulatory body whose functions are those of providing information and research, guardian of our nuclear stock of materials, setting safety standards, etc. It is in this manner that we may expect to see fullest use made of our new source of power.

A Commendation for Our Connecticut Colleague, Mr. Morano

EXTENSION OF REMARKS
OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1957

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a letter recently sent to the President of the United States by several members of a special subcommittee study mission to Guatamala.

The letter includes excerpts from editorial comment in one of several Guatamalan newspapers, all of which are generous in their praise of the work of the American congressional committee, and especially Representative ALBERT P. MORANO, of Connecticut's Fourth District:

COMMITTEE ON FOREIGN AFFAIRS,
March 14, 1957.

The PRESIDENT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: Recently a group from the House Foreign Affairs Committee completed a special study mission to Guatamala. In addition to ourselves, the mission included Congressman THOMAS S. GORDON, of Illinois, chairman of the Committee on Foreign Affairs; Congressman A. S. J. CARNAHAN, of Missouri; and Congressman ALBERT P. MORANO, of Connecticut, the third Republican member of the group.

Guatemala is a key country to hemispheric relations and it is essential that good relations with that country be constantly furthered. We are happy to have served with this group in the accomplishment of a successful mission.

In this connection, we wish to call to your attention the very special talent, skill, and personality possessed by our colleague, Congressman ALBERT P. MORANO. During a prior study mission on which we served in June 1955 to Costa Rica, Nicaragua, El Salvador, and Guatemala, Congressman MORANO addressed the legislative bodies of two of those countries, Nicaragua and El Salvador, in fluent Spanish, in the local idiom, and with a warmth that won the hearts of the people in those two countries. During our recent mission to Guatemala Congressman MORANO addressed the legislative body of that country and again received a standing ovation. Typical of the reaction was the following editorial from a Guatemalan newspaper:

"THE AMERICAN CONGRESSMEN

"This morning five members of the Foreign Affairs Committee of the United States House of Representatives were received in plenary session of the Guatemalan Congress, an event that is referred to in the news story appearing in another part of this edition. The gentlemen are invited guests of President Castillo Armas and it is the second time that they have come to our country. The first time was at the beginning of this regime, only a short time after the events which brought about the political change which proscribed the Communist rule in Guatemala. They observed then how the political and administrative affairs were being conducted by the movement which triumphed in July 1954; now they have returned to find out what has been done to bring about recovery, how programs are being developed, and how the democratic life again has established itself among our people.

"The aforementioned Congressmen—Messrs. MERROW, GORDON, MORANO, CHIPERFIELD, and CARNAHAN—were influential in the decision of the American Congress to grant $15 million in aid for the 1956-57 period. This lends a certain luster to their presence here now which they have so recognized and stated.

"Reinforcing the protocolary greetings of Mr. Carnahan, Mr. MORANO was highly expressive. He was so in every sense, but particularly in affirming the community of spiritual, or better said, ideological interests of the two nations; the United States of America and Guatemala. The speaker strongly stressed the force of this tie, describing it as the integration of a domain whose elements are coexistent and which cannot bo loosened without risking loss of the most precious of all possessions—liberty. Mr. MORANO said so in this phrase which must be highlighted before publishing in its entirety the brilliant speech which he delivered this morning before our Congress:

" 'The heartbeat of liberty here in Guatemala and the heartbeat of liberty in the United States are the same. If this heartbeat is interrupted in the United States, the same will happen in Guatemala and the same will occur inversely.'

"This conclusion in itself makes the address historical and it should receive attentive consideration by Guatemalans, apart from other merits found in the contents of the text, which follows." (Translation from Spanish, editorial in El Espectador, Guatemala City, Guatemala, February 14, 1957.)

Many United States officials, as well as local residents of the three countries whose legislative bodies Congressman MORANO addressed, have stated that Congressman MORANO has enhanced the prestige and standing of the United States in those countries and has increased the good will toward the United States to a remarkable degree. This has been accomplished not only by his fluent knowledge of Spanish, but by his profound understanding of Latin America, its people and its psychology, and by his ability to tell the story of the United States to the people of Latin America.

We know that you agree with us that good relations between the United States and our Latin American neighbors are vital to the peace and security of the hemisphere and to our own national interests. It is essential that there be made the best use of our resources, skill and manpower to the end that hemispheric relations may be constantly improved. In this effort we feel strongly that Congressman MORANO can render a great service to our Nation and to you in your efforts to improve United States-Latin American relations.

We feel certain that Congressman MORANO would be happy to serve on any special good will mission you may find necessary in our dealings with our Latin American neighbors.

We are happy to call these unusual qualifications of our Republican colleague, who is doing so much to implement your farsighted foreign policy programs, to your personal attention.

Because we believe this matter to be of such vital importance, we are addressing this letter to you for your personal comment, and

are sending a copy to the Secretary of State for his information.

A copy of the report of the special study mission to Guatemala is attached herewith.

Respectfully yours,

ROBERT B. CHIPERFIELD,
Ranking Minority Member, Committee on Foreign Affairs.
CHESTER E. MERROW.

Operation Mercy, 1957

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BROOKS of Texas. Mr. Speaker, a great number of people in our country are deeply concerned about the possibilities of a third world war fought with nuclear weapons—a war which might easily include every member of our families in forward combat areas.

Fortunately, I believe, there are also a number of our fellow-Americans who are taking time out from their own busy lives to train themselves to save lives in case of war or any other disaster. These unselfish citizens have worked long and hard under the guidance of local civil defense directors. Typical of these citizens, their civil defense directors, and the proficiency they have gained is Operation Mercy, 1957, which was recently carried out in Jefferson County, Tex.

Following is a report of the success of Operation Mercy from the Beaumont Journal of March 1, 1957, and I feel confident that after reading this report we all will want to congratulate Jefferson County Judge James A. Kirkland, Commissioners Dick Scurlock, T. B. Ellison, Lamar Lawson, and Ted R. Walker, Jefferson County Civil Defense Director George Gary and the citizens of southeast Texas who took part in this exercise:

CIVIL DEFENSE TEST TERMED SUCCESSFUL

(By Charles Culhane)

A highly realistic civil defense test exercise dubbed "Operation Mercy 1957" went off like clockwork at Hotel Dieu Thursday.

George Red Gary, county civil defense director, called the exercise very successful. Dr. T. E. Dodd, civil defense liaison officer of the State health department, commented that the drill was "one of the best I have ever witnessed."

The exercise was based on a simulated sabotage explosion in the basement of the hospital.

The drill began at 1:30 p. m. About 45 "casualties" were sprawled in a room off the basement corridor of the hospital.

Their faces and limbs were smeared with mercurochrome to simulate blood. Nurses and sisters from the hospital staff moved in to administer first aid and attach name tags to the "victims."

The marines and nurses carried the "casualties" on stretchers to a sorting center in the doctors' parking lot of the hospital.

The stretcher-borne "casualties" were placed across wooden sawhorses at the sorting center. "Victims" who needed surgery were carried to a shock center or minor and major surgery rooms set up in Rosary Hall.

At 2 p. m. the Magnolia Petroleum Co. helicopter landed on the hospital grounds near the bank of the turning basin and evacuated one of the "casualties" by air.

The helicopter was piloted by Travis Rhodes, Johnny Vaughan, mechanic for the plane, acted as the "casualty."

He was belted into an open-air stretcher rack on the right float of the plane and carried from the hospital to the Jefferson County Airport—a distance of almost 10 miles.

A complete communications system with walkie-talkies, auxiliary telephones, and a control center was set up in and around the hospital.

The communications setup was supervised by L. M. York, assistant fire chief at Orange. Boy Scouts acted as messengers between the different stations of the drill.

Police were posted at all entrances to the test area to divert unauthorized traffic away from the scene. The sheriff's department, the department of public safety, the city fire and water and Beaumont ambulance services departments also took part in the test.

The entire drill was under the direction of Mr. Gary and Sister Mary Wilfred of Hotel Dieu. Dr. Dale Hager was in charge of medical personnel.

More Tributes to the Late Harold Talbott

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. PATTERSON. Mr. Speaker and distinguished colleagues, Harold Talbott had many important unachieved ambitions at the time of his death, and we all know of his great service to this Nation.

There are 2 recent articles that appeared in the New York Journal American and the New York Times that, I believe, reflect an accurate understanding of Harold Talbott. Under unanimous consent, I insert these articles in the CONGRESSIONAL RECORD at this point.

[From the New York Times of March 5, 1957]

SAD CASUALTY OF THE PUBLIC SERVICE

(By Arthur Krock)

WASHINGTON, March 4.—"The Air Force has become a part of my body," said Harold E. Talbott to the Senate investigators, and the simple words are his true and fitting epitaph. From his interment that part survived; it has grown in strength and efficiency ever since it became one with him, and for that reason.

Talbott gave up his post as Secretary of the Air Force because he had made himself politically expendable. But to understand the circumstances, it is necessary to understand two underlying factors. One is the standard required by the public service, particularly exacting on citizens who have spent most of their lives in competitive business pursuits. The otner is the lifelong determination of the late Secretary of the Air Force to spread efficient practices throughout American industry.

The standard imposed on men drafted into Government from private life is not only exacting and sudden; it is new and strange to them. They find that fitness for and dedication to the task assigned—and Talbott had these in full measure—are only two of the requirements. The businessman brought into Government must at once develop another set of antennas, not only to alert him when a conflict of his private interest and that of the public may be posed, but also when critics and ill-wishers may merely contend it has been posed and deliberately resolved by him to his own material advantage.

Moreover, these recruits from business, especially when they deal with Government procurement in large amounts from manufacturers with whom they have had any degree of association, are more exposed than others to that well-known Washington treatment known as the smear. This is the product of politics, of personal envy, of false witness, of zealotry for doctrine, and it is usually fed into journalistic channels by anonymous sources. Only a very cautious man, with a sixth sense of the pitfalls of office, is fully equipped to deal with these hazards. And Talbott was neither cautious nor extrasensory in these respects.

EFFICIENCY HIS IDOL

His determination to spread the most efficient practices throughout industry was one of Talbott's most familiar chracteristics. That is an overriding reason why he became a partner in an efficiency engineering firm, and why, after he was Secretary of the Air Force, he continued the effort to persuade other businessmen they should employ the firm. His venture was profitable, like others to which he addressed his great administrative talent: Talbott would have been highly self-critical if he had backed a loser. But those who knew him well never doubted that he was led into the ethical error of promoting this firm from his Air Force office by his passion for this project, and by his conviction that improvement in American industry would grow with the growth of use of this service.

Such persons could thoroughly understand, therefore, how it was that Talbott saw his errors only in retrospect and sincerely believed they were merely errors of judgment and procedure, without reflecting a basic intention to use his office to advance his financial interests. They could understand also his unhappy dismay when he was told his exterior activities had injured the cause of the Air Force and for its sake he should resign. For he had devoted one part of his life to establishing aviation on a sound basis, another to tooling it for the defense of the United States, and a third to bestowing all possible might on military aviation and improving the condition of every individual who labored in that field. To that fact his predecessors and successors as Secretary of the Air Force, and thousands of others in Government and out, are emphatic witnesses.

The President and the Senate investigators were wholly aware of this dedication and this achievement, though not all of them understood the psychological elements in Talbott's wholly unwitting lapse from the rigid ethical standard the President set for his administration. In commenting to a news conference, after the Secretary testified before the committee, the President said that "somewhere" in the 1952 campaign he "tried to explain my conception of what a public servant owed to the Government, the people * * * that his actions had to be impeccable, both from the standpoint of law and the standpoint of ethics." And he had told the voters that "the new administration will not tolerate any deviation from an uncompromising code of honesty and ethics in the Government service."

On that Spartan rescript, though neither honesty nor law had been breached, one of the ablest and most devoted architects of our national security was separated from the Government.

But the important sections of the foundations and superstructures of the Air Force that Talbott built will long survive him. And not in even one tiny chink of the structure is there a grain of self-serving.

[From the New York Journal-American of March 13, 1957]

HAROLD TALBOTT—HIS SERVICE BUILT A BETTER AIR FORCE

(By Leslie Gould)

The desk calendar says this is the day we were to have lunched with Harold Talbott. The date was made a few days before he left for Florida, never to return.

While he cannot keep this date, we will, in a different way.

Harold Talbott became the central figure in a political controversy and was forced out of his office of Secretary of the Air Force.

This was unfortunate, for the issue, involving a conflict of interest, got the headlines and forgotten was the really great service he performed for his country.

Harold Talbott, without question, was the best Secretary the Air Force has had since it became a separate service. He was dedicated to the air service. The generals will tell you that. So will others down the line, including the enlisted personnel.

As he once said—the Air Force had become a part of him.

This was why having to leave his post was such a shock—a shock that must have hastened his end. He was given a rough time—not all of it deserved.

DEVOTED TO THE SERVICE

While his resignation probably had to come—he did err in judgment—anyone knowing Harold Talbott over the years also knew his personal devotion to the Air Force and his personal integrity.

This writer knew Talbott for many years, back to the days of the 1929 boom. His word was always good, and he never attempted to give you a bum steer or to mislead—even if it would have been in his personal interest to do so.

He also was a loyal friend, and being a loyal friend he would do anything to help a friend. Being the kind of person he was, he was aggressive about it. That was one thing that made it so hard for him in his time of trouble—some of his friends might have been a little more aggressively loyal to him.

EARLY CHRYSLER BACKER

His interest in aviation goes back to the days of the First World War. He headed the Dayton Wright Airplane Co. in 1916 and during the war was a major in the production organization of the Army Air Force. He was one of the early backers of Walter Chrysler, when he developed the motorcar company that bears his name. He was a director of that for many years and also served as board chairman of North American Aviation. Another major interest was Electric Auto-Lite.

In politics he was one of the biggest money raisers for General Eisenhower, and before that for Governor Dewey and Wendell Willkie.

His main interest was aviation and he was named Secretary by President Eisenhower. He played a major role in furthering the cause of the air service and one of his big achievements was the founding of the separate Air Force Academy.

Nothing can cloud the real contribution Harold Talbott made to his country through the Air Force—which is stronger and more efficient today because of him.

Taxpayers Should Rebel Against Reckless Spending

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, John S. Knight, publisher of the Chicago Daily News and several other metropolitan newspapers, is an outstanding journalist. On last Saturday there appeared in the Chicago Daily News an editorial written by Mr. Knight entitled "The Editor's Notebook."

It sums up the attitude of the American people toward this matter of reckless spending on the part of our Government. Under leave to extend my remarks, I am including the editorial in question.

THE EDITOR'S NOTEBOOK

(By John S. Knight)

TAXPAYERS SHOULD REBEL AGAINST RECKLESS SPENDING

The news these days is usually distressing, but never dull.

One item that caught my attention last week was a United Press story from Washington which said that President Eisenhower plans to ask Congress for a special foreign aid fund of around $400 million for emergency projects.

It seems, according to the United Press, that although foreign aid spending ran at the rate of $7.9 billion for the fiscal year of 1956, "the administration faces some possible embarrassment because it is low on cash at a time when Poland is urgently seeking American help."

In addition, the UP says the President will ask Congress to drop the requirement that around 80 percent of the administration's disbursements should be made through loans.

To replace this stipulation, the President will request a generalized requirement that the administration distribute as much as it can in the form of loans.

Now what this all means is that our Government, instead of gradually curtailing foreign aid, is planning an even bigger spending spree.

And the administration would like to get rid of the irksome restrictions imposed by Congress on the theory that it is impossible to predict what the need may be.

FOREIGN AID GROWS INTO PERMANENT DOLE

It would seem to me that Congress should view this latest request with a fishy eye.

By July of this year, the American people will have forked up $60 billion in foreign assistance. No one begrudged the aid given to rehabilitate war-worn Europe, even though the administration of that aid was deplorably inefficient and often used for highly questionable projects.

When the Marshall plan was born in 1947, it was generally accepted as an emergency measure.

In fact, representations were freely made that within 4 or 5 years, this assistance could be safely terminated as Europe's economy was restored to a sound basis.

But, following the Marshall plan expenditures of more than $11 billion, the Mutual Security Administration was organized to carry on with foreign aid.

When the Republicans came into power in 1953, MSA became the Foreign Operations Administration, and, later in 1955, it was rechristened the International Cooperation Administration.

By this time, foreign assistance was no longer in the emergency category, but had become a permanent function of the United States Government.

THE FALSE PREMISE: DOLLARS BUY FRIENDS

What began as a compassionate effort to aid our friends and allies in Europe is now a planned year-by-year arm of our foreign policy.

It springs from the over simplified premise that, in the war against communism, you can buy friends with American dollars.

This was shown recently when Howard Pyle, a presidential assistant in the White House, defended the administration's foreign spending record with these words:

"I would rather see our money waging peace on the world's economic battlefields than our sons waging war on bloody battlefields."

This is the loose type of rationalization usually heard from the apologists for unlimited foreign aid.

If the question were really this simple, there would be few objections to the Government's program. But, in addition to the $200 million Congress has just authorized for the Middle East, our sons are committed under the Eisenhower doctrine to "wage war on the bloody battlefields" of that area, should any country seek our help in warding off Russian aggression.

Moreover, as Governor Pyle undoubtedly knows, the United States is also obligated to defend no less than 42 other nations.

So we do not have, as Pyle implies, a choice between "economic battlefields" and "bloody battlefields."

Rather, our situation is that we are actually in a position where Russia can trigger trouble at a time of her own choosing.

AFRICA ALSO HUNGERS FOR AMERICAN HANDOUTS

Vice President NIXON'S good-will trip to Africa may open up a new area of foreign spending. To keep our readers adequately informed, Peter Lisagor of the Chicago Daily News Foreign Service accompanied the Vice President and reports that American prestige currently runs high in Africa.

"But," says Lisagor, "it would be a mistake to imply that Africa can be taken for granted in the United States, or that friendship for America is without its price."

"The plain fact is that the bite has been put on NIXON, wherever he has gone, for American aid, economic and military in most cases. * * * If American aid should not be forthcoming in countries now counting on it, the cheers NIXON has heard as a representative of Uncle Sam could quickly turn into jeers."

At present, Lisagor thinks this would be an unlikely possibility because "the amounts contemplated are modest by the usual aid standards."

But the question is: How long will they stay modest?

Based upon the record, you are entitled to your own guess.

LUXURY BUDGET IGNORES GIGANTIC PUBLIC DEBT

One day this country will have to regain its perspective.

The Federal debit is now $276 billion. According to Senator HARRY BYRD, of Virginia, the contingent liabilities, by guaranties of various Federal borrowing programs, total $260 billion.

Yet the new $71.8 billion budget contains 13 additional State and local grants, making 67 in all.

It also creates 31,500 new civilian jobs. The major increases are not in defense, but in domestic-civilian expenditures.

As BYRD said in a letter to Percival F. Brundage, Director of the Budget, "This

is a luxury budget, padded with increased spending all down the line."

But, instead of facing the economic facts, we plunge blindly ahead with greater expenditures at home and constantly enlarge our commitments abroad.

A taxpayer today, with a wife and two children, pays 20 cents out of every dollar of a $10,000 income for Federal, State and local taxes.

And taxes keep going up.

ONLY PEOPLE CAN CURB HEEDLESS SPENDING SPREE

It is time the people rose in protest against the scattering of their dollars around the globe.

No one else will do it from them.

Business enjoys Government contracts, labor leaders favor all spending programs, former United States officials and politicians get fat fees from abroad to promote foreign aid, bankers enjoy Government deposits.

The planners and the spenders are running wild in oversized, self-perpetuating agencies. Key people in foreign aid often hold jobs for which they have no background of experience.

Even Vice President NIXON commented on the cornball diplomats he found in Africa. In one city, the consular and information staffs totaled 100 people. NIXON observed that a third as many might do a better job.

In Iran, deep in the mountain canyons, the United States has spent $3,500,000 for an uncompleted road hacked out of the mountainside and tunneled through solid rock. It leads to a dam and power project that isn't there.

There must be a cure to this nonsense.

But it all seems pretty hopeless.

I have just read that the Department of Health, Education, and Welfare is asking Congress for $228,000 to teach the people of our 48 States how to fish.

Polish National Communism: A Myth

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. FLOOD. Mr. Speaker, last autumn a political change, only superficial in character, took place in Poland which has an important bearing upon the welfare of the Polish people and the status of Polish-American diplomatic relations. A new Communist Government came into power, claiming to be an advocate of "national" communism. This government is now in the process of negotiating an agreement for American economic aid.

Americans should have a clear understanding of this new so-called national Communist Government in Poland. In the first place, it is still a Communist regime, guided by the same body of thought of other Communist regimes throughout the world. Claims to "national" communism are in themselves contradictory because communism by theory and practice is a worldwide antidemocratic, antinational conspiracy dedicated to the ignoble end of destroying man's natural right to freedom.

The new regime in Warsaw has appealed to a concept that is dear to the heart of every Pole; that concept is, patriotism and love of country. Such is the only claim of this refime to popularity.

And what is the basis of this claim?

What is the justification for the appeal to Polish patriotism?

It is fear: Fear inspired by the belief that if the Polish people do not accept their "nationalist" regime, and if they seek to overthrow it and establish a genuine democracy as we know they do, Soviet Russia would intervene and crush the Polish nation in a bloodbath of war and terror.

Thus, the heart of the matter is this: The Polish people are compelled to accept their masters who have but one fundamental objective in their policies and that is the preservation of communism in Poland.

America is, therefore, faced with a very delicate situation.

What are we to do?

The dangers are great; the siutation is full of uncertainties.

Nonetheless, we must act. There is a natural humanitarian instinct within us as a nation which compels us to do whatever we can to alleviate the terrible economic conditions of the Polish people. We must respond to this instinct, for the interest of the Polish people—and not their Communist oppressors whether they be nationalist or Stalinist—is a matter of great concern for us.

Aid the Polish people we must, but it must be done with great caution. We must make it clear that we do not seek to strengthen the regime and perpetuate communism in Poland, but that we are aiding the Polish people, doing only what we can to give them hope for the future.

Nor do we want our aid to be an occasion for the terrible retribution that befell Hungary. It is not our aim to provoke Russia. We want no military alliance with Poland. We desire only to aid the Polish people.

Such aid agreements that are concluded must stipulate, however, that the United States has the right to observe the distribution of the aid, seeing that it is placed where it will do the people the most good. Safeguards should be a key stipulation in whatever agreement is finally concluded.

When this important question is solved, then our attention should be turned to such issues as the danger posed by Polish consulates in America being used again as propaganda centers; the inequity of exchange in currency which is so unrealistic in relation to the true economic values; religious freedom in Poland; and the question of cultural exchange and travel in Poland on both of which I hold many reservations at this time.

Our position vis-a-vis Poland should be clear to everyone. The Polish nationalist regime does not deserve our sanction any more than other Communist regimes do. What does deserve our blessings—indeed our everlasting blessings—are the people of Poland. It is their interest, their welfare, their future which concerns us, and whatever is done by way of aid to Poland should be done solely for them.

A Battle Lost but a War To Be Won

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BEAMER. Mr. Speaker, a sad news item has come to my attention from the Burlington (Vt.) Free Press of March 16, 1957. Under unanimous consent, I include the attached article in the Appendix of the RECORD.

I have not met Mr. Simpson but I have had considerable correspondence with him and with his friends. Mr. Simpson is a State employee in Vermont, and he was charged by the Civil Service Commission to be in violation of that portion of the Hatch Act that pertained to State employees. Why? Merely because he wrote a letter for publication stating that he thought that Mr. Taft would make a good candidate for President. This letter was written prior to the 1952 convention.

This is an example of the long arm of the Federal Government reaching into the activities of the State government. If this principle is permitted to continue, it will mean that all of the authority will be centered in a strong Federal Government and the local and State governments will be forced to be subservient to Federal power.

Mr. Simpson is representative of many other State employees of both political parties who rightfully feel that they should be entitled to an expression of their political choice and their political convictions. This is the American way, and Mr. Simpson may well become a symbol of a battle lost but a war that will be won.

I introduced H. R. 3084 in the 84th Congress which passed the House but was stymied in the Senate. I have reintroduced the same bill, H. R. 558, which would amend the Hatch Act and exempt the State employees from its provisions.

The above-mentioned article follows:

A 4-year battle between the State of Vermont and the Federal Government over charges of violations of the Hatch Act by W. Arthur Simpson, social welfare commissioner, ended in United States District Court in Burlington yesterday.

Simpson and the State pulled down the flag of resistance with the claim, "We may have lost the battle but we have won the war."

Attorneys for Simpson and the State filed a stipulation calling for dismissal of their appeal of a United States Civil Service Commission finding that Simpson violated the Hatch Act by engaging in political activities.

The veteran State office holder and Lyndonville farmer was charged March 12, 1953, with violating the Hatch Act by running for office while a member of the Old Age Assistance Commission in Vermont, by making speeches at a Republican State convention while serving as welfare commissioner and by writing a letter for publication urging the election of the late Senator Robert A. Taft for President.

The commission ruled against Simpson in November, 1954, saying his political activity "warrants his removal from office."

The commission told the State that unless it discharged Simpson, it would lose about $11,000 in Federal grants.

But the State board of social welfare balked and won the backing of the executive and Legislature.

Former Attorney General F. Elliott Barber, Jr., was named a special counsel to the State and an appeal was filed in Federal court.

CASE CAN'T BE REOPENED

Yesterday's action by Simpson and the State amounted to a withdrawal of their attempt to reopen the case. Their petition to discontinue the legal battle was granted by Judge Ernest W. Gibson.

The appeal was dismissed "with prejudice," meaning it cannot be brought again.

Simpson said the action was taken because "we won most all of our points and established the fact it was a constitutional right to write a letter to the editor."

He pointed out that the Civil Service Commission has since changed its regulations to permit such activity.

The $11,000 is simply a bookkeeping item, he said. It will not cost the State a cent unless "at some far distant time the Federal Government ceases to give grants in aid. Then there would have to be a settlement."

The Commissioner, who has not denied his political activities but who insisted they did not constitute Hatch Act violations, noted bills have been introduced in the United States Senate and House of Representatives to exempt other than Federal employees from provisions of the Hatch Act.

A bill to accomplish this passed the House unanimously last year but was not acted on by the upper Chamber.

STATE NOT AFFECTED

Simpson, his personal attorney, Fletcher Joslin, of Montpelier, and Barber indicated they felt the State had little to gain by continuing the fight "inasmuch as State operations had not been affected by the United States Commission ruling."

Gibson's order in October 1955, that the Commission produce more evidence to support its charges against Simpson if there was to be a ruling from his court was also cited as a victory for Simpson and the State.

The welfare chief yesterday also reiterated his contention that he had had assurances under Federal Security Administration rules he was exempt from provisions of the Hatch Act.

However, the matter appeared academic.

Simpson, the State and the Federal Government, through its failure to follow Gibson's directive for new evidence to support its charges, seemed willing to bury the hatchet in a grave marked only by the technical wording of a "stipulation dismissing an action with prejudice."

Briton's Faith in United States Is Shaken as Result of Censure on Egypt

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1957

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Britons' Faith in United States Is Shaken as Result of Censure on Egypt," by Drew Middleton, from the New York Times, Wednesday, March 13, 1957:

BRITONS' FAITH IN UNITED STATES IS SHAKEN AS RESULT OF CENSURE ON EGYPT—FEELING IS WIDESPREAD THAT WASHINGTON LET THEM DOWN—PRESSURE ON ISRAEL IN U. N. IS CALLED "BULLYING WRONG MAN"

(By Drew Middleton)

LONDON, March 12.—A loss of confidence in the Government of the United States, its leaders, its policies, and its most solemn pronouncements, is the most serious casualty in Britain of the international events of the last 4 months.

United States censure of Britain and France during the Suez crisis alienated a section of the population whose members are usually friends and defenders of the United States in Britain.

The Washington administration's handling of the dispute between Israel and the United Nations over the former's withdrawal from the Gaza Strip and the Gulf of Aqaba aroused the hot antagonism of those who had approved the United States position on Suez, including prominent members of the Labor Party.

The net result is that Labor voters, usually critical of United States policy, are more critical than ever. And the Conservative Party is increasingly hostile in both Parliament and the country toward United States policy.

Not once in more than a month of travel and discussion did this correspondent hear a Briton support the United States administration over Suez or Israel.

People felt they had been let down. They thought the United States action of voting with the Soviet Union in the United Nations against Britain mocked a decade of fine talk about the transatlantic alliance. This, they kept repeating, they would not forget.

BULLYING WRONG MAN

To people in pubs, factory canteens and trains the Eisenhower Doctrine for the Middle East seemed to be an American attempt to do in the Middle East what President Eisenhower had censured Britain for doing. United States pressure on Israel over the withdrawal was interpreted as "bullying the wrong man."

"If [Secretary of State] Dulles is so smart," a Staffordshire man said, "why doesn't he start bullying Nasser? He's the bloke that started all this, not the Israelis."

Such comments may be narrow, ill-informed and emotional, but they are ubiquitous. The alliance between the United States and Britain may be convalescent in Parliament; it is still mighty sick in the country.

One of the most important policymakers saw an encouraging side to the deterioration of relations, however.

"It would be a good thing, good for Britain and good for the United States, if from now on we look at the alliance more realistically," he said. "Emotion is a bad guide for policymaking and there has been too much emotion in all this 'hands across the sea' business. Naturally, neither of us will 'go it alone.' But a little more independence of the United States will encourage us to be more flexible and adventurous in foreign policy."

The average Briton's attitude toward the rest of the world clearly expresses that confidence in himself and his country's future that, in the circumstances, was one of the most important discoveries of this inquiry.

DECADES OF DIFFICULTIES

Nearly two decades of political crisis, war and economic difficulties have not appreciably weakened that strain of assurance, touched with condescending superiority, that has helped to make the British highly successful and heartily disliked in the past.

Paradoxically, there is little anti-Americanism directed at a visitor. The American traveler meets a ready welcome, keen interest and warm hospitality. He also is subjected to sharp questioning and a real desire for information.

One questioner wanted to know if President Eisenhower really owned "thousands of acres" of oil lands. But in general the questions were intelligent.

In Stourbridge in the Midlands a man wanted to know the prospects for changing the filibuster rule in the United States Senate. In Cardiff, Wales, an accountant asked about the powers of the National Security Council.

There is a danger that suspicion of the United States Government will spread to suspicion of the American people, of the Atlantic Alliance, of the United Nations and ultimately of all international agreements. The present strong currents of nationalism have their undercurrents of isolationism and neutrality.

"I'm fed up with these treaties and such," was a typical comment.

Criticism of the United States Government is phenomenal in that it includes all classes and political parties. In Newcastle a visitor was reminded that "the workers" had always suspected American capitalism. The era of Senator JOSEPH R. MCCARTHY, of course, left its scars on young intellectuals of both political parties.

British opinion of the United States in these circles never has recovered from the shock occasioned by the manner in which Senator MCCARTHY rode roughshod over American liberties.

The reporting of MCCARTHY'S influence between 1952 and 1956 may have been slightly exaggerated in British newspapers and weeklies but no one can exaggerate the harm he did to the reputation of the United States as the champion of human freedom.

The Left saw Senator MCCARTHY as the standard bearer of an emerging American fascism. The Right saw him as an isolationist who would break United States commitments overseas. Both factions united in condemning American hesitancy in dealing with him.

CONSERVATIVES JOIN CRITICS

Conservative criticism has emerged into the open since the Sues crisis.

"What in heaven's name did you think we were?" a retired officer asked. "A lot of pet dogs who'd sit up and beg when Mr. Dulles spoke?"

He, and many like him, were as worried by what they considered the Washington administration's inability to understand the British approach to the Middle East as by its actions after the intervention.

The United States censure shocked even some who were most critical of the British Government's intervention in Egypt. The trans-Atlantic alliance may have been overvalued in this country. But to the British an alliance is—or rather was—an alliance.

"Possibly you didn't see the need for it (intervention)," an actuary said in Scotland, "but surely there was no reason to turn on us and to vote with the Russians against us. Man, that made nonsense of all your President and others have said about the alliance. It's like a marriage; it's valid even when things aren't going your way."

A more extreme view was put by a mechanic in Stafford.

"All we are to the Americans is an aircraft carrier," he said. "As long as you can use our airfields and do the leading, everything's fine. But when we do something on our own, you come all over religious on us. You'd move damned quick if someone grabbed your Panama Canal."

ATTACK CENTERS ON DULLES

Rightly or wrongly, Secretary of State Dulles has become the focus of criticism of the United States Government. But recently this criticism has touched President Eisenhower, long the most popular American in these islands.

In many cases a visitor finds that criticism is so violent, so unreasoning that past contributions by Mr. Dulles have been forgotten. In the north, especially in Durham and Newcastle, many persons were convinced that Sir Anthony Eden did not resign as Prime Minister because of ill health but had been removed as a sacrifice to jealous gods in the United States State Department.

Discussion of the Washington administration's plan for the Middle East almost invariably produced the charge of hypocrisy. Labor voters, torn between party allegiance and a strong dislike of the Egyptians and President Gamal Abdel Nasser, asked how they could approve the Americans' doing something that had been the basis for criticism of the Eden government by their leaders and the United States Government.

"They must have had blinkers on over there if they didn't see that the 'wogs' (Egyptians) were getting guns from the Russians," a farmer said in Bristol. "That's what Eden was telling them all year. First you vote with the Russians against us and then you turn around and say the Russians ought to get out of the Middle East and you should go in."

To which a physician added: "I was against the Government because I thought its course would lead straight to war. How can I support the American line?"

Beyond the present and perhaps ephemeral animosity toward the United States Government there is a hard-headed attitude toward the United States. Britain is one of the few countries in Europe in which strangers do not buttonhole an American to tell him how much they would like to live in the United States.

Britons are interested in the United States. They admire and copy American techniques in industry and living. They are at times envious and jealous, although, on the whole, power has been surrendered with remarkable grace.

But there is little enthusiasm for the traditions and promise of United States democracy and free enterprise. The starving cotton workers of Lancashire cheered the liberal principles of President Lincoln during the Civil War. Today the traveler frequently senses that the United States means little more than big shiny cars, gadgets, and the half-real world of Hollywood.

Profound distrust of capitalism may be one reason. The British workers have never learned, nor have their own leaders explained to them, what modern capitalism in the United States means in terms of a worker's life.

The present increase in the emigration of skilled workers worries Government officials here who know that the proportion of workers in the total population is steadily decreasing. But it did not appear to worry particularly those with whom this correspondent talked in a month of travel in Britain.

EMIGRATION NOT NEW

Emigration is not new. A minister remarked recently that there are six times as many Scotsmen around the world as there are in Scotland.

"We've always needed brains and skills but so has the Commonwealth," a lawyer said. "People have been getting fed up and leaving for hundreds of years. We'll manage."

The lawyer looked around the room and said hurriedly and rather ashamedly: "You know we may not have America's resources, but we've got character and intelligence. They count."

The Mail Should Pay Its Way

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. HOSMER. Mr. Speaker, editorial columnist Larry Collines, Sr., of the Long Beach Independent newspaper recently set forth his thought with respects to the proposition that the mail should pay its way. Since the matter of postal rate increases is expected to be before the Congress in the near future, the views he sets forth are pertinent to the record. They are as follows:

If the cost of mailing a first-class letter were increased to 5 cents it would wipe out the $500 million annual deficit of the post office. That would be putting that great institution on a pay-its-way basis. It would cost the average family very little more, because they do not mail many letters. But it would be costly to many business concerns who use the mails for sending out first-class mail. But before the 2-cent-a-stamp increase is put in effect, careful consideration should be given to a major increase in second-class mailing.

Under second-class mailing privileges many newspapers and magazines are subsidized to the extent of millions of dollars annually. Some individual magazines mail their products at millions of dollars lower rates than it costs the post officer to handle. That means those individual magazines and their subscribers are subsidized by the taxes paid by all the people. This also applies to newspapers with large mail subscriptions. It is apparent the strongest opposition to an overall increase in postal rates comes from these interests.

The post office system is just about the most important service organization in this country. It reaches into every home. In its early days the exeremely low rates for publications were set by Congress as a means of getting information to all the people as cheapiy and quickly as possible. It provided that newspapers and magazines would be distributed at lower rates than average costs because that was the people's only means for getting information.

That condition does not prevail today. Radio, television, and fast transportation bring the people in touch with world and domestic affairs almost as quickly as they happen. Advertisers pay a large share of the cost of publications. It should no longer be necessary to subsidize them. If the people want them badly enough they will pay the small difference in postal rates to insure their delivery. In such cases it is unreasonable to ask others to pay part of the cost of that subscription through taxes which go to make up the post office deficit.

We hear businessmen say postal rates will cost them more money, which they oppose. We hear the same men loudly opposing subsidies to the farmers. It makes a difference "whose ox is gored." But to those who believe government services should pay their own way wherever possible, we urge them to let their Congressman and Senator know they favor increasing postal rates to accomplish that purpose.

Another newspaperman, Col. C. S. Smith, publisher of the Herald-American newspapers in the Los Angeles County area, also has expressed to me similar thoughts with particular reference to so-called junk mail. The telegram I received from him reads as follows:

Concerning pending legislation regarding the Post Office Department. A large portion of the mail is now what we call junk mail or advertising matter which is mailed at greatly reduced rates addressed only to "occupant." This rate is lower than the distribution rate using the cheapest kind of distributors therefore we are sure the Post Office Department is losing vast sums on this class of mail. Nearly all of this mail is in direct competition to established newspapers and established merchants. We cannot see why the Post Office Department wishes to subsidize this class of business. Perhaps if this junk mail at vastly reduced rates of 1½ cents each were discontinued the first-class mail rate would not have to be raised as much as now suggested. Urgently request you consider this matter fully before raising first-class rates or accepting another multi-million-dollar deficit in post office operation.

Publisher, Herald American Newspapers, Compton, Calif.

Construction Loans to Veterans

SPEECH
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4602) to encourage new residential construction for veterans' housing in rural areas and small cities and towns by raising the maximum amount in which direct loans may be made from $10,000 to $12,500, to authorize advance financing commitments, to extend the direct loan program for veterans, and for other purposes.

Mr. MASON. Mr. Chairman, will the gentleman yield?

Mr. MULTER. I yield to the gentleman from Illinois.

Mr. MASON. I just want this time to serve notice on the committee that there will be no future extensions of time.

Mr. MULTER. Mr. Chairman, this amendment, I think, would accomplish the purpose of making more money available for veterans loans. It is the subject matter of a bill which I introduced, together with the gentleman from New York [Mr. KEOGH], in the last session. It is H. R. 804 in this session. It provides, in effect, tax exemption of the interest received from loans to veterans, provided the interest rate on those loans does not exceed 3½ percent.

By this simple enactment, the veteran could get a 3½ percent loan and the lender could get a net return to him of 3½ percent less the cost of placing and servicing the loan. Now, they tell me, and I think it is the fact, that it costs about one-half percent to place, process, and service a veterans mortgage loan. That means they would have 3 percent free of taxation on every mortgage of this kind that they made to veterans. Now, there is nothing mandatory about the provision. I do not say the lender or the bank must loan at 3½ percent, but I say if they do extend themselves to this extent and help the veterans of this country, giving them a low interest rate, then

they get a tax exemption on the return of their interest on these loans, and these loans only.

Mr. Chairman, I urge the enactment of this amendment.

Segregation and "Surrender"

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1957

Mr. ABBITT. Mr. Speaker, there is a gradual movement in this country toward Federal control of all activities. Many leaders are adopting a so-called middle-of-the-road philosophy. The bartering of principle is a dangerous business. In making concessions and compromises, principle is lost and the rights of the people diminish.

If the Supreme Court decision of May 17, 1954, is allowed to stand, the school system of our State will be wrecked; the rights of our people mutilated; and the sovereignty of our State desecrated. Somewhere along the line it becomes necessary to meet the issue head-on.

Many politicians, in their zeal to secure political preferment, are willing to turn their backs on constitutional government, the sovereignty of our States, and the privileges and freedoms of the individuals of this country. Some of our would-be leaders in Virginia have adopted an attitude that they are for segregated schools but there is nothing that can be done to permit the Commonwealth of Virginia to continue to operate her schools on a segregated basis; that there must be a little integration in compliance with the decree of the Supreme Court.

There is no such thing as a little compliance. Either we comply or we exert every possible legitimate, peaceful means at the disposal of the Commonwealth of Virginia and her people to maintain the right to operate our schools as the people of Virginia desire them operated.

I am convinced that if our people will stand together on this great issue and fight for the principles involved we have reason to hope that the people of this country will some day awaken to a realization of what the Court has attempted to do to our Constitution and demand a return to constitutional government.

On Monday, March 25, 1957, there appeared in the Richmond News Leader an outstanding editorial entitled "Segregation and 'Surrender'." On Tuesday, March 26, 1957, there appeared in the Richmond Times-Dispatch an equally outstanding editorial entitled "Dalton Should 'Choose to Run'." These fine editorials pointed out in detail the political manipulations of one of the politicians in Virginia who is attempting to secure political preferment by playing upon words and forgetting principle. In one breath this politician pretends that he favors keeping white schools of Virginia white and in the next breath says we must have some integration. He wants to be all things to all people and at the same time no doubt hopes in his heart that by playing up to the modern Republicanism of the present administration he will secure an appointment to one of the judicial plums now dangling in Virginia.

There is an unholy alliance between Attorney General Brownell, the present administration and the NAACP to bring Virginia to her knees and to force us to take orders from Brownell and the NAACP. Could it be that Mr. Dalton has now joined this unholy alliance?

Mr. Speaker, under leave to extend my remarks, I desire to include these editorials which are as follows:

[From the Richmond News Leader of March 25, 1957]

SEGREGATION AND SURRENDER

With Senator Ted Dalton's address before the Republican State Central Committee on Saturday, the issue of a school policy in Virginia is fairly joined.

Mr. Dalton, speaking for the Republicans, is agreeable to some racial integration under a plan of pupil assignment. He would keep the white schools "as white as possible," but he would prefer integration to closing schools.

On the opposite side, the dominant Democratic organization of United States Senator HARRY F. BYRD, which has endorsed the gubernatorial candidacy of J. Lindsay Almond, Jr., favors an approach of "massive resistance" at the State level. This carries with it the denial of State funds to any locality which integrates its local schools. Because the State supplement is vital to school operations in most counties and cities, this might have the effect of closing some schools in order to prevent race mixing.

It is fair to say that Senator Dalton is no more "in favor of integration" than the Byrd organization is "in favor of risking the closing of some schools." Both parties denounce the Supreme Court's school decision (Mr. Dalton, who may abandon politics to accept a Federal judgeship, described the opinion as "unreasonable and unfair"), and both parties, it may be assumed, have an equal devotion to the cause of educating children. Their division lies at that critical point, some time in the future, when a local school division at last faces the bitter choice: Mix the races, or close the school. Mr. Dalton would mix. Mr. BYRD would close.

In this bitter, tragic choice, this newspaper alines itself with Senator Byrd—and for a number of reasons.

To permit the assignment of white and Negro pupils to the same classroom, as a State policy, is to surrender altogether to the Supreme Court of the United States. We are not yet ready to surrender.

To risk the closing of a school, or actually to close a school, is a miserably unhappy prospect. Yet the stakes are high. If the Federal courts can be convinced that Virginia means business—if Negro petitioners can be convinced that to win a suit means to lose their school—we may reach an impasse at a price which is relatively small in terms of the overall gain. In any event, this newspaper has enough confidence in the ingenuity and resourcefulness of the white people of Virginia to be confident that a school, once closed, would not remain closed long. The loss in educational opportunity to white children, at least, would be only temporary. Negro petitioners, having precipitated the crisis, would have only themselves to blame for whatever consequences might result.

The capitulation advocated by Senator DALTON might begin with "just a little integration," but the experience of Baltimore offers abundant proof that a little integration swiftly develops into big integration. Baltimore began with a 3-percent mixing in its first year; this jumped to 7 percent in the second year; it is now 15 percent in the third year. Moreover, physical conditions in rural counties make "a little integration" impossible. It is total, or none at all.

We oppose Senator Dalton's soft view for other reasons: Important as public education is, other things are important, too—and among them is a steadfast insistence upon obedience to the Constitution as the supreme law of the land. To submit tamely to this flagrant usurpation of power by the Supreme Court will make every subsequent usurpation that much easier; for the South to resist, and to keep on resisting, even at bitter price, may serve to awaken the rest of the country to the serious nature of the constitutional crisis at hand.

One final point: To accept race-mixing now, in our view, will be to saddle succeeding generations in the South with the terrible consequences of racial amalgamation. No responsible person contends that integration in 1957 will mean "mongrelization" in 1958. The apprehension is for 1977 or 1997—for 20, 30, or 40 years hence. If a firm stand now will prevent that consequence then, our children one day will be thankful for this resistance in our own time.

Let us take it to the hustings, Mr. Dalton. If devotion to the Constitution is so dead in Virginia, and pride of race so feeble, that the people of this State will abandon both Constitution and race on the altar of a few public schoolhouses, we deserve the worst that may happen to us.

[From the Richmond Times-Dispatch of March 26, 1957]

DALTON SHOULD CHOOSE TO RUN

"Although I am taking a hard and long look at the matter of running (for governor), the chances are that I will not do so," State Senator Ted Dalton told the Republican State Central Committee on Saturday.

We hope Mr. Dalton decides to accept the nomination.

The likelihood of his doing so appears less certain than it had been before he made his speech to the GOP committee.

He did not speak like a man who expects to run for governor, on a Republican ticket, in a traditionally Democratic State.

The less charitable will accuse him of speaking like a man in line for lifetime appointment to a Federal judgeship to succeed Judge Barksdale, slated to retire 4 months hence from the bench of the United States district court of western Virginia.

Nor did he speak like a Republican.

What he said was unmistakably in line with the new Republicanism, whose standardbearer has reneged on his pledge to protect States rights.

Heretofore Mr. Dalton's gubernatorial aspirations had been regarded with a sort of kindly interest by some Virginia Democrats. This attitude reflected favorably on his popularity, as well as a belief that his chances of success at the polls were comfortably remote.

We doubt that the same tolerant attitude prevails now that he has unmistakably identified himself with the neither-here-nor-there middle-of-the-road "republicanism" symbolized by Mr. Eisenhower and those White House advisers who appraise the school issue in terms of political strategy.

Mr. Dalton told the GOP committee that he had not made up his mind on whether or not to run for governor, because, he said, he was not satisfied that he had "fully done his part to establish a two-party system in Virginia."

This newspaper believes a genuine two-party system to be indispensable to the system of checks and balances which protects

a nation and a state against abuse of political power.

But as GOP Committeeman William Siple of Hopewell said, in comenting on the Dalton middle-of-the-road policy, "It might put the Republican Party (in Virginia) behind the 8-ball for the next 50 years."

The prospect of that hopeless position (to the detriment of 2-party government) was enhanced by the committee's 25-to-5 vote against Committeeman Walter G. Gambill's motion to censure Mr. Eisenhower's modern Republicanism, as an expedient surrender to the big government ideology of the New Deal.

Mr. Dalton, in Saturday's speech, referred to the Supreme Court school decision as "unreasonable and unfair." Yet he would have Virginia bow to that unconstitutional directive—gradually.

"We do not approve of the decision in Virginia," he said, adding that we should "keep white schools white."

But having said that, he half-about-faced. "An intelligent approach" to the situation, he said, would be to "keep the white school as white as possible, under law and order."

Mr. Dalton's proposal advocates gradual surrender to a Supreme Court directive we do not recognize as law, enacted by the representatives of the people, or by State ratification of an amendment, but a directive—a judicial fiat trespassing explicit constitutional limitations on the Court's powers.

This possible successor to a Federal judgeship in Virginia would have the people of this State yield to insertion of the thin edge of the wedge. Once inserted, the Federal courts would be free to wield the sledgehammer to drive that wedge in deeper.

As the forcible transfer of pupils in New York has clearly shown, the NAACP is not content with such integration as would take place along neighborhood lines. They wish to uproot white children from white schools, and uproot colored children from colored schools, in order to expedite race mingling by force.

There was a time when it could still be hoped that both the NAACP and the Court itself might be sensitive to the enormity of the disruption created by hasty implementation of the school decision—and the imperative need for permitting southern mores, rather than the Court's impatience, to determine regional reaction to the Court order. The growing aggressiveness of the NAACP, and the intransigence of the Court (as seen in its refusal yesterday to review the Charlottesville and Arlington cases) have destroyed that hope.

Mr. Dalton seems completely unaware of this radical change in the situation.

Mr. Dalton ignored another salient fact in the dilemma created by the court's decision:

Virginia is not an isolated target of the Eisenhower-Brownell campaign to win the big city Negro vote. It does not exist in a vacuum. It is traditionally and inseparably linked to the South as a whole. The South's public school system is in jeopardy as a result of the "new" Republicans' determination to regulate State-financed education.

Mr. Dalton takes a defeatist attitude. He says there's no hope of the court reversing itself. He says that our public schools must be preserved—even at the cost of integration by gradualism. He accuses Senator BYRD of "Calling on our little children to bear the brunt."

This resort to pathos is most disappointing in a statesman who had been, and is, widely respected. It was a deplorable appeal to the very "emotionalism" he charges against Virginia Democrats.

Mr. Dalton refuses to recognize that the "massive (but passive) resistance" advocated by Senator BYRD, not only in Virginia but throughout the South, may prove to be our best hope to bring about a change of the court's approach to a deadlock of its own creation.

Nor does Mr. Dalton seem to realize that this deadlock cannot be broken along judicial lines.

A political decision can be altered only by political means.

It seems reasonable to assume that a court which allowed itself to be influenced by a minority political-pressure group may not be indifferent to the great majority of voters in 13 States determined to resist en bloc.

Mr. BYRD and other southern statesmen do not advocate, as Mr. Dalton charges, the closing of public schools. They do say that the closing of schools, in deference to the wishes of parents, will be the only alternative—if the high Court refuses to recognize the preponderance of hard fact over the abstract philosophizing of the NAACP.

Mr. Dalton professes to believe that the majority of Virginians see things his way. He alone can give them an opportunity to be counted—by running for Governor.

Trinity Project Partnership Advantageous

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1957

Mr. HOSMER. Mr. Speaker. The Secretary of the Interior has recommended that a partnership arrangement be concluded with the Pacific Gas & Electric Co. with respect to development of the Trinity River project in California. A discussion of Secretary Seaton's recommendations and their advantages is contained in the following editorial appearing recently in the Long Beach Press-Telegram newspaper:

BIG TAXPAYER SAVINGS SEEN IN TRINITY PARTNERSHIP PROPOSAL

Power potential from a water development project on the Trinity River in far northern California has suddenly become a vigorously debated issue.

Senator THOMAS H. KUCHEL widened and intensified the discussion when he came out flatly against a proposal by Interior Secretary Seaton for a partnership power development on the Trinity, a unit of the Central Valley project.

Seaton's plan calls for construction by the Government of the water storage facilities and canals, with the Pacific Gas & Electric Co. constructing, at its own cost, three powerplants and paying an estimated $4,617,000 annually over a 50-year contract period, for use of the falling water.

The alternative plan favored by Senator KUCHEL calls for exclusive Federal development of the entire project.

The Senator and the Interior Department are in direct disagreement on certain important phases of the issue, but there is apparently no challenge to these claims by Secretary Seaton as to financial benefits of joint development:

It would save the Government not less than $55 million in initial cost.

The Government would collect $165 million more in revenue in the first 50 years of the project.

Federal, State, and local government would collect $135 million in taxes over the contract period, while a straight Government project would be nontaxable.

Seaton makes the further conclusion that these financial gains would provide substantially more funds for potential irrigation and multipurpose development in the Central Valley area.

Senator KUCHEL's major objection is in behalf of preference purchasers of power in the area, such as municipally owned utilities. He says that such purchasers would pay $86 million more for power in the 50-year period if the Pacific Gas & Electric Co. develops the project.

He also makes the point that if San Luis Reservoir in the San Joaquin Valley is developed as a major feature of the Feather River project, Trinity power would be called upon to pump water to that reservoir and preference customers would have to look elsewhere for virtually all their required power. In that event, both the Federal Government and preference purchasers would have to pay substantially more for power.

Supporters of the partnership plan answer these objections on the grounds that the people of the United States should not be forced to forego a financially attractive program for the benefit of a few privileged electric customers in the Central Valley. They say further that the tax benefits to the Federal Government would more than offset the increased Federal power costs in case San Luis Reservoir is built.

In our opinion, Secretary Seaton has made a good case for the partnership plan.

It is sound principle that the Government should do only those things which regular industry cannot do, or cannot do so well.

The power phase of the Trinity project appears to be a case where free enterprise can do the job better, and to greater benefit to the general public, than it would be done as an exclusive Government operation.

There's another point that is timely in this Federal income-tax paying period. Putting the Government operation label on a project does not take off the price tag, as some people seem to think. The partnership plan means that regular industry will make a substantial contribution to the cost of Trinity, saving the general taxpayers of the country proportionately.

Southern California Dental Association Endorses H. R. 9 and H. R. 10

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. McDONOUGH. Mr. Speaker, I have introduced H. R. 4403, a companion bill to H. R. 9 and H. R. 10, the Jenkins-Keogh bills, and I believe that early consideration should be given by the House to this legislation, which would grant to self-employed persons substantially the same tax benefits as are now available to employed persons participating in corporate pension plans.

I have received many endorsements of this legislation, and the following is a resolution submitted by the Southern California State Dental Association, which represents nearly 4,000 ethical dentists in unanimous support of this legislation:

Whereas there are now pending before the Congress H. R. 9 and 10, commonly referred to as the Jenkins-Keogh bills, which bills would grant to self-employed persons sub-

stantially the same tax benefits as are now available to employed persons participating in corporate pension plans; and

Whereas common justice demands that self-employed citizens of the United States have available to themselves the same tax benefits as are provided for employed persons:

Resolved, That the Southern California State Dental Association in annual session assembled urges the 85th Congress to enact the said proposal into law.

Resolved further, That a copy of this resolution be sent to each Senator and Representative from California and to the Vice President of the United States.

Suez: The Alternatives

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of March 10, 1957:

SUEZ: THE ALTERNATIVES

With the Suez Canal open to smaller ships and work progressing on removing the last major physical obstacles to regular traffic, the problems of the political and economic nature of canal control are again in the limelight. The immediate questions are the passage of Israeli ships through the waterway and the manner in which tolls are to be paid. These questions must be answered soon, and with justice to all parties. But to assist in reaching such a conclusion as well as in the long-term interests of the free world, it is necessary to press for alternatives to the canal.

Both international justice and the advancement of the prospects of peace in the Middle East require that Egypt's ban on Israeli shipping in the canal (posed as a belligerent right) must be lifted. And until some permanent regime for the canal can be established, there should be a kind of trusteeship, either through the Users' Association or a United Nations body, to receive tolls; transmit a fair percentage to Egypt, and retain the balance for improving shipping facilities in the waterway.

The Suez crisis revealed three major threats to the oil supply of Western Europe:

1. The blocking of the canal, which disrupted the transportation of a great portion of Europe's oil.

2. The sabotage of the three pipelines operated by the Iraq Petroleum Co. through Syria, which cut off a major alternative route for oil.

3. The refusal of Saudi Arabia to sell oil for consumption in Britain and France, which hit at one important source of oil for those countries, passing through the undamaged Tapline, operated on behalf of Aramco, to the Mediterranean.

At no time was every source of Mid East petroleum, or every transportation route, barred to Western Europe. Iran, Iraq, and Kuwait were still producing freely; had there been a sufficiency of alternative transportation routes, Europe's petroleum crisis would have been far less severe. It is up to the free world to encourage such alternatives, since even if President Nasser should make a satisfactory agreement for the management of the Suez Canal it has been demonstrated how easily the waterway can be closed, either by the Egyptians or by air attack. The vulnerability of the pipelines was also vividly illustrated.

More pipelines constitute one answer. The Israeli line from Elath, on the Gulf of Aqaba, to Beersheba, is approaching completion. But it is only an 8-inch pipe, for domestic purposes. A larger line, from Elath to Haifa, which would bring oil to the Mediterranean for European use, is now projected.

Another pipeline project would bring oil from Kuwait, Iraq, and Iran around the northern border of Syria to the Turkish port of Iskenderun. This would be a major program, entirely within the Baghdad pact nations. Elsewhere on this page Mr. Frederick Wildman, Jr., advocates an extension of this idea to link the Middle East oilfields directly with Europe by pipeline.

The most flexible answer to the Suez problem is the big tanker. Even before Nasser seized the Suez Canal Co., it was recognized that the canal constituted a potential bottleneck to the mounting tide of oil flowing from the Middle East to Europe and America. Tankers of average size could not transport oil around the Cape of Good Hope economically. But with big tankers—60,000 tons and over—the cost per ton taking the long route would be about the same as passing through Suez with smaller vessels.

There has been a notable development of the big tankers. Craft in the neighborhood of 50,000 tons have already been launched and one of 106,500 tons is on order. Such vessels, bigger than the biggest ocean liners, will have a problem in docking, loading, and unloading. They constitute a large initial investment. But if ports are available they can go where the oil is and take it where needed.

It would be a mistake for the Western World to concentrate exclusively on the reopening of the Suez Canal. That is undoubtedly of vital importance, but it can be achieved more quickly, on better terms and with greater security for the interests of the free world if Egypt, Syria, and the Soviet Union are all aware that a determined and concentrated effort is being made to reduce the dependence of consuming and producing countries upon a limited number of routes for transporting petroleum.

Resolution From Rochester Branch, No. 210, National Association of Letter Carriers

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. KEATING. Mr. Speaker, at the request of Mr. Thomas F. Corbett, Jr., secretary of Rochester Branch, No. 210, of the National Association of Letter Carriers, I am inserting herewith a resolution adopted at a meeting of postal employees held February 10, 1957:

Resolved, That we here gathered wholeheartedly endorse bills S. 27 and H. R. 2474, providing for postal employees' salaries of $5,000 to $6,100, and also bill S. 21 and H. R. 607, providing increases of $800 for our annuitants; further

Resolved, That we request our Senators and Representatives to insert said resolution into the CONGRESSIONAL RECORD.

The President's Budget

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, January 5, 1957

Mr. FEIGHAN. Mr. Speaker, under leave obtained, I wish to insert in the RECORD an address I delivered over WHK Radio Station, Cleveland, on Saturday, March 23, on the President's budget.

The speech follows:

THE PRESIDENT'S BUDGET

My subject is the President's budget. I know this is a subject of great interest to you because it affects your pocketbooks and every taxpayer of the United States. Congress is very much concerned about the new budget the President recently submitted. Our concern grows out of a number of reasons.

The latest budget submitted to Congress by President Eisenhower is the largest peacetime budget ever presented in the history of the Nation. It called for enactment of over $73 billion in appropriations and authority to obligate over $76 billion.

This latest budget is $3 billion over the budget of the current year. It is between five and six billion dollars more than last year. Think of this, the new budget is between seven and eight billion dollars more than the year before that. The records show that the proposed economy program which President Eisenhower promised the American people has resulted in an increase each year of several billion dollars over the preceding year. Naturally you, the taxpayers, have to pay this increase.

It is important for you to remember that the administration has been asking Congress each year for increased authority to enter into financial obligations. Obviously larger and larger grants of such authority each year means higher spending in succeeding years. This is a consideration which Congress will give most careful study during the immediate months ahead.

On the same day the President submitted his new budget to the Congress, Secretary of the Treasury Humphrey called a press conference at which he made the following statement: "The cost of living has recently moved up somewhat in spite of monetary measures to restrain it. Governmental expenditures and the number of Government employees are now increasing. This trend should promptly be stopped." Secretary of the Treasury Humphrey is a member of the President's Cabinet and traditionally a man holding such a position is supposed to advise the President on money matters. It appeared that the President and his other advisers forgot to consult with Secretary Humphrey before they prepared their budget and sent it to Congress. However, a day later, President Eisenhower, at a press conference, stated he was in agreement with Secretary of Treasury Humphrey that the rate of spending was dangerously high and should be checked. After the President restated his position on the budget, we in Congress, were confronted with the problem of trying to determine whose budget we had before us. Secretary of the Treasury Humphrey stated that he disagreed with it and President Eisenhower later concurred with Humphrey—obviously someone other than the President must have been responsible for preparing, approving, and submitting the budget sent to Congress.

However, both President Eisenhower and Secretary of the Treasury Humphrey, while

stating that the budget was too high, failed to tell Congress where the cuts should be made. The President is Chief Executive of the Government, responsible for running the Government and therefore he should know best where cuts can be made.

It is obvious to Congress that a serious divided command exists at the highest levels of our Government. Congress decided to support the President in this issue of a divided command. Accordingly last week the House of Representatives put itself on record as anxious to make substantial reductions in the President's budget for the fiscal year of 1958 and passed a resolution which reads as follows:

"*Resolved*, That the President respectfully be requested to indicate the places and amounts in his budget where he thinks substantial reductions can best be made; and be it further

"*Resolved*, That a copy of this resolution be transmitted to the President."

By this action Congress made it unmistakably clear that it intends to support the President of the United States in a situation of divided command which prevails in the executive branch of the Government.

The appearance of Secretary of Commerce Weeks, another member of President Eisenhower's Cabinet, on a nationwide television network last week would have been very funny were it not for the fact that it emphasized the divided command of President Eisenhower with respect to matters of the budget. Secretary Weeks, while on the television program, emphatically stated that the budget, as submitted by the President, could and should be cut substantially. A few days later this same Secretary Weeks, when appearing before the House Appropriations Committee, could not find one way by which a cut of any kind could be effected in the budget submitted for the Department of Commerce. From this, one could very well conclude that when members of President Eisenhower's program appear on national television programs, they have a sharp eye on the presidential campaign of 1960, but when appearing before the House Appropriations Committee, they express a cold disregard for the taxpayers' pocketbook. It is a tough job for Congress to get at the bottom of the new budget submitted by the President and to know where substantial cuts can be made. We Members of Congress are anxious to maintain public services necessary to the security and welfare of the American people and to cut off all the window trimming, unnecessary services and sinecure jobs allocated to political hacks, some of them coming as high as $20,000 per year of the taxpayers' money.

Another matter of interest to the citizens of Cleveland who voted to bring the Pan American games to Cleveland is the effort being made by some of the Ohio Members of Congress to secure Federal support for these games. It is my conviction that the holding of the Pan American games in Cleveland in 1959 will make a substantial contribution to the improvement of relations between the people of North, Central, and South America, as well as provide an example of real down-to-earth friendship for the whole world to observe. Cleveland is known as one of the most cosmopolitan cities of the world. This makes Cleveland an ideal host for the Pan American games.

Reasons were advocated before a committee of Congress only a few days ago in support of a proposal that Congress appropriate funds to cover part of the expenses necessary to the successful conduct of the Pan American games. On March 8, I, together with a number of civic leaders of Cleveland, incuding Mayor Celebrezze, visited the White House urging suport for the Pan American games to be held in Cleveland. The President was unavailable and Gov. Howard Pyle, one of his assistants, received the delegation. After a full discussion of the merits of our proposal, Governor Pyle assured us that President Eisenhower was firmly behind the Pan American games.

On March 12th this same delegation of civic leaders from Cleveland appeared before a House Subcommittee on Appropriations in support of a request for $4,900,000 to cover part of the expenses of the Pan American games. We were astonished to hear from Hon. JOHN J. ROONEY, chairman of the subcommittee, that the State Department had withdrawn its support of the Pan American games. Later I was informally told that withdrawal of this support very likely would eliminate Federal support for the holding of the Pan American games in Cleveland.

In light of this development on March 14, I addressed a letter to the President in which I expressed my concern about this situation of divided command in which the President favors the Pan American games and the Department of State has reversed its position which, only a few months ago, promised all-out support for the Pan American games. On March 20 I received a letter from the White House signed by Howard Pyle, Deputy Assistant to the President, assuring me that the President had not changed his position in support of the Pan American games.

It is difficult to estimate the outcome of any project put under the spell of the divided command. I assure you that I, in company with civic leaders of Cleveland, will do my best to eliminate the divided command which now jeopardizes the holding of the Pan American games in Cleveland. The Federal Government spends billions of dollars each year for our national security and to improve solidarity of the Western Hemisphere. We seek to impress upon the countries of the world the record of developments of such progressive cities in the United States as Cleveland. What better expenditure of Federal funds, could be made to increase the solidarity of the Western Hemisphere than to support the holding of the pan-American games in Cleveland in 1959?

Northern Parents Join Resistance

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. ABBITT. Mr. Speaker, those of us who believe in our constitutional form of government take heart when we realize that there are people all over America who feel as we do.

Gradually, the people in this country are awakening to the fact that for many years minority pressure groups have, by exerting influence far beyond their real strength, been taking this country slowly along the road to socialism.

Once the rank and file of our people are aroused to the dangers engulfing us they will rise and put a stop to the socialistic trend, provided they become aroused soon enough and before it is too late. The only hope left to recapture our republican form of government is to bring home to the masses of our people the knowledge of what has already taken place, what is happening now, and what will soon happen in the very near future unless drastic action is taken in the immediate future.

Mr. Ross Valentine, a very noted, able, and courageous editorial writer for the Richmond Times-Dispatch, had a most enlightening article in the Dispatch on Monday, March 25, 1957, entitled "Northern Parents Join Resistance." It warms the cockles of the hearts of those of us who believe in the ability of the American people to take care of themselves and to throw off tyranny once they become aware that their rights, privileges, and freedoms are being usurped from them. It is heartening to know that the good citizens of Queens Borough, N. Y., feel as do the people of our great State in matters pertaining to the education and welfare of our youth.

Mr. Valentine's article also comments upon the scholarly approach that Representative JOHN BELL WILLIAMS of Mississippi undertook in his speech before the Virginia Defenders of State Sovereignty last Friday evening, March 22. This speech was not one of vengeance or malevolence for the Negro citizens of the South, but rather one of intelligibility, understanding, and perception for the problems which face all of our people as a result of the Supreme Court's decision of May 17, 1954. We, his colleagues, need not attend a speech made by Congressman WILLIAMS to know of his wisdom and forthrightness for any and all matters affecting the people of this great country of ours.

Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include Mr. Valentine's fine article in the hopes that it will further enlighten the people of this country as to what is happening to them. The article is as follows:

[From the Richmond (Va.) Times-Dispatch of Monday, March 25, 1957]

NORTHERN PARENTS JOIN RESISTANCE

(By Ross Valentine)

Representative JOHN BELL WILLIAMS of Mississippi is a man after my own heart. His speech to the convention of the Virginia Defenders of State Sovereignty was factual, dispassionate, frank, and considerate of the feelings of our colored fellow citizens.

I hadn't been sure of just what kind of man he would turn out to be. I went to the Jefferson Friday night to find out. If there's anything that "twists my tripes," it is a ranting demagog. I've heard plenty of them in my day, including Father Coughlin, whose delivery, working toward an apoplectic climax, was disturbingly reminiscent of Hitler's and Mussolini's.

I am happy to report that Mr. WILLIAMS' approach was diametrically opposite to that of the Michigan priest who (verbally) unfrocked himself to reveal the hate-filled "racist" hiding under the vestments of his venerable church.

WILLIAMS appealed to reason.

He might have been arguing a case before the Supreme Court. Even the political minded neophytes on that bench might have been impressed by his presentation of the case against judicial usurpation of legislative and amendatory powers.

"Black Monday," he summed up, referring to May 17, 1954, "was the blackest day in the history of Anglo-American jurisprudence."

He deplored the distoration of the southern resistance movement by an uninformed and often leftwing-manipulated northern press. He pointed out what we all know, that the white South's feeling for its Negro citizen is one of understanding, and of desire to provide educational opportunities, as attested by the multiple millions contributed (by predominantly white taxpayers)

to bring Negro schools to a level commensurate with the whites'.

He called on Virginia, as the No. 1 target of a court committed to a race-mixing philosophy, to resist—but to resist lawfully—not to resort to lawlessness, as reciprocal to lawlessness-in-high-places.

And he also pointed out that, in time, the North would become aware of the southern delimma occasioned by the unwise decision of the Court.

I picked up a New York paper the next morning to find considerable space given to massive resistance by citizens of Queens Borough (population circa 1,700,000) to the city school board's integration-by-bus policy; that is, the transfer of white pupils to Negro schools and vice versa.

The unusually complete news coverage at first astonished me—until I recalled the tremendous circulation enjoyed by the big city's dailies in its borough of homes.

Also significant was the fact that less than 5 percent of Queens' 208,195 school-age children are nonwhite.

A federation of civic councils formed in Queens 2 months ago, a northern counterpart of Virginia's Defenders. Its leaders have come out point blank against forced integration.

"More than 2,000 letters," says the New York news story, have been received by the city's board of education, protesting NAACP aggression against their neighborhood-way-of-life. I quote from the New York paper:

"Sociologists suggest that many of suburban Queens' residents had moved from the heart of the city either consciously or partly to get away from integrated patterns in more congested sections. Still others might be worrying about changes that affect property values.

One surburban newspaper headlined its pertinent story The Red Plot To "Rezone" Your Children. A civic newsletter referred to "The Red Hand in New York Schools."

Not far away from Queens, in the city of New Rochelle, the NAACP and a clerical group calling itself The Interdenominational Ministerial Alliance protested the proposed erection of a $1,516,000 Lincoln Elementary School in a preponderantly Negro district.

The Rev. M. deWitt Bullock, identified as head of the local NAACP, said erection of the school would wreck plans for housing integration, and frustrate efforts toward achieving the best educational climate for all our children. He pointed to integrated schools elsewhere as the kind of enriched and democratic living that should be duplicated a thousand times.

It begins to look as though resistance to integration by dictation is not restricted, entirely, to the backward South.

Paper Classrooms

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BYRD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the March 14, 1947, issue of the Warren Sentinel, Front Royal, Va.:

PAPER CLASSROOMS

For the first time we've seen the statement in print for national distribution that there is no school emergency. A circular published by the United States Chamber of Commerce, notwithstanding, all responsible reports that have come across this desk indicate an immediate, alarming, and growing shortage of classrooms.

Getting back to the United States Chamber's brief circular, it states that:

In 1947 when spiraling enrollments required 9,500 new classrooms, local school boards built 16,000.

The trend of classroom construction outstripping need has continued each year.

During the last 10 years 470,000 classrooms were built with local funds when there was need for only 290,000.

The overage of 179,000 classrooms should not be considered surplus, but were necessary to replace obsolete buildings from depression and war years.

The only crisis is that 840,000 pupils or 2.6 percent by National Education Association estimate are on half-day session and this need can be met by local citizens.

Willing to accept United States Office of Education building estimates based on reports from local school boards, the United States Chamber refuses to accept information from the same sources that an immediate need exists for 159,000 classrooms because of overcrowding, obsolescence, and double sessions. Incidentally, 69,000 of the estimated 470,000 built classrooms have not been constructed and may never be, because of rising financing and construction costs.

The chamber circular states that the need is critical for 840,000 pupils or 2.6 percent of present school population. Compared with this number United States Office of Education statistics show that 2,300,000 children are in overcrowded schoolrooms and another 840,000 on double sessions. How many on double sessions are also in overcrowded facilities, no one knows. Conservatively, 10 percent of the children in United States schools are being cheated of a decent education.

Walter Lippman, commenting on the demonstrated need for more classrooms, referred to a Commerce Department estimate that $4 billion would be needed annually for the next 10 years for school construction, a rise in expenditures of 60 percent above current level. This need exists in spite of impressive building efforts at the local level which cannot hold the dike against mounting classroom requirements.

Overlooked by the United States Chamber is the varying impact of enrollments upon elementary and high schools. Until now emphasis has been on relieving shortages in elementary schools. Clearly predictable is the 49 percent increase of high school enrollments between 1957 and 1964 which compares with a 21 percent rise in the past 7 years. In one year alone, between the fall of 1955 and the fall of 1956, overcrowding in high schools increased 9.8 percent.

United States Office of Education Circular No. 490 dated January 1957 showed that the Virginia State Department of Public Instruction this past fall reported a need for 2,680 classrooms to take care of 74,833 pupils in overcrowded buildings and another 2,294 rooms to replace unsatisfactory facilities. In Front Royal more than 16 percent of the pupils are in overcrowded classrooms and almost 1 of every 3 pupils is on half day sessions at Front Royal Elementary School.

Complete figures from the United States Office of Education based on information from local school districts show that the need for additional classrooms exists beyond a doubt. Irresponsible use of partial statistics from the same source by the United States Chamber only serves to muddy the picture.

And we cannot afford to waste much more time. The issue faces us now. The remedy was needed 10 years ago.

To deny a child part of his education now is to cause a loss that cannot be remedied later on. Children who are shortchanged on instruction now are almost certain to bear the marks of an inadequate education for life.

Statement of Hon. Robert C. Byrd, of West Virginia, to the House Committee on Interstate and Foreign Commerce

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BYRD. Mr. Speaker, I wish to direct to the attention of our colleagues the statement I today presented to the House Committee on Interstate and Foreign Commerce in support of the bill H. R. 4353, which has been introduced by the chairman of the committee, the Honorable OREN HARRIS, to amend the Railroad Retirement Act, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to improve and liberalize benefits payable to railroad workers and other beneficiaries under those laws. I have today introduced a similar bill.

The statement follows:

STATEMENT OF HON. ROBERT C. BYRD, SIXTH DISTRICT, WEST VIRGINIA, PRESENTED TO THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE MARCH 26, 1957

Mr. Chairman and members of the committee, I appreciate the opportunity to present this statement in support of the legislation that has been introduced by the chairman of this committee to amend the Railroad Retirement Act, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to improve and liberalize benefits payable to railroad workers and other beneficiaries under those laws. I am today introducing legislation similar to H. R. 4353.

Legislation to increase benefits under the railroad retirement system is overdue. The abundant information and testimony already on record convincingly reveal that the benefits available to rail workers upon their retirement from active employment are inadequate to support a man and wife at an average standard of living. The responsibility to correct this situation, as well as the obligation to so do, is that of the Congress—for the very reason that the railroad retirement system is under the management of the Congress and is not worked out through bargaining between labor and management.

With reference to the Railroad Retirement Act, the proposed measure would increase all annuities, pensions, and insurance lump sums by 10 percent. The only exception under the 10 percent increase would be those annuities that are based on the equivalent of the annuitant's average monthly compensation while working in the railroad industry. A disability annuitant would not lose the annuity for any month in which he earned over $100 in outside employment, provided his total annual earnings did not exceed $1,200. Women workers with less than 30 years of service would be eligible to retire at age 62 on a reduced basis, rather than at age 65. A wife may elect to receive her annuity at age 62 on a reduced basis, rather than at age 65. The election to draw an annuity before reaching age 65 would reduce the annuity by one one-hundred-eightieth for each month that the annuitant is under age 65. The bill authorizes payment of the insurance lump sums up to a maximum of $750. The act presently precludes the payment of this sum if the deceased employee is survived by a person entitled to an annuity in

the month in which the employee died. The maximum creditable compensation under the Railroad Retirement Act would be increased from $350 to $400 a month.

To finance the benefits under the Railroad Retirement Act, an amendment is proposed to the Railroad Retirement Tax Act which will increase the rate of tax from 6¼ percent to 7½ percent on carriers and employees.

Of great importance are the amendments which the bill proposes to the Railroad Unemployment Insurance Act. The daily benefit rate would be increased to 60 percent of compensation for the employee's last employment in a "base" year—the present rate being 50 percent. Daily benefit rates would be $0.50 to $1.70 higher than the present rates. The maximum benefit rate would be increased to $10.20 from $8.50. Sundays and holidays would be treated as days of employment. Benefits would be payable for each day of unemployment over 4, rather than the present requirement of 7 days. The period for which unemployment benefits are to be paid will be extended in the case of career railroad employees, i. e., those with at least 5 years of railroad service—the extended benefit period depending upon the employee's years of service. The maximum period for which unemployment benefits are presently payable is 130 days. In this regard, the bill, H. R. 4353, provides as follows:

Years of service:	*Number of compensable 14-day periods*
5 and less than 10	39
10 and less than 15	65
15 and less than 20	91
20 and over	117

In the Sixth District of West Virginia, which I have the honor to represent, we have many railroad workers—a good number of whom in recent years have been made idle because of the conversion from steam to diesel power. This is seemingly inconceivable when one realizes that the net income of railways in 1955 was $925 million against a total of $681.5 million in 1954. I recall distinctly the despairing letter I received around the holidays from one of my constituents—a man, 63 years of age, with 50 years of service as a roundhouse machinist, who had been "advanced to the rocking chair." Under the proposed amendment, this worker could receive unemployment-insurance benefits until he reaches 65 years of age.

The absolute necessity of expanding the unemployment-insurance benefits has been clearly demonstrated by the bare statistics of railway employment in recent years. The testimony before this committee shows that railway traffic in 1956 was 40 percent above 1929, but employment in the same period went down by 40 percent. The tabulation that follows substantiates this fact:

Year:	*Number of railway employees*
1948	2,300,000
1951	2,100,000
1956 (approximate)	1,600,000

In other words, there were 30 percent fewer railroad workers in 1956 than there were in 1948, and yet the volume of traffic in those years was almost the same. Furthermore, the prospect is that another 250,000 railroad workers will be dropped from the rolls within the next 10 years or so. Automation is taking its toll. I understand the newer yards have a machine with an electronic memory by which the routing of cars can be selected in advance and recorded on a machine. When the cars come to the yard, the machine sorts them automatically and rolls them into their proper place.

In July 1956 when legislation was enacted by the Congress to increase benefits by, generally, 10 percent, the echo resounding from the enactment was that the increase was, in essence, a temporary measure, for the purpose of providing an interim modest increase in benefits of 10 percent which, on the average, amounted to $10 a month. That was merely a step in the right direction, and its purpose was to afford some measure of hope to beneficiaries under the Railroad Retirement Act. At the time of the 1956 enactment, the rolls of the Railroad Retirement Board showed 650,900 beneficiaries. Out of that total number, the increases went to about 300,000 annuitants, about 40,000 wives, and 65,000 survivors. The average monthly benefit now is only $111.70, and the average for survivor benefits ranges from only $46.30 to $50.50. It is also noteworthy that prior to the 1956 legislation employee annuities under the railroad retirement system had been increased only twice since 1937, and survivor benefits only once since their inception in 1946. On the other hand, the cost of living, as measured by the Consumer Price Index, has risen 5 percent in the period between 1950 and November 1956. Today it is the highest it has ever been in the history of our country.

The retirement income now provided for industrial workers under most negotiated plans is far above that received by railway annuitants. The retirement income for a 30-year worker in industry, with annual earnings of $4,200, has been placed at between $170 and $200 a month (including social-security benefits of $108.50). It is plainly evident that railroad workers lag behind the rest of American workers. Surely, such workers should not be penalized with working and living conditions below the standards of other industries as a result of governmental regulation. Railroad workers and their dependents are entitled to share in the improvements and adjustments received by all other American workmen. I, therefore, sincerely hope that the committee will be able to give favorable consideration to legislation beneficial to railroad workers and their dependents.

Need for New School Construction

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. DINGELL. Mr. Speaker, recently, Mr. Louis Schimmel, president of the Pontiac, Mich., School Board, told a committee of Congress that Michigan has been able to take care of its own school building needs.

He presumes to speak as head of one small school district for all the school districts of Michigan.

The country needs a vast number of additional classrooms to handle a population growing with explosive speed. Population growth exceeds 1 percent a year. Last year the country was reliably reported to need 150,000 classrooms, enough to build a one-story school, one classroom wide, extending from coast to coast.

A number of facts have been overlooked by the maker of the statement to which I alluded. The first is that Michigan's total value of public school property per pupil is only $647, or about 60 percent of that expended by the 2 top States in per-pupil expenditure. Equally important is the fact that he is not authorized to speak for the State of Michigan.

The best rebuttal of the statement by Mr. Schimmel is an impartial study made by the Department of Health, Education, and Welfare during the last session of Congress. That study shows that 14.5 percent of Michigan's total capital needs for school construction cannot be met by 1959–60.

Mr. Schimmel's arguments are simply reduceable to this, that he does not like Federal aid to education; and that he feels it unnecessary, even in view of compelling and obvious evidence to the contrary in the form of antiquated, unsafe, and overcrowded schools, children going half days to school, and receiving inadequate supervision.

Each year's delay in the passage of an adequate Federal school construction program robs another year's baby crop of an adequate education. Each year's baby crop in school suffers another year's loss. Further, in a very real way, the people of the United States suffer a loss in skills, invention, and progress in an age where the Soviet Union is making tremendous strides in the production of skilled technicians, scientists, and engineers, in what probably is the critical test in the battle for supremacy between communism and free society.

Russia in the past 5 years has turned out 216,000 engineers, we have graduated only 142,000 in the same period. In the next 5 years Russia will train 400,000 exclusive of a large number trained in the satellites and China. America's projected output of engineers will be 153,000. The results are similar in other fields of scientific and technical endeavor.

Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission, has warned that unless immediate steps are taken to correct this educational deficiency the results can become disastrous. Edward Teller, the father of the hydrogen bomb, a distinguished scientist has said simply and positively that the Soviet will surpass the United States in the technical and scientific field.

The tables below by the research division of the National Education Association, published in January 1957, are of interest. The first is the average value of public school property per pupil enrolled. The years cited are 1951 to 1952. Ordinarily that would not be the best figure to use because of the time lag. However, it is substantially reliable, and the most recent figures I could find. The thing which makes it most useful is that school construction in no area has kept up with the population growth:

TABLE 25.—*Average value of public-school property per pupil enrolled, 1951–52*

Delaware	$1,102
New York	952
New Hampshire	926
Wisconsin	815
Kansas	781
Oregon	725
Rhode Island	724
Washington	698
Nevada	683
New Jersey	656
Michigan	647
Pennsylvania	637
Wyoming	630
Ohio	614

The last two tables I insert are equally indicative of the need for school aid to Michigan and other States of the Union. They are from the Department of Health, Education, and Welfare, published in a school facilities survey. The first shows the number of units which are now in use and the number of which should be abandoned:

(1) States	(2) Now in use				(3) Should be abandoned by 1959–60			
	Elementary (a)	Secondary (b)	Combined elementary-secondary (c)	Total (d)	Elementary (a)	Secondary (b)	Combined elementary-secondary (c)	Total (d)

[1] Data based on local planning areas instead of local school administrative units.
[2] All of the 395 deficit units have exhausted their statutory bonding capacity.
[3] The territory is a single fiscal unit for school construction, with applicable resources of $21,953,000 and a deficit of $24,415,000.
[4] Projected on the basis of enrollments in all States and Territories, rounded to thousands, from data reported from 38 States enrolling 72.62965 percent of the pupils in the fall of 1954.

Even a casual perusal of the statistics shows that Mr. Schimmel is in error.

One of the best sources of authority in speaking for all the people of a State is the Governor. In Michigan we have a remarkable Governor, the Honorable G. Mennen Williams, elected last fall for the fifth time, by one of the largest majorities given any Governor in the history of the State. His position is that Michigan needs Federal aid for construction of schools. It is superfluous to say that position has been supported by the people of the State at the polls.

The summation of this is found in a statement by Mr. Albert J. Phillips, executive secretary of the Michigan Education Association, made before the House Committee on Education and Labor, showing the need for a Federal school construction program:

STATEMENT IN FAVOR OF FEDERAL AID FOR SCHOOL CONSTRUCTION SUBMITTED BY ALBERT J. PHILLIPS, EXECUTIVE SECRETARY OF THE MICHIGAN EDUCATION ASSOCIATION

Michigan schools need both Federal and State aid for school construction if they are to meet the school buildings needs of the near future and over a long range period.

This is due to the following factors:

1. The annual enrollment increases are now 70,000 pupils per year. These will be higher within a few years. This calls for an additional 2,200 classrooms per year for the elementary grades. Other school facilities are necessary in addition to these classroom needs.

2. Michigan will soon need additional junior high schools, and later senior high schools in addition to the elementary school needs. The cost of high schools is greater than that for elementary schools.

3. Increasing costs of school construction is proving to be an acute problem in many school districts.

4. Some districts already are overburdened by high millage levies for the retirement of school bonds.

5. Many districts are now levying excessively high combined millages for school operation and debt retirement. These added to the millage levies for other governmental units (city and county) have produced extremely high millage rates on property in these school districts.

6. Increasing interest rates, which have more than doubled in the past few years, are going to prevent the construction of many school buildings. If interest rates on school bonds could be reduced this would help a great deal.

7. Some areas, especially in southeastern Michigan, are growing so rapidly in population that the schools have hundreds of children added to their enrollments before many of the homes are placed on the assessment rolls.

8. The school building needs up to June 30, 1956 were estimated at about $423,500,000. There is a great backlog of school construction and needed repairs.

Michigan has done a great deal to solve its school building needs. The Michigan Education Association in 1948 initiated and secured the adoption of a constitutional amendment which changed the period for bond issues from "up to 5 years" to "up to 20 years."

This was the greatest single move in helping to solve our school building needs.

The following data will show how Michigan moved forward on this problem:

Year	Building and site fund	Debt retirement	Total
1940–41	$410,000	$9,690,000	$10,100,000
1941–42	340,000	9,650,000	9,990,000
1942–43	310,000	9,270,000	9,580,000
1943–44	1,300,000	14,120,000	15,420,000
1944–45	1,960,000	12,830,000	14,790,000
1945–46	2,910,000	7,270,000	10,180,000
1946–47	5,300,000	7,060,000	12,360,000
1947–48	9,980,000	7,240,000	17,220,000
AMENDMENT TO CONSTITUTION PASSED NOVEMBER 1948			
1948–49	13,220,000	8,990,000	22,210,000
1949–50	19,360,000	13,290,000	32,650,000
1950–51	17,170,000	17,810,000	34,980,000
1951–52	17,550,000	23,130,000	40,680,000
1952–53	17,560,000	29,560,000	47,120,000
1953–54	21,600,000	36,540,000	58,140,000
1954–55	26,520,000	47,940,000	74,460,000

Another constitutional amendment was passed in April 1955. We do not have data as yet on building and site fund and debt retirement payments for 1955–56.

The following data will give information on the extent to which school-bond issues have been voted in Michigan since the MEA sponsored amendment was adopted in November 1948:

July 1, 1949, to Jan. 1, 1950	$29,446,790
Jan. 1, 1950, to June 30, 1950	25,892,800
July 1, 1950, to Jan. 1, 1951	17,765,100
Jan. 1, 1951, to July 1, 1952	28,964,000
July 1, 1951, to Jan. 1, 1952	22,964,390
Jan. 1, 1952, to July 1, 1952	24,067,000
July 1, 1952, to July 1, 1953	64,096,015
July 1, 1953, to Jan. 1, 1954	28,422,500
Jan. 1, 1954, to July 1, 1954	59,623,900
July 1, 1954, to Jan. 1, 1955	48,635,825
Jan. 1, 1955, to July 1, 1955	25,736,500
July 1, 1955, to Jan. 1, 1956	54,093,500
Jan. 1, 1956, to July 1, 1956	92,718,500
July 1, 1956, to Jan. 1, 1957	66,242,650
Total	588,689,470

In spite of the fine support given by Michigan's property taxpayers, the school-building problem is becoming increasingly acute. The present State superintendent of public instruction has appointed a State committee to study the problem and offer suggestions as to possible solutions.

The Michigan Education Association on April 6, 1956, adopted the following resolution:

"We urge immediate action by the United States Congress in providing aid to the States for the construction of public school buildings, especially the appropriations of funds as proposed by the Kelley bill, H. R. 7535, without the inclusion of the Powell proposal which we believe would prevent the passage of much needed legislation for construction of schools."

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Sovereignty, Civilization, and Ships

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27, 1957

Mr. SALTONSTALL. Mr. President, on behalf of the Senator from Maryland [Mr. BEALL], I ask unanimous consent to have printed in the RECORD a brief statement prepared by him, a letter from Governor McKeldin to President Eisenhower, and the text of an address delivered by Governor McKeldin at the Chicago World Trade Conference.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BEALL

The distinguished Governor of the Free State of Maryland, Theodore R. McKeldin, delivered a very significant speech recently before the Chicago World Trade Conference. In it the Governor expressed his concern over the fact that, at times in the past, there has been a gap between America's stated objective of increased world trade and our occasional lapse into unwise protectionism as typified by the unfortunate 50 percent increase in duties in Swiss-watch imports. Governor McKeldin underlined this point by adding the following statement:

"I have had a few occasions in the past to comment in particular on the injury to the Swiss-watch import trade by restrictive Government actions over the last several years, and now it faces threatened imposition of quotas based on claims of defense essentiality. Regardless of whether or not the domestic industry can properly be regarded as essential to our national defense, it is clear to me that import quotas will not serve the purpose of maintaining the vigor of this domestic industry—or of any other industry. I am convinced that the imposition of such devices only serves to harass trade—commerce which is so patently essential to our common security position. Far from expanding restrictions, we should liberalize them and expand trade instead. I have recommended to President Eisenhower, and I reaffirm today my conviction that beneficial psychological and foreign-policy results would flow from a revocation of the 1954 tariff increase on Swiss watches. This would be a bold stroke that could not fail to achieve good results both at home and abroad."

Governor McKeldin has sent a copy of this speech to President Eisenhower and, in his covering letter, the Governor warned the President that he is apt to be faced with a mounting drive for import quotas on watches, bicycles, and many other products, frequently based on a questionable claim by domestic manufacturers of their essentiality to national security. He urged the President not to yield to such pressures, but to continue to stand by the principles enunciated in his inaugural address when he rejected the "fortress America" concept.

Because of the thought-provoking character of the expressions of Governor McKeldin in his speech and in his letter to President Eisenhower, and because I believe that his opinions can be of value to all of us, whether we agree or disagree with him, I request unanimous consent to have them printed in the Appendix of today's RECORD.

EXECUTIVE DEPARTMENT,
Annapolis, Md., March 5, 1957.

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: As I have expressed to you on other occasions, I am in full accord with your continued efforts to increase the strength and security of the free world through policies designed to expand mutually beneficial trade and I try to lend support to these efforts at every opportunity.

It was especially gratifying to me, therefore, to note that in your memorable Inaugural Address you reaffirmed your deep commitment to this philosophy by rejecting the "fortress America" concept. It was meaningful, also, to read in your recent report to the Congress the affirmation that "our national trade policy, which seeks to promote the continued growth of mutually profitable world trade, is thus doubly in the self-interest of the United States; it furthers both our prosperity and our national security."

The principles embodied in these recent statements of yours have served me well in the preparation of an address which I made several days ago at the Chicago World Trade Conference. As I believe it may be of particular interest to you, I am attaching a copy of the speech herewith.

In this speech at Chicago before a large gathering of businessmen engaged in international trade, I emphasized an essential concomitant of the principles to which you have given expersion and support: That it is the special responsibility of the business community to exercise its influence in enlarging the area of freedom for the conduct of world trade. I stressed the need for sustained interest and effort on the part of those businessmen and others who recognize the vital importance of expanded international trade. Only through such widespread understanding can we avoid further undermining of our trade objectives such as occurred when tariffs on Swiss watch imports were, unfortunately, increased by 50 percent in 1954. As I have mentioned previously, I do believe that beneficial psychological and foreign policy results would flow from a revocation of this tariff increase, and a more economic and more effective means of aiding the domestic industry might be developed if, indeed, such aid is merited.

I am disturbed to see today the threat of import quotas in both the Swiss watch and English bicycle cases. The use of such quotas, as I mentioned in my address, is alien to our free enterprise system because they stifle trade and tend to divert it into unnatural and artificial channels. Most alarming to me is the excessive clamor of protectionists for the use of import quotas in the name of national security. This proposition—at least, any promiscuous adherence to such a proposition—stands in bold contradition to your forthright rejection of the "fortress America" concept.

Therefore, at the Chicago World Trade Conference last week, I took this occasion to call for a removal of restraints that inhibit foreign trade and to emphasize the need for acting with application and consistency if we are to achieve the goals we seek. One significant example is the present need for the Congress to endorse without further delay your repeated requests for enactment of legislation authorizing United States membership in the Organization for Trade Cooperation. Such an expression of leadership spells not only an important milestone in the course of world trade—it also represents enlightened self-interest by the acknowledged leader of the free world.

I hope that my efforts to gain increasing support for the principles you espouse will yield fruitful results and that the national interest will, as it must, eclipse the narrow goals of those who press for the restriction of imports. Clearly, the realization of this objective is of major importance in our continuing endeavors to achieve a true and durable security for the Nation and, in fact, for the free world itself.

With highest regards and all good wishes, I am,

Sincerely,

THEODORE R. MCKELDIN,
Governor of Maryland.

"SOVEREIGNTY, CIVILIZATION, AND SHIPS

"(Address by Gov. Theodore R. McKeldin, of Maryland, Chicago World Trade Conference)

"The word 'sovereignty' has come into increasingly common use in this country in recent years, especially in the dozen years that the cold war has been raging. I wish I could say that it has come into increasingly widespread understanding; but I am afraid that the facts would not bear out any such claim.

"As a matter of fact, it has always been an ill-defined word. Some of the shrewdest brains in the world among lawyers, philosophers, and statesmen have struggled to define it exactly, but with only partial success. Webster's Dictionary offers three definitions, of which perhaps the most definite is "the power that determines and administers the government of a state in the final analysis," which leaves the inquirer free to settle upon practically anything he wishes.

"Certainly in the United States the power 'that determines and administers the government' is very diffuse. Congress has part of it, the President has part, the Supreme Court has part; but I do not understand how any candid man can seriously maintain that all three branches of the Government put together have all of it 'in the final analysis.' At this moment we are shuddering at the threat of war in the Middle East. The President and Congress are making every effort to avoid it and in that I am sure they have the sympathy of the Supreme Court. Yet it may come, and if it does, to that extent this Government will be 'determined and administered' by forces beyond our control.

"In this sense, the 'power that determines * * * the government of a state'—the force that confronts and challenges the government—is external in nature. Recently the President asked the Congress for a declaration of support, for a vote of confidence, in the exercise of the influence and power of this Government in meeting this challenge. In the final analysis, he asked the Congress, the body representative of the people, to express the support of the American people. In a democracy no al-

ternative course is possible. 'In the final analysis'—as that phrase is used in the definition of sovereignty—can only 'mean the people, the electorate who freely determine their government and the policies, both active and responsive, that their government will pursue.

"I cannot fail to observe in passing, that it is dangerously mischievous to attempt to interfere with or impair the essential function of sovereignty—that is, the conduct of foreign relations—through 'Brickerization' of presidential powers.

"Even within our own borders, government can do no more than direct and to some extent control forces that it did not create and could not subdue, if it wished to do so. One of the most powerful of these is commerce, or in the older, and in some respects better term, 'world trade.' The typical American trader is a private citizen engaged in what he regards as private business. The last thing he wants is to be saddled with any responsibility for the conduct of public affairs and most certainly he cherishes no ambition to regulate the affairs of foreigners, which he associates with sovereignty.

"Nevertheless, regardless of his wishes, he exercises part of the power 'that determines and administers' our national policy 'in the final analysis.' The conditions of modern life impose a certain measure of sovereignty on him, and unless he recognizes this and accepts the implications, he will not serve his country well. In the long run he will not serve himself well, either, although for a short time he may profit at the country's expense.

"What I wish to emphasize here is the special responsibility that American businessmen—particularly those businessmen who are engaged in foreign trade—have in helping give direction to our foreign-trade policy. The determination of the posture that our country assumes in the conduct of commerce among nations is an essential responsibility of the business community.

"The traditional policy of our country has been to encourage the maximum expression of individual preferences, initiative, and enterprise in the marketplace. This policy has brought great benefits to the economy and rewards to the participants. The logic of such a policy is equally applicable both with respect to domestic trade as well as to foreign commerce. Yet there are those in the business community who would wittingly subject our foreign trade, and the American business community that is engaged in such trade, to restrictions and harassments. Indeed, if such restraints were applied to their own domestic affairs, these would be described by them at the very least as 'undue Government interference.'

"Is there any reason why freedom of enterprise should stop at the shoreline? Clearly, the answer must be 'No.'

"There cannot be one logic which applies to domestic trade and another to our foreign trade. To do so is to imperil our own economy. Our export trade accounts for over 3 million American jobs and for commerce that maintains our ports and merchant fleet. The simple arithmetic of logic and experience shows that we cannot export unless we import. And we must remember that imports not only support our exports but afford us supplies of essential and strategic raw materials that sustain our industries and offer competition which lends vigor to our industry and sharpens its enterprise.

"But, as important as is foreign trade to our Nation's economy and to our livelihood, such trade has assumed another dimension of critical importance in the middle of the 20th century. Trade nurtures and sustains the economies of our allies and of the entire free world community. Threats to their trade are threats to their very economic life. By the same token, the opportunity to expand trade offers them the promise of economic progress and growth.

"This is a setting in which we must regard the future of United States trade and tariff policy. And it is a future that is veiled in uncertainty and beclouded by lack of clear purpose on the part of the American people. We can do no better than to chart our course as did President Eisenhower in his stirring and memorable inaugural address. You will recall that he shunned the vague and illusory picture of a fortress America—a safe and solitary refuge in a sea of trouble. He proclaimed America's irrecovable commitment to a unity of purpose with the world community. Our strength is the common strength of free nations; our future inexorably entwined with that of all freedom-loving peoples.

"We are prepared to make sacrifices to achieve our common purpose: to shoulder the burden of armaments and to support the cost of essential programs of economic assistance. There is one thing, however, which we can and must do which will involve no cost but which will bring a harvest of mutual benefits to all the participants. That is to remove the restraints that inhibit foreign trade and to permit the expansion of such trade as conditions of the market place and the activity of the business community will permit.

"It saddens me to observe that our citizenry does not appear willing to give the support to this objective which it merits and requires in order to be brought to reality. The impetus of the 23 years of the reciprocal trade-agreements program has slackened. Instead of further tariff reduction, we have seen the expansion of escape clauses and higher duties imposed on such products as Swiss watches and British bicycles.

"I have emphasized that, in the conduct of foreign relations, the exercise of sovereign power must be accomplished without hindrance. We must recognize that trade relations are no less a part of foreign relations than diplomacy itself. Yet the free conduct of trade relations is threatened by restrictive restraints and compromises which can only sap the vigor of our policy and cast doubt upon our intentions.

"The treatment of British bicycles, Swiss watches, woolens and cotton textiles from Japan has become an unfortunate symbol of our trade policy to many of our free-word friends. Such actions and threats of restrictive action spell inconsistency in our trade-agreement commitments and inject uncertainty into the conduct of world trade. It is particularly ironic that the tariff increases on watches and bicycles have not satisfied the domestic industries; now they seek compound protection through import quotas.

"We have thus seen, as well, increased pressure for the use of quotas to restrict imports—quotas which are alien to our free-enterprise system because they involve direct intervention in the market place for the purpose of controlling and allocating trade. Foreign traders who have chafed over the use of such restrictions by foreign countries during the postwar period of reconstruction know too well how quotas stifle trade and tend to direct it into unnatural and artificial channels.

"Perhaps most alarming is the clamor on the part of protectionists for the use of import quotas based on the contention that a domestic industry is essential to the national defense. Nothing is more contradictory to a rejection of the 'fortress America' concept. Nothing would more directly alienate our allies than to limit our imports by making use of so thoroughly protectionist a device as import quotas.

"I have had a few occasions in the past to comment in particular on the injury to the Swiss watch import trade by restrictive Government actions over the last several years, and now it faces threatened imposition of quotas based on claims of defense essentiality. Regardless of whether or not the domestic industry can properly be regarded as essential to our national defense, it is clear to me that import quotas will not serve the purpose of maintaining the vigor of this domestic industry—or of any other industry. I am convinced that the imposition of such devices only serves to harass trade—commerce which is so patently essential to our common security position. Far from expanding restrictions, we should liberalize them and expand trade instead. I have recommended to President Eisenhower and I reaffirm today my conviction that beneficial psychological and foreign policy results would flow from a revocation of the 1954 tariff increase on Swiss watches. This would be a bold stroke that could not fail to achieve good results both at home and abroad.

"It is well to emphasize again and again that international commerce has a quality of essentiality of its own. For commerce is now and has been from the beginning of recorded history the lifeblood of civilization. At times various nations have sealed their borders against the trader, and centuries of stagnation have been the invariable result. China before the 16th century is the most conspicuous example, but Japan, India, Korea, and Tibet are others. Only where trade moves does civilization really live; and only where trade moves briskly does civilization grow strong and great. Can it be denied, then, that in the final analysis the trader exercises power that determines the destiny of the state?

"It is true enough that this sovereignty of trade is far from absolute, but it exists as certainly as the power exercised by the three branches of Government. It is part, and a highly important part, of the complex of forces that must be brought to work in unison if the Nation is to play successfully the part to which destiny is plainly calling it.

"If I could tell you how these forces are to be brought into focus, I could solve all the problems of statecraft and half the problems of business, here and now. I am not oracle enough for that; but I have wisdom enough—and so have you—to know that the problem will never be solved except by men who have faced it squarely, who know that some responsibility for the solution lies upon them, and who work vigorously to discharge that responsibility.

"I am reminded of a wise phrase of Wendell Willkie's which is found in his book of essays entitled 'An American Program.' Willkie wrote, 'Our sovereignty is not something to be hoarded, but something to be used.'

"Your sovereignty as citizens and as businessmen engaged in foreign trade must be used and exercised for when—and I refuse to say 'if'—when the men who control the movement of American commerce solve the perplexities that harass them today and gain a clear conception of the part they can play and how it should be played, an astonishingly large proportion of our international difficulties will disappear. I have no fear of any failure of either skill or will in American businessmen; what I fear is the shortness of time left to us. Our position in the world is clouded by many obscurities and the work of clearing them away is bound to be difficult; but with firmness, good will, and mutual confidence it can be done, and when it is done a large share of the credit will belong to the traders who have kept the blood stream of civilization moving."

Mounting Federal Expenditures

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from a constituent in regard to mounting Federal expenditures. This letter appeared in the March 25, 1957, issue of the Manchester Union Leader. I should like to insert also the lead editorial from that issue entitled "Ruinous Indeed," and which refers to the letter. This letter is typical of the great volume of communications on the subject which I have received since the opening of this session of Congress.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

SPENDING INTO NATIONAL RUIN

(The lead editorial on this page today, Ruinous Delay, refers to a letter to Senator BRIDGES from Roland P. Genest, Champagne's Super Markets vice president. A copy of that letter appears below. Reprinting it is indeed a public service.)

DEAR SENATOR BRIDGES: Unfortunately, it was necessary for me to cut short my recent visit to Washington. I had intended to call upon you personally to air my views on a subject which I believe is of paramount concern to people of our country today—Government spending. In my opinion, it is needlessly exorbitant with the attendant result that taxes are eating up consumer incomes and are well on their way to stifling the incentives of all businesses. I can vouch for these two evils from personal experience, both as a wage earner and as a responsible executive in a New Hampshire business with a sales volume of approximately $12 million annually.

Being in a rapidly growing business, we are consciously aware of the fact that costs of all types have been mounting for several years. However, we have never felt that there was ever an excuse for not practicing the most rigid economies possible, at all times, to keep our costs at a minimum commensurate with these upward spirals. As a matter of record, these upward spirals have caused us to exercise even more caution and scrutiny in the setting of our budgets and our needs.

The Government's current spending is becoming ruinous. It is going on with a reckless abandon that reminds me of a nouveau riche family who wastes its newly acquired riches on a multitude of things it never had and doesn't need simply because the money is there and it appears that there is plenty more where that came from. But everyone knows of the wells that eventually run dry when nobody thought they ever would.

Of course, there are more and greater demands for Government spending than ever before, but this is all the more reason for greater attention to the really necessary projects and the finest examination of proper allocations. In other words, exercising the most solid principles of business—"getting a dollar's value for each dollar spent," is badly needed now. Foreign aid is more vital than ever, yes; but in my opinion, it is without proper direction—it is too big and too wasteful. Everyone with any exposure to it is critically conscious of the overlapping costs, duplications, and excesses in the military budget caused in large measure by factional jealousies and bickerings, and lack of sound businesslike coordination of all efforts. The growing feeling on the part of the Government to play big brother and assume the responsibility for many questionable costs in the matters of housing, schools, agriculture, and health insurance is cause for great alarm for the serious-thinking people of this country.

The cause for alarm is the greater because these excesses are being carried out under a Republican administration—an administration which violently criticized the terrible wastefulness of the previous Democratic administration. The American people are sick to death of these extravegances. Having once hopefully turned to the Republican Party for relief from these abuses, they find this relief has not been forthcoming.

I am concerned and practically every businessman with whom I come in contact is deeply concerned about the needless excesses of current Government spending and stifling taxation.

Something must be done soon to restore adequate incentives to individual wage earners and businesses to keep our country and its economy on a safe, secure, and sound keel.

I urgently request that you invest your sincere and wholehearted efforts, and enlist the support of all of your colleagues in a concerted effort to eliminate wasteful, pointless Government spending, and unnecessary taxation.

Very sincerely yours.

ROLAND P. GENEST.

P. S.—I am and have been a Republican all my life.

RUINOUS INDEED

Cuts in the heavy spending in Washington will be made only if the Senators and Representatives hear from the folks back home by way of letters such as the letter written to Senator BRIDGES by Roland P. Genest, vice president in charge of operations of Champagne's supermarkets. That correspondence appears on this page today. Let enough Americans write, telegraph, and phone their Senators and Representatives and tell them that the budget should be cut, and it will be.

The Genest letter is especially encouraging. One of the unfortunate aspects of the last decade has been the fact that both on the State of New Hampshire and on the Washington level prominent businessmen and other community leaders have abandoned the principles of thrift in Government by which this Nation grew great. Moreover, these same leaders have been leading the clamor for more spending. Therefore, to have a business leader of Mr. Genest's stature writing so strongly to Senator BRIDGES is a most heartening event.

Indeed, as Mr. Genest says, "the Government's current spending is becoming ruinous."

The rush to ruin will be stopped only if all of us let the spenders in Washington know we want an end to their extravagance.

Toward European Unity

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. JOHNSON of Texas. Mr. President, the signing of the common market and Euratom pacts in Rome 2 days ago was one of the most significant steps in the history of strife-torn Europe. I believe its significance has received general recognition from the American people.

I ask unanimous consent that an editorial from today's edition of the New York Herald Tribune summarizing this event be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOWARD EUROPEAN UNITY

The international reaction to the signing of the common market and Euratom pacts in Rome was what might have been expected—pleasure in Washington, imprecations in Moscow, and quiet satisfaction among the European peoples who stand to gain most from the new agreements. What the signatories of the six European countries have done is to agree to weld their 160 million citizens into a single economic unit. Their objectives are to remove the customs barriers and trade quotas that now impede their commerce and to permit free exchange among them of labor, capital, and goods. Concurrently, they will pool their resources for the development of peacetime atomic energy.

The six nations—France, West Germany, Italy, Belgium, Holland, and Luxembourg—have realistically allowed themselves a period estimated at from 12 to 17 years to make the national adjustments necessary for the complete establishment of the common market. The parliaments of the six nations involved must still give their approval, but steps toward clearing the way for the common market and Euratom are expected to start at once. Aside from their purely economic aspects, Europe's new communal arrangements are significant in their creation of a continental parliament, council of ministers, and court of justice—all designed to further free commerce by lowering national barriers.

In a sense, the signing of the agreements at Rome constitutes an acknowledgement of a fact of life that some Europeans have been reluctant to face—that neither France nor Germany nor the other nations can any longer stand alone and self-sufficient in a world of superpowers. A continent long rent by war and suspicion can hold its rightful place in today's world only if it pools its resources of peoples, goods, and ingenuity.

The nations which signed the common market and Euratom pacts comprise 160 million persons, including some of the most industrious and imaginative in the world. Together they can produce and prosper; separated they offer an easy target for the Soviet colossus on their east. That is why Moscow is disturbed at their decision to unite their resources; that is also why the free world welcomes their creation of so powerful a federation. Obstacles and roadblocks are still ahead, but in this historic meeting in Rome the statesmen have written in bright letters their conviction not that Europe is finished, but that Europe, as a great entity in the world, is just beginning.

Outstanding Growth of North Central Airlines

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. WILEY. Mr. President, this is a season when a great many annual reports are pouring out to the more than

8½ million stockholders in publicly owned corporations.

These reports are read with interest by investors in terms of determining how the capital which they are risking is being utilized. The reports are likewise read with interest by public officials and citizens of the areas where companies play a crucial role in the economic life.

It is natural, therefore, that we of Wisconsin should read with particular interest the annual report of one of the vital enterprises which means a great deal to our State and to its competitive position in this air age. I refer, of course, to America's leading local airline—North Central Airlines.

I was pleased, therefore, as a citizen and as senior Senator from Wisconsin, to receive North Central's 1956 annual report, just as I am pleased to note progress reflected in other reports of other fine enterprises serving my State.

North Central, I should like to point out, last year established new passenger, air express, and airmail records, leading the Nation's 13 local airlines. Indeed, North Central widened its margin of industry leadership during the year by setting new records in plane-miles, passenger-miles, and commercial revenues.

Thus, North Central concluded its 10th year of public service by not only racking up new achievements—thanks to its 1,000 devoted employees—but by preparing even more intensively for a still more successful future. I understand that North Central has on file with the Civil Aeronautics Board applications which, if approved, would expand the present system fivefold.

I cite these facts now because I feel that one can hardly emphasize enough the community importance of this and other local airlines.

America naturally follows with deep interest the progress of its great regional air carriers and its international carriers. But too little public attention has been given thus far, I believe, to the indispensable job of the local airlines in building the economy of this great Nation, especially its smaller communities.

I send to the desk a few selected paragraphs from the annual report of this company. I ask unanimous consent that the paragraphs be printed in the Appendix of the RECORD, to be preceded by a list of its officers and directors.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

NORTH CENTRAL AIRLINES, INC.

General offices: 6201 34th Avenue South, Wold-Chamberlain Field, Minneapolis, Minn.

Directors: H. N. Carr,[1] Werner L. Christensen, Garnet F. DeCoursin,[1] Robert F. Grover, Arthur E. A. Mueller,[1] A. L. Wheeler, K. B. Willett.

Officers: Arthur E. A. Mueller, chairman of the board; H. N. Carr, president and general manager; Frank N. Buttomer, vice president, traffic and sales; R. H. Bendio, Sr., vice president, maintenance and engineering; Alvin D. Niemeyer, vice president, operations; Arthur E. Schwandt, vice president, industrial relations; Bernard Sweet, secretary-treasurer.

Registrar and stock transfer agent: Northwestern National Bank of Minneapolis, Minneapolis, Minn.

[1] Executive committee.

ANNUAL REPORT, 1956

North Central Airlines in 1956 again established new records in passenger, air express and airmail traffic and commercial revenues for the Nation's local airline industry.

Commercial revenues totaled a record $46,746,781 in 1956, an increase of 26 percent over 1955. Operating costs were reduced from 102.8 cents per plane-mile in 1955 to 99.6 cents in 1956, one of the lowest in the industry.

• • • • •

AGGRESSIVE ROUTE DEVELOPMENT

North Central Airlines is executing one of the most aggressive route development programs in the local service industry. In terms of route miles, North Central would become the Nation's largest scheduled carrier if the Civil Aeronautic Board approves the majority of the new routes for which the company has applied. The present system of 51 cities in 9 States would be expanded to 145 cities in 17 States and 1 Canadian province. It would reach east to Buffalo, N. Y., south to Kansas City, Mo., west to Denver, Colo., and north to Port Arthur-Fort William, Ontario.

The company's applications pending before the Board propose the addition of some 12,000 miles and 94 cities to the present 3,240-mile system. This would make North Central five times larger. In addition, North Central has on file with the Board long-range plans for 1,072 miles of helicopter routes serving 53 points in the metropolitan areas of the system.

A major portion of the company's effort, as well as substantial expenditures, has been directed toward the successful conclusion of these applications and the building of a larger, stronger airline. In addition to filing for several new routes in 1956, North Central participated in six major route cases before the Civil Aeronautics Board during the year. The results of this tremendous investment in route development will be realized within the next 2 years, with a Board decision affecting North Central occurring on an average of every 90 days.

• • • • •

SERVICE INCREASED 22 PERCENT

North Central Airlines offered more service to the traveling public in 1956 than in any previous year. The DC-3 Northliner fleet flew 7,754,836 miles, an increase of 22 percent over 1955. Since no new routes were inaugurated in 1956, this increase reflects the strides made during the year in the development of the present system, by improvements in route patterns and intensification of flight schedules.

Service to Chicago's second airport, new O'Hare Field, was inaugurated on April 29, 1956. The number of daily flights between the 2 Chicago airports and Milwaukee now stands at 51, one of the world's most frequent flight schedules.

Another round-trip flight between Chicago and the Twin Cities was inaugurated during the year, along with additional service between the Twin Cities and Duluth-Superior, between Chicago and Detroit and between Chicago-Milwaukee and a number of intermediate Wisconsin cities. New early morning service to the metropolitan cities was instituted by overnighting aircraft at selected intermediate points for morning flight origination, and new limited-stop flights have substantially improved service over a number of important routes.

In terms of flight operations, North Central Airlines attained "trunkline" proportions in 1956. The airline currently operates nearly 100 daily flights—about 650 takeoffs and landings for an average of 1 operation every 90 seconds.

Major improvements in facilities and procedures during the year have resulted in increased operational reliability and better passenger service. Airport expansion and additional radio navigational aids have enabled North Central to provide better service at several smaller cities during marginal weather conditions. More than half the cities on the system have begun major airport improvement programs which will be completed in 1957 and 1958. These include lengthening runways and constructing new runways, laying additional taxiways, installing instrument landing systems, building modern passenger terminals, and purchasing additional acreage to protect approaches for future expansion.

To expedite operations and reservations communications, new automatic "selective" teletype circuits were installed systemwide, and a private line telephone between the Twin Cities and Chicago via key cities was placed in operation. To better handle the rapidly growing passenger reservations traffic, the Chicago Reservations and System Space Control offices were transferred to more suitable quarters where equipment and procedures are designed for greater efficiency and speed.

The confirmed ticket pick-up policy (proof of ticket purchase before confirming a passenger's reservation) is helping to reduce the "no-show" and late cancellation problem. This procedure was put into effect by the entire scheduled airline industry in September.

North Central has plans to increase flights to the Wisconsin cities now threatened with loss of service by the Chicago and Northwestern Railroad. The railroad has petitioned to discontinue 21 trains, including several between Chicago and Madison, Chicago and the Twin Cities, Chicago and Milwaukee, Madison and Milwaukee, and Milwaukee and Green Bay—all routes currently served by North Central.

TRAFFIC LEADERSHIP

North Central again established new traffic records for the Nation's 13 local airlines in 1956 and further strengthened its position of industry leadership.

A total of 549,654 revenue passengers flew the route of the Northliners in 1956, representing an increase of 28 percent over the 1955 total of 430,445 passengers and a lead of 36 percent over the second place local carrier. North Central's passenger business would have been even greater if the weather conditions had not been unusually severe during the 4 winter months of the year. In addition to scheduled service, North Central carried 2,121 passengers on 113 charter trips, 10 of which involved more than 1 aircraft.

Air express shipments rose to 4,959,925 pounds, a gain of 15 percent over 1955 and 66 percent more than the second local airline.

Air mail volume reached a record 2,174,801 pounds, an 18 percent increase. This exceeds the second place carrier by 29 percent. In addition to air mail, North Central advanced 581,062 pounds of regular mail which is ordinarily carried via surface transportation. This type of mail is carried on selected flights over the interpeninsular Michigan route and between the Twin Cities and Duluth-Superior, and over all routes during the Christmas postal rush.

While the amount of scheduled service (plane-miles) increased 22 percent in 1956, revenue passenger-miles increased 24 percent to 83,052,834. Load factor (percentage of seats occupied) rose from 50 to 52 percent.

In July more persons boarded North Central flights at Milwaukee than those of any other airline, marking the first time a local carrier has surpassed the trunklines at a major terminal. A new single-day system passenger record was set on October 13 when 2,315 passengers enplaned.

Monthly system traffic records were 56,467 revenue passengers in August and 39,422

ton-miles of air express and 20,665 ton-miles of airmail in October.

* * * * *

FORECAST

As a result of the company's aggressive route development program, North Central Airlines will experience unprecedented growth in 1957 and 1958. In addition to system expansion, the company anticipates dramatic improvements in present route certification, for example, the nonstop rights for which it has applied. These developments will enable the company to improve and expand service, operate more efficiently and at the same time, increase commercial revenues considerably.

North Central will establish new industry records in commercial revenues again in 1957. The company's two-millionth passenger will be carried in May, and passenger traffic over the system as now constituted is expected to approach the 700,000 mark for 1957. With this high volume of traffic, continued efficiency of operations and important route improvements, the company will be in a position to strengthen its financial condition substantially during 1957.

More Funds for the Federal National Mortgage Association (Fannie May)

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. JOHNSON of Texas. Mr. President, my hometown newspaper, the Austin Statesman, recently carried an excellent editorial on "the largest mortgage company in the world"—the Federal National Mortgage Association.

I ask unanimous consent to have this editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Austin (Tex.) Statesman of March 16, 1957]

MORE FUNDS NEEDED FOR LOANS BY "FANNIE MAY"

The Federal Government operates the largest mortgage company in the world. It is the Federal National Mortgage Association (FNMA), but usually called Fannie May, first chartered by Congress in 1938 and rechartered with revised functions in 1954.

Congress is about to make Fannie May even larger. The move will help thousands of bankers, home buyers and builders, officials of the huge association say. It buys and sells Veterans' Administration and Federal Housing Administration home mortgages all over the United States.

One of Fannie May's chief functions is to keep money fluid. It does this by purchasing Veterans' Administration and Federal Housing Administration mortgages from banks and other lending institutions in scarce money areas and reselling them in places where investment dollars go begging. It deals only with private lending firms, not individuals.

Today money is so tight over a large area that Fannie May has a special problem. Hundreds of banks want to sell their mortgages to Fannie May so they will have cash to reinvest in more profitable channels, but few want to buy mortgages from the agency. By the end of March, the institution will have brought $1 billion worth of home mortgages, a record amount under its new charter. In contrast, the agency has been able to sell only $5 million worth of its mortgages since 1954.

Under current law Fannie May is authorized to borrow $1.1 billion to buy mortgages. Its buying cannot continue much longer unless Congress gives it permission to borrow more money. If it can't buy mortgages, money for home buyers won't be easily available.

On February 20, the House authorized Fannie May to borrow an additional $500 million. The Senate is expected to do likewise in the next few days. The President is expected to sign the legislation.

E. Herbert Norman

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Canada Protests a Senate Inquiry," from the Chicago Daily Tribune of March 25, 1957.

In the same connection, I ask unanimous consent to have printed in the RECORD an article entitled "Study Demand for Lid on Red Probe Record," written by Willard Edwards, and published in the Chicago Daily Tribune of March 25, 1957.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Tribune of March 25, 1957]

CANADA PROTESTS A SENATE INQUIRY

Lester B. Pearson, the Canadian Minister of External Affairs, has announced a strong protest to the United States Government as a consequence of an investigation undertaken by the Senate Internal Security Subcommittee. The subcommittee was primarily interested in an American diplomat, John K. Emmerson, but a Canadian diplomat, E. Herbert Norman, was discussed during the proceedings.

The American State Department lost no time in announcing that it repudiated the allegations concerning Norman which were embodied in the Senate subcommittee record. These, said the Department, are not "opinions of the United States Government." The Department added that if Canada considered its diplomatic agents in the clear, that was enough to satisfy the United States.

The Canadian Foreign Minister may be excused for failing to remember that the Government of the United States has three independent and coordinate branches and that, of these, the executive, represented in this instance by the State Department, has no business trying to qualify or reject the activities of the legislative, as represented by the Security Subcommittee. There is less reason for the State Department to ignore this fact.

Indeed, the executive branch is able to remember its restricted jurisdiction when it cares to do so. Before the United States entered World War II, and while diplomatic relations were still maintained with Germany, Mayor LaGuardia, of New York, made a speech denouncing Hitler. When Germany protested, Secretary of State Hull pointed out that the Federal Government had no control over the head of a municipality.

The same answer, varied to fit the circumstances, would have sufficed in dealing with the Canadian complaint relative to the Senate inquiry, but the State Department chose, instead, to apologize in effect for the activities of a legislative committee.

Norman has received attention on this side of the boundary in the past. In August 1951 Prof. Karl Wittfogel of Columbia university, a former Communist, testified before the security subcommittee that he knew Norman as a Communist. Norman had been No. 2 man in Pearson's ministry of external affairs, where he presided over the American desk. Later he was Canadian high commissioner to Uew Zealand, and now is Canadian ambassador to Egypt.

In that position, Norman has seen Emmerson, who is counselor of the American embassy in Lebanon. Norman's commission also extends to Lebanon, and he met Emmerson there. Emmerson at first said it was a casual encounter, but later recalled it lasted 2 hours. He denied, on the basis of an acquaintance dating back 17 years, that Norman was a Communist. This line of questioning grew out of the fact that Emmerson was an American diplomatic agent in China before the Communist conquest of that country. Previous testimony had suggested that he had some association with Communists, and he himself admitted that he had "illusions" about the Soviet Union at one time.

Inasmuch as Congress has vested Mr. Eisenhower with war powers in the Middle East and has given him initial authority to start spending $600 million in that area, legislative curiosity concerning the ideology of the diplomatic agents executing this policy against communism on the spot is entirely legitimate. There certainly is no reason for the State Department to make excuses to another government when the Senate wants to ask a few pertinent questions.

[From the Chicago Daily Tribune of March 25, 1957]

STUDY DEMAND FOR LID ON RED PROBE RECORD—FOLLOWS PROTEST BY CANADIAN AID

(By Willard Edwards)

WASHINGTON, March 24.—The Senate Internal Security Subcommittee today pondered a State Department demand to suppress publication of all further testimony involving the past Communist connections of a Canadian diplomat.

Chairman EASTLAND, Democrat, of Mississippi, put the problem up to the eight other subcommittee members. He noted that if the State Department's request is granted, the Senate will be in the position of having published a partial text of testimony by a witness and then cutting off release of additional testimony in which changes were made in the original statement.

PEARSON IN STRONG PROTEST

The State Department interceded after receiving a strong protest from Lester Pearson, Canadian Minister of External Affairs, who declared that "slanders and unsupported insinuations" had been published against E. Herbert Norman, Canadian Ambassador to Egypt and Minister to Lebanon.

The information relating to Norman was placed in the record during questioning in executive session by John K. Emmerson, deputy chief of staff in the American Embassy in Beirut, Lebanon, a friend of Norman since their days together in China and Japan during World War II and thereafter.

LINKED TO SPY FIGURE

Robert Morris, subcommittee counsel, introduced a Government security report which labeled Norman a member of the

Communist Party in 1940 who had been questioned by his own Government concerning his connection with a principal figure in the Canadian spy-ring investigation.

The Canadian protests followed release of this executive session record. The State Department was informed that Norman had been cleared of all charges in 1951.

When State Department officials carried the Canadian objections to the subcommittee, they were informed that another high government officer of a friendly government also had been named in testimony. This caused such alarm that Christian Herter, Acting Secretary of State, called upon Senator JOHNSON, Democrat, of Texas, Senate majority leader, and Senator DIRKSEN, Republican, of Illinois, acting minority leader, to demand a halt to EASTLAND's inquiry.

REPORT TESTIMONY CHANGED

Emmerson was questioned again in executive session last Thursday and Friday. He was reported to have altered his original testimony in relation to the manner in which he and Norman met in Beirut last October 27, and discussed the Middle East crisis.

The sessions also developed that the State Department had checked with the Federal Bureau of Investigation concerning the accuracy of the Government security report on Norman and received corroboration of his past record.

Although Norman is a representative of another Government, the questioning revealed that he was employed in 1945 in the Allied Counter Intelligence Corps attached to the staff of General MacArthur in Japan and was thus under American supervision.

Tax Relief for Persons Caring for Handicapped Children

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. JACKSON. Mr. President, I should like to commend to my colleagues an excellent column written for the Seattle Post-Intelligencer by Mr. Fergus Hoffman, the paper's business and financial editor.

The column deals with existing tax-relief measures now available to the families of handicapped children. It also points up the need for additional relief in some cases, and is very commendable as a public service for its instructive value to taxpayers.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Seattle Post-Intelligencer of March 14, 1957]

SEATTLE'S BUSINESS: HANDICAPPED YOUTH CARE TAX AID GIVEN

(By Fergus Hoffman)

When it comes to carrying life's burdens, the parents of handicapped children generally are not a complaning lot. They have only to look at the child to erase any twinge of self-pity. They consult with specialists in medicine and education; they join with other parents in organizing special schools and treatment centers for all handicapped children.

And they bear the extra costs to the last penny to provide whatever can be provided for the youngsters.

Maybe that's life—but every such parent should look into the chance of pinching pennies on taxes.

The Federal instruction manual for 1956 income-tax returns says expenses for special schools for handicapped children are not allowable medical expenses.

The official Government publication Your Federal Income Tax says the same thing.

These assertions are not necessarily so. It may require the expert service of a tax consultant, but many taxpayers parents of handicapped children should discover that they are entitled to deduct a variety of expenses involved in providing specialized education for their youngsters.

Not only should these deductions be taken for 1956 but for the so-called open years. Refunds for 1955 and 1954 may be obtained, depending upon individual circumstances.

The Seattle office of Internal Revenue Service cautions that no general rule can be readily applied to tax returns by parents of handicapped children. However, the Treasury Department, in a special ruling, has changed its thinking on this point, and it is certainly worthwhile for parents to investigate.

The special ruling would allow deductions for meals, lodging, and transportation involved in giving a handicapped child specialized schooling. These would be categorized as deductible medical expenses. Cost of ordinary education in addition to specialized education may be deductible.

The broad rule on medical care is amounts paid for diagnosis, cure and mitigation, treatment or preventment of disease. Money spent for the purpose of affecting any structures or function of the body is also spent for medical care.

Many taxpayers may find they already are taking full advantage of the medical deductions, but for those whose major financial burden comes from providing special schooling for handicapped youngsters, the special ruling may be beneficial. Uncle Sam doesn't like to pick on little kids.

The Two-Party Political System

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. JOHNSON of Texas. Mr. President, the Abilene Reporter-News, one of our great and influential newspapers in far west Texas, recently carried some very thoughtful observations on our two-party system. I ask unanimous consent to have these editorial comments printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[The Abilene (Tex.) Reporter-News of March 16, 1957]

TWO-PARTY SYSTEM IS PREFERABLE TO SPLINTERS

At debates recently held by the Oxford Union some British youngsters spoke with asperity of the two-party system in the United States which finds Republican and Democrat almost as alike as 2 peas in a pod, with only slight difference between the 2. So, there is little or no choice offered the American voter, they argued.

However, the differences are there, less apparent than real perhaps. There is not much difference between the two parties in the matter of social security legislation and administration, true enough. This makes some conservative Republicans unhappy, and roils some Democratic liberals on the ground the GOP has stolen their stuff, but a two-party meeting of minds on social security should not surprise a British observer over much. In truth, the same thing has happened in a Britain divided between Labor and Conservative; the Conservatives have left social legislation almost untouched, just as the Republicans have in this country.

There are, however, enough differences between the two major parties in this country to offer refuge and accommodation to large segments of our population who disagree with both on relatively minor points.

Most Americans, we believe, recognize the wisdom and strength of a two-party system, as opposed to a fractionated system such as that long prevalent in France, where the real power quite often is wielded by splinter minorities. In France, the hands of government, not to mention the cogs of legislative machinery, are quite often paralyzed by a coalition of splinter parties, who rally around personalities rather than issues.

British critics of our system—representative as contrasted with parliamentary—seem to forget that there are only 50 million Britishers as contrasted with 169 million Americans. Britain's population is homogenous; ours is highly diverse. Ours is spread over 3 million square miles; Texas alone is bigger than 2½ Great Britains.

In so huge and diversified a country as ours there are conflicts of interest between the agricultural Middle West and manufacturing New England, between a traditionally Democratic South and a traditionally Republican New England, between the economic interests of half a dozen major geographical divisions of the land.

If all these conflicts of interest socially, economically and culturally were split into as many warring political parties it would sap the Nation's strength and reduce us to the impotence of France.

The two major parties are enough alike to insure against sudden violent changes, and different enough to give all men of good will the opportunity of self-expression.

The Bermuda Conference—Diplomacy by Trickery

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Diplomacy by Trickery," which appeared in the Indianapolis Star in its issue of March 26, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIPLOMACY BY TRICKERY

President Eisenhower is seeking by trickery to circumvent the Constitution of the United States and the laws made by the United States Congress. No other conclusion is possible from the announcement of the agreements made at the Bermuda Conference.

The President has unilaterally, and without the advice or consent of the Senate, announced that he intends to join the military alliance of the Baghdad Pact. He has no constitutional right to do so. This is a treaty to which he has no power to bind the people of the United States without the approval of the United States Senate. For, if this country joins the military part of this pact, we automatically become obligated to defend the Middle Eastern interests of Britain, Turkey, Iraq, Iran, and Pakistan. Yet no alliance can, under the Constitution, be binding on this country without senatorial approval.

Mr. Eisenhower says that he is acting under the Middle East joint resolution. That is not so. He did not ask Congress for authority to join the Bagdad Pact when he proposed his Middle Eastern policy. He did not inform Congress that he intended to make a military alliance with some of the nations in this area and not with others. Yet now he has simply taken matters into his own hands in an attempt to avoid having to ask approval by the Senate which is his constitutional duty.

Would the Senate approve American entry into the Bagdad Pact if asked? We do not believe it would. But whether it would or not, the Senate has not even been asked. This is the very sort of "back door" diplomacy that Republicans have been bitterly criticizing Democratic Presidents for doing at Yalta and in Korea. The President himself has repeatedly stated that he will never seek to circumvent his responsibilities to Congress in foreign affairs—particularly when he was opposing the Bricker amendment which would prevent such evasion. Now he himself has proved the necessity for limiting still further the power of the President to make treaties singlehandedly and without responsibility to either Congress or the people.

This agreement to enter the military alliance with Bagdad Pact nations is an example of Presidential duplicity that needs to be repudiated by Congress. If the President wants to put the United States into this Middle Eastern military alliance, let him do it legally. Let him come before Congress and ask for approval in the proper manner instead of trying to sneak it in through the back door.

We did not think the President would stoop to this sort of obvious trickery. Because he has done so, we suggest that Congress by resolution repudiate this illegal alliance. At the same time we suggest that Congress also ask the President to explain why he has agreed to give guided missiles—with atomic warheads located nearby to be supplied in case of war—in violation of the law passed by Congress prohibiting him from sharing atomic missiles with anyone.

The Late Honorable Harold Hagen

SPEECH
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. HALE. Mr. Speaker, I want to add my word to what has already been said about Harold Hagen. He was by no means an intimate friend of mine. We were never on the same committee or otherwise drawn closely together, but for many years his name came immediately ahead of mine on the rollcall and somehow that alphabetical proximity contributed to the warm and friendly feeling that I had for him. We were both 78th'ers.

I think Harold Hagen was a most devoted, conscientious and useful Member of this House. His work on the Civil Service and Post Office Committee was outstanding. I was very sorry to have him leave the House, and I lament today his sudden and untimely death. I join most sincerely in the expressions of sympathy to his wife and family.

Al Butler, All-American

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. KEATING. Mr. Speaker, the city of Rochester, N. Y., is famed for many things, not the least of which is the excellence of its athletes. Added luster to the city's athletic reputation has come in recent years through the feats of native sons Johnny Antonelli, Bob Keegen, and Walt Dukes—to name just a few—in the ranks of professional sports.

For the last 4 years the city sports pages have been set ablaze by the feats of a young man still in high school. His name is Elbert (Al) Butler, and this year he led his East High School team to the city and section 5 AA basketball championships.

In the reason just completed, Al scored a recordbreaking 526 points in 16 league games. His total of 1,691 points for 4 seasons is another alltime high for the Rochester Interscholastic League, and his selection as an all-scholastic 4 years in a row is also an unprecedented feat.

Mr. Speaker, this fleet "phenom" was selected in a poll of high school, college, and professional coaches for an all-America high-school team published last Sunday in Parade magazine. A glance at Al Butler's record will attest to the soundness of this selection. All who have seen him in action add an emphatic amen to the superlatives which are clear from the figures alone.

His rebounding, feeding, and scoring proclivities have been nothing short of phenomenal and mark him as perhaps the greatest Rochester schoolboy athlete of all time. All of us in Rochester look forward with eager anticipation to the continuation of his feats in the years to come.

But perhaps the most remarkable thing about this young man is something which fails to show in the cold statistics of his athletic prowess. This is his unassuming modesty. It is well known in Rochester that Al has always been the first to give credit to his teammates and to praise them for any successes he personally has achieved.

This combination of modesty and ability—a virtue not always found in high school athletes—mark Al Butler as an all-around, all-American, fully worthy of this high award.

Mr. Speaker, I should like also to take this opportunity to salute the entire East High team for their winning performance in the recently completed New York State section 5 AA tournament. Great a part as Al Butler played in this accomplishment, he would be the first, I am sure, to say that it was a team performance which brought victory.

To all concerned, and especially Al Butler and coach Ben Daly, I extend congratulations on a job well done.

Difficult Task

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Difficult Task" which appeared in the March 20, 1957, issue of the Park City Daily News of Bowling Green, Ky.

The editorial is as follows:

DIFFICULT TASK

At budget time in former years, Congress has resolutely set about cutting the President's money requests almost as a matter of course. But the lawmakers always assumed the White House had presented a budget it earnestly believed was essential in every detail.

They are not thus convinced in 1957.

When Mr. Eisenhower presented his figures for the coming year, he permitted his potent Treasury Secretary George Humphrey to assail them as too big.

Many legislators and a horde of others interested in the Federal budget took this as an unmistakable sign the President didn't really believe in his new figures. There has been widespread feeling that he either ducked the task of tight budgetmaking, or didn't know how to bring it off.

Some observers have thought that Mr. Eisenhower was honestly torn between the desire for economy in Government and the belief that many costly Federal programs are necessary to meet the problems of this expanding country in a troubled age.

Whatever is in his mind, whatever the facts of budget preparation, within the administration, the President plainly doesn't intend to revise his requests. He has tossed the ball to Congress.

The lawmakers obviously do not like this. Even though in past years they have relished the job of budget slashing, they didn't like to undertake that part of it which they feel is properly the administration's responsibility.

The President says big savings aren't possible unless sizable projects like the farm or the veterans' program are trimmed. And he adds that since these are authorized by Congress, the latter must decide which if any must suffer.

It is true that these things have been authorized on Capitol Hill. But most legislative programs originate in the executive branch of the Government.

"The President proposes, the Congress disposes," they used to say.

The responsibility for Government programs generally is a joint one. If a major project is to be heavily slashed, the matter hardly seems one for congressional decision alone.

The budget situation this year is extremely puzzling. Probably there are not too many Americans who feel that up to now the administration has discharged its full responsibility toward the vital budget-making assignment.

Repeal of 20 Percent Cabaret Tax

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. MAY. Mr. Speaker, I feel that it is particularly appropriate at this time to submit in the RECORD a resolution drawn by the City Council of Los Angeles, and forwarded to me by the Honorable H. ALLEN SMITH, 20th District, California, in which they heartily approve of the repeal of the 20 percent cabaret tax. There is growing sentiment throughout the country for repeal of this discriminatory tax. The voice of the large and populous city of Los Angeles added to the many others who are for repeal is an important step forward in implementing passage of H. R. 4583, a bill which I recently introduced for complete repeal of the 20 percent cabaret tax.

Following is the text of the resolution:

Whereas on March 7, 1957, there was introduced in Congress a bill to repeal the 20 percent entertainment tax now levied on restaurants with floor shows; and

Whereas this discriminatory tax has caused countless musicians and entertainers to become unemployed due to the resistance of the American public to pay this added tax to the cost of their meals in places where such entertainment is offered; and

Whereas the industry as a whole has shown a remarkable gain in dollar volume of business in places other than where entertainment is offered; and

Whereas the major contributing factor to this decrease in employment of musicians and entertainers is the wartime 20 percent cabaret tax which the Federal Government is still attempting to impose on the public, but the public is not accepting this 20 percent tax, and such is demonstrated by the decrease in the number of full-time jobs available to musicians, as well as the restaurants and hotels that have discontinued entertainment subject to the 20 percent tax; and

Whereas an excellent demonstration of the destroying impact of the 20 percent tax is the restaurants and hotels of the city of Los Angeles that have discontinued all entertainment that would make their sales subject to the 20 percent tax. Within a few blocks of the city hall, one of the major hotels has already darkened its lights in one of the finest cabaret rooms in the Nation. Another hotel within a short distance is waiting out the action by Congress, and if the 20 percent tax is not repealed, then all indications are it will discontinue the offering of cabaret entertainment—the closing of these cabarets will result in loss of employment to 250 employees: Now, therefore, be it

Resolved, That the council of the city of Los Angeles go on record favoring the passage of this vital legislation whereby we, in the center of the entertainment world, might be of assistance to these many fine musicians and entertainers who are suffering because of this discriminatory tax.

Federal Transportation Taxes Should Be Repealed

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. HERLONG. Mr. Speaker, as the spring arrives, and millions of Americans prepare to take their vacations, I am reminded that the 10-percent Federal transportation tax is still with us. That tax should be repealed as quickly as possible.

Mr. Speaker, the United States Government is one of the very few governments in the world—federal, state, or territorial—which does not recognize the importance of travel to the overall economy.

Forty-three of our States and three of our Territories maintain travel promotion departments and spend considerable sums of money in attracting visitors. There is every reason to believe that within a few years the remaining States and Territories will fall in line on this matter of travel promotion.

More than 40 foreign governments maintain branches of their official government travel bureaus in the United States. The purpose—to attract visitors from this country. Everyone of these foreign countries recognize the great importance of travel dollars.

Why do our States and Territories and more than 40 foreign countries devote so much attention to the development of travel business? I think the reasons are well summed up in this statement recently issued by the National Association of Travel Organizations:

It has been demonstrated that each State has its own distinctive features and attractions which appeal to travelers. There is no other way in which a State can sell itself to people everywhere as effectively as through advertising and exploiting these distinctive attractions. Travel appeals to everyone. Through it a mass appeal can be made, as distinguished from the limited appeal which can be made through extolling industrial or agricultural advantages.

It has been demonstrated that once a travel-promotion program has been undertaken, attention must be devoted to basic improvement programs at home. These programs must include such matters as better accommodations, better food, a wider variety of entertainment, sports and activities, greater neatness and cleanliness, and more friendliness and hospitality. These things benefit residents as well as visitors.

It has been demonstrated that, in conducting a State travel-promotion program, the travel industry is not being set up as a favored industry. The large amount of money brought in by travelers benefits the hundreds of types of enterprises which cater to the needs of travelers. It also creates, through their prosperity, a large demand for all types of goods and services. Travel promotion programs aid everybody, not just a favored few. No one has yet been able to devise a promotional program for any other industry which will, over a long period of time, benefit so many people. Travel promotion does not exhaust tangible resources. Instead it sells scenery, friendliness, and countless services over and over again to the benefit of all.

It has been demonstrated that effective State and regional development programs must include travel promotion, industrial promotion, and agricultural promotion, properly blended. The three go hand in hand and none can be neglected. The mass appeal is made through travel advertising and promotion. If large numbers of visitors are attracted to a State, many will return to become permanent residents. Among them will be business and professional people—industrialists, farmers, and retired people. The businessmen and industrialists will bring their employees, their manufacturing plants, and their payrolls. Business executives today are looking for pleasant living conditions for themselves and their employees, along with good transportation, ample sites, abundant water supply and the other usual requirements. The record shows that at the present time the States which are most adept at attracting visitors also have the best record for attracting new industry.

Although this statement pertains to the States, it also explains why the governments of more than 40 countries attach so much importance to travel promotions.

The United States Government has failed to follow the trend established by more than 40 other nations and by its own States and Territories.

There is no official program for attracting visitors from other nations to this country or assisting the States in the development of travel within the United States of America.

Just the opposite is true.

The United States Government, alone among the governments of the world maintains a 10 percent excise tax on the transportation of persons via the public carriers. It has removed a similar tax on foreign travel. It chooses to help send our people abroad and penalize them if they travel at home.

The United States Government, also alone among the enlightened governments of the world, maintains repressive laws pertaining to the admittance of visitors from other countries. In our anxiety to keep out undesirable alien immigrants, we have unwittingly built a fence around the United States which presents a very inhospitable barrier to those who would visit us of their own free will to spend their money with us and gain some first hand information about this country.

These two major obstacles to the development of travel which have been created by acts of the United States Government should be removed.

The tax on the transportation of persons should be promptly repealed.

The immigration statutes should be revised to encourage people from abroad to visit the United States of America.

The removal of the tax on the transportation of persons would deprive the Government of an estimated $190 million in revenue during 1957. But since a great deal of the travel via the public carriers is performed by businessmen traveling on expense account, the tax on travel is deducted from their income tax. Thus the $190 million collected from

travelers will not be clear profit for the Government.

What would the effect of the removal of this tax be?

It would mean that the cost of travel via the public carriers would be reduced by 10 percent, making it possible for the more than 14 million families representing more than 40 million people in this country who do not own automobiles to travel more freely than they do now.

Travel officials estimate that with this brake removed, the 14 million families which do not own automobiles would take long-deferred trips and vacations, spending thereby, about a billion dollars in the year following the removal of the tax—a billion dollars that would be scattered around the Nation in your States and in mine.

If this is true, then the transportation lines would get 22 percent of this, or $220 million dollars in new business, which they could use.

The restaurants and food stores would get 27 percent or $270 million in new business.

The hotels, motels, and resorts would get 21 percent or $210 million in new business.

The retail stores would get 14 percent or $140 million spent for luggage, cameras, skis, sporting goods, and special clothing needed by the travelers.

The theaters, travel attractions, sports events, night clubs, and sightseeing lines would get 11 percent or $110 million.

The laundries, cleaning shops, barbers, telephone companies, utility companies, and other service institutions across the country would get 5 percent or $50 million in new business from this travel.

I submit that this substantial augmentation of the travel business throughout the land would help so many business enterprises meet more payrolls and pay for more goods and supplies that both corporate and individual income taxes payable to the Federal Government would be increased, as would the returns from the many sales and excise taxes which are involved when a billion dollars is fed into the economy in the manner just outlined.

If anyone questions the accuracy of the statistics and estimates quoted, let me tell you this. No agency of the Federal Government could supply this information. It came from the National Association of Travel Organizations, a nonprofit association of all types of travel enterprises in the United States of America.

This association is so anxious to prove that its facts, collected from State and private travel research agencies are right, that it has just raised a fund by private subscription, that will enable the United States Bureau of Census to make a national travel survey during 1957. Note—the travel industry is paying the United States Government to gather facts for it.

Based on the private research figures maintained by this travel association, United States citizens spent $25.5 billion for travel in 1956. This was for business and pleasure travel at home and abroad. $1.9 billion of this was spent abroad. The rest was spent in the United States of America, giving some idea of the very important role of travel in the national economy.

An indication of the fact that their figures are conservative may be gained from this comparison. The Florida State Chamber of Commerce estimated out-of-State tourist expenditures in Florida at $1,210,000,000 during 1955. The National Association of Travel Organizations credits Florida with an even billion in their tabulation.

It is difficult to compute the amount of Federal taxes generated by the travel business, but the total is very substantial. It is estimated that at least 40 percent of the total mileage piled up by private automobiles is for intercity or long-distance travel. The taxes on the gasoline, oil, and rubber alone constitute an enormous sum. Intercity bus mileage generates further Federal taxes. Diesel engines pulling passenger trains do. Gasoline consumed by airplanes is a factor. This is only the beginning of a long list of Federal taxes paid by travel enterprises.

The point is—the time has come for the United States Government to recognize the need for stimulating the travel business for the common good. The States and most foreign governments have long since done so.

The first step is to repeal the 10-percent excise tax on the transportation of persons.

Closely associated with the tax on travel is the 3-percent tax on the transportation of goods. This, too, has a repressive effect on the national economy.

That $72 Billion Budget

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include an article by Hyman H. Bookbinder, legislative representative, AFL-CIO, in the April issue of the American Federationist, as follows:

Early this year the President of the United States sent to Congress a volume that was heavier and larger than the Chicago telephone directory. But on almost every one of its 1,165 pages were figures much larger than telephone numbers.

The volume was President Eisenhower's justification for his proposal that Congress permit him to spend $72 billion in the 12 months starting July 1, 1957. It was the annual budget for Uncle Sam.

How much is $72 billion? About a billion and a half dollars every week—about $200 million every day. In the time it takes you to read this article, about 10 minutes, Uncle Sam will have spent more than a million dollars.

Does this huge spending by our Federal Government frighten you or disturb you? In the 2 months since the budget was proposed, many people and newspapers have tried to frighten you. Leading the fear campaign was the President's own financial lieutenant, Secretary of the Treasury George Humphrey.

"If Government spending is not cut," the Secretary said, "I will predict that you will have a depression that will curl your hair."

The rather unusual spectacle of the President's No. 1 financial aid attacking the budget proposals of his chief was soon followed up by another fear-monger. Former President Herbert Hoover demanded a lowered budget and offered his credentials as an expert.

"My hair has already been curled once," he said. "And I think I can detect the signs."

The huge budget, it is argued, will aggravate inflation. But this is a phony argument. Actually, even with $72 billion expenditures, there will be a budget surplus of at least $2 billion next year.

Mr. Eisenhower himself was challenged regarding the budget at a press conference. After all, his questioners reminded him, hadn't he made many speeches and campaign promises about bringing down the costs of Government? His answer was simple and direct:

"As long as the American people demand—and, in my opinion, deserve—the kind of services this budget provides, we have got to spend this kind of money."

Here, in a single sentence, the President demolished all of the political nonsense of the campaign. The Federal Government's role—in the words of our Constitution—to "provide for the common defense, promote the general welfare and secure the blessings of liberty" would just have to cost money.

In a recent speech Marion Folsom, Secretary of Health, Education, and Welfare, stated:

"We say the Federal Government would fail to serve the people's interest if it stood idly by, indifferent to broad deficiencies in health, education or economic security. * * * We believe the Federal Government * * * can and should act in these fields for the benefit of all the people."

These statements by President Eisenhower and Mr. Folsom are welcome evidence that we have come a long way these past 25 years.

The New Deal and the Fair Deal once were bitterly attacked by political opponents as welfare states and handout states, as programs which would destroy a free America.

Presidents Franklin Roosevelt and Harry Truman had to blaze new trails to extend the areas of Government responsibility. But today, except for some diehards in both parties, there is substantial agreement in principle that a free, democratic society is enhanced rather than hurt by responsible Government efforts to promote the general welfare.

But agreement in principle is not enough. There must be determination to resist unscrupulous cuts and to support expenditures which are in fact necessary to carry out our constitutional obligations. To do so requires an understanding of what the budget provides, what our capabilities are, what our unfilled needs are.

It is unfortunate that the President himself seems to have succumbed to the mounting pressures for slashing the budget. Instead of defending the budget which he himself asked Congress to support, he has urged Congress to cut wherever possible, but without indicating where or how.

It goes without saying, of course, that for every dollar we decide to spend we must raise a dollar in taxes, unless we go further into debt. Nobody likes to pay taxes, and, because of this, demands to "reduce the budget" seem very appealing. Wage earners especially would welcome reduced taxes so that they could more easily meet the rising costs of living and enjoy a decent standard of living. But workers have demonstrated time and time again that they are ready to

pay a fair share of the taxload through a fair tax system. Thus, they have never resisted increases in social-security taxes; they want a solvent, sound social-security system.

Reduced taxes would be very welcome. But more welcome would be reduced slums and school shortages, reduced threat of war and Communist aggression.

What makes up the proposed $72 billion budget? The calamity howlers would have us believe that all or most of this money goes for bureaucrats in Washington who dream up crazy schemes for giving away our precious tax dollars. The fact is that only a very small part of the total budget goes for what might be called welfare activities. Here is a breakdown:

[In billions]

National defense (including atomic energy)	$41.3
Mutual security (military and economic)	4.8
Interest on debt	7.4
Veterans' benefits	5.0
Agriculture	5.0
Labor and welfare	3.5
Commerce and housing	1.8
Natural resources	1.5
General Government	1.5

Take a good look at this breakdown. Sixty-five cents of every tax dollar is going to build up our own defenses and those of our allies in order to deter Soviet aggression. Shall we cut this?

The AFL–CIO does not presume to have any expert judgment about the proper size of the Military Establishment. It does share the general apprehension, however, that we may be erring on the low side rather than the high side.

As far as foreign aid is concerned, labor has ofttimes been critical about specific aspects of this program, but labor has never swerved from its conviction that our country has made no better investment in world understanding and world peace than our mutual-security program. We cannot permit budget-balancing preoccupation to weaken our efforts for peace and against world communism.

After defense and mutual security, there are only 26 billions left. But $7.4 billion of this must be paid out in interest on the national debt. (It is interesting to note that the very ones who scream "Cut the budget" have furthered the high-interest policies of government, which have added about half a billion dollars to the interest costs of the Federal Government.)

We will need about $5 billion for meeting our obligations to our war veterans. Another $5 billion is needed for our agricultural support program—and many people believe that even this is not enough.

But these facts of life have been conveniently ignored by some of the calamity howlers. Without indicating where or how, some of them have talked about cutting the budget by 2 billions, by 3 billions, even by 5 billions. The most casual study of the figures listed will show that such cuts can be made only by cutting down our defense expenditures or by destroying much of the regular functions and responsibilities of our Federal Government.

A few weeks ago representatives of labor appeared before the subcommittee of the House Appropriations Committee which deals with the labor and welfare portion of the budget. The AFL–CIO urged the committee to resist entering any competition on who can cut the most out of the proposed budget.

The AFL–CIO statement said:

"We are disturbed at the hue and cry which has been raised about the huge budget which the President has submitted. Of course, it is huge. But so are our responsibilities. And so are our capabilities. Let those who are ready to sell America short wail and moan. The AFL–CIO will not join the hysterical cut-the-budget-at-any-price crowd.

"We have confidence in America's ability to meet its tremendous responsibilities both in the worldwide struggle against imperialistic communism and in the challenge at home to meet the needs of our people.

"Where shall the billions in budget cuts come from? Shall we stop our payments to veterans? Shall we stop our interest payments on the public debt? Shall we stop making soil-bank payments to our farmers? Shall we cut the wages of our underpaid civil servants?

"Or shall we just nibble away at every regular program of the Federal Government—an arbitrary 5 percent or 10 percent or 20 percent cut right across the board?"

At the time this article is being written it is not known whether this subcommittee has joined the race to cut the budget. But two other subcommittees have set an unfortunate precedent. Cuts in the post office appropriations, for example, if unrestored in the Senate, would mean the loss of thousands of jobs and a tremendous increase in workloads for all employees, to say nothing of deterioration in postal service.

Only $3.5 billion is in the Federal budget for a whole range of very important labor and welfare activities. This comes to only 5 percent of the entire budget. It represents, moreover, less than 1 percent of the entire national income of the American people. It comes to only $20.40 for each of the 173 million Americans who will be living in the year starting next July 1.

Can America afford 1 percent of its income for the kinds of services provided in our labor and welfare budget? A brief review of some of these services raises the more appropriate question, "Can America afford not to spend at least this much money?"

Almost half of the entire Labor-Welfare budget, $1,700,000,000, is distributed by the Social Security Administration in the form of grants to States for public assistance.

There are about 2,500,000 older persons who need public assistance because they have no other source of income. These are the folks who never had an opportunity to be covered by the social-security system and now need help.

Even when the Federal money is added to the State funds, the average recipient of old-age assistance receives only about $59 a month. The public-assistance program also provides an average payment of about $33 a month for dependent children, about $63 for aid to the blind, and about $59 for aid to permanently and totally disabled persons. Can we do less than this in a country as rich as America?

About $550 million has been allowed in the budget for the Public Health Service. This comes to about $3 a year for every man, woman, and child in the United States. It is the best value in the world. With this very small per capita expenditure, the Federal Government has helped build thousands of hospitals, has conducted medical research, has provided grants to States to fight tuberculosis and veneral disease and communicable diseases, has promoted sanitary engineering activities, has worked on health problems of our American Indians—to name just a few activities of the Public Health Service.

If there is any complaint at all, it is that we have spent too little on health activities. Take hospital construction, for example. The Hill-Burton Act was passed 10 years ago. Since its passege, more than 3,000 projects costing a total of $2.5 billion have been supported with Federal funds. The Federal share came to $800 million. But even this has not met our needs. The experts have stated that we are still short 800,000 hospital beds.

Year after year, labor has urged Congress to appropriate the full amount authorized by the law. But it has refused to do so. Last year, for example, Congress allowed only $125 million, even though the law permits as much as $210 million. The proposed budget for next year calls for only $121 million. The AFL–CIO has requested the full authorization.

Take medical research, as another example. In recent years spectacular progress has been made toward the conquest of some of our major sicknesses. Federal money helped support the work which led to the discovery of the Salk vaccine. We know more about heart disease now, more about mental health, more about cancer.

But it has taken bold, imaginative leadership in Congress to push ahead in this field despite the penny-pinching proposals which came from the White House. Last year, it is recalled, the President proposed a total of only $126 million for medical research, including the National Institutes of Health. Congress raised it to $184 million—an increase of 50 percent.

The American people are indeed fortunate to have men like Representative JOHN FOGARTY, of Rhode Island, and Senator LISTER HILL, of Alabama, heading the respective committees charged with responsibilities in this area. They have worked long and hard to keep medical research at the highest possible level, and we are now seeing the brilliant results of their work.

Let the budget cutters read these words of Congressman FOGARTY and then tell us how much they want to cut:

"We have made great strides in the fight on cancer through new surgical techniques and new detection methods that have been developed, with the result that there are at least 15,000 people walking around alive today who would be dead except for the progress that has been made in the past 10 years. * * *

"When there is such an obvious possibility of alleviating human suffering and prolonging human life, I am in favor of resolving our doubts on the side of optimism regarding our research potential, instead of on the side of economy. * * * I do not know how anyone can, in good conscience, vote for a lesser amount just for the sake of saving tax dollars. I do not think these are the kind of dollars that the taxpayers want saved."

How else are some of our tax dollars spent in the labor and welfare area? Space does not permit a listing of all the other vital services which are today being provided to at least some degree, but here are just a few illustrations:

Apprenticeship and training programs and grants for vocational education to provide skilled manpower for our advancing technology.

Research work and safety programs to meet the challenge presented by atomic radiation hazards.

Study of problems affecting the aged and chronically diseased.

Support for education through research activities and through grants for school construction.

Vocational rehabilitation programs—both for actual rehabilitations and for further research in new techniques.

School-lunch program for about 12 million children.

Maternal and child-health services and aid to crippled children.

Labor has a strong interest, of course, in seeing to it that our labor laws are properly enforced. A minimum-wage law is meaningless if we don't provide the funds for proper enforcement. Bacon-Davis provisions for prevailing wages on public construction must be properly administered. The Mexican farm-labor program needs good policing to prevent hardships to both Mexican and American workers.

All of these things cost money. But it should be remembered that all of these labor

and welfare activities of our Federal Government—and many, many more which have not even been touched upon in this article—cost only 5 percent of the total national budget and only 1 percent of our national income. This is a small enough price to pay for a healthy, happy, and productive people.

Some day—soon, we hope—the danger of war and aggression will recede. Perhaps then we shall be able to cut our defense budget from $40 billion down to $30 billion or even $20 billion. Just think how much more we could do to provide for the domestic needs of our people if $5 or $10 billion a year were diverted from our defense budget to things like housing and education and health. And this would still make possible substantial tax cuts.

In the meantime, can America afford a $72 billion budget? Of course it can. Can it afford not to provide adequately for national defense or for the vital services described above? The answer is obvious.

American workers do not want their taxes wasted. But they are prepared to do their share to provide for the common defense and to promote the general welfare.

Slum Clearance and Urban Renewal Program

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27, 1957

Mr. KEFAUVER. Mr. President, the Committee on Banking and Currency of the Senate has been holding hearings in connection with the continuation of the slum clearance and urban renewal program, one of the best programs for our cities that has been inaugurated in many years. A very effective analysis of the necessity for continuing this program as originally recommended without cutback and without diminution was made yesterday before the Senate Committee on Banking and Currency by the mayor of Nashville, Tenn., the Honorable Ben West. Mayor West made the statement on behalf of the city of Nashville, and also on behalf of the American Municipal Association.

I ask unanimous consent that the testimony of Mayor West be printed in the Appendix of the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF BEN WEST, MAYOR OF NASHVILLE, TENN., ON BEHALF OF THE AMERICAN MUNICIPAL ASSOCIATION BEFORE THE HOUSING SUBCOMMITTEE OF THE SENATE BANKING AND CURRENCY COMMITTEE, MARCH 26, 1957, ON THE SUBJECT OF URBAN RENEWAL

The mayors of this Nation are shocked by the administration's order to kill the slum-clearance and urban-renewal program.

Municipal officials are shaking their heads in disbelief at the new administration policy of limiting urban renewal projects to small piecemeal undertakings in cities which are already participating in the program or to those struck by disaster.

It is even more unbelievable, since this appears to be no temporary fund curtailment but a permanent change in policy—requests for future slum-clearance money have been so drastically reduced that we question whether or not we can wage any serious war on slums.

These developments are particularly discouraging to the American Municipal Association, which has spent much time and effort backing adequate housing legislation. As you know, the American Municipal Association vigorously supported the 1949 Housing Act and has appeared before Congress each year since to assist the committees in their deliberations on this vital legislation.

CITY DWELLERS IGNORED

More than two-thirds of our population live in urban areas. Five million families are forced to live in rock-bottom dwelling units which should have been demolished decades ago.

We have Federal programs to assist those who live on the farm and even to assist persons living in other countries. But aside from the housing program we have little or nothing in the way of Federal assistance for those who live in our cities. To discontinue urban renewal would be to ignore the vital needs affecting a great majority of our people.

FALSE ECONOMY

Naturally Congress is concerned about Federal spending. So are we all. As municipal officials, we try to reduce our own budgets, too. But to practice saving by eliminating essential items is to practice foolish economy. In our cities we might save money by doing away with the police and fire departments—but it would be a violation of public trust. Likewise, we believe it is a violation of the public trust for Congress to turn its back on our Nation's slums. Cutting the urban-renewal program to a point where it is ineffective may save a few million in Washington—but how much is that saving going to cost at every level of government? Let's look at this saving in its entirety. How much will it save our future citizens who must grow up in delinquency-ridden slums? How much will it save the community which has geared its highway, schools, and public facilities programs to an expiring urban-renewal program? How much will it save the businessman who has planned to develop new plant facilities in a slum clearance area? How much will it save in terms of crime, disease, and human frustration? In a general stunting of economic growth?

REHABILITATION AND CONSERVATION

When we consider urban renewal, there is a tendency to think only of projects where entire areas are cleared and redeveloped. The conservation aspects of urban renewal are, however, in our opinion equally important. Without the assistance of the urban-renewal program it will not be possible to channel private capital into the great grey areas of our cities. These are the neighborhoods which are not slums but which are beginning to deteriorate. Homeowners are unable or unwilling to make necessary repairs and to adequately maintain their property. Many of the most energetic families move out. Private investors will not risk money in neighborhoods that are going down. In size, impact on the community and opportunity for economy this is the area where the investment of the smallest amount of Federal and local funds can bring the greatest return. Even the most conservative elements of the business world have recognized this and are lending wholehearted support to this aspect of urban renewal.

May I make a prediction? If we cut the heart out of the Urban Renewal Program now, within a period of 5 years we are going to have one gosh-awful clamor for public housing. These grey areas are going to turn into slums. Neighborhoods that can be saved if we act now will be doomed if we delay.

LOCAL PROJECTS DOOMED

Figures will be presented to show how the cut in renewal operations will kill many local programs. In my own State of Tennessee, projects planned, those under contract negotiation and approved projects for which additional funds will be needed will require $45 million of Federal grant funds. If we have to stop or sharply reduce our efforts, imagine the blow to the cities involved. It takes literally years of effort to plan and program a project. We have reorganized our local administrative machinery. We have created new agencies. We have hired and trained key personnel. Citizens groups have been formed and all elements of the community have given their support to renewal. And all of this will be for nothing if the program is reduced in an ineffectual dribble.

Congress gave us a "do it yourself kit" in the form of urban renewal with its workable program. We took the advice and went to work. It took some time but we are just beginning to roll. Now it is proposed to take away our hammer and saw. If the administration policy sticks, it seems to us that this is clearly a breach of faith with the municipal officials and all those who have worked so hard for this program.

STOP AND GO ADMINISTRATION

We cannot make sound local plans for highways, public facilities, long range finances and dozens of other local activities that are geared to urban renewal if we must operate with a "stop and go" national program. There must be an element of predictability.

We would respectfully suggest a program of action to accomplish the goals envisioned by the Congress in the Housing Act. We recommend the following:

1. Capital grant authorizations should be increased to an absolute minimum of $250 million as originally requested by the President. The House subcommittee recommended that loan and grant authorizations should be raised from $1 billion to $2 billion. We agree. We can accomplish little if we are going to think little. This is a big problem and we are not going to make a big improvement with puny efforts. We must conserve those neighborhoods that can be saved and rebuild the slum areas.

2. Local public agency letter 91 should be rescinded immediately. This March 6 communication from the Acting Urban Renewal Commissioner to all the municipalities orders a drastic cut in new project authorizations and all but precludes sound slum-elimination programs. It instructs that henceforth those few new projects which are to be approved shall be reduced in size or divided. This piecemeal approach will only serve to generate more Federal paperwork. It won't eliminate slums.

3. Federal participation in urban-renewal projects should be increased from the present two-thirds to four-fifths of the net cost. The reason for this is simple. We are running out of local money. As long as Federal and State taxes are at their present level, we don't know where we are going to get any more either.

4. Authorizations for public housing should be maintained at adequate level. The various programs of the Housing Act are interrelated. They fit together into a whole. We cannot proceed to clear slums unless we have an adequate amount of low-cost housing to accommodate those who are displaced by renewal projects and who cannot afford decent shelter. Low-cost housing is even more important in view of new Federal aid highway legislation. It has been estimated that in the next 13 years, up to 1 million acres of land will have to be cleared in urban areas to make way for new roads. Naturally we are going to try to route these highways through the slum areas and this

is going to increase the demand for low-cost housing for the displaced.

5. The community facilities programs should be maintained at an effective level. Smaller cities and towns are turning increasingly to the program of advances for public-works planning to help them provide the schools and other facilities which they so urgently need. In this tight-money period, the community facilities loan program is providing needed financing for facilities that could not be otherwise provided. Many communities are also receiving valuable benefits from the urban planning assistance program. The combined cost of all three of these measures is small or even insignificant in relation to their value to municipalities.

Tremendous forces are at work in our cities. Impatience with slums and blight is everywhere. Individuals and groups are demanding action. Our cities must be built into the healthy, attractive places we know they can be. We mayors want to meet this challenge but we cannot do it alone.

This is a national problem, too, and the National Government must respond. We have a golden opportunity to act, and we must act. As a nation of plenty in times of comparative peace, when will be have a better chance?

United States Warned To Guard Hemisphere Interests

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article from the Washingtong Post and Times Herald of March 26, 1957:

UNITED STATES WARNED TO GUARD HEMISPHERE INTERESTS

(By Ernest B. Vaccaro)

The United was told yesterday that its vital interests in Central America and the Caribbean "are in danger of being overlooked" in its concentration on world-shaking events elsewhere.

A report was made public by a special Senate committee studying foreign aid.

It was prepared by James Minotto, Phoenix, Ariz., rancher and a former Mutual Security Agency chief in Portugal. He drafted it for the committee after a survey of Cuba, Haiti, the Dominican Republic, Panama, Costa Rica, Nicaragua, Honduras, El Salvador, Guatemala and Mexico.

While he said the threat of Communist subversion in those areas appears "negligible," he declared Guatemala showed "the ease with which some of these countries can be subverted to a base for mounting a Communist-led psychological offensive against the United States."

In "rging continuation of military, economic development, and technical assistance for the area, he declared:

"For example, the Castillo Armas Government in Guatemala must convince most of the people that they are better off than they were in 1954 if the present trend toward more democratic government is to be maintained.

"If the government is unable to demonstrate such improvement, very few observers are willing to predict the orientation of the new administration that will come to power in 1960.

"The great gap in incomes in several of these countries plus the lack of education presents a fertile field for Communist activities. The Communist Party is outlawed in almost every country in the area. Despite this fact, untoward events, or dramatized issues of the local government against the people in some countries, can result in a repeat in the unhappy history in Guatemala from 1950 to 1954."

Minotto said the United States must carry out its moral commitments to Guatemala, which cannot carry on necessary programs within the borrowing limits of its own economy.

"The availability to the United States of sites for naval and air operations and the denial of such sites for use against the United States by other countries are considered essential parts of our security interests," he said.

Minotto said the Defense Department should speed up machinery for arms deliveries about which there have been some disappointments. And he said the Government should relax its policy of restricting grants and loans to emergency conditions to provide help for construction of public facilities needed to stimulate private investment.

All Northern California Democrats Oppose Pacific Gas & Electric Co. Partnership Proposal on Trinity River Project Powerhouses

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. ENGLE. Mr. Speaker, I wish to include in the Appendix of the RECORD a statement by all the Democratic congressmen from northern California opposing the so-called partnership proposal of the Pacific Gas & Electric Co. for building the powerhouses on the Trinity River project.

JOINT STATEMENT OF CONGRESSMEN FROM CENTRAL VALLEY AREA IN OPPOSITION TO PACIFIC GAS & ELECTRIC CO. TRINITY PROPOSAL

We have studied carefully the recommendation of Secretary Seaton that Congress approve development of the Trinity Project power facilities by the Pacific Gas & Electric Co. This bold attempt on the part of the administration to circumvent and repudiate existing law and revise the concept of developing reclamation projects is completely unacceptable to us. A few of our reasons are set out briefly in the following paragraphs.

EXISTING LAW AND POLICY WOULD BE VIOLATED

The Federal Government's power policy, as set out in numerous acts of Congress, provides that electric power and energy be disposed of in such manner as to encourage the most widespread use thereof at lowest possible rates to consumers consistent with sound business principles, and that preference in such disposition shall be given to public agencies, municipalities, and cooperatives. If this long-established policy is to be modified to put power operations on a profit-making basis—and we believe it should not be modified in the interest of fullest use of the Nation's water resources for the benefit of the greatest number of our people—but if it is to be modified, the approach should be direct and not by the back door; i. e., it should be done by legislation generally applicable to all projects and areas and not by singling out one individual unit of a going multiple-purpose development.

BASIC CONCEPT OF RECLAMATION DEVELOPMENT WOULD BE CHANGED

The Central Valley project was not constructed for profitmaking purposes. It was constructed to meet the needs of the people of the Central Valley Basin for water, flood control, and low-cost electric power. The Trinity River addition to the project, as indicated in the authorizing act, is subject to the provisions in reclamation law with respect to the disposal of electric energy. The Secretary's recommendation would require extensive amendments to the authorizing legislation enacted less than 2 years ago and approved by the President. The Secretary's recommendation would further deny 250,000 kilowatts of low-cost electric power to the consumers of northern California, including Federal installations, and would result in the partitioning of one segment of this vast integrated system of dams, reservoirs, canals, transmission lines, etc., for construction entirely separate and different from the rest of the project. Such a procedure would irreparably disrupt existing operation of the Central Valley project and threaten future development.

POWER CONSUMERS WOULD NOT BE PROTECTED

The proposed contract between the Department of the Interior and the Pacific Gas & Electric Co. contains no provisions for the protection of the power consumers, and in this respect the proposal violates the intention of Congress in authorizing the negotiations. The Senate report implementing the authorizing legislation clearly states that the authorization for negotiations should in no sense be understood to waive, in the negotiations, existing provisions in reclamation law. Secretary Seaton admits that acceptance of his proposal would result in preference agencies paying $86 million more for energy over the contract period and that this additional cost to preference agencies would be $118 million if the San Luis Unit is constructed. There is a growing indication that the Secretary has greatly underestimated these losses.

The Pacific Gas & Electric Co. pays no money it does not collect on the electric bills and therefore, if the proposal were accepted, the homeowner, farmer, and businessman would find on their power bills the Pacific Gas & Electric Co.'s highly advertised "generous payments" to the Government as well as the cost of the powerplants and the Federal, State, and local taxes, and a nice profit to the company.

WATER USERS WOULD NOT BE PROTECTED

Acceptance of Secretary Seaton's recommendation would place project operations on the basis of maximizing power and energy production. This is indicated in the proposed contract by provisions requiring penalty payments by the Federal Government for noncompliance with release schedules designed to maximize power and energy production. Unforeseen periods of low flow could result in enormous payments by the Federal Government to the company in penalties. Conflicts between operations for meeting the water needs of the Central Valley and power operations would be bound to arise and we fear that when this serious problem involves the substitution of dollars for water, it would be the water users who would be hurt. Although, theoretically, the water needs of the Central Valley would retain priority, we fear that there is danger in actual practice that this would not be the case.

WOULD MEAN THE END OF LOW-COST POWER IN CALIFORNIA

We believe that the Pacific Gas & Electric Co.'s design on the Trinity power facilities

foreshadows something even bigger and that the real purpose of the company is to stop for all time the expansion of Federal power in California in order that it may monopolize the power market in that area. Acceptance of this proposal would set the precedent for future Federal development in California and elsewhere. If this happens, it will be to the detriment of not only the potential direct beneficiaries of Federal power but also every user of electricity in the area. Experience and history have shown that the existence of Federal power in an area has had the effect of holding down prevailing rates in that area, including rates of private utilities. Compare, for instance, the prevailing rates in the Northwest with those in the Northeast.

CLAIMED ADDITIONAL SURPLUSES NOT NEEDED

The Central Valley project is already on a very sound financial basis. Financial studies of the presently authorized project, including the Trinity addition, indicate a surplus of about $114 million at the end of 50 years and financial studies including proposed future additions all indicate that power revenues will be sufficient to carry forward future irrigation development as rapidly as it is needed. Additional revenues, therefore, are not needed to assist irrigation development. On the other hand, the denial of low-cost electric energy to irrigation districts would hardly support the Secretary's statement that, under his recommendation, power would become a better partner to irrigation development in the Central Valley project area.

FEDERAL GOVERNMENT IN UNFAVORABLE POSITION AT END OF CONTRACT PERIOD

Another very important aspect which we believe has not been given adequate consideration by the Secretary is the relative positions of the Federal Government and the Pacific Gas & Electric Co. at the end of the 50-year contract period. The Federal Government could take over the power facilities at the end of this period only by payment of the company's net investment plus severance damages. In other words, under Federal construction the Federal Government would own the power facilities at the end of the 50-year contract period while under the recommended proposal the Pacific Gas & Electric Co. would own the power facilities. The Secretary's financial comparisons overlook this item. Recent experience of the State of California in a similar situation is an indication of what the Federal Government may be faced with at the end of the repayment period. The Pacific Gas & Electric Co. constructed its Big Ben powerplant on the Feather River sometime between 1908 and 1916 at a cost of about $7,700,000. This plant will have to be purchased by the State of California in connection with construction of its Feather River project. On December 2, 1954, the company advised the State of California that the plant is now worth $33 million.

OUR CONCLUSION

Therefore, for the reasons set out above, among others, we reiterate that Secretary Seaton's recommendation that the Pacific Gas & Electric Co. be permitted to build the Trinity project power facilities is completely unacceptable and should be rejected, and construction of the Trinity River division should proceed in accordance with the Trinity River Act of August 12, 1955.

Does the End Justify the Means?

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

DOES THE END JUSTIFY THE MEANS?—HENNINGS' OPINION ON CIVIL-RIGHTS CASES SUGGESTS USE OF UNITED STATES INJUNCTIVE POWER

(By David Lawrence)

The end seems to justify the means—and if the Constitution stands in the way, it must be circumvented.

This is a dangerous doctrine in a democracy and one that the American people will resent to the utmost. But it comes, in effect, from the chairman of the Senate Subcommittee on Constitutional Rights, Senator THOMAS HENNINGS, Democrat, of Missouri, who, though denying any intention to abandon jury trial in America, says frankly that, because southern juries will not convict in civil-rights cases, some way has to be found to get around them.

In a formal memorandum to the members of the Senate Committee on the Judiciary, Mr. HENNINGS says:

"We know that, regardless of the facts, juries in some such cases are not likely to convict. An alternative is the grant of injunctive relief to the United States."

This means government by injunction. It is something that the labor unions successfully fought until they got relief from Congress in the Norris-La Guardia anti-injunction law. But this is a special privilege granted only to individuals involved in labor disputes. Now it is intended to punish without jury trial any citizens who become involved in any way in disputes over civil rights.

This, of course, would result because the suits in civil-rights cases would be prosecuted in the name of the United States, and such a device automatically bars any jury trial.

The Missouri Senator frankly admits this. In fact, his candor is to be commended, for he takes issue with Assistant Attorney General Olney of the Criminal Division of the Department of Justice, who on March 15 issued a statement arguing that the defendants in the Clinton, Tenn., case had not been deprived of a jury trial. Mr. Olney contended that, because in the middle of the proceedings the United States had been made a party to the suit, this was a technical matter and it didn't mean jury trial had been forfeited. Here is what the Assistant Attorney General said:

"The right to a jury trial is not a matter of discretion to be granted or withheld by the Department of Justice or by the court and could no in any case be defeated by the subetitution, for technical reasons, of the name of the United States on the contempt citation."

But the memorandum by Senator HENNINGS, which he says is supported by an exhaustive analysis made by the chief counsel of the Senate Subcommittee on Constitutional Rights, takes the opposite view.

Mr. HENNINGS, after giving a list of 28 Federal statutes in which injunctions may be issued, says:

"As outlined above, with one exception (labor disputes cases under the Norris-La-Guardia Act), there is no right to trial by jury in cases for criminal contempt of court for violations of injunctions, under these statutes, where the United States is a party to the case."

The history of this type of case under Federal injunctions shows that, where contempt is committed in the presence of the court or where the principal who is ordered to obey an injunction disregards it, he may be hauled into court and tried and punished without a jury trial.

In the Clinton, Tenn., case, however, the complainants were private individuals who said that 18 defendants had conspired to violate the Federal injunction. These alleged acts were committed outside the courtroom. The defendants were not principals in the dispute. The school board itself had complied with the Federal injunction ordering the end of segregation. Then, all of a sudden, the Department of Justice on February 25 last asked the court to change the name of the case and insert the name "United States" as the complaining party. This automatically bars a jury trial because the law specifically says so.

Surely, the American people are entitled to know what's going on here and what subterfuges are being used at Clinton. For, if what happened in the Clinton case is valid, in fact, the Federal judge promptly approved the change in the name of the case—then civil-rights legislation by the Senate or the House isn't really necessary after all. If indeed the end justifies the means, the Department of Justice, whether authorized or not by civil-rights legislation, can change the name of any case and deprive the defendants of a jury trial in criminal contempt cases. There need be no explanation given except perhaps the excuse of technical reasons, though everyone will know that it's really an effort to get around the fact that southern juries might not bring in convictions in civil-rights cases.

A constitutional amendment is the logical way to deal with the whole problem. If two-thirds of both Houses of Congress and three-fourths of the States want to take away or limit further the right of trial by jury, then the Constitution and law will order it done—and such orders will be obeyed.

Our Middle East Policy Has Been One of Confusion

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a statement given by me to the Boston Traveller, of Boston, Mass., and appearing in its issue of March 25, 1957:

Our foreign policy during the past 2 years has been one of sharp contradictions, due to uncertainty and indecisive thought and action. The responsibility for this definitely rests with President Eisenhower. It is about time that the blame for our present situation be placed where it rightfully belongs—on President Eisenhower.

Our Middle East policy has been one of confusion.

The Eisenhower Middle East doctrine is as a result of the lack of vision to appreciate the implications involved, and with the proceeding upon the hope that the Kremlin and Nasser would be good. This is false thinking.

It is well known that with firmness on our side, Nasser would have been ousted by forces within Egypt long ago. It is also known that while the leaders of the other Arab nations are determined to destroy Israel, that most of them hate and fear Nasser. President Eisenhower has failed to exploit this fact.

We now find Nasser, whose forces were decisively defeated by the Israelian forces, gaining a great political victory, and more dangerous as a result of the weak leadership on the part of our country.

By the indecision and failures of President Eisenhower, we find Dictator Nasser—saved from defeat and removal from office—acting not only like a dictator, but also like a conqueror.

It is clear that Israel withdrew its forces from the Gaza strip and elsewhere upon at least implied promises being made by our Government and by representatives of the United Nations that Aqaba Bay would be open to Israelian shipping, and that Israel would be protected in the future from Egyptian raids from the Gaza area by the United Nations forces taking over. It is a moral, if not legal, obligation to carry out promises made, either expressedly or by implication.

To allow Nasser to get along with his present plans will be capitulation on our part. Our own national interest is involved. Every nation is watching the United States to see if it will follow a weak or firm policy. When they see weakness or indecision on our part, it causes them to doubt us. The result is neutralism, or the journey toward neutralism—either one of which is unfavorable to us. So, it is more than a question of Israel and Egypt, or other Arab nations—it is a question of our own national interest being involved.

If Nasser gets away with his present plans, our country will be the laughing stock of the world. It will be a serious blow to our best interests. The Kremlin will benefit.

Our leadership should have foreseen the probability of what is now happening. At the last meeting of the leaders of both parties at the White House, when administration spokesmen said that if Israelian forces withdrew, the problem was solved, some of us present warned that if Nasser objected to the United Nations forces immediately going into the areas vacated by the Israelian forces, that the United Nations forces would probably not do so. We also warned them that if this happened, and there was a good probability, that would be capitulation on our part.

We were informed that in private talks with representatives of the United Nations, that the United Nations forces would take over at once when the Israelian forces withdrew.

I have always been of the opinion that Israel, acting for its self-preservation, was justified in going into the Sinai Peninsula and the Gaza strip, and also in taking the position that Aqaba Bay is an open waterway and that another international agreement should be made in connection with the use of the Suez Canal, with the ships of all countries being permitted to use the same. However, without regard to how anyone felt in relation to the action taken by Israel, Israel has a clear case now.

It is a mistake for President Eisenhower to delegate or abdicate our foreign policy in the present crisis to the United Nations. There are occasions when we should act within the United Nations, but there are occasions when we should act unilaterally in our own best interests.

We are now faced with a greater crisis in the Middle East than heretofore. It is not too late to repair the situation and to avert danger of another world conflict.

This can only be done by firmness on our part—abandoning our present policy of indecision and appeasement that is making Nasser a conquering hero.

Juvenile Delinquency

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 27, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD extracts from a speech by Chief Justice Irving Ben Cooper, court of special sessions, city of New York, on the subject of juvenile delinquency, which I think is deserving of wide circulation.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

DRAMATIC PLIGHT IN THE COURTROOM

(Remarks of Chief Justice Irving Ben Cooper, court of special sessions, city of New York, under auspices of the Earl P. Nelson Memorial Fund, University of Missouri Law School, Columbia, Mo., December 13, 1956)

The special privilege accorded me to address those soon to be invested with professional status at the bar is accompanied by a deep sense of responsibility. The occasion calls for plain, straight talk.

Let us consider together a throbbing problem—presenting an awful challenge as much to you as to me—affecting daily the peace, dignity, and welfare of the national commonweal. How goes it with the courts of the Nation with jurisdiction over the personal liberties and destinies of our citizenry? Who comes there nowadays, how are they dealt with, what abuses by overt action or by oversight take place? Who really cares? While we are inquiring, let us keep in the forefront two piercing observations, one by Chief Justice Vanderbilt, of New Jersey: "Most American lawyers show disdain for the criminal laws and our law schools dispose of it in 2 or at most 3 semester hours, forgetful of the fact that it is ultimately on the enforcement of the criminal law that we must depend for the vindication of our private civil rights."

As to the other, we hear from Mr. Justice Holmes: "If the training of lawyers led them habitually to consider more definitely and explicitly the social advantage on which the rule they law down must be justified, they sometimes would hesitate where now they are confident, and see that really they were taking sides upon debatable and often burning questions."

What do you do with the brilliant college student who picks up a piece of jewelry in a store so that she can look pretty when she is married in a week or two? With the university boy who in a moment of silliness commits an act of exposure that brings him before the criminal bench? With the attractive young lady who has become a drug addict and wants to marry the source of her supply—a man with a long criminal record? What do you say to her parents standing before you wrung white with the anguish resulting from the arrest? Is it sufficient to rule "guilty," "innocent," "fingerprint," "reformatory," "prison"? Are we really coping with the broad problems of human life when we permit the community to believe that a criminal court handles only the "untouchables"?

These problems, these situations, this plea are succinctly summed up in two brief commentaries by two observers. They require no amplification. They constitute the challenge to all citizens who care. The first is contemporary testimony by a 19-year-old city boy: "Guys who don't feel like they're countin' who are being shoved around, who feel like they are worthless to everybody, well, they're the guys who go out and try to make names for themselves by being big stickup guys. It's on account of they feel like they are nobody."

The other, by one of the greatest jurists of our land, former Associate Justice Benjamin N. Cardozo, of the Supreme Court of the United States: "Run your eyes over the life history of a man sentenced to the chair. There, spread before you in all its inevitable sequency, is a story of the rake's progress more implacable than any that was ever painted by a Hogarth. The correctional school, the reformatory, Sing Sing or Dannemora, and then at last the chair. The heavy hand of doom was on his head from the beginning. The sin, in truth, is ours—the sin of a penal system that leaves the victim to his fate when the course that he is going is written down so plainly.

THE DETERMINED OFFENDER

I shall not discuss tonight the problems presented by the determined offender, except to say that the determined offender against the peace and dignity of the people presents a challenge not to be evaded. The right to move safe and unmolested through the city, to be secure at work and at home, to be protected against frauds and schemers, is the supreme luxury of civilization. For it the community pays a huge price, and is intolerant of failure or lag on the part of its agents and instruments. It cannot be patient with or concerned about the welfare of offenders while they threaten its security and comfort.

THE YOUNG FIRST OFFENDER

According to FBI recent predictions, in excess of 2,500,000 major crimes will be committed this year in the United States. They are not talking about the millions of traffic and other relatively petty offenses. The reference is to murder, robbery, assault, burglary, larceny, embezzlement, sex offenses, narcotics, etc. It is a matter of grave concern when the FBI informs us that of all the persons arrested in our country and charged with the commission of crime in 1955, at least 50 percent had not yet attained their 21st birthday. Most of these are first offenders, little people in the matter of possessions and what is commonly considered social importance. Most of them are decent, law-abiding human beings, who in a moment of excitement, strain, or depression gave vent to impulses whose strength they had rarely admitted to themselves, and became enmeshed in the criminal law.

* * * * *

In or out of court, these are the marks of delayed adolescence, of failure to accept responsibility, of purposelessness in the face of life and destiny—the temper of generalized irresponsibility. Youth offenses, after all, follow in the main patterns of adult desires. Deep in the heart of many an average mature citizen, walled off as an incipient tuberculosis by protective tissue, are the prohibited acts he fortunately escaped committing or being caught redhanded at. To consider youthful crime as something foisted on an innocent, a highminded and law-abiding community rather than as an aspect of its own thought of itself and its own action, is to be naive beyond sanity.

My plea is addressed to the plight of the young and adult first offenders whose numbers are legion. Generally speaking, every

first offender is a potential recidivist. The stake which the community has in the legal process is that he should not actually become one. The object of sentence, then, should be to fit the punishment not to the crime, but to the offender.

Today we speak less of punishment as retributive, as deterrent, or as regenerative. We are more aware that the sickness of the soul that brought about the crime is not to be properly treated by a given number of dollars in fines or of days in prison.

Young offenders have a long potential for good as well as for evil. But the potential is in them—not in their act. Sentencing the offense rather than the person plunges certain young people headlong into hatred, revolt, community repudiation—into something approaching self-destruction, that is, moral suicide. Society then has lost a son, and gained a wastrel whose depredations have been known to affect the lives of many and to cost millions.

And so they come before the court, month in month out, day after day, an apparently unending line of human misery and tragedy. How are we equipped to handle them?

GROPING IN THE DARK

These are issues that face judges as they approach the fateful act of sentencing. After interminable hours of listening to charges and counter-charges, quibbling and evasions, painstaking establishment of self-evident facts, and the final officially established legal description of an act, judges often find themselves merely at the beginning of what they should know in order to act professionally.

What judges want to know at this point is:

Why did he commit his act? Others about him, somewhat similarly placed, have not so acted. What was there in his experience to turn him criminal? What of his home, his relations with parents, siblings, and neighbors? With social institutions? With peer groups? With friends and boon companions? Who has influenced him? After whom did he mold himself? What variety of activities did he participate in? What has work, love, marriage, parenthood meant to him and how has he behaved in these relationships? Most important of all, what variety of opportunities was open to him? Did he participate in his culture and cherish it? Was he proud to be an American, a Jew, a Catholic, a Negro? What interests does he now have? What skills? Whom does he love? Hate?

• • • • •

It is inadequate answers to these inquiries that pose the dilemmas of sentencing. Not until the courts which deal with these perilous problems are adequately staffed with the professional skills will we be able to identify the youthful offender with good moral potential, who can be safely returned to the community to line up with the orderly citizen, from the hair trigger, perverted, or psychopathic first offender who needs institutionalized care. Yes, "possibilities of murder and desperate love are inside all the least likely skulls." As thing stand now, the courts can do little to minimize recidiviam; they cannot complete their mission with assurance.

• • • • •

THE MAJORITY—A TREMENDOUS PROBLEM

The great mass of offenders consists of persons who have not made very good use of their opportunities and who are prone to give vent to their feelings at slight provocation. They accept the easiest way out of trying situations. They have never really faced up to life as a challenge.

A common factor in most of these cases is that, set against the life situation, the criminal charge lacks major importance. Where there is so much deep-seated misery one additional increment does not seem to matter too much. The life situation may inhere in the defendant's relations to his mother or father, to his family tradition, to his neighborhood associates, to the social situation of his school or shop or other place of employment, to the standards of the community as these are reflected in the magazines, papers, movies, actions of important people, envy of others. Treatment involves dealing with these primary causes.

The need of these defendants for the help of society and the court is greater than that of the morally sensitive and the family-bolstered individuals. For these misguided defendants are in great peril—the peril of rejecting and being rejected by the community. Their own inner resources, often considerable if they can be reached, are blocked by widely publicized community standards which have been hammered into them by print, screen, and radio. In many cases the family, source of moral and sentimental education, has taught them to be immoral and hard. There will be no reinforcement to them or to the court from this source. The neighborhood, that social unit formed of the interaction of families directly and through the schools, churches, recreational activities, shops, and festivals which they initiate, support and patronize, is in effect nonexistent. Families live side by side, but do not function as families or as neighbors. There is no family or interfamily support of children. The contaminated child of the tainted family passes on his infection without other families knowing, caring, or acting.

• • • • •

THE PROBATION OFFICER

The probation officer, like the priest, teacher, doctor or lawyer, is at his best both symbol and practitioner. His art is to integrate individuals in society. He meets his client as a friendly ambassador to the social order, accepting him at his own evaluation. He points out the resources and explains the rules of the house. He arranges meetings, makes introductions, facilitates acceptance.

He rejoices in his client's successes, consoles him in setbacks, points out new gambits and openings. The intensity of his expectations for his client become part of the latter's urge to succeed. He works in and through his client.

After all, the delinquent has defied the community. He is threatened both in depth and extent, and he is insecure of his own integrity. The probation worker who can help him must be prepared to participate in recriminations and discouragements, in false starts, failures, hard ascents, and periods of slow gain. He must see his client to the point where he can keep pace with his peers.

Probation has come to its present importance in the treatment of offenders because it has demonstrated itself a valid instrument of moral reeducation in a very considerable portion of cases in which it is used. Probation workers, following their charges into and through family, neighborhood, and community relationships, are accumulating a great body of knowledge and experience about the channels into which the community forces life to flow. Probation today is applying some of the new knowledge of sociology, cultural anthropology, case and group work, psychology and psychiatry to the social situations its workers must meet. The educational requirements needed for skilled probation workers and supervisors, and the length and severity of the internship called for to season them, demand superior mental and emotional equipment and a high order of moral purpose and devotion. Public recognition of their status as professionals, increased funds to provide scholarships for training probation workers, and more adequate salaries are long overdue.

We believe in probation, but we do not "hand it out." We prescribe it. We watch its effects on the delinquent with solicitude and hope. Our hopes are realized to an astonishing degree.

• • • • •

Indeed, the court, insofar as it is able to reflect the immutable will of society to be protected against willfulness, and society's readiness to receive those healed of their moral infirmities back into the community, must be counted among our most important instruments of moral regeneration.

THE CHALLENGE

• • • • •

This is a challenge no more invincible than many others that the bar has met and resolved for the betterment of the commonweal. Only the legal profession can assure its success. The fervent efforts of some lawyers have made whole communities their grateful beneficiaries. The time has come when the rest of us must lend a hand. If the profession wills it, an end can come quickly to abuses that outrage the sensitive and fragile area of personal life and liberty.

• • • • •

You will distinguish, I am sure, between the self-righteous breastbeaters, demagogs, boasters of their humanity, and those who out of a world full of human limitations, half truths, comfortable rationalizations, eyes turned away from the galling facts of life, rise and say, "I go this way and not there. I am this and not that. I have no price but only value." Indeed, for those who build their safety in things, and things alone, there is no greater threat, no more incomprehensible danger than such a lawyer—a lawyer in pursuit of truth.

Let us put an end to such shoddy thinking as, "Why should I stick my neck out?" "Why should I be the one to speak up?" "What's in it for me?" "What's your angle?" "You've got to get along." And it is so easy to be cynical, pessimistic and run with the pack. We must throttle the growing conviction on the part of all kinds of people that whatever we hope for and whatever we do are irrelevant; that our individual efforts really make no difference in stemming the sweep of world forces. To me this mood of resignation is but a desire to escape from the problems of freedom, a fear of growing up and maturely accepting one's responsibilities. They have lost faith—if they ever had any—in the efficacy of effort. Because they believe they are suffering, they make others suffer; tormented by fear, they make others afraid.

They need to be shown that they are wrong by people who take their religion with them right into the thick of the world and put it to work there. Life has taught me that men serve causes not by exhortation or by rules solemnly pronounced, but because of their inner devotion to them. And so, the will to do justice is so very much more than a mental exercise. Never succumb even temporarily to the notion that intellectual advancement can become superior to ideals. As Santayana pointed out, it is "not wisdom to be only wise."

Above all, my friends, character and courage. We assume these indispensable qualities abound. When on occasion our profession falls to low estate, you will find their absence the principal cause. Enter the open lists—to win or lose. Do not be dismayed by those who come charging with colors flying and shining shield raised. The fickle crowd may for a while cheer them as heroes, but the triumph is usually brief and they leave us nothing but "the echo of a name and a suit of rusty armor." Always carry on, toughened in battle and hardened by victory and adversity. You will be heartily welcomed back again and again.

For your own contentment and peace of mind, line up with those at the bar who grow angry in the cause of decency. Be it remembered it was Mr. Justice Oliver Wendell

Holmes who wrote, "I have had to deal with cases that made my blood boil and yet seemed to create no feeling in the public or even in most of my brethren." Associate with lawyers to whom a principle is not a thing you talk about but do something about; those who realize that it is difficult to fight for principles but much more difficult to live by them. Yes, men placed among us as standards against which we can measure our own integrity; men who serve with honor and not for honor; men, to paraphrase Judge Learned Hand, content to be themselves, confident that if they are faithful in that, their light will shine, steady and far; "unafraid before the unknown universe, indifferent to the world's disparagements and uncorrupted by its prizes," they are "ardent and secure in that faith by which alone mankind in the end can live."

The true administration of justice becomes a reality only when the judiciary and the bar join harmoniously in the solution of problems common to both. The issues presented this evening constitute a challenging illustration. In 1846, it is related, Henry David Thoreau was jailed in Concord, Mass., for refusing to pay his taxes as a political protest. Visiting Thoreau, Ralph Waldo Emerson peered through the cell bars and asked: "What are you doing in there?" Thoreau replied: "What are you doing out there?"

It's Time To Kill a Killer

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. HERLONG. Mr. Speaker, polio is still a crippling, killing disease against which we have made tremendous strides since the development of the Salk vaccine. But there are still thousands who have not availed themselves of the shots. In connection with this apathy on the part of the public, a newspaper in my district, the Melbourne Times, is doing an outstanding job in trying to get everyone to take the vaccine.

In its all-out effort, the newspaper on Sunday, March 24, gave over a large portion of its front page to point up the necessity for taking the shots. Its publisher, Mr. Frederick L. McFarlin, and the staff are to be commended for this most worthwhile public service.

Mr. Speaker, with my remarks I wish to include an editorial which appeared on this front page of the Melbourne Times:

IT'S TIME TO KILL A KILLER

In many ways crippling, killing polio is Public Enemy No. 1.

Running it a close second is public apathy.

We have feared the scourge for years and there was rejoicing in every city, town, and village when a humble Pennsylvania medical man, Dr. Jonas Salk, was able to offer the world a safe and effective serum to combat poliomyelitis.

It is too bad the American people forget so many things so quickly.

In April of 1955 everyone was so inoculation conscious it seemed we had polio on the run.

Then another new discovery hit the front pages. Another phase of research produced a 20th century miracle. And Americans turned their thoughts to other things.

Meanwhile, polio continued to strike without warning. It still claims the life of an occasional victim and the free mobility of others.

Polio has been cornered and is tottering. But a few more lethal punches are needed before it goes down for the count.

The head of every house should ask this question: Has everyone in this family taken advantage of one of medical research's greatest miracles: inoculation against polio?

If one member of the family has not been immunized there is work to be done.

Polio is not kid stuff. Adults up to 50 years of age are susceptible. Last year one-quarter of all polio victims were between the ages of 25 and 50.

The medical men and women of South Brevard have joined all doctors in Florida in an all-out all-ages campaign to see that everyone is inoculated with the safe, effective, and miraculous Salk serum which fosters immunity against polio.

The Daily and Sunday Times is dedicated to cosponsor this all-out campaign to beat the killer which strikes without warning.

Nothing will be left undone, no effort will be ignored, in this comprehensive battle against a dread foe.

You owe it to yourself, and to your family, to see to it that everyone at your house gets the three painless injections of Salk serum which may keep your family on its feet without crutches or braces.

Florida Supreme Court Decision on Integrating Schools of the State

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. SIKES. Mr. Speaker, Florida's Supreme Court has been hailed in recent years for its outstanding work. Particularly impressive was the record of the court during the period in which the Honorable B. K. Roberts was chief justice. The volume of work handled during that period was far greater than at any other time in the history of the court and far greater than that processed by any other comparable court in the land. Now in a decision about integrating the schools of the State, the Florida Supreme Court has taken another wise and forward-thinking step, for the court has ruled that it has control of its own discretionary process in issuing orders to carry out United States Supreme Court decrees and holds that violence would result from ordering admission in a test case at this time. Justice Roberts wrote for the majority in a 5 to 2 decision. I believe that this important document should be invited to the attention of each Member of the Congress and under unanimous consent I am having it reprinted in the CONGRESSIONAL RECORD.

The majority decision follows:

IN THE SUPREME COURT OF FLORIDA, JANUARY TERM, A. D. 1957, EN BANC—THE STATE OF FLORIDA, EX REL., VIRGIL D. HAWKINS, RELATOR, VERSUS BOARD OF CONTROL, A BODY CORPORATE, ET AL., RESPONDENTS—CASE NO. 21,138

Opinion filed March 8, 1957.

A case of original jurisdiction—mandamus.

Richard W. Ervin, attorney general, Ralph E. Odum, assistant attorney general, and John J. Blair, special assistant attorney general for respondents.

Horace E. Hill and Robert L. Carter, New York, N. Y., for relator.

Roberts, Judge: This litigation is concerned with the rights of the relator, a Negro, to be admitted to the University of Florida Law School, provided he meets the entrance requirements applicable to all students. The history of the litigation is set forth in *State ex rel. Hawkins* v. *Board of Control* ((Fla. 1955) 83 So. 2d 20), our latest decision in the controversy, referred to hereafter as the 1955 decision.

Our 1955 decision was entered in response to the mandate of the United States Supreme Court in *State ex rel. Hawkins* v. *Board of Control* ((May 1954) 347 U. S. 971), directing this court to reconsider its decision in *State ex rel. Hawkins* v. *Board of Control* ((Fla. 1952) 60 So. 2d 162) (the 1952 decision hereafter), "in the light of the segregation cases decided May 17, 1954, *Brown* v. *Board of Education, etc.* (347 U. S. 483) and conditions that now prevail." Since this court has held in a long line of decisions that it is bound by the decisions of the United States Supreme Court "construing the meaning and effect of acts of Congress and those provisions of the National Constitution which restrict the powers of the States," *Miami Home Milk Producers Association* v. *Milk Control Board* ((1936) 169 So. 541, 124 Fla. 797), we held in our 1955 decision, under the authority of *Brown* v. *Board of Education, etc., supra* (347 U. S. 483), that the relator could not be denied admission to the University of Florida Law School solely because of his race. In the exercise of our discretion, however, we decided to withhold the issuance of a peremptory writ of mandamus in the cause, pending a subsequent determination of law and fact as to the time when the relator should be admitted to that institution; and the Honorable John A. H. Murphree, resident circuit judge of the circuit in which the university is located, was appointed as the commissioner of this court to take testimony on behalf of the relator and the respondents, members of the board of control, relating to the factual issue. Our decision in this respect was based on two considerations, one a Federal and the other a State ground: (1) the application to the controversy of the formula set out in the so-called implementation decision, *Brown* v. *Board of Education of Topeka* (349 U. S. 295); and (2) the exercise of our traditional power as a State court to decline to issue the extraordinary writ of mandamus if to do so would tend to work a serious public mischief. *City of Safety Harbor* v. *State* ((1939) 136 Fla. 636, 187 So. 173); *State ex rel Carson* v. *Bateman* (131 Fla. 625, 180 So. 22); *State ex rel. Gibson* v. *City of Lakeland* (126 Fla. 342, 171 So. 227); *State ex rel Bottome* v. *City of St. Petersburg* (126 Fla. 233, 170 So. 730).

The relator then filed a petition for certiorari in the United States Supreme Court to review our 1955 decision on the ground that the decision in the *Brown* case (347 U. S. 483) did not apply to "State junior colleges, colleges, graduate and professional schools." The Court disposed of this petition by a short but not entirely unambiguous opinion, dated March 12, 1956, reading as follows:

"Per curiam.

"The petition for certiorari is denied.

"On May 24, 1954, we issued a mandate in this case to the Supreme Court of Florida. 347 U. S. 971. We directed that the case be reconsidered in light of our decision in the segregation cases decided May 17, 1954, *Brown* v. *Board of Education* (347 U. S. 483). In doing so, we did not imply that decrees involving graduate study present the problems of public elementary and secondary schools. We had theretofore, in three cases, ordered the admission of Negro applicants to grad-

uate schools without discrimination because of color. *Sweatt* v. *Painter* (339 U. S. 629); *Sipuel* v. *Board of Regents of the University of Oklahoma* (332 U. S. 631); cf. *McLaurin* v. *Oklahoma State Regents for Higher Education* (339 U. S. 637). Thus, our second decision in the *Brown* case (349 U. S. 294), which implemented the earlier one, had no application to a case involving a Negro applying for admission to a State law school. Accordingly, the mandate of May 24, 1954, is recalled and is vacated. In lieu thereof, the following order is entered:

"Per curiam: The petition for writ of certiorari is granted. The judgment is vacated and the case is remanded on the authority of the segregation cases decided May 17, 1954, *Brown* v. *Board of Education* (347 U. S. 483). As this case involves the admission of a Negro to a graduate professional school there is no reason for delay. He is entitled to prompt admission under the rules and regulations applicable to other qualified candidates. *Sweatt* v. *Painter* (339 U. S. 629); *Sipuel* v. *Board of Regents of the University of Oklahoma* (332 U. S. 631); cf. *McLaurin* v. *Oklahoma State Regents for Higher Education* (339 U. S. 637)."

The cause is now before this court on the relator's motion for a peremptory writ of mandamus to compel the respondents to admit him to the University of Florida Law School, his contention being that the above-quoted opinion entitles him to immediate admission, provided he is otherwise qualified, without regard to the outcome of the factual study which was in progress at the time of the filing of his motion and which has now been concluded.

There can be no doubt that, by revising its May 1954 mandate directed to our 1952 decision in the manner above noted, the Supreme Court of the United States neatly, albeit laconically, cut off the Federal prop that supported, in part, our 1955 decision. But it will have been noted that the opinion stated that "[t]he petition for certiorari is denied," presumably referring to our 1955 decision; and, this being so, our 1955 decision still stands, nonetheless firmly, on the State ground mentioned therein and referred to above.

Indeed, it is unthinkable that the Supreme Court of the United States would attempt to convert into a writ of right that which has for centuries at common law and in this State been considered a discretionary writ; nor can we conceive that that Court would hold that the highest court of a sovereign State does not have the right to control the effective date of its own discretionary process. Yet, this would be the effect of the Court's order, under the interpretation contended for by the relator. We will not assume that the Court intended such a result.

In what appears to be a progressive disappearance of State sovereignty, it is interesting to read certain decisions (among others) which the United State Supreme Court has handed down in recent months. See *Railway Employees Dept., etc. et al.* v. *Hanson et al.* ((May 1956) —— U. S. ——, 100 L. ed. (advance), p. 638), holding that a union shop agreement negotiated between certain railroads and certain organizations of employees of such railroads which had been authorized by an act of the Congress superseded the right-to-work provisions of the constitution of the State of Nebraska and the State statutes enacted pursuant thereto; *Dantan George Rea* v. *United States of America* ((January 1956) 350 U. S. 214, 100 L. ed. (advance), p. 213), holding that it was within the power of the Federal courts to enjoin an officer of the executive department of the Federal Government from testifying in a State court in a case involving a violation of a criminal statute of that State; *Commonwealth of Pennsylvania* v. *Steve Nelson* ((April 1956) 350 U. S. 497, 100 L. ed. (advance), p. 415), outlawing anti-sedition laws in 42 States, Alaska and Hawaii; *Griffin et al.* v. *People of the State of Illinois* ((April 1956), —— U. S. ——, 100 L. ed. (advance), p. 483), requiring the States to finance appeals by penniless persons convicted of crimes; *Slochower* v. *Board of Higher Education of the city of New York* ((April 1956) 350 U. S. 551, 100 L. ed. (advance), p. 449), limiting the power of States and cities to discharge public employees when they plead the fifth amendment against self-incrimination in duly authorized inquiries affecting the general welfare; *Browder et al.* v. *Gayle et al.* (142 F. Supp. 707 (M. D. Ala. 1956)), affirmed by the Supreme Court, 77 S. Ct. 145, holding invalid statutes and ordinances requiring the segregation of the white and colored races in motor buses operating in the city of Montgomery, Ala.

It is a "consummation devoutly to be wished" that the concept of States' rights will not come to be of interest only to writers and students of history. Such concept is vital to the preservation of human liberties now. And whatever one's ideology may be—whether one is a strong defender of State sovereignty or an equally fervent advocate of centralized government—we think the great majority of persons would agree that if the death knell of this fundamental principle of Jeffersonian democracy is to be tolled, the bell should be rung by the people themselves as the Constitution contemplates. President Lincoln's words of warning are just as true today as they were almost a century ago, when he said in his first inaugural address on March 4, 1861:

"If the policy of the Government upon vital questions affecting the whole people is to be irrevocably fixed by decisions of the Supreme Court * * * the people will have ceased to be their own rulers, having to that extent practically resigned their Government into the hands of that eminent tribunal."

And we do not feel it is amiss to refer to the following remarks made by George Washington in his Farewell Address:

"If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed."

But we repeat that, despite these recent decisions, we cannot attribute to the Supreme Court an intention to abrogate the rule which denies to Federal courts the right to regulate or control long-established rules of practice and procedure adopted by State courts for the administration of justice therein. Cf. *Naim* v. *Naim* ((Va. 1956) 90 S. E. 2d 849), in which the Supreme Court of Appeals of Virginia declined to remand a cause to a lower court, as directed by mandate of the United States Supreme Court, because to do so "would be contrary to [the] fixed rules of practice and procedure" of the Virginia courts, as well as the statute law of that State. A motion to recall the mandate and to set the case down for oral argument upon the merits, or in the alternative, to recall and amend the mandate was denied by the United States Supreme Court for the reason that the decision above referred to (90 S. E. 2d 849) "leaves the case devoid of a properly presented Federal question." *Naim* v. *Naim* ((March 12, 1956), — U. S. —, 100 L. Ed. (advance), p. 352). A fortiori, we cannot assume that the Supreme Court intended to deprive the highest court of an independent sovereign State of one of its traditional powers, that is, the right to exercise a sound judicial discretion as to the date of the issuance of its process in order to prevent a serious public mischief. As recently as June 4, 1956, in *United Automobile, Aircraft, and Agricultural Implement Workers of America, et al.* v. *Wisconsin Employment Relations Board et al.* (— U. S. —), the Supreme Court recognized the "dominant interest" of a State in preventing violence. It there said: "The States are the natural guardians of the public against violence. It is the local communities that suffer most from the fear and loss occasioned by coercion and destruction. We would not interpret an act of Congress to leave them powerless to avert such emergencies without compelling directions to that effect." We are cognizant of our duty to compel relator's admission to the University of Florida Law School without delay, if it is feasible to do so at this time; but we have an equally compelling duty to perform in respect to the public peace and a long-established State judicial procedure by which to perform it. We point out, additionally, that the relator, having a choice between a Federal and a State court, selected this court as the forum in which to try his cause; he thereby selected the rules of practice and procedure long established in this jurisdiction. We have no doubt that the Supreme Court intended that we should adhere to such procedure in the instant controversy. The relator's contention in this respect cannot, therefore, be sustained.

We come now to the question of whether the facts, as developed under the guidance of this court's commissioner, require the immediate admission of the relator to the University of Florida Law School, provided he meets the entrance requirements. It might be noted that the relator had due notice and an opportunity to be heard at the hearings scheduled by the commissioner. He did not appear nor did he present any testimony in support of his right to immediate admission. Moreover, the history of this controversy leads us to believe that the relator does not, in fact, have a genuine interest in obtaining a legal education. He was given an opportunity to secure a legal education outside this State under the regional education plan, but declined; he was given an opportunity to attend the University of Florida Law School, temporarily, if law facilities were not available at the Florida Agricultural and Mechanical University, but declined; he was then given an opportunity to attend the law school at the Florida Agricultural and Mechanical University, but declined. And, as noted, he was given an opportunity to appear before the court's commissioner and offer evidence in support of his right to immediate admission to the University of Florida Law School, but declined.

It should be noted that the law school at the University of Florida is an integral part of that institution. A law student is not in a class separate and apart from all other university students—he is a university student just as much as those entering the enginering school, or the educational school, or the architectural school, and entitled to participate in all campus activities.

Against this background, we have considered the evidence adduced by the respondents which, in the state of the record here, must constitute the basis for the exercise of our discretion in the matter. The factual material on file in this court reflects a prodigious amount of work by the commissioner and the respondents or those acting in their behalf. It is not contended—nor could it be—that there was even a modicum of bias on the part of any person involved in the work of assembling the data here presented nor in the formulation of the questionnaires which were the basic mediums by which much of the information was obtained. The survey is completely objective and as accurate and comprehensive as the time available for the study would permit. The testimony of the witnesses shows no bias and reflects only a sincere desire to do whatever is best for all concerned.

The survey conducted under the guidance of the court's commissioner shows, among others, that a substantial number of students and a substantial number of the parents of students state that they expect to take action—which apparently is positive action—to persuade Negro students to leave the university or make it so unpleasant for them that they will move out of a dormitory room or out of a class or out of a cafeteria or otherwise stop using the facilities of the University of Florida, should integration occur. It was also shown that 41 percent of the parents of students now in our white universities would cause them to drop out of those schools or transfer to another school; and that 62 percent of the parents of white 1956 high-school graduates would send their children elsewhere than to our white State institutions, if we have enforced integration. There would be loss of revenue to our white institutions from grants, from activities on the part of the alumni of those institutions in support of their financial affairs, and from students moving out of dormitories (many of which are being paid for out of revenue certificates), if we have integration. Those institutions would lose the support of 52 percent of their alumni, if integration occurs, which would seriously impair the financial support to be expected from our State legislature. Integration would unquestionably result in the abandonment of substantially all of the graduate work now being offered at the Florida Agricultural and Mechanical University because it would be an unnecessary duplication of the same courses offered at the University of Florida or at Florida State University.

Our study of the results of the survey material to the question here, and other material evidence, leads inevitably to the conclusion that violence in university communities and a critical disruption of the university system would occur if Negro students are permitted to enter the State white universities at this time, including the law school of the University of Florida, of which it is an integral part. This court has an opportunity to prevent the incidents of violence which are, even now, occurring in various parts of this country as a result of the States' efforts to enforce the Supreme Court's decision in the Brown case. We quote with approval that part of the language of Mr. Justice Hobson in his special concurring opinion in which he said, "The testimony which was taken at the direction of this court by the Honorable John A. H. Murphree, and which is now before us for consideration, was not in the record when the Supreme Court of the United States said 'there is no reason for delay.' This testimony, as well as the revealing incidents (of which we may take judicial notice) which have occurred since the repudiation of the 'separate but equal' doctrine, convinces me that the immediate admission of relator to the University of Florida College of Law would result in great public mischief." The homely expression, "An ounce of prevention is worth a pound of cure," is especially applicable to the situation here—involving, as it does, the public welfare of all our people.

In the exercise of what we sincerely believe to be sound judicial discretion, we have decided that the relator's motion for a preemptory writ should be denied, but without prejudice to the right of relator to renew his motion when he is prepared to present testimony showing that his admission can be accomplished without doing great public mischief. For the reasons stated, the entry of a final judgment is deferred until further order of the court.

It is so ordered.

Thornal and O'Connell, judges, concur.

Terrell, circuit judge, and Hobson, judge, concurs specially.

Thomas and Drew, judges, dissent.

Assistant Attorney General Holifield Honored

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. WATTS. Mr. Speaker, recently the Nation's oldest active State assistant attorney general was again given recognition for his outstanding service to the people of Kentucky by receiving a medallion presented to him by the Governor of Kentucky for service to the commonwealth. General Holifield is a lawyer's lawyer, a judge's counsel. For many years his profound knowledge of the law and his great ability to apply that knowledge to the legal problems of the State has made General Holifield a competent source of advice and counsel to his fellow members of the bar. His knowledge of constitutional law has won him wide recognition. The people of Kentucky and of the South owe him a debt of gratitude for his brilliant and successful legal battles to free southern rail shippers from discriminatory freight rates. General Holifield incidentally is the uncle of one of our esteemed colleagues in the House of Representatives, the Honorable CHET HOLIFIELD, of California.

Under unanimous consent I include in the CONGRESSIONAL RECORD following these remarks a newspaper article from the Lexington Herald of March 16 concerning this great Kentuckian:

[From the Lexington (Ky.) Herald of March 16, 1957]

FIRST GOVERNOR'S AWARD GIVEN TO ASSISTANT ATTORNEY GENERAL

(By Paul R. Jordan)

FRANKFORT, KY., March 15.—Assistant Attorney General M. B. Holifield was honored today with the first Governor's Award for "exceptionally meritorious, conspicuous, and longstanding public service."

Gov. A. B. Chandler presented a medallion, inscribed "for service to the Commonwealth of Kentucky," to Holifield's secretary, Mrs. Lucy Rodman, as several hundred State employees watched the ceremony in front of the capitol.

The 85-year-old Holifield, an assistant under 7 attorneys general since 1928, is seriously ill in a Lexington hospital.

Holifield, considered the foremost authority on the Kentucky constitution, observed his 85th birthday February 7 as the oldest assistant attorney general still active in the United States.

Chandler indicated the Governor's Award will be made yearly on June 1—anniversary of the commonwealth's birthday—to an employee of the State.

He said it had been hoped to make the first presentation this June 1, but in view of Holifield's illness, "we wanted to give it to him while he yet lives."

LETTER READ

Chandler read a letter to Holifield in which he said in part:

"Many of your achievements have earned the undying gratitude of the people of Kentucky. Perhaps most notable was your successful handling of the legal struggle that freed southern rail shippers from discriminatory freight rates.

"This outstanding example of your ability, which was exemplified most dramatically by your brilliant representation of the commonwealth's interest before the Supreme Court of the United States and the Interstate Commerce Commission, has saved Kentuckians millions of dollars.

"I am sure that every Kentuckian has directly or indirectly benefited from this display of your superlative legal talents. • • •

"As you enter the twilight of your career, may God walk with you and protect you. Our hearts and thoughts go out to you as a majestic pillar of the commonwealth, and I know I am joined by all Kentuckians in saying, 'Well done, thou good and faithful servant'."

Accepting the medallion, Mrs. Rodman said: "I know General Holifield will be very pleased and very, very proud of this."

The 14-karat gold medal bears on its face the great seal of Kentucky and the words, "The Governor's Award." It hangs on a blue and write ribbon from a bar pin that says "for service." On the reverse side of the medal are these words:

"Presented to M. B. Holifield by the governor of Kentucky."

EXECUTIVE ORDER

The citation of the award was contained in an executive order signed by Chandler.

In it, he described Holifield, a native of Graves County, as an "outstanding citizen and public servant, cherished legal, civic, and lay religious scholar and mentor, grand dean of Kentucky jurisprudence and lawyers' lawyer, gracious gentleman and upholder of the Christian faith."

Holifield is the author of a number of articles on both religious and constitutional subjects.

He has served continuously as an assistant attorney general since 1928 except for 1 term, 1932–36, when he returned to Mayfield to rejoin his law firm.

Holifield was admitted to the bar in 1896 after being graduated from Cumberland University in Tennessee.

Big Man, Big Job

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent feature story from the Bridgeport Sunday Post of March 24 entitled "Meade Alcorn: 24 Hours a Day for GOP."

This penetrating profile presents a well-rounded picture of a completely able and energetic man whose experience and accomplishment in the field of public service and politics is a great pride to all of us in the Connecticut delegation.

Republicans look forward with great hope for a brighter future for the Republican Party under the helm of Meade Alcorn, who most deservedly may be entitled "Mr. Modern Republican."

The article follows:

MEADE ALCORN: 24 HOURS A DAY FOR GOP

(By Ann V. Masters)

President Eisenhower has put it very bluntly. Wagging his finger at Meade Alcorn, Jr., new Republican national chairman, he said, "Meade, I want a Republican House and Senate in 1958. That's your job."

Red-haired, blue-eyed Meade Alcorn, 49, had his job cut out for him some 6 weeks ago when that same august finger tapped him. Connecticut's distinguished political and legislative leader was Ike's personal choice for the party's top political post. The Republican Party unanimously confirmed it.

Energetic Meade Alcorn, a former hurdle champion, has been on a steady jump since then. In the past 6 weeks, he has had 1 evening free. Just over a week ago, he faced his first large press conference with 65 newspapermen. The questions flew from tough, veteran news hawks. "They're a great crowd," he said admiringly when seen in his home in Suffield a few days later. "But believe me, you're like a duck on a rock, a fair target for everyone and anyone."

TOP LEVEL

No political tyro, Alcorn has been recognized for years as a key party leader in Hartford County and the State, before his move to the top level in national politics. He was right-hand man to Leonard W. Hall—previous Republican national chairman—at the Republican National Convention in San Francisco last year, where he served as vice chairman of arrangements. This strategically important position groomed him for his present role. He also was chairman of the Connecticut delegation.

What does a national committee chairman do? In his Suffield home, situated on the main street of that handsome New England town, against a backdrop of rolling hills, Alcorn explained. "As the President put it, 'you're the head of the political hierarchy.'" This means he is in close touch with members of the Republican National Committee and with the State chairmen in 48 States.

At Republican national headquarters, 1625 I Street NW., Washington, D. C., he is top boss with a staff of 104. Special departments handle research, public relations, women's interests, agriculture, labor, and speakers who are sent out on a constant schedule.

WHITE HOUSE BREAKFAST

A lawyer, who for many years served as State's attorney for Hartford County, Alcorn is a partner in the law firm of Alcorn, Bakewell, and Alcorn in Hartford. It has a staff of 7 or 8 lawyers and about the same amount of office help, a considerable difference from the battery of aids he now faces.

Alcorn spends most of his time in Washington. Seated in the tastefully furnished living room of his large, rambling home where he spends weekends, he gave his program. In Washington, his day starts not later than 8 a. m., usually with a breakfast meeting with members of his staff.

He is at the White House for breakfast at 7:30 a. m. 2 or 3 times a week. At least once a week is a necessity, he pointed out. Usually Sherman Adams, the President's aid, is present, as are other White House staff members. Cabinet members, high-ranking Republican political figures, and, on occasion, heads of Senate congressional committees.

SERIES OF PROBLEMS

At the Republican National Committee office, Alcorn is on the phone a great deal. "Life is a series of problems," he declared. One State official calls, disgruntled over an appointment, a State chairman wonders about a program, or a Senator is unhappy about a bill coming up.

A staggering amount of mail pours in. Several hundred letters in a day on the budget and on the Israeli situation now swamp the office.

Speaking engagements keep Alcorn moving. Last Monday, he flew to Lincoln, Nebr., stepped off the plane to meet the flash bulbs, newsmen, TV cameramen. He spoke at a big Republican dinner given in honor of Nebraska Founder's Day. Up until 1 a. m., the next day he was back in Washington. In the past 6 weeks he has given speeches in Missouri, New Jersey, Washington, and other places.

Does a Republican national chairman influence matters of policy? And to what extent is he involved in formulating them?

LEAD IS SET

The President and Republican Members of the Senate and House set the lead, Alcorn made clear. "Of course," he said, "the chairman has a voice in these things." On questions of campaigns, political strategy or technique, the national chairman is officially responsible. The dividing line is difficult to fix. But one thing Alcorn was emphatic about. "I don't say 'this is the party policy.' I would not lay down any laws. It isn't that way. Subjects are discussed."

"This is the sort of thing I am involved in," said Alcorn, explaining some of the distinctions, the manner in which policy and strategy sometimes overlap and his own role. A vacancy for United States Senator in Texas now to be filled by election. Alcorn has been in touch daily giving help advice. Four field men from Washington are working in Texas.

A week ago the political leader learned some drought-relief measures were due to expire, an occurrence of grave concern to Texans. He got in touch with Ezra Benson, Secretary of Agriculture. The matter was checked, the measures extended.

In New Mexico, a special election for a Member of the House of Representatives demands conferences, help in mapping out a program and campaign.

APPOINTMENTS CHECKED

The Republicans' top man works closely with members of the Cabinet on appointments in all manner of jobs, a United States district attorney, a circuit court judge, filling positions in the FHA in various States. These are cleared through the national committee. The person's background is checked to see that no problem exists that might embarrass the administration.

One question that he is now plagued with is: "What are you going to do about Senator McCarthy?" President Eisenhower officially snubbed the Senator by not inviting him to the official White House reception upon his inauguration. "The national committee is not going to intrude itself," said Alcorn emphatically. "We are not going to do it. We are staying out of these contests."

The Republicans' major political task will be to win control of Congress in 1958. Work is already started on this.

Six regional conferences, followed by a meeting of the national committee, will really kick off the House and Senate races in 1958. State by State conferences will take place, followed by county and district meetings.

The Republican chieftain plans to attend as many State conferences as he can, and hopes to get to all 48. He is now on a 16-hours-a-day schedule, spends Monday through Thursday in Washington, and returns to Connecticut and his law office Friday and Saturday. Like his predecessor, Leonard Hall, he serves without pay. His living is made at law, at which he does a lot of trial work.

POLITICAL INSIGHT

The new political leader referred to Hall as "the greatest Republican chairman we ever had." Asked what made him say this, he outlined Hall's qualifications and, in doing so, the qualities called for in a chairman's job.

"Hall is a resilient personality. Affable and genial, he can listen to troubles by the hour and be helpful, patient, and firm when necessary," said Alcorn. "He's been in politics so long. For 25 years he was head of a town committee. As a chairman, he was able to evaluate and get at the heart of a problem. He understood problems at the grassroots level, like a question of a postmastership—not a major patronage, but important to people. He has insight into what makes people go around politically."

Alcorn has the same background, to a large degree, and an understanding that also begins at the grassroots level. He has been chairman of Suffield's Republican town committee since 1938. An indefatigable worker, he has proved his organizational and administrative ability on State and National levels. Objective, with keen, balanced judgment, and a trained mind, he effectively presents ideas. He also works well with people and inspires cooperation.

His outstanding record of civic and political experience includes: Assistant State's attorney for Hartford County from 1935 to 1942; State's attorney, 1942 to 1948; member, Connecticut House of Representatives, 1937 to 1943; Republican majority leader, 1939; and speaker of the house, 1941.

He has served as delegate to five national conventions, was State chairman of the Citizens for Eisenhower, is a State central committeeman, a national committeeman, and was a vice chairman of the Republican National Committee until his election to his new post on January 22.

FATHER FAMED PROSECUTOR

Hugh Meade Alcorn, Jr., has added further luster to a name made famous for public service by his father. As State attorney, the late Hugh Meade Alcorn, Sr., sent Gerald Chapman, who murdered a policeman in New Britain in 1925, to the chair a year later. During the case the notorious Chapman gang murdered two key witnesses and set fire to the barn of another. Young Alcorn, Jr., his brother, Howard, now a superior court judge, and Robert, a writer, who appears in the March Reader's Digest, were threatened with kidnaping.

"That was some time," recalls his son, who was then in school. Asked if he felt his heritage had an influence on his choice of career, he replied, "There's no question about it." Since he was a child he has been called Meade to distinguish him from Alcorn, Sr. His father also ran for Governor of Connecticut and was defeated by Wilbur L. Cross.

HURDLE CHAMPION

Born October 20, 1907, H. Meade Alcorn, Jr., went to Dartmouth, graduating cum laude in 1930. He was a track star and hurdle champion. In 1927 he broke the world's indoor record for the 60-yard low hurdles. He became New England's 220-yard low-hurdles champion a year later and has won over 50 medals at various events.

He graduated from Yale Law School in 1933 and was admitted to the Connecticut bar the same year. Two years later he followed his father's footsteps as assistant State's attorney, and upon his father's resignation succeeded him as State's attorney.

Meade Alcorn, Jr., established his own brilliant criminal prosecution record. He broke the Waterbury corruption ring in 1939, which saw Mayor Frank Hayes and Democratic and Republican politicians defrauding the city by phony bills for alleged contracting. Kickbacks from the contractors were then given. Three and a half million dollars was involved

SMASHED HARTFORD CONSPIRACY

In the late forties, he smashed the Hartford conspiracy. This dealt with a powerful politician, a member of the vice squad, and a gambler who rigged up a protection system to which pay-offs were made.

Connecticut's distinguished citizen is a native of Suffield. His first wife and only son died. He has one daughter, Janet Eileen. Recently remarried, he met his wife, Marcia, while she was working for Senator Prescott Bush on a campaign. She is vice president of the Suffield Women's Republican Club. Of

her, Alcorn says, "She's the best thing that ever happened to me in politics."

The man who today has the Republican Party's top post has the job of winning friends for Ike and his "modern Republicanism" among clashing GOP factions. Alcorn has been an outspoken supporter of progressive policies, and is credited with broad liberal views. Defining the difference between modern Republicanism and fundamental or Old Guard Republicanism, he said: "Modern Republicanism is a determined effort to make the Republican Party, within the framework of traditional Republican principles, alive and responsible to the needs of today."

He pointed out that the party has to keep up with today's problems and give the answers today. An approach that "what was good enough for grand dad is good enough for me" will not do. "Grandfather went to work in a horse and buggy," he said.

UNITE WARRING FACTIONS

How does he expect to unite these warring factions? Republicans must: 1. Not shrink from talking about views. This is a wholesome approach. They must be willing to talk and evaluate. 2. Discussions of the differences cannot be permitted to create a real division in the party.

"Compromise is the essence of politics," he said. "Ultimately policies are reasoned opinions." He added, "The party has always had differences." A stanch advocate of Ike's "Middle-of-the-road Republicanism," he feels "you can find a common denominator of thought."

Speaking of the hotly discussed budget, he pointed out that it followed the President's platform on which he was elected. There will be considerable difficulty cutting it. He commented:

"One thing that has been terribly obscured is that the budget is well within the receipts of the United States Government. It's a balanced budget."

MAJOR CONCERNS

The party's major problems include the farm problem, "a real battleground," with some farmers misunderstanding what the Government is trying to do, he felt. Others are Federal aid to education, foreign aid, budget cuts, and segregation.

Whipping the party into top form is naturally a fundamental concern of Alcorn's. With organizational skill and sound judgment, he outlined the three ingredients necessary: (1) Best candidates. "It is shocking to realize some districts do not run candidates," he pointed out, and he plans to "whittle away at that," in addition to running top men and women. (2) Good program. As long as the President is in the White House, the policies he stands for should be endorsed. (3) Good organization. Aggressive party organizations should be on a 365-day, year-round basis. Team spirit and pride in the party should be developed.

IKE-NIXON RELATIONSHIP

His association with President Eisenhower has been, he declared, "a wonderful relationship. He's such a dynamic personality. It's hard to describe him. He's the kind of man who inspires great loyalty, devotion, and dedication. He arouses zeal and a sense of mission in those around him. There's not an insincere thing about him, and it's not a pretense."

The President is intensely interested in the long-range Republican Party program, and Alcorn sees him frequently. "When he talks about its importance," said Alcorn, "it's not just a political expedient, but because he has seen his Government program interrupted and halted."

Of Vice President RICHARD NIXON, he said, "He's one of the most completely informed men in public life today. His capacity is beyond description." Describing NIXON as a tireless worker, he declared, "he's carried more responsibility than any other Vice President in history."

President Eisenhower is barred by the Constitution from running for a third term. Asked to comment on the possibility of NIXON as a presidential candidate in 1960, Alcorn stated his official position: "I will not use the office of Republican national chairman to further the political interest of any individual."

THE FUTURE?

As a major political figure in Connecticut and nationally, Alcorn's plans for the future are of interest. The former Republican national chairman, Leonard Hall, is mentioned as a strong possibility as candidate for Governor of New York State. Queried on whether he might one day be interested in running for Governor of Connecticut, Alcorn looked startled, then said emphatically, "Flatly, no."

What happens to old chairmen of political parties? With a grin, Alcorn, who looks in trim, tiptop shape said, "You can't be old and last at this. You couldn't stand the pace." Then answering the question, he said, "Some become postmasters, some land in the Cabinet."

Alcorn's tenure of office is for 4 years, although continuation usually depends on the man himself. Many find it a long, arduous stretch without pay. Said Alcorn: "When I finish I want to get back to my law office." Admitting it was a tough grind, he added, "But when it's all over, I'm sure I'll be very glad I've done it."

At the President's Gettysburg farm, where the Alcorns recently were his guests, Eisenhower gave one of the most important requirements for a political career. He said: "A man must have a glint of enthusiasm in his eye and a spark in his heart." Alcorn has both.

Small Business Needs Tax Relief

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, March 27, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me as to the small business needs for tax relief.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER

I support the bill offered by the Senator from Arkansas to amend the corporate tax rate. The effect of the Senator's measure would be to bring about a limited degree of graduation in the corporate tax rate. My only complaint with his bill is that it does not go far enough. But at least it is a step in the right direction and one that is sorely needed by small business, particularly at the present time.

Rarely in our history have we had such widespread distress in the ranks of small business at a time of relative prosperity and high employment. It is an ominous portent for the future of our free economy that last year business failures were 16 percent higher than in the preceding year and in the first months of this year, the trend continues steadily upward. In January and February of this year failures were 11 percent higher than in the corresponding period of last year. The tight money policy of the present administration has fallen most cruelly on small firms, which are far less able than large companies to finance their operations out of internal savings and which, even during times of relatively free credit, must pay much higher interest rates than the giant corporations. Today, many small enterprises have found that their traditional sources of credit have dried up. As a result, the competitive disadvantage under which they labor in trying to compete with their large rivals has been increased.

The recent investigations by the various committees of Congress into the price increase in the oil industry have provided a graphic example of the way in which large companies are able to finance the cost of expansion by the simple device of raising prices to the consumer. This, of course, the small company is rarely in a position to do. A minute of the board of directors of the Standard Oil Company of New Jersey of December 13, 1956, states:

"3. Based on the estimates of future expenditures submitted by the affiliates, and assuming continuance of the company's present dividend policy and of crude prices at their current levels, the forecast shows that for the first time in many years the consolidated group is faced with the prospect of being unable to generate, internally, sufficient cash to cover replacements, modernization, and expansion to the degree desired—and no change in this situation is indicated throughout the period covered by the forecast.

"In this connection, however, it was pointed out that, in part, the high capital expenditure rate reflects deliberate efforts to use, to a greater degree than in recent years, the ownership route rather than the leasing route to cover tanker and service-station requirements" (House Committee on Interstate and Foreign Commerce, vol. 5, p. 694, hearings transcript, Feb. 20, 1957).

Later officials of Standard Oil acknowledged that the recent price increases which the oil industry has put into effect have made it unnecessary for the company to go to outside sources for funds needed for the purposes set forth in the minute. They could have borrowed money to cover the costs of these additional tanker and service-station requirements; they could have floated securities, but they did not do so. Instead they have made the consumer pay the cost of this expansion.

This is merely one example of what has tended to become the principal source of financing of the large corporations—financing out of internal savings, paid for ultimately by the consumer. The present bill, while not limiting in any way the power of the large corporations to finance themselves in this way, would at least to some extent restore the competitive balance between the large corporations which are able to finance themselves in this way and smaller companies which are not. Therefore, I wish to express my hope that the measure will receive the support of all Members of the Senate who are concerned with the future vitality of our competitive system.

A Helping Hand for Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the New York Times of March 22 which discusses the present negotiations over American economic aid to Poland:

A HELPING HAND FOR POLAND

The Eisenhower administration will have lost a major opportunity of its own making if it allows the present negotiations over American economic aid to Poland to peter out in a morass of doubts, indecision and timidity. While obviously there is no necessity to grant the Poles the entire huge sum of $300 millions in agricultural produces and machinery for which they are asking, it nevertheless is vitally in the interests of the United States to offer them substantial help at this crucial moment in their relations with Soviet Russia.

It is only to be expected that with their usual myopia some Members of Congress would object to anything that smacks of aid to a Communist state, even to one that has been showing signs in recent months of some independence from Russian imperialism. But the administration should be willing to face a hot political fight, even with members of its own party, so long as it knows that under the peculiar circumstances of the present situation American loans to Poland might help drive the wedge a little deeper between Gomulka's government and its imperial Russian "protectors." Here is the first real chance we have had in respect to Poland in several years; it is a chance—which our own Government wisely encouraged—to offer Warsaw some alternative to complete and hopeless dependence on the East.

Naturally, the grant of a few score million dollars' worth of American aid is not going to change the situation overnight; deep-dyed Polish Communists insist, of course, that it won't change it at all. But it is a thin opening of the door. For effective aid congressional action will probably be needed, but before congressional action can be expected there must be Executive decision. A study of foreign aid made last December by former Representative James P. Richards, now the President's emissary in the Middle East, stated: "One of our primary objectives is to help nations such as Poland disengage themselves from Soviet domination, and it is essential that we be able to provide them assistance." Senator Kennedy has wisely pointed out that the Poles' "ability and willingness to turn to this Nation for assistance for the first time should be encouraged." Many bitterly anti-Communist Polish-Americans say the same. And President Eisenhower himself, talking last fall in the specific contest of the Polish upheaval, spoke of America's mission to help peoples "who need and want and can profitably use our aid," so that they can advance toward self-support and, by implication, to ultimate political independence.

"Tonight We Are All Irish"

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1957

Mr. LANE. Mr. Speaker, the people of the United States, known the world over for their open hearts, are giving an especially warm welcome to the Jewish lord mayor of Dublin, Ireland, the present capital city of Eire, and the future capital city of the entire Emerald Isle.

The visit of lord mayor and Mrs. Robert Briscoe to Boston, by a strange and happy coincidence, took place on St. Patrick's Day. It was small wonder, then, that the greeting they received, touched off the most enthusiastic celebration ever recorded in Boston, which made it seem more Irish than Dublin itself. The way those people with names like O'Schwartz and McRocco joined heartily in the demonstration was a grand thing to see and hear.

For the theme was "Tonight we are all Irish."

Irish in neighborliness, in devotion to freedom, and in love of God.

The meaning of this great day was eloquently set forth by His Excellency, Archbishop Richard J. Cushing, spiritual leader of the archdiocese of Boston.

The archbishop, who combines personal piety with a generous outgoing spirit that has enlisted support from people of all faiths in building hospitals, and colleges, and homes for the aged, and other humanitarian works, summed up the universal significance of St. Patrick's Day.

Under unanimous consent, I insert in the CONGRESSIONAL RECORD the complete text of an address given by Archbishop Cushing at the civic reception for Lord Mayor Robert Briscoe, of Dublin, at the annual St. Patrick's Day dinner, Sheraton Plaza, Boston, Mass., on March 18, 1957:

ST. PATRICK RESEMBLES PATRIARCH OF OLD TESTAMENT

If this were a religious rather than a civic gathering, and if theology rather than patriotism were our theme tonight, I would then speak to you of that kinship between the Lord Mayor's people and my own which is established by all the religious traditions, realities, and values which the great Pope Pius XI had in mind when he declared: Spiritually we are all Semites.

But this is not a directly religious meeting. The traditions, values, and realities which bring us together tonight are chiefly cultural, national, and fraternal. Tonight we are all Irish.

But since the traditions of Ireland are always colored by religion, and since the great national feast of Ireland is the feast day of her patron saint, even on a civic occasion I must speak to you in terms of religion and piety. Happily I can do so appropriately tonight by speaking of the two great chieftains to whom the right honorable mayor and all others here present owe the allegiance of grateful spiritual sons. I refer to Patrick, the apostle and father of the Irish people; and Abraham, the patriarch and founder of the Jewish people.

Not long ago I enjoyed the pleasure, rare for me, of watching a new moving picture. It was this recent version of the Ten Commandments which has proved so popular a film. Watching its portrayal of the mighty personality of Moses, the manner in which he became a willing instrument in the hand of God and the lawgiver of a people destined to influence and to edify all the world with the doctrine Moses preached to them, one could not help thinking of the parallel between Moses and Patrick, between the Jews and the Irish, the one a people scattered throughout the world to spread the law of Moses, the other not less scattered to preach the faith of Patrick. I reflected, as I watched the film, on how Patrick, as their lawgiver, might well be called the Moses of the Irish people. Even the features attributed to Moses, the majesty of his heroic bearing, made me think of the imposing statues by which our people represent and remember their glorious apostle, St. Patrick.

STONE OF DESTINY

Then a week or two later I read an account of a talk given by a great Jewish scholar to an Irish society in New York. This scholar spoke of the parallels between the Irish people and the Jews, the kindred nature of their strange destinies as tiny nations called upon by God greatly to aid in the building of His universal kingdom. He spoke of the common characteristics of poetic vision and prophetic hope shared by the religious Jew and the devout Irishman. He appealed to the memory and influence of another of the great Jewish patriarchs as the source of these inspirations. He told the story of Jacob. Jacob, avoiding hatred and cherishing love, was walking a lonely road one night when he was taken unaware by the call of sleep. He laid his head to rest on a stone which, in such weariness, felt good as a pillow. From this cold stone came Jacob's vision of a ladder reaching up to God's own house. "This," said Jacob, "is the gateway of heaven and I knew it not." And Jacob arose and preached the kingdom of God, the hope of God, and the loving mercy of God by which the Jews were kept a people down through the centuries.

It is symbolic, this scholar pointed out, that the stone of destiny, so long cherished by the Irish as the stone on which her monarchs were crowned, the legendary Stone of Scone (scoon), is reputed to be the very stone on which of old Jacob rested his head. No one, I think, has ever explained how the stone of Jacob's journey found its way to Ireland, and yet it seems fitting that it should have rested there. For surely the parallel between the Irish sense of destiny, the Irish poetic vision and unflagging pursuit of God's will be the children of St. Patrick and these same qualities in the children of Jacob, make the Irish and the Jews somehow spiritual kinsmen and identify Patrick as the Jacob of the Irish people. Patrick avoided hatred and cherished love, as did Jacob. Patrick heard his call from God in a dream, as did Jacob. Patrick conceived his mighty work in loneliness by night, as did Jacob. Patrick raised up to God a faithful tribe of spiritual sons even as did Jacob. Patrick saw in the rocks of Ireland the gateway of heaven just as Jacob recognized the stone on which he rested his head.

But the clearest and most appropriate parallel between the patriarchs of the Jews and the apostle of the Irish is that between Patrick and Abraham. No parallel dramatizes the relations between these mighty men of God and the spiritual likenesses between their respective peoples better than does this; no parallel demonstrates more clearly the roots of the spiritual destinies and racial qualities which the Jews and the Irish share than does the parallel which identifies Patrick as the Abraham of the Irish.

VOCATION

The origins of Abraham were obscure; so were those of Patrick. God called Abraham out of his father's house and the land of his own people to go into another land to serve another people; so also did God call Patrick. In the moment when Abraham placed himself at the disposition of God, the Almighty promised him a people who would be faithful to him forever and through whom his name would be brought to the ends of the earth.

"And the Lord said to Abraham: Lift up thine eyes, and look from the place wherein thou now art, to the north and to the south,

to the east and to the west—and I will make thy seed as the dust of the earth. For in thee shall all the nations of the earth be blessed!"

There is no corner of the world to which has not been brought the vision, the vitality and the promises made to Abraham, and to his seed forever in that moment when God called him.

Even so was the call to Patrick, who, like Abraham, was brought out of his own land to raise up a people who would go to the north and the south, the east and the west, making his seed as the stars of the sky and the dust of the earth. Even so has the story of the O'Higgins in South America, the Plunketts in New Zealand, a Duffy in Australia, an O'Doherty in Manila, a Hennessey in Hong Kong, an O'Donnell in Spain, Taafe in Australia, the MacMahons and Flynns in France, the Fitzpatricks in Canada, the Welchs, Glynns, Farleys, Sheridans, and McCormicks in the United States, brought into all the nations the national genius and the religious faith for which the Irish are indebted to Patrick.

The Messianic hopes and strivings conceived by Abraham at God's command, and perpetuated by the Jews of old, find their counterpart in the historic missionary aspirations and efforts which Patrick kindled in the Irish people and by which they have brought the Gospel to the most remote islands of the most distant oceans, to the loneliest corners of the five continents. The parallel between Abraham, the Patriarch of the nation chosen to redeem the Gentiles, and Patrick, the Apostle of the nation which has been the mother of missionaries beyond counting, is echoed in the words by which Patrick himself expressed his presentiment of how his spiritual seed would enrich the whole world. He wrote:

"I am immensely indebted to God, who granted to me this great grace that through me many peoples should be regenerated by God."

It is as if the prophecy made to Abraham had been fulfilled by Patrick, as if work prospered by Patrick had been begun by Abraham—and so, indeed, it was.

The Jews think of Abraham as the lofty father of their tribes; such is the popular interpretation of his very name. The Irish see in Patrick the father of all their scattered flock; the popular observance of his feast all around the globe keeps the Irish, wherever they may be, a single family. Abraham is the physical progenitor of his people, but his historic importance derives from the fact that he is the starting point or source of the Old Testament. Patrick is the spiritual father of his people, but he is such because his preaching is the starting-point or source of their knowledge of the New Testament. The Jews were wont to speak of God as the God of Abraham; it is no exaggeration to say that the Irish think of their God as the God of Patrick.

Abraham was made mighty by his faith; of him the Scripture says simply: "Abraham believed God," and so powerful was that belief that Abraham would not hesitate to see his own son die rather than repudiate his faith in God. Abraham's unique faith in God became, for the Jews, the pledge of their privileges as the chosen people. Patrick made faith, unqualified and indestructible, the supreme virtue in the thought of his people; it is proverbial that the devout Irishman would prefer to suffer any tragedy rather than deny the faith of Patrick. Such fidelity has been, for the Irish, the title to the unique honor they claim among the nations of Christendom as a people who have never produced a heresy. To be the seed of Abraham and the children of Abraham, to do the work of Abraham, to merit the promises made to Abraham, to keep the faith of Abraham, to be justified with the faithful Abraham—no Jew could imagine a greater glory. To be the sons of St. Patrick, to be numbered forever among those justified with the faithful Patrick—no Irishman knows a greater consolation.

Others may find the Irish cult of Patrick romantic, even fanatical; a Jew will understand it immediately, when he remembers Abraham. Others may find the Jewish loyalty to Abraham mysterious, even unintelligible; an Irishman, remembering March 17 and his own love of Patrick, understands why on October 9, the Roman Martyrology commemorates St. Abraham "patriarch and father of all believers"—and rejoices that he walks by faith as did Abraham, as did Patrick. In this he acknowledges a bond between himself, the son of St. Patrick, and the Jew, the son of Abraham. Patrick is the Abraham of the Irish; Abraham is the Patrick of the Old Law.

WORLDWIDE MISSION

And so tonight we salute with affection a guest of honor who is doubly prepared to understand the joy of this occasion. Abraham and Patrick are names both rich in special meaning for Mayor Briscoe. He has learned lessons from both Abraham and Patrick, the patriarch of the Jews and the patriarch of the Irish; his presence here this evening reminds us of these lessons and of how timely they are. Abraham and Patrick both taught and exemplified them all. Let me mention but a few: The obscure, sometimes bitter, ways of God's merciful providence: Abraham and Patrick, the Irish and the Jews, exemplify these. The immortal majesty which surrounds those, however humble their origins, who are called to do the work of God: Abraham and Patrick exemplify this. The worldwide mission and the service to all humanity which are accomplished by even the smallest nations when these obey God's call and follow faithfully their spiritual fathers: Abraham and his Jews, Patrick and his Irish, both prove these. The terrible cost of fidelity to God and His will for us: The cost in exile, opprobrium, austere discipline, and heartbreaking renunciations; the Jews of Abraham and the Irish of Patrick understand these. That God's providence assigns vocations to nations as well as to individuals, and that these vocations come to nations through their spiritual chieftains: Abraham and the Jews, Patrick and the Irish, demonstrate these truths unforgettably. The justice and unity in the battle for it; faith and valor in the profession of it; sacrifice and generosity in the practice of it, are the things which keep a people strong, free, and indestructible—of all these truths the personalities of Abraham and Patrick are the pledge and the histories of Ireland and the Jews are the proof.

We cannot better prove ourselves worthy of our patriarch Abraham and our apostle Patrick than by resolving not to forget the spiritual fruits of the exile, the sorrow, the strife, and the struggles to which the children of Abraham and those of Patrick have been the willing heirs from time immemorial.

These trials should have taught us patience, sympathy, kindness, and the high spirituality of which St. Patrick's Day is an annual reminder and of which the whole world stands in such tragic need today. May the children of Patrick and those of Abraham continue to bless all the nations of the earth, and chiefly, at the moment, by exemplifying toward one another, toward all others, the persevering forbearance, and unconquerable faith of Abraham and Patrick, the twin patrons of our guest of honor, the patriarchs of the religious and cultural heritage of all the Irish.

A Bill To Bring Tax Fairness to Distillers

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include an editorial under date of March 21, 1957, from the Louisville Courier-Journal, entitled "A Bill To Bring Tax Fairness to Distillers."

This editorial has to do with the extension of the bonding period with respect to distillers. As the editorial goes on to say, this is "no wet-dry issue." It is meting out simple justice to the small distillers who are unable to pay the terrific tax of $10.50 per gallon at the end of the 8-year bonding period. Briefly, it simply means that the Government does not lose 1 cent in taxes. The legislation is designed merely to give the small distiller an extension of time in which to orderly market, sell, and to pay their tax. Frankly, it is comparable to a bank giving an individual in financial difficulty more time in which to meet his obligation and to preserve and maintain his credit.

Mr. Speaker, I have several small distillers located in my congressional district. They employ a considerable number of my people in Marion, Nelson, Larue, Meade, Bullitt, and Mercer Counties. For this reason, I know of their problems and I can assure the House that this is indeed a most difficult—a very real, and a heavily pressing financial problem. These little distillers are in an emergency and they desperately need help. If they do not get this legislation, many will be forced out of business by flooding the market with distress merchandise. The big distillers would grab their products up for a song and make a killing because they are able to pay the tax now due. The little outfit does not have the money and what is even worse—he cannot borrow it. I repeat—this gives nobody concerned a rebate or tax cut—it just gives additional time in which to pay the Government tax that is due.

The Ways and Means Committee of the House and especially the Forand subcommittee have done a magnificent job on this subject matter. They heard the testimony and the evidence and they know that this legislation is necessary, important, and fair.

The editorial follows:

A BILL TO BRING TAX FAIRNESS TO DISTILLERS

Whisky distillers in general, and small distillers in particular, will be given a long-overdue tax break if Congress adopts the revision of the excise tax law approved this week by the House Ways and Means Committee. The committee proposal would not change the tax on whisky, now $10.50 a gallon. But it would allow distillers a longer period in which distilled spirits can be kept in bonded warehouses before payment of the Federal withdrawal tax.

The Federal tax on whisky is paid not when the whisky is made, but when it is withdrawn from storage for sale. At present, distillers are allowed to keep wiskey in storage warehouses 8 years before it must be withdrawn and the tax on it paid. Under the proposed revision, they could keep the whisky in storage for 20 years before compulsory withdrawal and tax payment.

This would be a considerable break for the small distiller. Right now, most distillers have great volumes of whisky in storage. When th estorage period ends, and tax payment time comes, some of the smaller distillers may find themselves painfully squeezed for cash with which to pay the heavy Federal excise, and may be forced to flood the market with whisky, on which they may suffer an actual loss in order to get ready cash with which to pay taxes. The larger distillers, of course, are not so pressed for cash. And there is some evidence that they have welcomed the shorter bonding period as a means of forcing out of business some of their small competitors, especially some of the small Kentucky firms specializing in quality bourbon.

If adopted by Congress, as we hope it will be, this revision will not excuse the distillers from payment of a cent of taxes. It will merely allow them to withdraw their whisky when market conditions make it advisable, in a manner that will permit them to meet the demands of competition. A similar measure, which would have extended the period of storage for 4 years, was passed by the House but defeated in the Senate 4 years ago, when it became involved in a fight between wets and drys.

Actually, of course, no wet-dry issue is involved in the matter, and none should be allowed to obscure the real issue, which is justice for the distiller and the improvement of orderly marketing conditions within the distilling industry.

Juvenile Delinquency: A National Problem

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the remarks I had the privilege of making before the subcommittee of the Committee on Education and Labor, the chairman of which is the distinguished gentleman from Alabama, Hon. CARL ELLIOTT. My subject was juvenile delinquency, so important to the future of our country:

STATEMENT IN SUPPORT OF H. R. 2495

Mr. Chairman, in coming before you and the members of this distinguished committee, I come only because of my deep conviction that the subject matter which you are considering deeply affects the future of our country.

Juvenile delinquency has been steadily increasing, until today we find it one of our great national problems. Its causes are, in many cases, national and not local. National distribution of horror books and pornographic matter, as documented in Senate Report No. 2381 of the 84th Congress, 2d session, together with the car-conscious mobility of modern youth, are cases in point.

The mobility of our total population has also added to the need for national legislation. Juvenile delinquency cuts across State lines, just as it also cuts across economic lines. Every citizen up and down the economic scale, therefore, has a stake in controlling juvenile delinquency. While it is true that a majority of crimes are committed by adults, it is equally evident that most of our older, hardened criminals started their evil ways early in life.

It is my belief that it would cost the Nation far less in the long run to spend a little in the beginning, in an effort to turn potential delinquent children to useful lifetime pursuits, rather than careers of violence.

That is why I joined a number of my colleagues in introducing a bill (H. R. 2495). The problem of crime in this bill is dealt with in its early, formative stages. Specifically, the bill calls for Federal leadership and funds to stimulate and promote the training of specialized personnel and to supplement State and local resources and programs, as well as coordinate public and private nonprofit agencies already active in this work.

The bill calls for (a) establishment of a Federal Advisory Council on Juvenile Delinquency, (b) provides for grants to States to strengthen and improve local programs, (c) authorizes the appropriation of $5 million for each of 7 fiscal years for the purpose of training personnel to properly service juvenile-delinquency programs, and (d) authorizes the sum of $1 million for the ensuing fiscal year and such sums as the Congress shall determine for each of the following 6 fiscal years for the development and demonstration of special projects embodying improved techniques and practices for the control, treatment, and lessening of juvenile delinquency.

These measures, I believe, are necessitated by the grim facts of juvenile delinquency. In 1954 juvenile crimes increased by 13 percent; out of 1½ million juveniles dealt with by police, an estimated 475,000 boys and girls were brought to the attention of juvenile courts that year. In 1955, there was another 9-percent increase, and the rate is still growing. Boys outnumbered girls 5 to 1, and there were noticeable signs of delinquent tendencies in half of the group at the age of 8 years.

Incidentally, let me point out to the committee that this is a worldwide trend, as attested by United Nations figures. In only two countries, the United Kingdom and France, have juvenile delinquency rates decreased in the past 5 years. It is significant that in those two countries, there has been launched a nationally coordinated program designed to curb delinquency among youth.

An important feature of this bill which has not been emphasized sufficiently, is the provision (p. 8, pars. D and E) which authorizes the States to enter into contracts with private voluntary organizations. Many private recreation associations are doing a splendid job in providing recreation programs. Many of these are in need of assistance from public funds due to increasingly insufficient recreation facilities. I have just recently received a letter from such a struggling association, expressing their needs and concern.

H. R. 2495, therefore, emphasizes action on the local level, resulting in individual treatment. For that reason, the Federal Council will not choose State councils and the authority of the Secretary of Health, Education, and Welfare is strictly spelled out by section 203. In addition, the States have the right of appeal to the courts if the Secretary should suspend payments without due cause.

The members of both the Federal and State councils will represent various professional backgrounds. This recognizes that the problem of juvenile delinquency has criminal, educational, medical, and social aspects. No single approach can do the total job.

When a wave of juvenile delinquency strikes, it means that there is something wrong in our social fabric and in social institutions. Juvenile delinquency implies failure to some extent on the part of every American. This bill would mobilize the resources of our society to accept responsibility for the lives of our children up to the age of 18. It will provide our communities with better mental-health services, with better educational and recreational facilities and with agencies to promote youth employment. The need for such facilities is attested to not only by voluminous testimony before Senator KEFAUVER's Subcommittee To Investigate Juvenile Delinquency, in the 84th Congress, but also by various witnesses before this committee. I join them in urging adoption of this bill so that we may safeguard the Nation's greatest resource, the young people who will determine its future.

Jurisdiction Over Members of Our Armed Forces Overseas

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks, I include house joint resolution No. 35 adopted by the 80th General Assembly of Tennessee in support of pending legislation in the Senate and House of Representatives of the United States to direct the President to seek a modification of all international agreements so that the United States may regain exclusive jurisdiction over the members of its Armed Forces for all purposes, or if such a modification is refused, then to terminate or denounce the agreements according to the terms of each:

House Joint Resolution 35

Whereas the members of our Armed Forces serving abroad, their civilian components and the dependents of each, are now subject to the criminal jurisdiction of more than 50 countries in which they may be on duty, by reason of the NATO Status of Forces Treaty, the administrative agreement with Japan, and Executive agreements with other nations; and

Whereas these agreements penalize our servicemen for foreign service by depriving them of many of the rights granted by our Constitution, which they are sworn to defend; and

Whereas it is impossible for any serviceman accused of transgression in a foreign country to receive a fair and impartial trial because of the varying systems of jurisprudence which make it impossible for him to receive the protection of all of the rights and guarantees which our Constitution gives to every citizen, and because of the prejudice and animosity sometimes existing against our men; and

Whereas legislation has been introduced in both the Senate and the House of Representatives of the United States to direct the President to seek a modification of all such agreements so that the United States may regain exclusive jurisdiction over the members of its Armed Forces for all purposes, or if such a modification is refused, then to terminate or denounce the agreements according to the terms of each: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring) of the General Assembly of the State of Tennessee, That the members of this legislature deplore the arrangements now existing which make service in our Armed Forces abroad a hazard by depriving our servicemen, their civilian components and dependents of each, of the rights and and guaranties of our Constitution when they are stationed in other lands; and be it further

Resolved, That we respectfully urge the Congress of the United States to immediately enact the legislation now pending or similar legislation which will secure a modification or denunciation of the provisions of the NATO Status of Forces Treaty and all other agreements which surrender to foreign nations criminal jurisdiction over our servicemen; and be it further

Resolved, That the Legislature of the State of Tennessee expresses its belief that all United States service personnel stationed abroad should be tried by United States military tribunals under the Uniform Code of Military Justice for any offense committed on foreign soil and respectfully urges the President of the United States, by negotiation, and the Senate and the House of Representatives of the United States by legislation directing such negotiation, to immediately seek a modification of all existing agreements with foreign nations so that the United States may regain criminal jurisdiction over its Armed Forces, and failing such modification being secured, to denounce such agreements; and be it further

Resolved, That a copy of this resolution be spread on Journals of the House and Senate and that copies hereof be transmitted forthwith to the President of the United States, and to all Members of the Senate and House of Representatives of the United States Congress, and filed with the Clerk of each.

Adopted March 13, 1957.

JAMES L. BOMAR,
Speaker of the House of Representatives.

Concurred in March 18, 1957.

JARED MADDUX,
Speaker of the Senate.

Approved March 21, 1957.

FRANK G. CLEMENT,
Governor.

Farm Aid

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1957

Mr. COAD. Mr. Speaker, a recent exchange of correspondence between myself and a constituent, Dr. Herbert H. Kersten, M. D., of Fort Dodge, Iowa, is presented as follows:

THE KERSTEN CLINIC,
Fort Dodge, Iowa, March 16, 1957.

Congressman MERWIN COAD,
House Office Building, Washington, D. C.

DEAR MR. COAD: In the recent election I worked actively for the election of your opponent because I believed that a Republican Congress would give this country a better chance for a solvent economy. I sincerely hope that you will cause me to get a different view of things.

In the last 20 years the Federal Government has been attempting to subsidize more and more segments of our economy so that it is now the style to scream for handouts of federally collected tax money the minute anyone has financial difficulty. When such grants are given it means only that the particular difficulty experienced rightly or wrongly by a given group is paid for by other citizens who are not directly concerned.

It has reached such an extreme state of affairs that we now find demands on the Federal Treasury (meaning you, me, and the other citizens of the country) for dollar aid for everything under the sun. And with such Federal aid goes Federal control and Federal waste and inefficiency.

Some Congressmen operate on the theory that they will provide whatever a given vocal pressure group demands, regardless of the final effect on the country.

I see that you are beginning to fall into such a trap by endorsing high tax paid subsidy for farmers in the form of corn payments. Can you not see that this will only mean that we are all going to be taxed to provide an artificially high price level for the farmers, and that once this has been done for that particular group that we will be obligated to do the same for all other economic groups when basic changes in the economy threaten to cause long-term readjustments? In 1776, 90 percent of our population lived on the farms. Economic pressures and changes in the price structure have now caused most of our people to live away from the land. If we had subsidized them to maintain old-time price relationships they would still be on the land, and we would still have a primitive economy.

If we will limit Federal meddling in our economy to a minimum amount of police action to prevent unfair competition, and to control a smooth flow of money and credit, long-term evolutionary trends will have a chance to manifest themselves, and we will continue to have a prosperous economy with unregimented citizens.

Continue on the present road and we will tax and spend ourselves into serfdom.

Let's cut Federal spending and the concomitant Federal taxing to the bone. Don't let Congress continue this insane effort to buy the people with their own tax money.

Let us reduce Federal spending and Federal taxing so as to leave some source of tax income for State and local governments. Then there will be no need for Federal intrusions into such fields as financing schools, propping up commodity prices, and so on.

And I am not speaking from a selfish standpoint. Our family's main asset is in the form of several Iowa farms.

We believe that if prices are permitted to seek their own level (as they should in a genuinely free economy) that inefficient farm operators will go to better paying jobs in town, food costs for most of the country's population will be lower, and unnecessary taxes to pay for the subsidy can be eliminated.

I wish you good luck and good judgment in your career as our Congressman.

Yours very truly,

HERBERT H. KERSTEN, M. D.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 26, 1957.

HERBERT H. KERSTEN, M. D.,
The Kersten Clinic,
Fort Dodge, Iowa

DEAR DR. KERSTEN: Because of the press of legislative matters, I have not been as prompt in replying to your letter of March 16, as I would have liked.

At the outset, let me state that I appreciate your frankness and I shall attempt to reply in kind. There is no achievement in the harangue of vague generalities, and I never like to deal in that regard.

Your letter deals generally with the Federal Budget, Government spending, Government efficiency and related subjects. There is no one who is more convinced than I that definite reductions can and should be made in the budget request for the fiscal year 1958. A budget of $71.8 billion is simply out of line with good judgment and with the economy in general. During these times of general prosperity we should be in a position to at least hold the budget down to a consistent level, pay off some of the public indebtedness and to personally save a fair amount. We cannot do this if the budget is going to rob us of that opportunity.

In line with reducing the Federal Budget, I have assisted in asking that it be cut, and have voted to do so. I am sure that, as further appropriation measures come to the floor of the House, I will seek to cut it to a realistic and workable level.

However, the picture of some specifics of our economy is not in line with what the general scene would lead us, at first glance, to believe. During the 1947–1949 period, the wholesale price level leveled to an average of 100 percent. However, now we find that the mineral prices stand at 125 percent and mineral production stands at 130 percent. Therefore, the mineral price has just about remained even with production.

On the other hand, while farm prices and production were on a par during the period of 1947–49, we find that since that time the following changes have occurred. Farm production is 112 percent of what it was during that base period, but the price level has fallen to 88.4 percent. This general situation has caused a basic dislocation in our economy, and this is the basis for the economic situation which we are experiencing in Iowa.

Any Federal aid which I have supported, do now, or will in the future support (for the farmer) is certainly not on the basis that we ought to give him a direct handout. We have placed artificial values on gold for as long as history has established—it is only fair that we place a real value on those things which are basic to life—the very foodstuffs which we eat and the fiber which we wear, and the materials of our homes.

All industries set a price on their products, which basically is figured at cost of production plus a reasonable profit. This is firmly established and is a policy with which everyone is in general agreement. Industry and labor, as well as other segments of our economy, have been able to regulate their production and their prices. The farmer, unfortunately, has not been able to organize to the degree that he can accomplish this. The Federal Government, because of this lack of organization, has made these many attempts to do for him what he has been unable to do for himself.

There are those who ask for and almost demand that the American farmer be placed on the strict law of supply and demand. I certainly will agree with this, providing the other segments of the economy are also in full operation on the same basis. We are well aware of the tax writeoffs, the subsidies, the tariffs, the land grants, the defense contracts, and all the rest. If these were done away with, and they are no more than artificial stimulants to business, then I would be quite willing to place the farmer in the same operation.

Now it is a readily recognizable fact that we are not going to be able to take industry away from these artificial stimulants, and we cannot completely do away with the actual productive waste which is caused by a defense program. It is therefore not only the prerogative but the basic responsibility of the Government to protect the rural American population by the placement of values on the raw materials which all come from Mother Earth.

To carry the line of logic concerning the efficient farmer to its ultimate and furthest conclusion, we would end up with only one farmer producing all the world's goods at the lowest possible price, if indeed not for free. For, whenever you have even as few as two farmers, one will ultimately be proven to be less efficient than the other. There is

a matter of human dignity to be concerned with here, and that is one of the highest privileges and responsibilities which I have, as one who represents the people of the Sixth Iowa District.

Again, I wish to express to you my sincere appreciation for your letter, and feel that the above, generally, if not specifically, sets forth the philosophy under which I guide my thought and action.

Please accept my personal best wishes.

Most cordially yours,

MERWIN COAD,
Member of Congress.

Tunisia Celebrates First Anniversary of Independence, March 20, 1957

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. POWELL. Mr. Speaker, I would like to extend warm greetings to the people of Tunisia, Prime Minister Bourguiba, and His Excellency Mongi Slim, Ambassador of Tunisia on the occasion of the celebration of the first anniversary of Tunisian independence, March 20, 1957.

The signing of the protocol agreement on March 20, 1956, recognizing the independence of Tunisia was a political act of the highest importance. By this historic act the Tunisian state acceded to a fully independent international status. This marked the end of a long period of tension. Tunisian independence bears witness to the fact that it is the ideas of liberty and dignity which today motivate dependent peoples, while only yesterday they were the prerogative of ruling nations.

The following editorial from the Washington Post and Times Herald of March 20 seems especially significant to recent developments in Tunisia:

A LOT TO CELEBRATE

In her first year as a sovereign nation, Tunisia has rather astonished the world and itself with its impressive social and economic reforms. Vice President NIXON, who is in Tunisia for the anniversary of independence from France, will see many evidences of a rapidly emerging democratic society. A constituent assembly has drafted a constitution, which will provide for universal suffrage in a parliamentary monarchy under the Bey. Civil courts have replaced religious courts. Land reforms are underway. Polygamy has been abolished and women have been given equal rights with men in matters of divorce. The old semifeudal administration of the country has been modernized. Desert reclamation programs are underway. Nearly two-thirds of the school-age children are in school.

Equally promising is the mature political temper of the country under the guidance of Prime Minister Bourguiba. Mr. Bourguiba has surmounted any bitterness toward France, which imprisoned him for 11 years because of his nationalist activities, to work for effective rapprochement with Paris. His counsel of restraint and friendship has won him wide admiration and has contributed to the development of proposed Western European economic aid to north Africa. Toward his Arab neighbors, Mr. Bourguiba has also been friendly but not blinded by the emotionalism of the independence groundswell. He has been critical alike of Nasser's firebrand nationalism and of the French-British-Israeli invasion of Egypt, yet a stanch champion of independence for Algeria. Significantly, in Tunisia almost alone among Arab countries, Jews occupy prominent and secure roles in government and the society generally.

Tunisia is rich in mineral wealth and has considerable agricultural potential, but it needs assistance in development of processing industries to build a modern economy on these natural foundations. Here, if anywhere, is a chance for realistic and fruitful American economic-development aid. Here especially is a good opportunity to avoid the "leap before you look" approach that sometimes has characterized American proffers of help designed to make a political impression in other newly independent nations. Instead of blanket promises of mere dollars, there ought to be a careful advance appraisal of what Tunisia needs and can profitably use. An appropriate recognition of Tunisia's freedom anniversary by this country would be the formulation of such a program to help Tunisia achieve the important role it covets—a bridge of understanding between the Arab world and the West.

The Atomic-Age Army

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Hanson W. Baldwin, of the New York Times, on the subject of the new atomic-age army:

THE ATOMIC-AGE ARMY—AN APPRAISAL OF THE CHANGES PLANNED IN ORGANIZATION, TACTICS, AND WEAPONS

(By Hanson W. Baldwin)

The new atomic-age army will be born in the next fiscal year, starting July 1.

Gen. Maxwell D. Taylor, Army Chief of Staff, told the Senate Armed Services Committee recently that the Army expected to make "major changes in organizations, tactics, and weapons" in the 1958 fiscal year.

There will be, he said, a "major shift to surface-to-surface and surface-to-air missiles, both with warheads of great destructive capacity."

The new Army will number about one million men—approximately its present size. It will be organized in 17 of the new pentomic, or five-sided divisions; 9 separate regiments or regimental combat teams, "several"—perhaps 6—of the new atomic-support commands equipped to provide atomic fire support to our allies, and additional antiaircraft missile battalions.

DIVISIONS TO BE SMALLER

The new five-sided divisions will be considerably smaller than the existing divisions. The airborne division will be reduced from 17,087 men to 11,500, and will have five combat groups instead of three regiments—each group with a headquarters company, mortar battery and five rifle companies.

The division artillery will include 5 batteries of 105 millimeter artillery plus an Honest John rocket battery. The Honest John can utilize a nuclear warhead.

The infantry division will be reduced from about 17,500 men to 13,800 of 5 regiments or groups each. The division's reconnaissance unit has been increased in strength from company to battalion size, and the division retains its present tank battalion, although there are no tanks assigned to the five groups or regiments. The field artillery is to be completely reorganized to permit both nuclear and nonnuclear firepower.

The armored division will experience little change. Its approximate strength will be about 14,600, as compared to present strength of 14,683. It, too, will utilize the Honest John rocket.

Of the Army's 17 divisions, 8 are scheduled for overseas deployment.

ADAPTABILITY A GOAL

General Taylor said that there were four principles upon which the reorganization of the Army was being based. These were, he said: Ready adaptability to the atomic battlefield; pooling in higher units of equipment not habitually required in the division; recognition of the increased reach of modern communications; adaptability to integration of news arms and equipment as developed.

Many of the Army's new weapons will not be available in quantity in the fiscal year 1955. However, the new units will be armed with the new weapons that are ready, and others will be integrated as they are produced.

Some of the new weapons that will give the Army a completely new look are:

Redstone guided rocket with a range up to about 200 miles, capable of carrying a nuclear warhead.

The Little John rocket, a lighter version of a free field artillery rocket.

The Dart, an assault demolition and antitank missile.

LaGrosse, a close-support missile.

The Spat—a self-propelled 90-millimeter antitank and assault gun.

The 105-millimeter mortar.

A new light machine gun to fire the NATO standard 7.62-millimeter cartridge.

The mechanical mule—a cross-country, 4-wheeled steering lightweight vehicle, 100 inches long, 46 inches wide, capable of carrying 1,000 pounds.

Such weapons and equipment plus new helicopters and aircraft are expected to provide the new atomic-age army with the firepower and mobility required for the battlefield of tomorrow.

We Win Two Ways

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to bring to the attention of the House an editorial taken from the Yorkville Enquirer, York, S. C., of March 21, 1957:

WE WIN TWO WAYS

With the first sensible move in some time toward a cut in Government spending taken by the House Appropriations Committee cutting of $517 million from the Federal budget, maybe we can look forward to a rising sentiment against extravagance and waste.

Of course, this is a small cut but it may be a trend.

Many politicians see it as a threat to President Eisenhower's school bill providing enor-

mous aid to education. That, too, we consider fortunate. Not only are we cutting the budget but we may keep the Federal Government out of our schools for a while longer.

Wherever the Federal Government makes great outlay, they gain control. This State has done wonders for its schools and every other State could do the same without Government aid. It all comes back to the same source and what the Federal Government hands out so graciously we pay back through the nose. There is no source but the people from which the Government can secure the funds they give away and there is always the added expense of redtape and handling.

This promising cut in funds will serve a twofold purpose in stemming the tide of spending and leaving the States to their own devices in school matters.

Secretary of State O. Frank Thornton, former York County representative, this week made a fine point when he told the Columbia Traffic and Transportation Club in Columbia that less Federal spending and less Federal interference with States rights are two of the most effective means of checking communism. He sharply denounced the spending of many times our national income and urged citizens to seek the cooperation of their Representatives in Washington in standing firm for cuts in Government spending.

Taxation of Cooperatives

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. COAD. Mr. Speaker, in a recent letter from Mr. Allen Arnold, secretary of the Independent Grain and Feed Association of Iowa, I was asked to support H. R. 501 which is a bill to equalize taxation and provide revenue. My reply to this request is as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 26, 1957.

Mr. ALLEN ARNOLD,
Secretary, Independent Grain and Feed Association of Iowa, Lake Park, Iowa

DEAR MR. ARNOLD: Your letter of March 18 is at hand, in which you ask that I support H. R. 501, which calls for changes in the Internal Revenue Code of 1954.

The fundamental principle of a cooperative is basically set out by law and establishes that a cooperative, which does business with other than members, must pay regular taxes on the amount of profit which is accrued thereby. However, that part, which is returned to the members in the form of patronage dividends, is not profit in the same sense that corporation profits are. These dividends are on a proportionate share to the amount of business which the given member has transacted with himself. It is, therefore, not a profit but merely a business saving, which the member has thus been enabled to effect. Because of this principle, as established by law, that amount of dividend is not so classified as corporation profits are classed.

Now in effect, H. R. 501 says that any person who is able, through his own marketing facilities and otherwise, to effect a saving should be taxed as if he had made that amount in profit. The enactment of this bill would destroy the initiative of a person attempting to be thrifty and frugal in his business operations.

The cooperatives, as historically established, have proven their worth many times over, in the overall good which they have done, not only for those members specifically involved, but also for the good of the general economy. While there may well be specific instances of needs for change in the cooperative laws, it is not my present opinion that a blanket taxation of cooperatives is by any means the answer to whatever problem might exist.

I take this opportunity to thank you most kindly for your letter, and feel that this frank appraisal on my part is more appreciated by you than any standoff I might make up in this regard.

Please accept my personal best wishes.

Most cordially yours,

MERWIN COAD,
Member of Congress.

Aqaba Is Open

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. MULTER. Mr. Speaker, the Gulf of Aqaba is open, but I wonder for how long. Unless the United States takes the initiative and sees that it stays open, the world has no assurance that peaceful commerce will be allowed to continue.

The following editorial, which appeared in the New York Herald Tribune of March 20, 1957, makes most interesting reading:

AQABA IS OPEN

On Monday a freighter chartered by Israel sailed down the Gulf of Aqaba through the Strait of Tiran and into the Red Sea. The ship, called the *Queen of Sheba*, was bound from the Israeli port of Elath for Masawa in Eritrea, on a mission of peaceful commerce. In a few days a Danish freighter, the *Brigitte Tost*, will pass the Strait of Tiran on her ways to Elath from South Africa.

These ships, and others like them, are able to make this voyage today for a simple reason. The promontory that overlooks the Strait of Tiran is no longer in the hands of Egyptian artillery men but is manned instead by the blue-helmeted forces of the United Nations. If this state of affairs were certain to continue indefinitely the prospects for tranquillity in the Middle East would be brightened considerably. But what has happened in the Gaza strip, where President Nasser of Egypt has singlehandedly deprived the U. N. of the control it was expected to exercise, leaves the future of peace commerce in the Gulf of Aqaba far from settled.

Yet of all the aspects of the Middle Eastern situation, the matter of free passage in the Aqaba is the least open to conflicting interpretation. There has been equivocation on the future of Gaza, and the matter of the Suez Canal is as tangled as ever, with Cairo's memorandum of yesterday contributing further to the confusion.

But there simply can be no question of what the maritime powers of the world, led by the United States, meant to do about the Gulf of Aqaba. Only the day before yesterday, Secretary of State John Foster Dulles, in his joint statement with Israel's Foreign Minister Golda Meir, reiterated the American position that there should be "free and innocent passage of the Strait of Tiran by the ships of all nations in accordance with international law."

On February 20, to go back a little further, President Eisenhower asserted in his public address that it should not be assumed that "Egypt will prevent Israeli shipping from using the Suez Canal or the Gulf of Aqaba." On February 11 the United States formally told Israel that "no nation has the right to prevent free and innocent passage in the gulf." On January 16 U. N. Secretary General Dag Hammarskjold reported that "the international significance of the Gulf of Aqaba may be considered to justify the right of innocent passage through the Strait of Tiran and the gulf in accordance with recognized rules of international law." Similar views were expressed in the General Assembly by delegates of many maritime nations after Israel had announced its intention of withdrawing its troops from Egyptian territory overlooking the gulf.

All of these statements are blunt and unequivocal. Yet they have not produced the slightest sign of acquiescence from any Arab leader. The statements emanating from Cairo have been to the effect that Egypt relinquishes none of its rights in the gulf. And Saudi Arabia, which holds title to two tiny, unhabited islands that block the entrance to the gulf, has announced that it considers it an Arab waterway and "will not allow the establishment of any right for Israel."

True, there has as yet been no overt act by Egypt to repossess the entrance of the gulf. But if the performance of the U. N. in Gaza is any touchstone, Cairo has only to say the word to move back in. And if Nasser's past record gives any indication of his future policies, he will not be long in elbowing aside the UNEF troops.

Right now the Gulf of Aqaba is an open and peaceful waterway. It is up to the United States to take the lead in seeing that it stays that way—whether Nasser likes it or not.

St. Vincent's High School of Plymouth Wins State of Pennsylvania Basketball Championship

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of March 25, hailing St. Vincent's high school of Plymouth, Pa., upon winning PCIAA class B State championship in basketball:

HAIL, THE CHAMPS

The fighting spirit that gave rise to the slogan, "Shawnee against the world," perhaps helps to explain the magnificent victory of St. Vincent's high school basketball team over St. Casimir's of Pittsburgh at Hazelton on Saturday night, giving the local lads the PCIAA class B State championship.

St. Casimir's had been unbeaten in 44 games, so it was a major undertaking for Coach Joe Evan's proteges who, incidentally, had 26 straight victories to their credit, no mean achievement. The pre-game scuttlebutt was the Plymouth aggregation was go-

ing down to defeat, but apparently the team was not aware it was due for a licking.

St. Vincent's bewildered the opposition from the beginning with its brilliant play. It was obvious the visitors were stunned by the outcome of the game, although there was no disgrace in losing under the circumstances. St. Vincent's simply would not be denied the grand prize—the State championship.

Wyoming Valley joins Plymouth in saluting St. Vincent's on this achievement. Pennsylvania is a big place and a State championship in any line is a great distinction.

The Late Percy Priest

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. LOSER. Mr. Speaker, the General Assembly of Tennessee adopted House Joint Resolution No. 22 as a memorial and tribute to the life and public service of the late J. Percy Priest, United States Representative from the Fifth Congressional District of Tennessee, who served in this great body for almost 16 years and distinguished himself as a statesman and public servant.

Under leave to extend my remarks, I include this very fine resolution in the CONGRESSIONAL RECORD:

House Joint Resolution 22
Memorial

Whereas on the morning of October 12, 1956, there were tears in the eyes and a quiver in the voice of the Honorable Zeke W. Johnson, Jr., Sergeant at Arms in the United States House of Representatives, as he called the Capitol Police Corps together and solemnly announced: "Lower the flag to half-staff, Percy Priest is dead"; and

Whereas on that same morning, the citizens of Nashville and Davidson County, Tenn., on the way to their chosen work, observed that flags at Federal, State, county, and city public buildings were flying at half-staff, and later found out that said flags were flying at half-staff out of respect to Representative Percy Priest, whom Almighty God in his infinite wisdom had seen fit to call home from these earthly portals at 2:15 a. m. on this morning; and

Whereas the entire populace of the State of Tennessee, as a result, became cognizant of the fact that not only had they lost a good and faithful servant, but that each individual citizen in his own peculiar rights had lost a true and devoted friend; and

Whereas only a short time back, and on December 14, 1954, Representative Priest was invited by the Nashville Civitan Club to deliver a speech, but upon his arrival was precluded from this task due to the fact that it was the purpose of this club to instead honor the said Percy Priest and as he sat for an hour, between smiles and tears, his life moved before him, with scores of old friends and neighbors crowding by to remind him that said life had been an unselfish one and full of human warmth and Christianity; and

Whereas on December 16, 1954, only 2 days after this tribute by the Civitan Club, and almost 2 years prior to the death of the Honorable Percy Priest, an editorial appeared in the December 16, 1954, edition of the Nashville Tennessean, which editorial is so appropriate it is thought that same should be reproduced in part for the benefit of this general assembly, and which is as follows:

"Perhaps it is enough to say that the life which passed in review before him—his own life—has been a good one from its early years to the rewarding maturity. It has been a good and unselfish life, savored with genuine humility; but there has also been an unwavering courage to stand for that which is right when the example of spiritual strength was most needed.

"The qualities which made Percy Priest a good schoolteacher, and later an able newspaperman, have served him well as a maker of laws in the Nation's Capitol. The friends of old, he has maintained, and always he has gone on to win new ones. In the face of national emergencies he has shouldered heavy responsibilities and worked with diligence and patriotism for his country's welfare.

"One of the finest things he has done is to set a standard official conduct which, if taken as a guide by all, would do away with the need of a revised code of ethics in the conduct of congressional business.

"For many years, Percy Priest, has been a member of the Nashville Civitan Club, and it was fitting that these associates should honor him so appropriately by turning back the pages of his life to reveal not only 'the things I might have done,' but the things indelibly written to the credit of the honored guest and associate. For all, it was a happy occasion."

Whereas Mr. Priest was a native Tennessean, having been born at Carters Creek in Maury County, on April 1, 1900, son of the late George M. and Harriet Hastings Priest; and

Whereas he attended Maury County public schools and Central High School at Columbia, then Middle Tennessee State College, and later the University of Tennessee, and Peabody College; and

Whereas as a student he was deeply interested in oratory, debates, dramatics, and history, all of which were to make a substantial contribution to his career; and

Whereas in his youth he knew the rigors of farm and country life, and often rode horseback the 15 miles between his farm home and the high school at Columbia, and other times hitched a horse to a buggy, or rode on a little mixed train on the Middle Tennessee Railroad; and

Whereas after ending Middle Tennessee State College he taught in Maury County 2 years and then became a teacher and athletic coach in the high school at Culleoka and, in all, was a schoolteacher for a period of 7 years, during which time he took summer courses at the University of Tennessee and Peabody College; and

Whereas he was associated with the Nashville Tennessean from May 1926 until September 1940, advancing to State news editor, city editor, and managing editor, later becoming the newspaper's roving reporter and writing human-interest stories based on his travels throughout the State; and

Whereas it has been so truthfully stated that it was as an individual rather than a public official that James Percy Priest was best known to thousands, with no request from any individual being too small, nor any person being too unimportant to get his attention, and with his greatness being attributed to "a simple faith in God"; and

Whereas Mr. Priest, during his lifetime, was quoted as saying:

"Whatever my achievements may be, I shall look back—not on these achievements, but on the warm personal friendships I have made along the way.

"In the discharge of my duties, I have faced every issue frankly, and have acted forthrightly, without dodging, straddling or equivocation. I have not followed the way of expediency to advance my own political personal ends"; and

Whereas in view of the entire life portrayed by James Percy Priest, the above excerpts being only a sketch of the fullness of same; and

Whereas the people of this great State are always cognizant of the true virtues of life and eager to commemorate for the fulfillment of said virtues: Now, therefore, be it

Resolved by the House of Representatives of the 80th General Assembly of the State of Tennessee (the Senate concurring), That this tribute to this outstanding Tennessean be expressed by this joint resolution, and that as a body we extend to his bereaved family our sympathy and sincere condolence in the great loss sustained by them and by all the people of Tennessee; be it further

Resolved, That the 80th general assembly go on record as being in support of the idea first proposed by the Reverend Harold D. Gregory, superintendent of missions, Nashville Baptist Association, with said idea later being carried into effect by the introduction of a resolution in the Congress of the United States by the Honorable Carlton Loser, whereby the new permanent veterans' hospital at Nashville be named in honor of the late James Percy Priest; be it further

Resolved, That the clerk be directed to prepare and forward a copy of this resolution to each Mrs. J. Percy Priest and their 4-year-old daughter, Harriet Frances Priest; be it further

Resolved, That a copy of this resolution be sent to each Member of Congress and each United States Senator serving the State of Tennessee; be it further

Resolved, That a copy of this resolution be mailed to the President of the United States, the Honorable Dwight D. Eisenhower, who stated after the death of Congressman Priest:

"The Congress of the United States and the people of the Nation have lost a valuable Member, in the sudden passing of James Percy Priest of Tennessee."

Adopted February 21, 1957.
JAMES L. BOMOR,
Speaker of the House of Representatives.
Concurred in March 14, 1957.
JARED MADDUX,
Speaker of the Senate.
Approved March 19, 1957.
FRANK G. CLEMENT,
Governor.

Seventy-fifth Anniversary of the Knights of Columbus

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. HILLINGS. Mr. Speaker, I join my colleagues in saluting the accomplishments of a fine, American religious organization, the Knights of Columbus on its 75th anniversary.

This splendid organization has made a great contribution to belief in God and the preservation of our heritage of American citizenship and ideals of human freedom. Its good works have been legion.

It is particularly significant that the Knights of Columbus is celebrating its 75th anniversary in our country at a time when a great portion of the world is forced to live in darkness, slavery, and atheism. In the struggle today for the control of the minds of men between

communism on the one hand and the forces of freedom on the other, the Knights of Columbus can stimulate and strengthen our efforts toward achieving victory in this world struggle.

If an organization like the Knights of Columbus could exist behind the Iron Curtain, it would be impossible for the Communists to maintain their dominance and control over so many millions of people.

As a member of the Archbishop John J. Cantwell Council in Arcadia, Calif., I am proud to extend best wishes and congratulations to my brother knights on this gala occasion.

Construction Loans to Veterans

SPEECH
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4602) to encourage new residential construction for veterans' housing in rural areas and small cities and towns by raising the maximum amount in which direct loans may be made from $10,000 to $12,000, to authorize advance financing commitments, to extend the direct loan program for veterans, and for other purposes.

Mr. TEAGUE of Texas. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. MULTER].

(Mr. MULTER asked and was given permission to revise and extend his remarks.)

Mr. KEARNEY. Mr. Chairman, will the gentleman yield?

Mr. MULTER. Briefly, sir.

Mr. KEARNEY. I want to say to the gentleman from West Virginia so far as the discussion between the gentleman from Massachusetts, the majority leader, and myself, it was a question of whether he stated it was an administrative order or an administration order.

Mr. MULTER. I have no right to speak for him. I think that it is the responsibility of both, the administration in the first instance and secondarily, the Veterans' Administration, which is administering this program.

Mr. Chairman, we have before us a bill which all agree is a good bill as far as it goes. There are going to be some amendments offered to it, one of which would make it a very bad bill and the other must necessarily make it a much better bill.

The problem is whether or not by adopting the amendment, when offered, to increase the interest rates you are going to get any more money into the mortgage market for the veterans who want to buy homes. I say to you the answer is no.

You can increase the rate of interest to 10 percent and it is not going to bring another dollar into this mortgage market. The tight-money policy means that there is not enough money to meet all the demands for it and this administration is going to keep the money supply short so that the demand will continue to exceed the supply. Where is this money going to come from if you increase the interest rate? We were told not so long ago, "Let us give Fanny May another billion dollars of lending power." We were told that that would not be inflationary. That is what this administration said. What was that going to be used for? That billion dollars was going to be used to buy mortgages from mortgage lenders so that they could relend the proceeds. That would bring more money into the mortgage market to the extent of that $1 billion.

Another amendment which will be offered will make this a better bill by increasing this direct-lending power so that it will cover the whole country and make money available to veterans who want to buy homes by using only their own money. It will make available their life-insurance reserve funds which are held for their benefit and are now invested in United States Government obligations. I tell you that it is necessarily less inflationary to take a billion dollars or $2 billions of the veterans' own money out of their reserve fund and lend it to them on long-term loans than it is to take that amount of money from the Treasury and giving it to the money lenders of the country to put into a revolving fund for the purpose of purchasing and selling mortgages.

Here is a Veterans' Administration release of March 16, 1957:

The Veterans' Administration received 25,773 home-loan applications during February, a decrease of 18.5 percent from the previous month. Appraisal requests also decreased about 34 percent from the previous month.

That means that the trouble is your veteran is being priced out of the home market. When you go to the Veterans' Administration and ask them for a commitment, you show them the costs of the home. That includes the cost of the land, the cost of the materials, the cost of the labor, and the cost of financing. On that basis you get a commitment, whether it be the VA or the FHA, that financing cost or discount, which is anywhere up to 15 points is included in the cost of the home. As a result, a $10,000 mortgage must now be $11,500 or a $12,500 mortgage must be increased by $1,250 if there is only a 10-point discount.

Mr. KEARNEY. Mr. Chairman, will the gentleman yield?

Mr. MULTER. I yield.

Mr. KEARNEY. I presume that the gentleman from New York is like myself, he wants to be sure that the veterans can obtain loans.

Mr. MULTER. That is right.

Mr. KEARNEY. Do you believe that the veterans today, taking our own State of New York for instance, can get along with 4½ percent interest?

Mr. MULTER. May I quote to you letters that I have received from builders and bankers who wish to be left unnamed, who say that the increased interest rate would not bring $1 more into the mortgage market; that there are mortgages available to the veterans at 4½ percent if the price of the house is kept down to where the veteran can afford to purchase and carry it.

The CHAIRMAN. The time of the gentleman from New York [Mr. MULTER] has expired.

Tribute to Congressman Albert P. Morano

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. ANFUSO. Mr. Speaker, I deem it a privilege to bring to the attention of my fellow Congressmen a story in the true Horatio Alger style about one of our distinguished colleagues, the Honorable ALBERT P. MORANO, of Connecticut. It was published in the New York Sunday Mirror, March 24, 1957.

One of the features in this newspaper is a column by Sidney Fields called Only Human. It is well known and widely read by Mirror readers, and it is also regarded as one of the highlights of a person's career to be the subject of this column. Our colleague is the subject of last Sunday's column, which is devoted to him in its entirety.

Congressman MORANO is well deserving of this signal honor. He is a great humanitarian and, regardless of political affiliations, he stands out as one of our great public servants. It was no surprise to me that in the last election he received the largest vote ever given to a Connecticut Congressman. I do not know of any record elsewhere which matches his 105,000 vote majority. It is no wonder he is being widely mentioned as his party's choice for Governor of Connecticut.

I wish to take this opportunity to congratulate the people of his district for electing such an able and outstanding Representative in Congress as ALBERT P. MORANO.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the article from the Sunday Mirror:

ONLY HUMAN
(By Sidney Fields)

ALBERT PAUL MORANO was 25 when he won his first elective job as a Republican member of the tax-relief board of Greenwich, Conn. It was at the depth of the depression and AL supported tax relief for all those who deserved it, but when he opposed it for a big GOP politician who didn't he was promptly bounced from his job.

"The job paid $200 a year and I needed it desperately," said AL recalling the incident in his home. "But I'd do the same thing again." He's the son of Italian immigrants, never got beyond second year in high school, and is now beginning his 4th term and 7th year as the Republican Congressman from Fairfield County.

AL, stocky, greying, 49, was one of 12 children, and his father was a gardener. At 10, AL held his first job, helping a milkman from 3 to 8:30 a. m., earning 50 cents and a bottle of milk each morning. Thereafter he was a pinboy, caddy, dancing waiter, and ditchdigger. In between he was an amateur boxer and a member of the Boys Club of Greenwich.

"The club took me away from wrong things," he said. "There were plenty of opportunities for going all wrong around here. At 14, I was arrested for breach of the peace. It was a penny crap game. One fellow tried to cheat. I tried to stop it and got hit, but I hit last. The fight lasted an hour. We were all put on probation."

He's never lost his association with the Boys Club, and since he became a Congressman allows the club to submit their candidates for West Point and Annapolis, which he forwards to the proper authorities for approval. They're never rejected.

AL divides his devotions among his people, regardless of party; his family; and his faith. He was indifferent to faith until 17 years ago. He was then broke and out of work, and applied for a job as a production man with a valve company with little hope of getting it, when he drove his wife and niece to church, and was persuaded by them to come in.

"For the first time in years I prayed," AL said. "I felt all my despair leave me, and I knew a new life was coming. I call it my little miracle."

He got the job, of course, and has never missed church since.

In 1935 he was elected to the unpaid job as a town meeting representative. Always something of a maverick, AL joined the district health officer, Dr. Albert Austin, in a losing fight against the installation of an incinerator, then helped get Austin nominated for Congress against the weight of the whole local Republican machine. He went to Washington as Austin's secretary.

"When Dr. Austin died in 1942 his wife asked me to notify all the family and friends," AL said. "Clare Boothe Luce was his step-daughter, and I thought, what a candidate for Congress she'd make. I persuaded her to run."

In 1946 AL became unemployment commissioner for Fairfield, then head of the State unemployment commission, and was reappointed to the job by a Democratic governor. He was sent to Congress in 1950. In 1956 he won his fourth term by 105,000 votes, largest majority ever given a Connecticut Congressman.

He's the first Representative of Italian origin to sit on the House Foreign Affairs Committee, and the first Congressman ever to address joint sessions of foreign legislatures in their native tongue (Guatemala, El Salvador, and Nicaragua). AL taught himself Spanish.

It was AL who got social security payments for women starting at age 62, and continued aid for mentally retarded children after they're 18. He is still fighting the injustices in the Walter-McCarran Immigration Act, and succeeded in getting refugees admitted on a first come, first serve basis rather than having them disqualified from quotas by such devices as "only bombed out refugees."

"And please say I got NIXON to wear hats at official functions," AL pleaded. "He never did, and Fairfield is the biggest hat making center in the world."

AL married a former phone operator, and has two children; Clare, 11, named after her godmother, Clare Boothe Luce; and Anthony, 24, in the Air Force, and himself the father of a 3-month-old son. Anthony married a southern girl and an index to AL's character is his first meeting with her parents. AL, with a straight face, told the father-in-law: "You're a southerner, and I'm a Yankee. You're a Protestant and I'm a Catholic. What's more you're a Democrat and I'm a Republican."

"His face went white," said AL, "until I slapped him on the back and told him: 'But that's what makes America'."

Time To Relieve Taxation Burden on Small Business

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. MACK of Washington. Mr. Speaker, increasing concern is being expressed over the need for greater assistance to the small businessman who is traditionally the backbone of our economy.

I feel that the following editorial, from the Longview Daily News, Longview, Wash., points out many of the problems which the small businessman faces:

For almost a decade both political parties have been paying court to the small businessman at election time and leaving him to his own devices in the interim.

This was never more true than during the last general election. Yet Congress now is in the process of extending business taxes as they stand for another year. This means that the incorporated business will continue to pay income tax at the rate of 30 percent on earnings under $25,000 and 52 percent on earnings above that figure.

Large corporations, of course, are taxed the same as small ones. Yet the larger firms have been given some help. Rapid tax write-offs on major capital investments have been common. This has been done under the guise of defense need in many cases but the war emergencies was stretched thin when Pacific Power & Light Co. obtained rapid amortization privileges on the Yale Dam.

The large corporation also has more ready access to investment money and at lower rates than the small firm.

Thus the small-business man is at something of a disadvantage. He goes into business, as often as not, with a minimum of capital. But even if business is good, confiscatory taxes prevent accumulation of substantial reserves.

In a period of competition such as we have today, in most fields, he must keep his machinery and equipment up to date, his plant at the peak of efficiency, if he is to survive. But how can he do this if he is not allowed to accumulate reserves—if taxes drain off the substance of his earnings?

The small sawmill operator, for example, cannot hope to improve his machinery, increase his product, and make more jobs unless he has funds above the amount needed to operate and live.

Yet, because his business is small and his equipment obsolete, he is not a good risk in the money market. If he can find financing for capital improvements he must pay dearly for the money.

As time goes by and his machinery becomes older it becomes more difficult for him to compete with bigger companies who have the most up-to-date equipment technology can provide. Still taxes siphon off the funds that might be used to improve the plant and keep men on the job.

National security has been the chronic reply to requests for tax relief. To keep the Nation in a state of preparedness is, of course, both costly and necessary.

But it is time we realized that we are not living from crisis to crisis, that tension and disturbance in the international arena may go on for decades or generations. We must learn to live with this situation and adjust our lives and economy to it. Surely the national security is not helped by penalizing small businesses.

Actually the reverse is true. The national security can best be served by a strong economy. So long as the sinews of war are provided at the level deemed necessary by the Pentagon and Congress, every effort should be made to give the economy a badly needed boost. Nowhere is the need greater than in the small-business field.

Bills have been introduced to give the small-business man—and this includes the farmer—a tax deduction on money spent for capital improvements. The deduction allowances would be made on a sliding scale and would apply only to those businesses where profits are below $150,000 a year.

Such a measure would allow business to improve and expand, creating more jobs and very likely create enough added tax revenues to offset the initial losses.

The Postal Service Should Pay Its Own Way

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. SCUDDER. Mr. Speaker, the House Committee on Post Office and Civil Service is currently holding hearings on bills to readjust postal rates and to establish a congressional policy for the determination of postal rates.

These bills, introduced simultaneously by the chairman of the committee and the ranking minority member, encompass administration proposals to offset the annual postal deficit by increasing rates.

Postmaster General Arthur E. Summerfield deserves a great deal of credit for economies effected since his nomination to that important post by President Eisenhower on January 20, 1953. However, the Post Office Department simply cannot break even and maintain the efficient service desired by the public without increasing rates to meet such legitimate expenses as salary increases and rising operational costs.

The first-class postal rate of 3 cents per ounce was put into effect in 1932, and has remained unchanged since that date. The present airmail rate of 6 cents per ounce has been static since January 1, 1949.

It is time the postal service starts paying its own way. A penny or two more for a postage stamp will mean little to the individual, but it will put the Post Office Department on a paying basis.

Apropos to this subject was an editorial appearing in the Santa Rosa (Calif.) Press-Democrat on February 26, 1957, which I desire to include, as follows:

LET'S NOT PAY HIDDEN TAXES FOR POSTAL COSTS

Even as you and I, the United States postal service is making operating and management economies, only to see them swallowed up by new added costs.

Postmaster General Arthur E. Summerfield says that the Department ran $720 million in the red in 1952, the last fiscal year of the Truman administration.

Since, $542 million in annual economies and increased rates have been put into effect—but new expenses of $473 came along to leave the total deficit only $138 million better off than in 1952.

The new expenses consisted of $207 million in pay increases, $59 million employee fringe benefits, $132 million increased retirement fund contributions, $47 million increased capital expenditures and $38 million in higher rail rate charges.

What's the solution?

Mr. Summerfield wants to increase postal rates, to bring in revenue to meet the increased costs.

The House Appropriations Committee has come up with another idea, that of knocking $58 million off the postal budget for 1958 and forcing the postal service to get by on less money.

According to the post office people, this would require closing of post offices and ending of mail deliveries on Saturdays, reduction of daily rural free delivery service and suspension of postal money orders.

Mr. Summerfield's idea—that of charging enough for postal services to break even—seems to make sense. What's the point of running at a deficit and then charging the public in a hidden manner by taxes, instead of charging in an open manner that lets people know what the service costs?

Here's an Answer to Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to bring to the attention of the House an editorial taken from the Rock Hill (S. C.) Evening Herald of March 25, 1957:

HERE'S AN ANSWER TO JUVENILE DELINQUENCY

We met a charming woman the other day. Slender, attractive, and more youthful looking than her years.

Knowing that she had 3 children, 2 of them teenagers, we marveled at the spotless appearance of her home.

"Oh, it's not my doing," he said quietly. "The children deserve the credit. They do a lot of the work. Take my teen-age daughter. She made her bed, cleaned her room, and found time to straighten up the living room this morning before she left for school."

And how did she develop this attitude of helpfulness in her youngsters? we asked in wonderment.

"Why, I have always taught my children to do things for themselves," she said. "When they were 4 or 5 years old, for example, and they asked for a sandwich, I would put the makings on the table. But I wouldn't make the sandwich. I let them do that.

"They learned to do things for themselves and they developed pride in doing things for themselves."

In training her children to stand on their own feet and to have pride in their home and a sense of responsibility, this mother has given her youngsters priceless assets for their adult lives.

If all parents took the trouble to develop such traits in their children, juvenile delinquency might become a vanishing problem.

The Late Judge Paul Brosman

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BOGGS. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith a tribute to the late Judge Paul Brosman, written by Dr. Rufus Carrollton Harris, president of Tulane University, and published in the Tulane Law Review for December 1956.

Judge Brosman was one of the first appointees to the United States Court of Military Appeals. His untimely death was a blow to that court and to the whole field of military justice.

No finer tribute could be written about him than that of President Harris, an associate of Judge Brosman for many, many years.

The article follows:

PAUL BROSMAN

(By Rufus Carrollton Harris)

Paul Brosman was a native son of Illinois. He became, however, the most enthusiastic adopted son of Louisiana. No son typified more gallantly the traditional—as distinguished from the professional—qualities of the southern gentleman. He was the husband of a charming wife from Indiana, and a father of a scholarly teacher not of law but of romance languages. He was professor of law in Indiana, Georgia, and Louisiana, and the 13th dean of the Tulane Law School. He was colonel in the Air Force, pioneer judge of the United States Court of Military Appeals, and specialist in the law of evidence and procedure. He was, moreover, a man who by the quality of his private life chiefly manifested the conditions essential to distinction and happiness in each of these relationships—citizen, husband, father, scholar, administrator, military officer, and Federal judge.

To succeeding classes of law students, he was the teacher who brilliantly saw and presented not only the views of both sides of a question but also he sought to find the middle view as well. He attempted to understand if not to accept all sides in the conflicts and issues of men. It may be doubted if anyone was more successful at this.

He was a dean who in his faculty meetings waited patiently until all the evidence was in and all the arguments exhausted before deciding. Even then he did not find decision a light and easy matter. Those who have served with him on the faculty or on committees know the seriousness with which he weighed the evidence on all questions. Students and colleagues on occasion may have differed with his judgment but none could complain of lack of hearing and of fair consideration. He taught by personal example that which he proclaimed so often that the basic purpose of education is to condition people to decide the great issues of life on the basis of rational instead of emotional processes.

Paul Brosman was one of those able administrators who made administration seem at once easy and natural. One of the real secrets of this was that he sought not only to understand but also to help people. He was equally at home in a convention, a private home, a social club, a student forum, or a solemn convocation. Moreover, he had a fund of wit and story which he used well and aptly. He remembered the names of students and their problems and kept their confidence. He knew the alumni and the bench and bar. Yet for all his bonhomie I sometimes wonder if many persons really knew Paul Brosman. Appearances of understanding so often are deceitful. Paradoxically, he expected but little of people and yet so very much. He possessed rare and extensive insight into human motivation and decision. This was due in part to his almost passionate effort to understand the dominant personal factors that chiefly moved the people he knew.

After World War II, it is correct to say that law school teaching and administration seemed not to hold for him the freshness and compulsion it once held. He sensed a lack of fulfillment and when the Korean crisis called him back into uniform and ultimately to the court a new door opened to him.

This period on the court was his time of flowering. Here he returned to writing at which he was so apt and which he had so long foregone for administrative duties. Here he could put to wiser use his natural endowment of extraordinary judicial temperament. The opinions he handed down were richly expressive, objective, and scholarly. They were marked by the same sense of fairness, thoroughness, aptness, and conviction seen earlier in the law school, and in all his personal as well as professional relationships. His service on the bench thus became more than an opportunity for him. It was a timely and happy challenge. It was a service which he enjoyed and one to which he responded with his usual humility, enthusiasm, and warmth. His death cut short a brilliant and promising new career. It brought an end to an aspect of jurisprudence needing his realism, intellectual honesty, and subjective understanding. It removed a wise counsellor. It took away one loved by a host of people, into whose ranks I long ago entered.

The Best Defense

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very thoughtful and sensible editorial, worthy of the attention of every Member of the Congress, that appeared in the National Tribune, Stars and Stripes, on March 28, 1957:

THE BEST DEFENSE

Knute Rockne, one of the great football coaches in American collegiate history, once said "the best defense is a good offense." Sir Walter Scott suggested the same thing in a more poetic vein when he wrote "Who spills the foremost foeman's blood, that party conquers in the end."

Naturally we often ponder about the futility of war but since time immemorial all

nations have been faced with its dangers and, to save themselves, have had recourse to battle to secure domination or safety.

Apparently the millenium has not yet arrived when the lion shall lie down with the lamb and the warrior shall turn his sword into a ploughshare.

All this is unfortunate for the happiness of the teeming millions who now inhabit this earth of ours. If the common man in any nation were asked if he preferred war to peace he would response without question "peace." We all want peace in a quiet world. This is the desire of mankind but there are proud, willful men who, in their unfortunate philosophy would make all men subject to their will, regardless of cost in lives and fortunes.

To them it matters not that whole countries should be wiped out if only they may have their way. They have lost sight of the Divine principles with which most of us have been endowed and which we strive to observe no matter how fraught with danger are the times in which we live.

The United States of America has fought a number of wars since it declared our independence in 1776. We almost went to war once with our ally France. We did go to war with England in 1812, but only because we felt that the high-handed actions of the British in pressing our citizens into the service of the Crown was something to be stopped. We won that war. Again in 1848 the arrogance of Santa Ana in Mexico brought us to war and our troops proved victorious.

Unfortunately, from 1861 to 1865 we were engaged in what, to that time was the greatest and costliest war of all times. Men took sides because of their convictions but happily the Union was preserved and time has healed most of the sores of that bloody era.

In 1898 we went to war to free an oppressed people in Cuba because of our belief in freedom as it applied to all men. We defeated one of the great powers of Europe in that struggle and proved that we had established our place among the nations of the world.

Coming down through the years we were engaged in World War I. Not for gain, but because we believed that a world power was growing to such vast strength that it was necessary to take up arms to defend ourselves. The same was true of World War II, and our action in Korea was again taken in the cause of freedom for an oppressed people.

In the years between these conflicts we settled down to enjoy a peaceful prosperity. Like Cincinnatus of old we did turn our swords into plowshares and developed an economy which has become the wonder, and sometimes the envy, of the world.

Now we are faced with peril. We still seek peace with all the will our leaders possess. But there are those who do not want peace but desire only conquest. These enemies from without and their emissaries within our borders seek only to destroy us and in the face of this enmity we must brace ourselves not only to be able to withstand the shock of an offense but to be ready to retaliate in such a manner that these foes of our way of life shall never dare again raise their hands against us.

To be ready for such an onslaught requires money—money for armament, money for manpower and money to help other nations stand firm against the wiles of a common enemy.

There are those among our legislators who cry out at the vast demands being made upon the American people for defense. It is true that here and there some reductions in defense spending can be made but by and large, to so weaken ourselves as to be unable to take up the cudgels when necessity demands is a poor economy in the long run.

It is true that to keep up the requirement of our Armed Forces means more taxes for the American people. However, without the means to help ourselves we could become victims of some predatory power. In a short time we would not be rendering tribute to our own salvation but rather tribute to some strange Caeser who would grind us down without pity and squeeze the last drop of blood from our veins to satisfy his greed and will to be overlord of all creation.

It therefore behooves us all to give thought to the demands being made upon us in support of the military needs of our country, here and abroad. It is a poor economy that would lose everything eventually in order to save a little now. Such shortsightedness must be condemned.

While we recommend to our legislators the use of the most careful judgment in determining the appropriations which must be made to meet our needs we also urge upon them serious consideration of the dangers which present themselves to our country and not seek savings for the sake of saying in the next election, "Well, we saved you so much money during the last 2 years. Remember us when voting time comes around again."

In order to preserve our Nation and our people—in order to live the life we wish—we must be strong. Stronger than any potential enemy and ready to face any hazard which confronts us, not only with courage but also with the weapons that will assure success. Only with strength can we subdue the powers of evil which work against us. Only with strength can we maintain our dignity and our way of life.

As Knute Rockne so ably expressed it, "The best defense is a good offense." We must be able, when sufficient provocation arises, to offer such a show of offense that our enemies will hesitate to take up arms against us. If the still-free nations of the world would join us in this philosophy we need have no fear of danger from our common enemy.

Tribute to Herky Rubenstein

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1957

Mr. CRETELLA. Mr. Speaker, on April 8, Mr. Herky Rubenstein will be the recipient of a testimonial dinner at the Waverly Inn in Cheshire, Conn., in the district which I represent.

Herky Rubenstein has long been active in the game of basketball and has made valuable contributions to the game through his participation as a player, coach, and founder of the Connecticut State Basketball League.

Below is a brief biography of Herky and some of the reasons why his many friends will gather next month in paying him tribute:

Herky Rubenstein was born October 16, 1902, in Syracuse, N. Y., where he attended elementary and high school. (His given name is Harold, but he never uses it.)

He was active in basketball as a player for 36 years prior to his retirement in 1949. He played with the All Syracuse Pros, Canton Bulldogs, Kingston Pros, All New Britain (Con.), New Haven Atlas and West Haven Red Devils, plus an assortment of other clubs, amateur and semipro, throughout the Northeast.

Herky coached the Red Devils for years. He played on some great Red Devil teams, alongside such performers as George Heyer, Ed Bennett, former Yale Capt. Bob O'Donnell, Milt Northrop, Bill Carroll, Chubby Malinconico, Frank Iwanski. He was still playing in his forties. He always has found time and energy to suit up when a charity game came along. Only last year he played for the March of Dimes. His legs were a bit rubbery and his reflexes weren't as sharp as they used to be, but the old Rubenstein talent still was there.

The best Rubenstein-coached Red Devil team probably was that of 1948–49. That year the Devils won 66 and lost only 9. They finished a close second in the Eastern Professional Basketball League. (Herky, for years was vice president of the league. He had helped to found its predecessor, the Connecticut State Basketball League.) The team also represented Albany in the New York State League, dropping a playoff series to Cohoes, 4 games to 3. Its members included Malinconico, Iwanski, George Collins, Johnny McHugh, Frank Crisafi, Johnny Dobrutsky, Joey St. John, Hy Shindell, Hank Donesky, and Big Moe Monahan.

How does Herky compare modern basketball with the game of yesteryear? "You've got to be big, but not necessarily smart," says Herky. "The big men are the key to any ball club. If you have size, a good coach can turn you into a good ball player." Does Herky (who has three boys and a girl) want his kids to play the game? "It's all up to them," he says. "Naturally, I want them to play, but primarily I want them to get an education."

Herky, who operates a concession at Savin Rock (where often old basketball friends call and olden days are relived), was famous for hise "sleeper play." In the day of the center jump, poker-faced Herky would set up this play with George Heyer, and pull it off beautifully. Face to face with his guard, Herky suddenly would break away, take a Heyer pass, and dump the ball in the hoop. The play often was used when a basket or two were needed to pull a tight game out of the fire. Herky was a line-drive shooter who never arched a shot. This probably was the result of his having played so much, largely in upstate New York, where the baskets didn't have backboards.

Rubenstein still has a bushy head of hair, but it now is graying. He hasn't changed a bit otherwise. He remains one of the most modest fellows on the scene.

The testimonial to Herky at Waverly Inn, April 9, 1957, will be the first of a yearly series honoring the stars of the old West Haven Red Devils. The speakers will be President Maurice Podoloff, of the National Basketball Association, and Albert (Albie) Booth, Yale's mighty mite of old, both longtime Rubenstein friends. About 300 are expected to attend.

Reds and Race Trouble

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to bring to the attention of the House an editorial taken from the Camden (S. C.) Chronicle of March 22, 1957:

REDS AND RACE TROUBLE

The Herald has frequently commented that there is a decided connection between the race troubles of the South and the Com-

munists. The Reds are famous for taking advantage of any situation to further their nefarious ends.

The New Orleans racial investigations have proved to the satisfaction of many Louisianians that such connection does exist. Ex-Reds testified that infiltration had been sought with some measure of success into the NAACP, and that the Communists have many agents working within the NAACP.

The purpose of the Communists is to cause as much trouble as they can, and racial differences offer a choice ground for their operations. The Communists, aided and abetted by the United States Supreme Court's integration decisions, have created more racial dissatisfaction in the past 2 or 3 years than the country had to contend with in all of its previous history.—Bamberg Herald.

Nasser's Latest Challenge

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. MULTER. Mr. Speaker, Mr. Nasser is asking for a showdown. How soon will he get it? In this connection, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of March 21, 1957:

NASSER'S LATEST CHALLENGE

Having ousted the United Nations from control of non-Egyptian Gaza, President Nasser has offered a new challenge to the United Nations. He has sent all governments a memorandum outlining the terms under which he will permit the ships of other nations to pass through the Suez Canal.

These terms, expressed in general principles to be elucidated in detail later, brush aside all the solutions for the canal dispute proposed by the West, including the interim solution based on a division of the tolls proposed by the United States, Britain, France and Norway. They ignore the principles adopted by the United Nations Security Council and agreed to by Egypt for a settlement of the dispute—principles which call for "insulating" the canal from Egyptian politics and for agreement between Egypt and the canal users on the tolls. Finally, Nasser's terms undertake to confirm and make permanent all the violations of the Suez convention of 1888 which Egypt has already perpetrated and to establish conditions which would enable Nasser and the Soviets, which stand behind him, to hold West European economy at their mercy.

To this end the memorandum not only reaffirms Egypt's seizure of the Suez Canal; it also reasserts Nasser's determination to manage and operate the canal under his sole authority and for his own purposes. To the same end the memorandum makes plain that only those ships will be permitted to use the canal which pay the full tolls in advance to the Egyptian Canal Authority or to its nominees. Whether the mention of "nominees," added to other statements that the "system of levying the canal tolls" will remain as under the natonalized company and that a special fund will be set aside for programs of improvement and expansion of the canal, still provide for talking points is not clear. But the general purport of the memorandum is brutally plain, and the West can accept it only at the price of complete capitulation.

This purport is not changed by the memorandum's pious promise that Egypt will respect the letter and the spirit of the 1888 convention and cooperate with the world community of nations. For Nasser has violated the convention by seizing the canal and blocking it in defiance of the convention's specific provision that not even measures of self-defense shall interfere with the free use of the canal in peace or war. What is more, he has proclaimed his intention to resume the blockade against Israel as soon as the canal reopens. Moreover, he continues to delay the reopening of the canal and lets it be known that it may remain blocked for technical reasons unless the United Nations, which is already paying for clearing the canal, also replaces the tugs and dredges he sank in it. "Upon what meat doth this our Caesar feed, that he is grown so great?"

Following Egypt's seizure of the canal and until it was blocked, Britain, France, and some other maritime nations paid tolls into blocked accounts pending later settlement. The United States is pledged to pay the tolls to the Canal User's Association, or the World Bank, or the United Nations. Should Nasser now stop their ships if they seek to resume this practice, these nations will face an immediate showdown.

Determining Egypt's Policy

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which was addressed to the editor of the New York Times and which appeared in that newspaper on March 27, 1957:

DETERMINING EGYPT'S POLICY—U. N. RESPONSIBILITY SAID TO BE THE SECURING OF DEFINITE ANSWER

(The writers of the following letter are educators and members of the American Christian Palestine Committee.)

TO THE EDITOR OF THE NEW YORK TIMES:

Unofficial reports already suggest that slight success will attend U. N. Secretary General Dag Hammarskjold's present mission to Cairo, at least insofar as Arab-Israeli issues are concerned. Egyptian policy, we may presume, will largely continue to follow already established precedents: to resume the war with Israel under a United Nations umbrella, preserving the power of option as to weapons and as to the place of use.

In this respect President Nasser suffers only from an embarrassment of riches. U. N. Emergency Forces, thinly stretched across an expanse of desert, will find it difficult to contain infiltrating commandos, although they will prove more than adequate to identify a countering force from the Israeli Army. If the fedayeen should fail, there is the Suez Canal or the Gulf of Aqaba.

Along with the blockades are other alternatives: warlike declarations and incitements to hostility directed at the Arab refugees and the Arab population in Israel; policies of economic and diplomatic boycott; encouragement of hostile actions by other Arab States. Clearly, when it comes to a protected war, Egypt has all the advantages.

RELATIONSHIPS OF COUNTRIES

According to Secretary General Hammarskjold, relationships between Israel and Egypt are still governed by the general armistice agreement which they signed on the Island of Rhodes, February 24, 1949. It was on the basis of the Israeli-Egyptian armistice agreement that the General Assembly urged the withdrawal of Israel's troops from the Gaza strip and the Gulf of Aqaba area. Yet this agreement was never intended to apply only to the border relations between the two signatories.

The preamble to the agreement states that the signatories had decided to negotiate an armistice to "facilitate the transition from the present truce to permanent peace in Palestine." Again, article I of the agreement begins as follows: "With a view to promoting the return to permanent peace in Palestine."

Mr. Hammarskjold is now in Cairo. It is clearly his responsibility to request from President Nasser an authoritative pronouncement on future Egyptian compliance with the true sense of the Israeli-Egyptian general armistice agreement.

Specifically and formally, the Egyptian Chief of State should be directed to answer whether it is actually the intention of his government "to facilitate the transition from the present truce to permanent peace in Palestine." The answer must be unequivocal; and it must be reported by the U. N. Secretary General to the United Nations on his return.

This responsibility of the U. N. Secretary General is an inescapable one. Since from Israel the United Nations has secured an act of compliance, it may from Egypt at least require a statement of intent. Israel has the right to expect more from the United Nations than the partial supervision of one phase of a war which is elsewhere fought to the utmost.

STRINGFELLOW BARR.
HOWARD M. LESOURD.
THOMAS CLARK POLLOCK.

NEW YORK, *March 22, 1957.*

Departments of Labor, and Health, Education, and Welfare, and Related Agencies Appropriation Bill, 1958

SPEECH
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6287) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies for the fiscal year year ending June 30, 1958, and for other purposes.

Mr. BOLAND. Mr. Chairman, I join with the distinguished gentleman from Rhode Island [Mr. FOGARTY] in urging the committee to reject the amendment of the gentleman from Texas to cut this item by $201,000. I am concerned with the attitude of the membership of this committee this afternoon in its headlong flight to slash numerous items in this particular appropriation bill. I fear and I know that in its anxiety to cut this budget without regard to the consequences, great harm will be done to many programs of the Department of Labor that have proved invaluable and worthwhile to the economy of this Nation. The program under discussion is one that has been completely justified. The amendment to cut it will do irreparable harm. As pointed out by Chairman

FOGARTY, the reported amount of $3,600,000 is a reduction of $340,000 from the request of the Department. It is an increase over fiscal 1957 but only as to mandatory increases occasioned principally by the contribution to the civil-service retirement fund. There is no provision for expansion of the staff. The committee has been told this afternoon of the great good that this program has worked between labor and management. I trust that the proposal to cut this item will be defeated.

Some Concrete Goals for United States Policy in Middle Europe

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article by me entitled "The Hope of Europe," which is contained in the April 1957 issue of the Progressive:

THE HOPE OF EUROPE
(By HENRY S. REUSS)

The people's rejection of Soviet tyranny throughout Middle Europe demonstrates once more that there is no finality to despotism. Neither years of Communist indoctrination nor the use of Soviet tanks and bayonets have succeeded in keeping the captive peoples immobile.

Nothing about Middle Europe is stationary, in fact, except the position of the United States Government. For years the administration has talked loudly of liberation. The 1952 Republican platform promised to replace the Democrats' "negative, futile, and immoral policy of containment" by a program which would "set up strains and stresses within the captive world." Newspaper advertisements depicted a uniformed General Eisenhower swearing "upon my honor, as a fighter for freedom, before God, I will work for liberation." In January 1953, Mr. Dulles said he "would use the Voice of America to help stir discontent and to let the Poles, Czechs, and others know that they have this country's support," and talked encouragingly of "air drops to aid such peoples." All this caused headshaking by sober people like Gen. Walter Bedell Smith, who warned that "the so-called policy of liberation is a very tricky and dangerous one."

Big talk about "liberation by air drop" died last November 4, with the pathetic unanswered S O S for Western help from the free Hungarian radio.

Within a few days, on November 14, President Eisenhower was saying, "But I must make one thing clear: the United States does not now and never has advocated open rebellion by an undefended populace against a force against which they could not possibly prevail." Simultaneously, the State Department let it be known that the captive nations must not go too far too fast toward freedom. At his December 18 press conference, Secretary Dulles denied that this country was contemplating negotiation for the withdrawal of Soviet troops from Central Europe. On hearing this, according to the London Economist's Hungarian correspondent, "the people of Budapest cursed Mr. Dulles; and the security police, their peace of mind restored, resumed their activities." In January, President Eisenhower turned down Prime Minister Bulganin's November 17 offer to negotiate the European question on the basis of mutual troop withdrawals. And in March the administration let the U. N. General Assembly session run out without attempting to add to its agenda the question of the threat to world peace posed by ferment in the satellites.

Whether because of a guilt complex stemming from the bankruptcy of its own "liberation by airdrop" talk, or from a general lack of creative imagination, the administration remains immobile on the Middle Europe question. Meanwhile, there is emerging from the Democratic side of Congress the outline of what a responsible opposition is supposed to produce: an alternative policy. Such a policy rejects the role both of saber rattler and of dazed and passive bystander. In the Senate, MIKE MANSFIELD of Montana set the framework in a thoughtful speech on January 29:

"Our interest with respect to Eastern Europe and even the Soviet Union itself is not merely in the tearing down of tyranny * * * Our fundamental interest is in the building up of stable, responsible, and humane governments, peaceful governments, which can take their rightful place in a peaceful Europe and in a world at peace."

In December, Senator HUBERT HUMPHREY had called for more detailed discussions on the establishment of a demilitarized zone. And a group of 12 Democrats in the House (HUGH J. ADDONIZIO, THOMAS L. ASHLEY, CHARLES A. BOYLE, JOHN D. DINGELL, TORBERT H. MACDONALD, EUGENE J. MCCARTHY, HENRY S. REUSS, GEORGE M. RHODES, PETER W. RODINO, JR., JAMES ROOSEVELT, B. F. SISK, FRANK THOMPSON, JR.) had written the President suggesting some concrete goals for United States policy in revolution-torn Middle Europe, based on our own revolutionary ideals of life, liberty, and the pursuit of happiness:

"1. Life: To bring an end to the threat of war in Central and Eastern Europe. A road toward that goal: creation of a demilitarized area, without the capacity to make aggressive war, for 1,000 miles from the Rhine to Russia's historic boundaries, with the demilitarization and the security of the area guaranteed by East and West.

"2. Liberty: To free the peoples of Central and Eastern Europe from foreign occupation or domination; to confirm their right to free elections, free speech, free worship, the civil liberties, protection for minorities; and at the same time to guard against the rebirth of totalitarianism from any quarter. A road toward that goal: embedding these human rights in the constitutions of the liberated states, with an international guaranty of their preservation.

"3. The pursuit of happiness: To hasten the economic and social progress of the liberated areas, and to provide an alternative to the old nationalistic rivalries for territory and resources. A road toward that goal: encouraging (by such steps as economic aid under international auspices) regional federation and economic integration in Central and Eastern Europe."

Let us look at the effect of such a proposal upon the United States, upon our NATO allies, including Western Germany, upon the captive nations, and finally upon Russia herself.

First, how will it serve the national interests of this country? Brute military force is the single most important factor behind Soviet control. To secure the withdrawal of Russia's troops to her own borders would at one stroke remove the greatest daily threat of atomic war and rescue an area which is essential to Communist plans for world domination. Thus our great object must be to rid mid-Europe of Russian soldiery.

Since war has rightly been excluded as a method of attaining this object, and since do-nothingism will do nothing, a proposal for negotiation is essential. It was pressure and negotiation, after all, which got the Russians out of Iran in 1946 and broke the Berlin blockade in 1949.

A Russian troop withdrawal would obviously require as its price a somewhat parallel Allied withdrawal. The exact measure of the price is subject to much debate. But a Western withdrawal to the Rhine, as proposed, would leave us our major air bases, and still provide room for all the United States troop strength presently in Europe. In view of the proposed shrinking of NATO ground forces in Europe in any event, it seems shortsighted to allow them to be depleted without at least attempting to get something in exchange for the depletion.

But how can you trust the Russians? As for getting out, you don't have to trust them: unless they get out, no cigars. As for staying out, there would be guaranties by NATO on the one hand and Russia on the other of the security of the demilitarized areas, including Germany. Just as now, a violation of its pledge by Russia could be the subject of retaliation by the West—but with two important differences. First, a general settlement would reduce the present tensions which might lead to Russian aggression. Second, a Russian aggression would have to start, not from East Berlin or Mecklenberg or Thuringia as at present, but from hundreds of miles east, on Russia's own border.

Now, what of the reaction of our NATO allies to the proposal? How does it serve their interests, and what view are they likely to take of it? In fact, the relaxation of tensions seems a much more immediate need to the Western Europeans than to us, insulated to some extent by the Atlantic. The specter of a Germany divided or reunited with unrestricted armaments, deeply troubles Britain, France, and other European countries which remember vividly the two recent world wars. Even in Germany—if my impression from recent conversations with dozens of German visitors is accurate—there is strong sentiment that cuts across right, middle, and left that Germany's best chance of greatness lies in peaceful statesmanship, not armed might. It is a rare German who would assert publicly that reunification in freedom and Russian troop withdrawal would not be a good trade for a self-imposed arms restriction. Such approval as you find for German rearmament is often couched in the statement: "America wants German rearmament, so we go along."

Not only would such a proposal suit the interests of our NATO allies. There is considerable evidence that their leaders recognize this, and are willing to act on it if we give them a chance and let them know that the subject is not out of bounds for discussion. French and British spokesmen have from time to time talked about troop withdrawals and demilitarized zones.

It is true that until recently Chancellor Adenauer admitted no possibility of discussing the question of "thinning out" of troops. But recently he has changed him mind, at least until the elections next September. The Eisenhower administration's refusal to propose a negotiation, so far as it stems from fear of undermining the Chancellor's campaign for reelection, seems misguided. The proposal asks for a united Germany restricted to defensive armaments, as a first step toward world disarmament. It does not ask for a Germany that is neutral, or one that could not aline itself with a continuing NATO to the extent of its restricted military abilities. It is thus not identified with either the positon of the German Social Democrats or with that of Chancellor Ade-

nauer's Christian Democrats. In any event, the position of government and opposition in Germany has moved much closer on the issue of a negotiated reunification.

It is important to consider the question of German reunification and liberation of the satellites together. Unless a basis for settling the Oder-Neisse territorial question between Germany and Poland is presented as part of a central European settlement. Poland might oppose a pullback of the Red army because she feared future designs on the territory by a reunited and possibly rearmed Germany. Moreover, the Oder-Neisse problem, if unresolved, would continue to haunt prospects for peace generally.

An Oder-Neisse compromise would be a lot easier if set in the framework of a middle Europe in which nationalism is played down. If the ultimate order for a free middle Europe is to embrace economic integration and federation, it should be possible to find a solution for these territories—perhaps by a division between Poland and Germany, perhaps as an autonomous member of some larger federation. If all can share in the economic benefits, it is no longer so necessary to national pride that each country seek to expand its boundaries.

But what of the captive peoples, who cannot speak up for themselves? They have already spoken, most eloquently, in the streets of Budapest. The one great lesson of Hungary's agony is that the spirit of human liberty seems able to continue even through 1984. Whover has fought to conquer middle Europe in the past has found that the spirit for freedom of its people can never be shaken, that their individualism is a passionate belief.

But national freedom alone—Wilson's "self-determination"—is now recognized as a will-o'-the-whisp. The states of middle Europe in an atomic world cannot possibly revert to 1919 nationalism in a military or economic sense.

Demilitarization of the area with security guaranties from East and West is no longer anathema to nations which could defend themselves only for minutes under modern armed attack. A demilitarized Finland has succeeded in preserving its national sovereignty in spite of its location next to the Soviet Union. When the Polish workers issued their manifesto at Poznan and asked for withdrawal of Russian troops, they sought not reincarnated Polish forces but forces of the U. N. instead.

Just as a middle European nation cannot be self-sufficient in defense, it cannot be self-sufficient in economic life. A workable solution must protect the great cultural heritages of Poles and Czechs, Hungarians and Slovaks by supporting them in a going economy. And that means economic integration, free movement of goods and people, and the steady development of regional insituations—stimulated if need be by western economic aid. Such a regional federation, based on the free consent of the people concerned, could ultimately look toward voluntary association in appropriate matters with larger units of the free world. For instance adherence to the Council of Europe could help lead toward an ultimate political and economic unification of Europe that would revive the dream of Dante.

This middle European goal of national freedom, of language, customs, and cultures, coupled with an international look to defense and economics, would surely be embraced by the democratically elected representatives of these peoples as soon as they have the power to speak.

Finally, we must ask whether Russia would accept such a proposal. Until we try, no man can tell. But the time seems ripe. The satellites, once thought firmly in the Kremlin's grip, have shown they are ready to turn their guns east, not west. Even within Russia, the post-Stalin collective leadership has not been able to silence the inquiring minds of the youth which it has gone to such pains to educate.

These new elements—independent thought in Russia and weakness in the satellites—may induce a breakthrough of a new Russian leadership if a sense-making proposal were presented.

And surely the proposal answers the real Russian need. It would minimize the threat of atomic war, which Russia should want no more than we. In return for getting out of the badly sagging satellites—and gaining a little reputation for good behavior among its slipping Afro-Asian clientele in the bargain—Russia would get assurance against what she considers to be the military threat of a rearmed middle Europe, including Germany. This assurance could be made even stronger if it were backstopped by a reciprocal ground and air inspection system for the demilitarized areas, and if a European security treaty were adopted by both East and West. The guaranties of human rights in the liberated states would be guaranties against iron guardist tyranny as well as against Communist tyranny. And economic internationalism in middle Europe would insure Russia of a trading area very much in her interest. Indeed, the proposal has such real advantages for Russia's legitimate interest that we need to remind ourselves that our primary objective is not making things difficult for Russia but producing a peaceful world.

But suppose Russia rejects such a proposal. Still, we are vastly ahead for placing it on the record. America cannot remain silent on the kind of Middle Europe we want to see emerge from the long nightmare of communism. The responsibilities of world power require that we define our aim, in time and so clearly that all men may paste it in their hats. Woodrow Wilson's 14 points, by presenting the Allies' blueprint for a future world order, did much to counteract the spurious Bolshevik peace offensive of 1918 and to halt the march of communism. Contrarily, in World War II the Allies' failure to announce a policy for postwar Germany other than the negative policy of unconditional surrender was, in the words of Hanson Baldwin, "the biggest political mistake of World War II * * * it discouraged opposition to Hitler, probably lengthened the war, cost us lives, and helped to lead to the present abortive peace."

Our vision of a free Middle Europe should be made known. For once known, it can begin to mold events—by encouraging the captive peoples and by giving the Russians an alternative. The times cry for a fresh policy, but the administration sits idle, afraid to seize the moment. Before another such opportunity presents itself, a new Stalin may arise, and it will be too late.

Gaza Strip Again

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article, entitled "Gaza Strip Again," which appeared in the Boston Daily Record on March 21, 1957:

GAZA STRIP AGAIN

Obviously, Israel did not leave the Gaza and Aqaba areas without some kind of an understanding with the United States, France, and Canada, the three countries that entered upon negotiations with Israel to solve the Near Eastern problem.

Whether it is called an agreement or an understanding or assumptions—a new term in international relations—a deal was made. Israel acted in accordance with the deal which Nasser is now violating.

Mrs. Meir, Israel's Foreign Minister, is now back in the United States discussing this deal with John Foster Dulles, who is also back in the United States.

But neither Mrs. Meir nor John Foster Dulles can prevent the Israeli armies from marching on Cairo if there is certainty that they have been doublecrossed.

No government could stand in Israel for 24 hours after the people became convinced that a doublecross had taken place.

And there can be little doubt but that Dag Hammarskjold, of the United Nations, is playing up to Nasser in much the same manner as Hitler was built up by the Great Powers before he turned on them and started World War II.

What frightens Hammarskjold is the very real voting strength in the United Nations General Assembly of the Afro-Asian bloc which now holds the balance of power. When this bloc is combined with the Soviet countries, it is a case of the tail wagging the dog. The Great Powers, which must assume real responsibility for the peace of the world, can always be outvoted by this mass of small countries.

From now on, therefore, it is necessary for the United States to bypass the United Nations or to be subject to the maneuvers of the small states, many of which, like Egypt or Syria, already have Soviet affiliations; or like India, are so frightened by British colonialism that they are subjecting themselves to Russian and Red Chinese colonialism.

The Post Office's Job Is To Serve the People

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very comprehensive article on the United States postal system which appeared in the April 1957 issue of the AFL-CIO American Federationist, the author of the article being the very able president of the National Association of Letter Carriers, Mr. William C. Doherty.

The article follows:

THE POST OFFICE'S JOB IS TO SERVE THE PEOPLE

(By William C. Doherty)

History will verify that our postal system is older than the Nation itself. A year before the Declaration of Independence was framed, the Continental Congress appointed Ben Franklin as the first Postmaster General of the new United States Postal System.

In addition to its longevity among Federal departments, the postal establishment has another claim to fame—albeit of somewhat dubious character. In the years since Ben Franklin's era, there has seldom been a letup in the controversy about the role our postal system should play.

Arguments can be advanced by both proponents and opponents on the question:

"What is the role of the postal establishment?"

Is it primarily a public service which, like other Federal departments and agencies, is adjudged worth what it costs? Or is it primarily a business venture operating within the framework of accepted business concepts? In brief, should our postal system break even or, indeed, make a profit, or should it not?

Not only has this controversy generated a considerable amount of heat but—unlike many other arguments—it has also produced a great deal of light. Unfortunately, no solution has been reached on the main issue.

In the early days of the Nation, the role intended for the postal system was clearly defined. The Founding Fathers made abundantly clear what they had in mind when they instructed the first Postmaster General:

"If the necessary expense shall exceed the produce, the deficiency shall be made good by the united colonists."

President George Washington, in an early message to Congress, advocated transmission of publications free of charge through the mails as a means of unifying the new Nation. The lawmakers agreed with him. In reply to Washington's message, Congress said:

"The circulation of political intelligence through these vehicles is justly reckoned as the surest means of preventing the degeneracy of a free government."

Proponents of the "service first" concept can take comfort in these and subsequent pronouncements. In 1814 Congress returned to this policy after a brief experiment in authorizing new post roads only when they could show that a profit would be realized. In 1844 the self-sustaining theory was again rejected after a careful study by a postal commission appointed by Congress. In 1851 Congress stated firmly:

"The Post Office is primarily a service organization."

Many postmasters general have associated themselves with this service concept, although the thesis that the Nation's postal system should be self-sustaining is not without its vigorous supporters.

Postmaster General Creswell, in 1869, was of the strong conviction that a pay-as-you-go policy was the only sane way in which to operate. However, he made a complete about-face 2 years later and, in his report to Congress, argued against the profit motive. He thought it was necessary for private enterprise but stated that "a government system, managed in the interests of the people, pursues exactly the opposite course."

In 1920 Postmaster General Will Hays said:

"The Post Office is not for profit nor for politics, but for service."

Congress, the executive branch, and mail users still demand good postal service, but sometimes their enthusiasm for resolving what is popularly referred to as a "postal deficit" defeats these demands.

It would be neither accurate nor fair to say that anyone has publicly suggested the complete abandonment of the service concept to embrace an all-out drive for a self-supporting postal service. They have not reached for the profit goal as yet, but in their zeal to prove that a "postal deficit" exists they are willing not only to refuse to underwrite the necessary cost of a mail service in an ever-expanding and dynamic national economy, but they also willingly forfeit existing services.

This happened in 1950 when several vital postal functions were either curtailed or eliminated. These cuts were made under the pious guise of balancing the budget. Currently there is thinking along the same lines.

Perhaps our generation has developed a blasé attitude toward the contributions made by the postal service to the growth and development of our Nation. The mails have aided our commerce, diffused knowledge among our people, and served to unify the Nation. Given the proper tools, the postal establishment will continue to make and enlarge upon these contributions.

Proper tools are not exclusively fair and reasonable postal rates, as some would believe, but must include a modern wage structure, labor-management policies, supplies, and equipment.

The motives of those who believe increased postage rates will cure all the ills of the postal establishment are not questioned. Their arguments are sincerely presented and well intentioned. However, it does seem that more emphasis, more information, more public enlightenment should be directed toward the positive features of the postal service. This suggestion would hold true in the field of costs to the taxpayers, as well as statistics pointing up the multiplicity of services performed—both postal and nonpostal.

It is one thing to say that service is provided to 70 million citizens from 37,000 local offices, spread out over more than 3,600,000 square miles of American territory. The magniture and complexity of the postal system require more than 520,000 employees. They work in terminals, on trains, in small and large post offices.

Each year rural carriers cover 1,500,000 miles of good roads and some not so good; 135 horseback routes are still in existence; 96 carriers deliver mail by boat; 32 routes call for delivery by private airplane; and more than 100,000 city letter carriers whom I have the honor to represent trudge the streets collecting and delivering more than 50 billion pieces of mail a year.

These statistics will prove that the American postal establishment is an enormous undertaking in an era of giant commercial enterprises and huge corporations. But these Bunyanese characteristics standing alone neither prove nor disprove that postal operating expenses are as costly as some would have us believe. An examination of the facts discloses that these operating costs are not the major contributing factor to the national budget problem we hear so much about these days.

It is true that postal revenue seldom has exceeded expenditures. All agree on that. No one has asserted or attempted to prove that it is not so.

What constitutes the principal unresolved area of disagreement is whether the disparity between operating costs and revenues is to be treated differently in the Post Office Department from the way it is treated in other Departments and agencies of Government. It is because of the absence of a clear-cut policy on the subject that the postal system has become the whipping boy in any discussion of Federal spending.

The facts do not support this unenviable role of spendthrift of the Nation. A look at the figures reported in the President's budget for fiscal 1955 discloses a gross postal budget expenditure of $2,714,000,000. Applicable receipts of public enterprise for the same period are listed as $2,390,000,000. This indicates that approximately 88 percent of its costs were recaptured in the form of postal charges and other revenue.

Compare this 88 percent figure with some of the other Federal Departments for the same fiscal year. The following table shows that the postal system comes closer to paying its way than any other agency:

[In millions of dollars]

	Gross budget expenditures	Applicable receipts
Agriculture	6,018	2,974
Commerce	1,142	18
Health, Education, and Welfare	1,994	2
Interior	546	34
Justice	179	(1)
Labor	401	1
State	142	(1)
Treasury	1,153	644

[1] Less than 1.

These figures reflect the expenses and revenue from measurable services performed. The Post Office, in addition, provides many immeasurable services, some of which are nonpostal in nature. In this category is included the unmistakable contributions a good postal system makes in the unending effort to think together and work together toward building a world community of free peoples through communication.

There are also many measurable nonpostal services performed by the Post Office which are reflected in its operating costs. Among those in this category are the handling of documentary stamps and the collection of duty for the Collector of Customs.

Everyone these days is conscious of Federal spending. Well they might be, in view of the taxes levied against all of us. In this connection, the interest of postal employees is no less lively than that of other citizens. But in one area they have a particular stake because invariably their legitimate economic interests are involved.

This particular phase of public spending is the cost of operating the postal service. As long as no policy exists to identify the proper role of the service, it is unlikely that the controversy over the alleged postal deficit will subside. And until it does or until it is clearly understood what constitutes the "deficit," postal employees are going to be squarely in the middle. Every time in recent years they have gone before Congress for a wage increase, they have been confronted with the bugaboo of a "postal deficit."

Once again the employees are about to be put through the wringer in their quest for a fair and adequate wage scale. Before a Congressional hearing 2 years ago, I presented a statement bearing directly on this point. I said:

"It has always been difficult for postal employees to rationalize the fish-on-the-one-hand-fowl-on-the-other thinking when their wages are concerned. No one suggests paying a forest ranger on the basis of admittance charges to any of our national parks. Army personnel are not paid according to PX receipts.

"'Why, then,' asks the postal employee, 'must my salary always be tied in with postal revenues and postage rates? Why not determine it on the basis of the very human need for adequate wages to enable me to purchase food, warmth, shelter, to say nothing of recreation and health and education of my children?'

"It is a justifiable inquiry."

A recent report submitted to the Senate Post Office and Civil Service Committee by a Citizens Advisory Council, created in the 84th Congress, commented as follows:

"We fail to see why there should be any connection between postal rates and postal pay. The laborer should be worthy of his hire, and the fact that it costs money to operate the postal service should not influence the level of postal pay."

In private enterprise no reasonable person would maintain that a company would be justified to remain in business only because inadequate wages make it possible to continue to meet competition. This is the position which some would have the Government adopt in relation to postal wages. The Government has no more right to use poor wages as an excuse for staying in the postal business than General Motors has to deny fair wage treatment on the grounds that it must follow that course to compete in the automotive industry.

The time-honored procedure for effectively burying a wage request from employees is to establish a study group or a committee whose charter can be indefinitely continued. In recent weeks this method was given a severe jolt.

Secretary of Defense Charles Wilson appointed a committee headed by Ralph J. Cordiner of General Electric. The complement of the Cordiner committee listed other equally distinguished leaders from the industrial world. The group was known formally as the Defense Advisory Committee on Professional and Technical Compensation. Its study was confined to positions in professional and technical categories of the Defense Department.

However, its findings and recommendations have equal application in many areas to all Federal employees, including postal workers. Stripped to its essentials, the Cordiner committee's report simply states that the wages of Government workers have not kept pace with the compensation paid to workers in private industry.

At this writing, the report has not been officially released. Newspaper stories suggest the White House is reluctant to allow the report to be released. On the basis of excerpts from the report appearing in new stories, one might readily say that White House reluctance is understandable.

The report is said to be critical of the unconcern at the progressive lowering of the level of the Department's civilian work force resulting from inadequate Government pay. That criticism would have application in any agency of the Federal Government.

At another point the Cordiner Committee's report is said to puncture one of the most prevalent misunderstandings about Federal employment. It is the area of so-called fringe benefits. Newspapers have published the following excerpt:

"Furthermore, the Federal Government has lost the advantage it once enjoyed in the area of fringe benefits. In brief, the magnet of interesting work and public service is no longer strong enough to overcome the pull of higher salaries in non-Federal employment."

The report also is said to comment on recruitment problems within the Defense Department. This is not a problem exclusive to that agency. The Post Office Department also finds this a headache—and a costly headache.

In Minneapolis, for example, 53 civil-service examinations were conducted in an effort to recruit needed postal personnel. One a year or 2 at most would normally suffice. From the 53 examinations, 1,343 men were given followup assignments to report to work. Of this small number only 526 accepted. The others apparently had been disenchanted by the meager pay offered.

"Pay is the most tangible condition of work to a newcomer to the labor market," the Cordiner report says.

It is interesting to note that of the 526 men who did accept postal employment in Minneapolis, 320 quit for greener financial pastures within a year.

When it is considered that cost estimates range from $100 to $300 simply to recruit and put a man on the job in the postal service, it will be readily seen that a high quit-rate is a tremendous drain on the national treasury.

Although most of the Cordiner Committee's conclusions have specific reference to limited segments of employment in the Defense Department, one conclusion is applicable to every person who works for a living, in or out of Government. The report says:

"Employees must receive sufficient compensation to enable them to establish and maintain a standard of living which will allow them to discharge their responsibilities to their families and to their employers."

It is to be hoped that, when the question of wages for postal workers comes before Congress at this session, the matter will be considered on its merits and in the light of the philosophy that every man is worthy of his hire. It is to be hoped, further, that it will be remembered that the postal worker is not merely a statistic in the Federal or postal budget, that the presence or absence of proper postage rates is not involved, that a bookkeeping difference between revenues and expenditures should be balanced in the light of numerous immeasurable services.

A fiscal policy for the Post Office Department should embrace proper rates in relation to operating expenses, fair treatment to mail users and such intangible factors as the role the service is to play in our lives. A wage policy for the Department should be separate and distinct, based on traditional American concepts of living costs, productivity and the right every man has to discharge his responsibilities to his family, his employer and his community.

There must not be a double standard of morality, one standard for employers in private industry and another standard for the Government. And low wages, inadequate wages— anything less than a saving wage— cannot be morally justified. Unfortunately, this is precisely the position in which the Federal Government now finds itself.

Postal employees will continue to look to their colleagues in the American labor movement for moral support in the fight to bring Government wages into line with reality. When the time comes and the shouting begins about "postal deficits" and "raiding the Treasury"—cries that were heard in 1955—it might be a good idea for all of us to recall that our postal system costs us 12 percent of the amount appropriated by Congress.

As the well-known commercial slogan might be paraphrased, no other Federal agency can make that claim.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

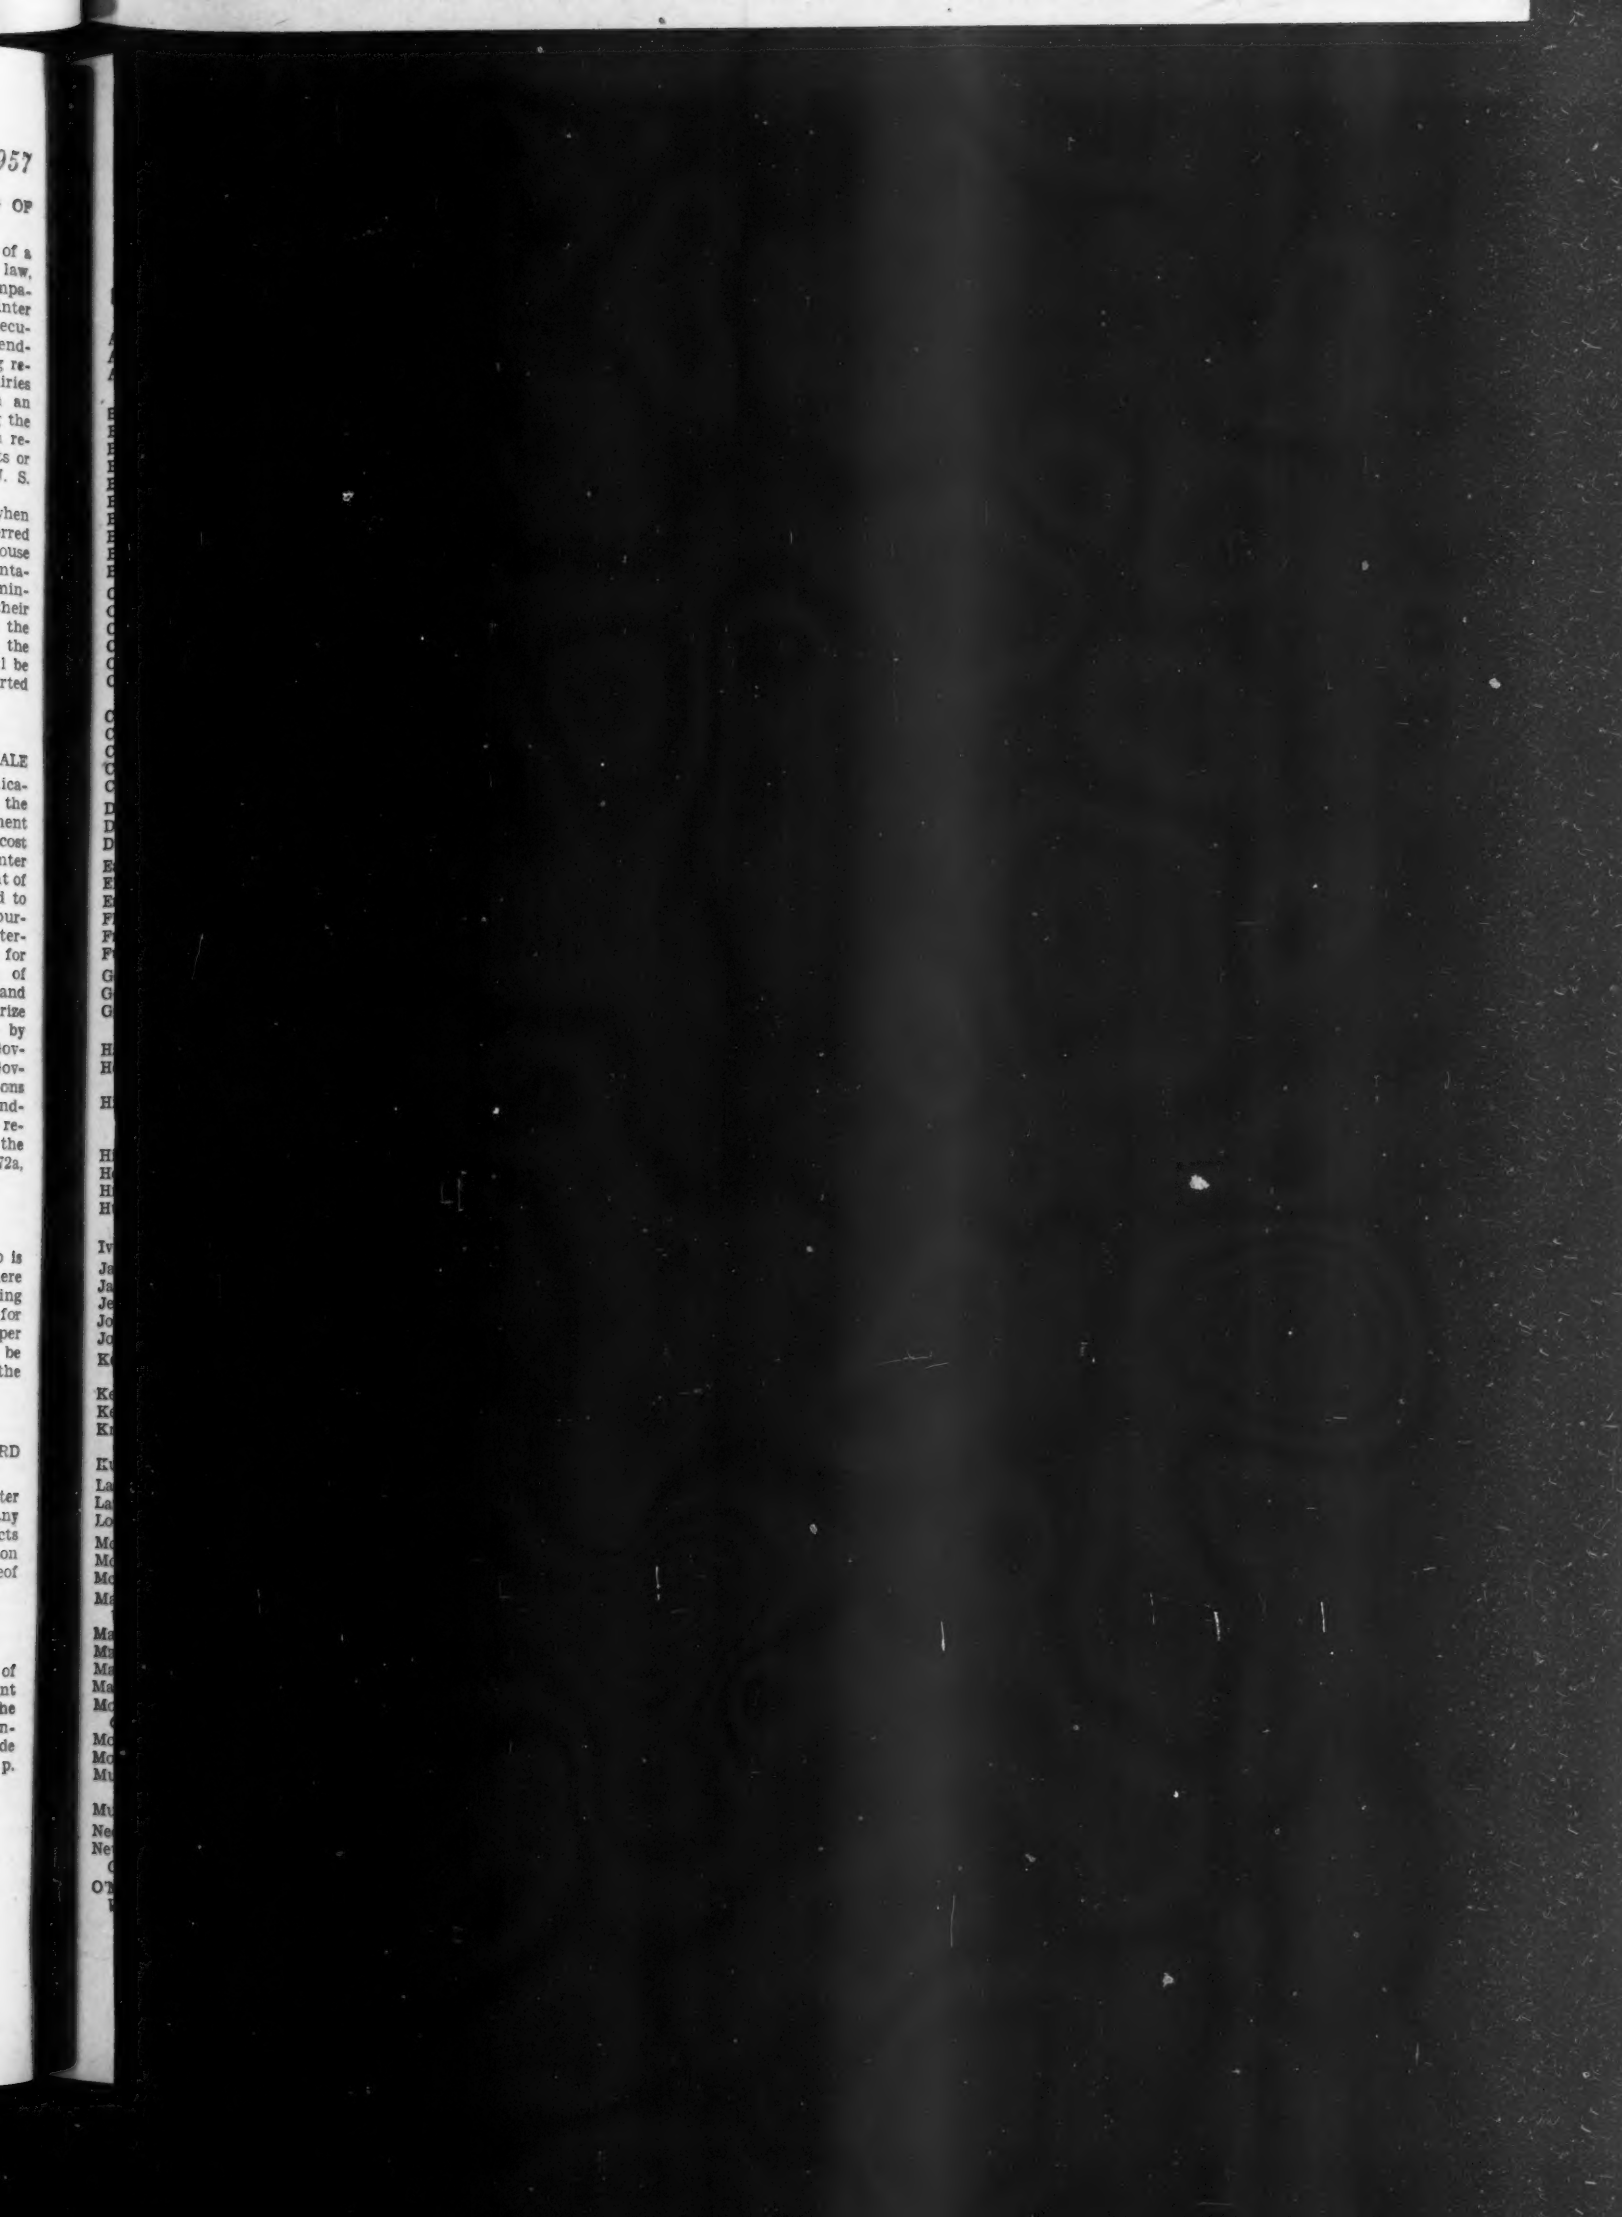
An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).



Appendix

Contributions of the General Electric Co. to the Economic Welfare of the Schenectady-Troy-Albany Area

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, March 28, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a letter I have received, which points up the contributions of the General Electric Co., to the economic welfare of the Schenectady-Troy-Albany area of New York State. It demonstrates the advantages which can accrue to both community and business through meeting mutual responsibilities and obligations.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GENERAL ELECTRIC CO.,
MOTOR AND GENERATOR DIVISION,
Schenectady, N. Y., March 7, 1957.

Senator IRVING M. IVES,
Senate Office Building,
Washington, D. C.

DEAR SENATOR IVES: A few days ago we had the privilege of sending along to you a copy of a press release in which we announced the planned investment of $28 million in 1957 to help keep the Schenectady facilities of the General Electric Co. modern, productive, and competitive so we can continue to remain a substantial job provider for many of your constituents in this area.

Since the mailing of that press release, it has occurred to me that you should have in your possession other pertinent information concerning our activities here in Schenectady. I venture to pass this information along to you because I know you are vitally interested in the economic well-being of this area. Also, I have been wanting to write you to make a few observations on how all of us here—with your help—feel we can collectively do a better job in meeting our business and social obligations.

You may not have thought of it quite this way before, but it seems to me that you and I are really in the business of pleasing the many and that our decisions must be based on what is best for the long-range interest of the many—not just any few.

In the employment area, you will be pleased to know that our Schenectady operations currently provide some 33,400 people with good paying jobs, and collectively these people are earning more than $200 million a year, and will continue to earn more each year as wage increases are put into effect in accordance with the 5-year "better living" contract that we negotiated with the union in 1955. Since many General Electric people live outside Schenectady County, this unusually large payroll—I believe it is the largest single industrial plan payroll in the State—contributes heavily to the economic well-being of many neighboring cities and towns in this general area.

You know, of course, that a basic payroll such as ours is said to generate local business in a volume 3 to 5 times the payroll itself as the money is passed from hand to hand in local purchases. On this basis, then, our payroll is currently generating local business in a volume of $600 million to a billion dollars annually. This is truly an impressive figure.

I don't need to tell you how conscious we in General Electric are of our obligations to the employees who make up the enterprise and how we constantly strive to do everything we can to have the best possible relations with them and with our neighbors here in Schenectady.

In addition to meeting this responsibility, we also have a very important responsibility to our many share owners, without whom there would be no enterprise at all. Our share owners now total 366,000 and, as you may know, they are people in all walks of life. More than 18,000 live right here in the Schenectady area, and in the State as a whole there are more than 83,000. More than two-thirds of them hold less than 100 shares. Of real significance is the fact that more women than men are owners of the business. It is of interest to note that many thousands of General Electric employees themselves are owners of the company, and many more are becoming owners through their participati onin the company's savings and stock bonus plan.

There is also another group to whom we have a responsibility. They are the many thousands of suppliers who manufacture parts for our operations and who provide us with all manner of essential services. I was impressed to learn the other day that our company does business with more than 42,000 such suppliers throughout the country. Many of these are located right here in New York State. An impressive fact is that nearly half of every dollar General Electric receives from the sale of its products is paid to this large group of suppliers. This means that in 1956 our suppliers received approximately 2 billion General Electric dollars for their products and services. Incidentally, 90 percent of our suppliers are small businesses.

In addition to the suppliers, there are also 400,000 independent distribution-type businesses who perform an important function in the distribution of the company's products to the eventual consumer. All these independent businesses are, of course, free at the time of each successive purchase from us to discontinue their arrangements with us, depending on whether we are offering them a rewarding value for themselves and their customers.

I am, of course, calling your attention to this information because I hope that it will help you to judge each issue on the basis of how it is likely to affect business and, therefore, the jobs of your constituents here in your own home State.

As managers of the business, our primary responsibility is to manage prudently and successfully. Only if we are successful, can we meet our obligations to employees, share owners, suppliers, customers and our community neighbors. I think you will agree that we would be the worst kind of community and State liability if we failed in meeting this primary responsibility.

It also follows that if we are to be successful, we must also help many others to succeed in their jobs, for success can only be realized through mutual effort.

This leads me to the observation—and I sincerely hope you will agree with me—that we can continue to operate successfully and be a good job supplier only if we have a business climate which encourages economic growth and which will enable us to do the best possible job for employees, customers, suppliers, share owners, and the general public. In view of this, I am naturally deeply interested and concerned with what takes place in Congress, for we both have a uniquely common interest in jobs and the flow of business in this area.

In short, we here in Schenectady try to be a good citizen-contributor to the common good, and we think we do pretty well at this as a rule. There will, of course, be the usual human errors in carrying out our good intentions, but we shall always continue to try to keep these at a minimum.

I am sure you will agree that the soundest economic growth in this community will come from our continued ability to meet our obligations to those who have claims on the business. We can do this when a vigorous business has a fair political climate which enables it to live up to its fullest utilization in serving all those depending on it or affected by it. That's what we keep assuring all our employees and neighbors here in the Schenectady-Troy-Albany area as the basis for their continued support for those who want to do right in public life.

I realize this has been a rather long letter, but I sincerely hope that its contents will be useful to you. I also hope that you will let me know how you feel about the various issues that come up in Congress, and I shall be glad to comment in turn to our employees, their families, and the community at large.

Is there something I can be doing now for the good of the cause?

Very truly yours,

JAMES M. CRAWFORD,
Vice President and General Manager,
Motor and Generator Division.

Testimony in Support of S. 11

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, March 28, 1957

Mr. HUMPHREY. Mr. President, Mr. George J. Burger, vice president of the National Federation of Independent Business, has recently testified before the Subcommittee on Antitrust and Monopoly Legislation supporting S. 11. I ask unanimous consent that the text of Mr. Burger's remarks be printed in the Appendix of the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

As you know, S. 11 is intended to reverse the 1950 decision of the United States Supreme Court in the Indiana Standard case. There, the Court ruled that a supplier may defend himself completely and finally against charges of unfair price discrimination, springing from the grant of special

low prices to one but not all of his customers, if he can show that he offered the special low price in good faith to meet an equally low offer by a competitor. This defense would hold regardless of injury created among his customers denied the special low prices.

We do believe there is need for this bill to become law. Here's why:

For instance, let's consider the following situation which could easily arise: a large supplier is selling through both a giant mass merchandiser and a large number of smaller, independent retailers competing with the mass-merchandiser. Due to certain economies, the supplier is extending a lower price to the mass merchandiser than to his independent outlets. But the differential does not give the mass merchandiser unfair advantage over his independent business competitors, and is defensible under the antitrust laws.

Fine and good.

Then a second large supplier decides to cut in on this mass merchandiser and offers a much lower price than the merchandiser is receiving. The first supplier has the choice of either holding his price and losing the account, or of cutting the price to meet competition. Quite humanly, he decides to do the latter.

But for one reason or another he decides against cutting prices proportionately to his other outlets, the independents who are competing with the mass merchandiser. The differential between them and the mass merchandiser has become so big they can't cope with it, and are squeezed profitwise and forced out.

This would be the situation: A large supplier cutting his prices in good faith to meet the competition of another supplier, a giant mass merchandiser customer receiving the benefits of the price cut and reflecting them in its selling, many smaller independent business competitors not receiving any reductions and being pinned to the wall.

Under the law as it now stands, these independents would have no recourse, no protection at all; theirs would be but to stand and die. And after they had died, perhaps, the law could be used to break up a fullblown monopoly.

S. 11 would change this situation, would give such independent businessmen the protection they need. As we see it, the bill offers no doctrinnaire approach to or solution of the problem. It recognizes that there are real and honest needs for meeting competition. To this end, it allows the "good faith" meeting of competition to remain a full and complete defense to unfair pricing charges where one, or a few unfavored firms are injured. It attempts only to cope with widespread injury such as is described above.

And make no mistake, gentlemen, such monopoly damage has occurred due to unfair pricing. With my own eyes I have seen it in the tire industry. Others have seen it in the grocery and other fields. What has happened before can happen again.

That is basically why our members favor this bill and urge it to be enacted into law.

Now, we realize it may be argued that by preventing such meeting of competition in good faith, the interests of the firm involved may be injured. We are not happy about this, for we wish no one damaged. But we think that such firm has an obligation to maintain such efficiency that it can meet competition, and when lowering prices to one customer lower them to all. Within the past year one large firm testified before Congress that, as a matter of policy, when it cuts prices for one customer it cuts them for all. What it can do, others should be able equally to do.

It may be argued, too, that perhaps the firm trying to take this business away may itself be discriminating among its customers in offering the lower prices, and confronting the first firm with an unfair situation. Our only observation here is that to guard against such contingency, Congress should equip the antitrust agencies with ability to meet and curb such an occurrence.

But even if this is not done, if it is not practical, then we think basically what you gentlemen of this committee are confronted with is a problem involving the weighing of damage to one against damage to the other, of benefits and protections to one against benefits and protections to the other.

Frankly, our members believe that our small, independent business structure is the real backbone of our country, and moreover is one of the main economic underpinnings of our very liberties.

For this reason we believe that when any balancing is done, if this is considered necessary, the scales should definitely tip in the direction of independent, smaller businessmen.

I have watched patiently the operations of the Robinson-Patman Act these past 20 years. In the first instance when it became a law I held to the premise the "magna carta" for small business had arrived for the first time in our Nation's economy. It is my belief that thousands upon thousands of small businesses held to the same view, and I must confess, after observing the scene for 20 years, that small business of this Nation has been disappointed in the results obtained under the law as a result of: (1) The many interpretations placed on the act by the courts, and (2) what can be commonly called a 50–50 decision action in the Federal Trade Commission.

Big business interests have consistently fought against this law. It is self-evident, from their action, they realize that for the first time efficient small business would be placed on parity with others so they could fairly compete.

So it behooves members of your committee, if they are desirous of maintaining the free enterprise system and the millions of small businesses of all descriptions, to take every action to protect the overall good of the Robinson-Patman Act, and that no attempt, direct or indirect, be made to weaken or nullify this major law.

In view of this we urge your favorable action on S. 11.

Problems in the Middle East

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 28, 1957

Mr. JOHNSON of Texas. Mr. President, many excellent and edifying articles about the problems in the Middle East have been published during the past several weeks; but I have been most impressed by editorials published by two of my State's most influential newspapers, the Corpus Christi Caller-Times, in south Texas; and the San Angelo Standard-Times, in west Texas.

I ask unanimous consent to have these two views on the Middle East situation printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Corpus Christi (Tex.) Caller-Times of March 22, 1957]

MID EAST DILEMMA

Israel's withdrawal from Gaza was prompted in a large measure by "assurances" given him in a letter from President Eisenhower, Israeli Prime Minister David Ben-Gurion told a Newsweek correspondent.

"In his letter the President stated we would have no regrets if we withdrew," Ben-Gurion was quoted as saying. "For me, this was more valid than any treaty between nations. That was the word not only of the President of the United States, but of an honorable man, a friend, and a general of armies. When he said we would have no regrets, I took that to mean everything—since I am sure he knew what would cause us to regret our withdrawal."

Thus, in the plainest of prose, Ben-Gurion has exposed the painful dilemma facing the Eisenhower administration in its Middle Eastern policy course. The United States cannot afford to be gored by either of the two horns of this dilemma.

The Eisenhower administration certainly as far as Congress and many of the people of the United States are concerned, is committed to assuring Israel free use of the Gulf of Aqaba and of the Suez Canal. Egyptian Premier Gamal Abdel Nasser has rejected the principle of Israeli use of Suez and both Nasser and Saudi Arabia's King Ibn Saud apparently are prepared to deny Israeli ships use of Aqaba. We are caught with water on both shoulders. We cannot abandon Israel to the Arabs nor the Arabs to Soviet Russia.

Secretary of State John Foster Dulles, as a result of Egyptian and Arab intransigence, finds himself in one of the most nettlesome predicaments in his long career. He'd better come up with a good solution or be prepared to return to the private practice of law.

[From the San Angelo (Tex.) Standard-Times of March 23, 1957]

BYPASSING SUEZ CANAL COULD BAFFLE NASTY NASSER

Eight major oil companies are taking steps, says a London dispatch, toward laying new pipelines in the Middle East. Committees have been set up to study routes, finances, and equipment, and the work of these committees is expected to be completed in a few weeks.

Spokesmen refused to comment on a proposed 1,000-mile pipeline from southern Iraq to Iskenderon, Turkey.

The vast uncertainties that surround the Mideast as long as Nasser sets astride the Suez Canal and the fact that Europe and the Western World must be ready for any eventualities suggests perhaps that our State Department would be interested in thwarting, frustrating, and otherwise baffling Gamel Nasser, who hasn't been averse to doing those same things to the rest of us.

If he wants to play it rough, Secretary Dulles might suggest that it use some of its $200 million emergency funds for getting that pipeline built with utmost expediency.

Of course, if private industry can give an assist to the State Department and is willing to proceed with its planning as though the pipeline were an emergency, that's well and good. But a little move on the part of the State Department could convince Nasser that he isn't going to have a monopoly on an essential artery of commerce.

If he is depending on the canal to undergird Egyptian economy, and if he is committed to pocketbook thinking as many of the rest of us, he might easily be persuaded to get down off his high horse and start being agreeable for a change.

As long as we are gambling for big stakes, and at times sloughing off our loose change in world diplomacy, this $200 million might not be such a bad debt. Our actually owning the pipeline might be a good investment.

For one thing, in Turkey we could count on some friends who are not afraid of Russia, and who furnish some defense against sabotage.

Nasser, in charge of the canal and threatening always to be disagreeable, is much of a thorn in the flesh of everybody but Soviet Russia. If the thorn can be blunted by arranging for diversionary routes for commerce, there is no reason for putting up with a dictator who wants to play nasty all the time.

How To Run an Honest Labor Union: Be Honest

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, March 28, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Victor Riesel on how to run an honest union. This article, dealing with the International Association of Machinists, is particularly pertinent in light of the disclosures brought forth by the Select Committee on Improper Activities in the Labor or Management Field.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Sunday Mirror of March 10, 1957]

HERE'S HOW TO RUN AN HONEST UNION: BE HONEST

(By Victor Riesel)

Me, I'm proud to carry honorary membership cards in the Sing Sing Prison Guards Union and the Screen Extras Guild.

True, they're not like Jimmie Petrillo's solid gold honorary cards, but the sentiment is worth more. So is the fact that the International Association of Machinists has a local, 1 of its 2,069, which humbled me by naming the union after me after I was hit.

You'll forgive me this bit of personal history, but I want to make the point that everything inside labor isn't a slice of that Portland crowd. That's why it gave me a charge, as they say in rock 'n roll, when the Government said to Dave Beck, "Look, don't bother, we're going to send a fellow by the name of Rudy Faupl of the machinists to that International Labor Organization meeting in Hamburg, Germany."

Faupl won't embarrass his people, the Government, or labor itself. His union is big. It is powerful. It is wealthy. It has a modern headquarters in Washington which is palatial without showing signs of the nouveau riche. And it has a code to guard every penny of the 900,000 men and women who are dextrously putting together our aircraft, bombers, and missiles—guided and unguided. I'd like to tell you about that code:

This union's money can be invested only in United States or Canadian Government bonds, or in those securities approved for investment by trust funds by the United States District Court for the District of Columbia.

It is absolutely forbidden by the IAM constitution to lend money for any purpose at any time to private individuals.

All this is no new practice, burgeoning after the hearings on Capitol Hill created sensitivities in some corners of the house of labor. The union's records have been audited for over 50 years. The constitution orders the international president, Al J. Hayes, to set up a special auditing committee each 6 months.

This committee is made up of 3 men from each of 3 local unions within a radius of 40 miles of the national headquarters in Washington. No man is permitted to serve on this auditing committee more than once in 3 years. It must hire a certified public accountant. Together they go over the books.

Then a full audit report is made up. It is signed and verified under oath by the committee on the C. P. A.

This report has run 60 pages because it shows every penny paid to every official—by name. It is printed and mailed to every 1 of the 2,069 local financial secretaries. Any 1 of the 900,000 members of IAM has the right to inspect it whenever he wishes. Those unionists sure know where their money goes.

And just to make certain, the union's leaders print a summary of the report in the national newspaper, edited by Gordon Cole, whom many of us consider the Nation's leading labor journalist.

But this is just the beginning. There's a tracer kept on every cent in every one of the locals, too. The national constitution specifically prohibits the lending or appropriating of funds, property, or assets of the local lodge for any other than the legitimate purposes of the IAM.

Furthermore, locals are required by the national headquarters to elect auditing committees to examine the union's local finances every 3 months. To enforce this provision, the national headquarters maintains a staff of 21 full-time, trained auditors who swirl around the country, checking not only the local books, but the health and welfare funds, building funds, and every other fund which is kept for the benefit of the members.

Thus it's no coincidence that the union's national chief, Al J. Hayes, is head of the AFL–CIO ethical practices committee. He goes in for ethical practices. It adds up. All you "gotta" do is want to do it. He preaches what he practices and vice versa.

Sharing International Labor Organization Costs

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, March 28, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent editorial, from the New York Times, concerning the vital importance of Senate Joint Resolution 73, which would increase the ceiling on United States contributions to the International Labor Organization from $1,750,000 to $3 million.

The position of the United States in the International Labor Organization will be subject to serious criticism by other member nations unless it agrees to pay its fair share of International Labor Organization costs without further delay.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of March 20, 1957]

SHARING ILO COSTS

At the request of Secretary Dulles, Chairman Green of the Senate Foreign Relations Committee has introduced a joint resolution (S. J. Res. 73) to increase the ceiling on United States contributions to the International Labor Organization from $1,750,000 to $3 million. The need to do so has been emphasized by a concurrent report of the Departments of State, Commerce, and Labor pledging continued and wholehearted Government support for the ILO.

The account of our Government with the organization shows how urgent is the need to raise the limit on our financial support. Our contribution is smaller in relation to the organization's total budget—25 percent—than our payments to the United Nations and its other agencies, which range from 30 to 33⅓ percent. Then, too, we will actually be in arrears in our ILO account this year unless the ceiling is raised. The United States assessment for 1957 is $42,000 higher than the present law permits. And the ILO's tentative budget for 1958 totals $139,000 more than does the present one.

The tridepartmental report attests to the ILO's importance in forwarding the foreign policies of the United States—as did the reports of the Department's advisory committee headed by Joseph B. Johnson and those of the Commerce and Industry Association and the Chamber of Commerce of New York. The department's report, as well as the others, not only urges continued participation in the ILO but points to ways in which our representatives can make its—and their—activities more effective.

Our delegates will be seriously hampered in playing this role if the United States is not willing to pay its fair share of the ILO's costs. Senate Joint Resolution 73 should be enacted without delay.

The Middle East Problem Is Not Yet Solved

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, March 28, 1957

Mr. SYMINGTON. Mr. President, it is clear that the Mideast problem has not yet been solved. I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Can We Muddle Through?" written by Walter Lippmann, and published in today's issue of the Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN WE MUDDLE THROUGH?

(By Walter Lippmann)

Mr. Dulles, having returned to Washington from Bermuda, was at pains to dispel any notion that there exists a British-American agreement on the line we shall take in the Middle East. As a matter of fact, nobody had any reason to suppose that there had been such an agreement. But the very fact that the President and the Prime Minister chose to meet at all in such a conspicuous way was bound to cause speculation, and in Egypt at least to arouse the suspicion that the two great powers, separated since last November, were now going to act together.

If, as we know from Mr. Dulles, there were no firm agreements, were there real disagreements? There were not, so it would seem, though there are undoubtedly wide differences of opinion as to what Nasser intends to do and how he should be dealt with. Al-

most certainly what happened in Bermuda was that the British accepted American leadership in the making and in the conduct of policy in the Middle East. There was no agreement as to what the policy would be, though no doubt various possibilities must have been canvassed. But there was an assent by the British, never formalized in any agreement, that the President, and more specifically that Mr. Dulles, should manage the Middle Eastern business. It was in that role that Mr. Dulles spoke with such personal authority at his press conference on Tuesday.

As the President and Mr. Dulles appear to see it, the American role in the Middle East is to be its protector as against the Soviet Union from the outside, and within the region itself to be the impartial mediator and the friend of everybody. In practice, they have little or no hope of reaching genuine settlements within the area, be it about the canal, about the future of Jordan, or about the Egyptian-Israeli conflict. Our real policy in the Middle East is to speak boldly and loudly about what is unlikely to happen—namely, an overt Soviet military aggression—and on the real issues to zig and to zag, and somehow to muddle through without any more shooting.

When Mr. Dulles spoke of feeling a "cautious optimism," he means presumably that there is a fair chance that for a while at least there will be tacit arrangements to keep the hot issues below the boiling point. We might guess that Nasser will have his way about the canal but that, except as to Israel, he will not actually molest or discriminate against other ships. We might guess that he will not build up serious military forces in the Sinai Peninsula which could threaten Israel, and that the raiding from the Gaza strip will not be organized on a big scale. And there would seem to be a fair chance that neither Nasser nor King Saud will in fact interfere with the passage through the Gulf of Aqaba.

This is, conceivably, how a new crisis may be stalled off by saving Nasser's face and by adding to his prestige without provoking Israel enough for her to use force.

It can be argued that this is the best that can be made of a bad job. It can be said that the revolutionary movement among the Afro-Asian peoples which Nasser leads cannot be stopped by force or bought off by force or bought off by economic concessions; it can be said that the local conflict in Palestine is insoluble in this generation.

But it can be argued also that the best way to deal with the situation is not to muddle through, not to carry water on both shoulders, not to finagle and to finesse, with the object of provoking no one and of placating everyone. For if, as is now contemplated, we in fact appease Nasser both on the canal and his claim to belligerent rights against Israel, we shall find ourselves much weaker when we come to the next phase of Nasser's revolution against the Western World.

The Preservation of Wildlife

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. McGOVERN. Mr. Speaker, as one keenly interested in the preservation of wildlife in my own State and in other parts of the Nation, I was pleased to note an editorial in the Sioux Falls (S. Dak.) Argus-Leader of March 25, 1957, which calls attention to this important subject. The State of South Dakota is one of the Nation's most significant wildlife areas and must play a key role in fostering improved wildlife programs.

As the editorial writer has suggested, it is particularly fitting that we turn our thoughts to the problems of wildlife conservation and management following the recent observance of National Wildlife Week.

The editorial is included as follows:

PROVIDE A HOME FOR WILDLIFE

Last week was National Wildlife Week and the occasion suggested that attention be devoted to the problems involved as civilization develops.

Civilization and wildlife can live together in a happy relationship but some adjustments must be made. If study is not devoted to the subject, wildlife will be gradually exterminated. In fact, some species already have disappeared from the scene.

But wildlife should be maintained and surely it is worth while to expend considerable effort toward this objective.

What we must realize is that wildlife needs a degree of protection as civilization encroaches upon its natural watering, lodging, and feeding places.

Before civilization appeared on the scene, wildlife existed on the basis of its own adjustment. One species might be eliminated through natural processes but there would be another one to replace it.

Then came civilization and the net result has been a constant decrease in wildlife. The buffalo has vanished from the plains and there has been no species to replace it. The once common prairie chicken is virtually a bird of the past in this area and though pheasants have been developed as a replacement, they are not nearly so numerous as the prairie chickens once were.

Various groups have interested themselves in the preservation of wildlife and their efforts are to be commended and supported. Wildlife is an asset we should preserve.

Workers Have Important Stake in Proposed Reorganization of Fairbanks, Morse & Co.

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, in all of the recent controversy over the attempted grab of Fairbanks, Morse & Co., by Leopold D. Silberstein and his Penn-Texas empire, have we not overlooked the most important possible effect of this struggle? I refer to the potential plight of the industrious, conscientious employees of this outstanding company who are concerned over their future employment status. The past and present management of Fairbanks, Morse has pursued such a sound course of corporate management that the company is free of debt and possessed of sufficient capital to insure continuing expansion and modernization. Sound fiscal programs of constructive American management, in creating greater markets and employment opportunities, is the mainstay of our ever-widening prosperity. Contrarywise accumulation of wealth through reduction or liquidation of instruments of productivity is not farsighted or economically healthy, and is most certainly not in the public interest.

My constituents who are employees and stockholders of Fairbanks, Morse & Co., are in accord with the present sound policies which have proved beneficial to both employer and employee.

The prospect of entirely dissimilar management unconcerned with the continuing operating welfare of Fairbanks, Morse & Co., has caused great concern to its employees. The very reason for its present vigor, sound fiscal planning, has made Fairbanks, Morse & Co., a prime target for corporate raiders and stock manipulators. There is substantial evidence that Silberstein not only intends to siphon off the $70 million quick assets of Fairbanks, Morse but actually must, in order to pay for the very stock he is voting to gain control of the company. Silberstein has pyramided an empire by the most unorthodox and shortsighted of schemes, notably sale and lease backs, large debt and high interest long term financing. He has publicly criticized what most economists consider the sound, debt-free, short-term financing policies of Fairbanks, Morse & Co., and stated that if he wins control there will be some changes made.

That in this proxy fight, Silberstein and company have been guilty of numerous and flagrant violations of the proxy rules of the Securities and Exchange Commission is an admitted and published fact. Failure to disclose, hiding behind the cover of Swiss banks, questionable use of third party stock procurement, illegal solicitation, all of these and many more improprieties and illegalities have been definitely ascribed to the Silberstein Penn-Texas operation. The failures of the Securities and Exchange Commission to take more positive action has been a mystery to all who have followed the fortunes of Mr. Silberstein, especially in his zealous quest of Fairbanks, Morse & Co. Whether or not the Silberstein crowd has acted improperly or have been guilty of any violation of the law in this proxy contest is now to be decided by the United States Federal court in Chicago. I will not attempt to prejudge the respective rights of the contending parties.

My more immediate concern which I believe should be the concern of this legislative body is for the protection of the innocent and almost powerless employees of these corporations which are being raided. If the present laws are not adequate then we should enact statutes which will safeguard healthy operating corporations from the attacks of those who would drain off the available capital thus destroying an operating concern with the resultant loss of means of livelihood to its workers.

Congress adopted the securities regulatory laws partly to protect American corporations from the assaults of those who would use any means of taking over corporate control. Behind the establishment of these safeguards lay the

knowledge that without them any corporation was easy prey to marauding speculators and financial jugglers. The SEC's mechanical and literal application of its regulatory power seems to indicate a lack of appreciation for the original and motivating congressional purpose in enacting these laws. Perhaps Congress should restate its desire that the administration of the securities laws be directed toward the ultimate protection of sound, prosperous, and economically stimulating productivity.

Small Business Administration

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. DOOLEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the statement of George Burger, vice president of the National Federation of Independent Business, Washington, D. C., before the Senate Small Business Committee on the subject of Small Business Administration:

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote.

The Federation, of course, has a vital stake in seeing to it that the operation of the Small Business Administration is carried out in accordance with the will of the Congress. In view of this, Mr. Chairman, and members of the committee, it might be well to do as the late Al Smith often said: "Let's look at the record," as it pertains to the actions of the federation since the Small Business Administration was created by the Congress, to make certain that the agency has carried out the will of the Congress in its help to small business of this Nation.

First, the record will show that in our appearances before the banking committees of the Congress we recommended the creation of the agency, and more important, that it be an independent agency, subject at all times to review by the Congress. This was the action we took in 1953.

Second, shortly after the agency was created in the summer of 1953, I made my usual annual visit to the head office of the federation at Burlingame, Calif., and during the time of this visit out there, I had an opportunity to visit some few regional offices of the Agency and confer with the regional directors. Mr. Chairman, at the time of these visits I always make it a must to be accompanied by someone else so that whatever my findings are, they can be confirmed by others present.

During our visits to the regional offices of the Small Business Administration in the West and Middle West, we found a situation as to policy that was not in keeping with the intent of Congress, and as a result of our findings on my return to Washington a joint meeting was held with Treasury and Commerce officials on October 26, 1953, which resulted in a complete change of policy through which all small business could be helped through the SBA. I might say that in November 1953, the press gave full publicity to that action. Shortly thereafter, Mr. Wendell Barnes became Administrator.

Third, during the life of the Agency the closest liaison has existed between the Washington office of the federation and the top officials of the Agency. Many conferences have been held with Mr. Barnes and his deputies, all in keeping with the intent of being a help to the Agency, and we believe the information we have been getting from our nationwide membership, commonly referred to as the "grassroots" has tended to advance the standing of the Small Business Administration with small business throughout the Nation. During these past 3 years we have made it our business to visit regional offices of the Agency throughout the Nation for the sole purpose of finding out what was taking place at the local level.

Fourth, on July 5, 1956, speaking for the federation, I conferred with Dr. Arthur Burns, Economic Adviser to the President, and presented to him as Chairman of the President's Cabinet Committee on Small Business, seven specific recommendations on small business to be considered by his group when they made their report to the President. Among the recommendations made by us were (1) that the agency be made a permanent agency of the Government, and (2) that the control of the agency be placed exclusively in the hands of the Administrator, eliminating the policy board as heretofore existing in that agency. In making the above recommendations we reaffirmed the recommendations which we made from the first instance when the legislation was proposed.

Fifth, in our appearances before the platform committees of both national convention—in Chicago and San Francisco, 1956—we urged these committees to have the same recommendations adopted in their respective platforms.

Sixth, on December 11, 1956, I had a 2-hour conference with Mr. Barnes and his deputy, at which time I gave to them our recent findings after personal visits to regional offices of SBA in certain sections of the Nation. As a result of that 2-hour or more conference we believe that SBA is showing a steady progress in carrying out the will of the Congress. However, there is still plenty of room for improvement.

Seventh, on the opening of the new Congress we urged introduction of legislation to make the agency a permanent one, with full power as to the overall policy of the agency being placed in the hands of the Administrator. We are more than pleased to advise that quite a few bills have been introduced along the line of these recommendations, and we have just completed a nationwide poll of our entire membership on S. 545 introduced by Senator THYE, and H. R. 2513, introduced by the Honorable FRANK THOMPSON, JR., both of which bills provide for the establishment of the Small Business Administration as a permanent agency, and with full control vested in the Administrator. The result of the poll disclosed: 83 percent for, 14 percent against, 3 percent no vote.

We believe the action of the Congress in making the Small Business Administration a permanent agency, with full control vested in the Administrator, will result in increasing the efficiency of the operation of the agency, which will act as a morale builder for small business of this Nation, and the establishment of the agency on a permanent basis will also attract more competent personnel.

Of course, there are many other operations the Small Business Administration can fulfill and carry out, such as making greater and greater efforts toward securing an equal share of Government contracts for small business, even, if necessary, to take the prime contract.

There is another important recommendation which should be considered, and that is that the regional and national advisory groups to the Small Business Administration should be made up exclusively of independent businessmen because through this action those groups will be able to give to the agency, both at the national and local levels, the correct picture facing small business in the respective areas. We look upon this as very important for a successful administration of the agency.

We have noted, and the Small Business Administration is to be commended for the action they have taken in the issuance of publications for distribution which provide information as an aid to small business. We also recommend that this action be continued and improved upon as time goes on.

As the views I have expressed come from the grassroots, we trust that Congress will take early action in following through on such recommendations.

Farmers Are Overtaxed Too

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an interesting letter from a farm family in my congressional district on the subject of overtaxation. Taxes have become a byword with every person who has a taxable income and the efforts now being made by this House to cut spending and reduce taxes are appreciated by the people.

The letter in question follows:

ALBANY, WIS., *March 1957.*

DEAR MR. SMITH: This letter should be short, necessarily it must be long. The subject—Overtaxation.

We own 2 small farms, 120–140 acres. Just ordinary buildings 50 years old—not fancy. Just ordinary land, not excellent, not poor. Our taxes total $1,636. These constitute two-thirds of our living expenses. There is something wrong with Government when taxes are twice as much as it costs a couple of people to provide themselves with everything else it requires to be able to live. We have to buy and pay for our own homes ourselves. Government provides us with nothing else put the privilege of being able to live here.

This sort of thing breeds communism from the inside, not as they would have us believe, from the outside in. After all which is different, taking two-thirds of our harvest away from us at the place of production, or handing us the tax bill to pay that makes up two-thirds of our living expense?

After having read an article written by Representative GEORGE MEADER of Michigan in the April issue of Reader's Digest we were prompted to write this letter. If only half of what he writes is true, that is bad.

In the first place, why can't these countries do for themselves as we have to? We do, however, recognize the need to save the oil in the Middle East. No doubt we here at

home can get along without Middle East oil for many years to come, even though we are heavy consumers of petroleum products. But we cannot provide oil for ourselves plus Europe's needs for many years in the future. Three-fourths of the world's oil lies under Arab soil. It cost $3 billion to drill for that which is flowing there now, of which two-thirds of it was American money for the drilling. Naturally our capitalistic government is interested in saving this investment for the oil companies. However, mostly this is a private interest. It is up to the oil companies to try to protect their investments there as much as possible themselves. Perhaps they could not do it alone. It is all right for the Government to give them the support which they cannot provide themselves; however, this is none of the taxpayers' business to provide it all. The oil companies who have their money invested there should be compelled to carry the financial burden as far as they are able, and then they could write it off as a tax loss, with the Government using public funds only where absolutely necessary.

The salaries of our public officials are paid out of the taxpayers' pockets—not necessarily out of the voters' pockets, as many millions of voters pay no other taxes except hidden ones. Those people would not provide our lawmakers with a living. First of all, you should attempt to serve the needs of those who pay. Learn to cut this waste spending to the bone. It is getting to the point where those who have to pay can stand it no longer. Imagine the bank interest of $80,000 to pay taxes for just 1 year. We are 57 and 45 years old. After having worked hard all the time, we should be able to retire on two farms; instead, now as we get older, we have to work ourselves to death just to pay taxes. We're unable to sell the farms because of the poor farm income plus these prohibitive taxes.

The President's budget for this year is outrageous. He was voted into office on the assumption that he would economize and save the country from bankruptcy. Instead, he is spending as much as our previous spendthrift administrations. He claims the people demand it. Who? Those who do not pay very much taxes, and those who get a nice job, also those who get a good deal out of it one way or another. Trim that man's budget wherever possible; it is your duty as a public servant and for your country's sake.

Don't you get other letters that sound something like this? Now let's hear you read this off on the House floor. Thank you for reading this.

Yours truly,

Mr. and Mrs. FRED HAMMERLY.

The Enemy Property Issue

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. MULTER. Mr. Speaker, this session of Congress will probably have to decide whether or not the United States will return to its former enemies of World War II those properties which were seized during the war.

In this connection, I commend to the attention of our colleagues the following article by Oscar Schisgall. Mr. Schisgall is a freelance writer, served with the O. W. I., and is the author of numerous books.

THE ENEMY PROPERTY ISSUE

(By Oscar Shisgall)

The people of the United States and their representatives in the Congress are faced with an issue that is peculiarly and deeply rooted in their emotions. The passions and arguments it has roused—and will not doubt continue to rouse—cross party lines, finding supporters and opponents among Republicans and Democrats alike. What the Congress votes to do will affect not only American citizens but the people of Germany and Japan and of all nations which were the Allies of the United States in World War II. In short, this promises to be one of the most controversial issues with which American citizens will be confronted.

In its simplest terms it is this: Shall the United States return to its former enemies of World War II—Germany and Japan—all those properties which were seized during the war and vested in the hands of the Alien Property Custodian?

Admittedly, if such properties are returned to citizens of the Axis, the act would be the complete repudiation of agreements the United States made after World War II with its allies. America must consider the issue, not only in terms of its immediate interests, but in terms of the long-range interests of the world as a whole.

To understand the problem one must understand its background.

BACKGROUND

After the first conflict with Germany the victorious Allies assessed their enormous losses. They tried to recoup them, at least in part, by imposing heavy repatriations on the German people. The reparations were so heavy, indeed, that they were eventually to become an insupportable burden for Germany. In any case, the Germans defaulted in paying the debt. More than $100 million remains unpaid to the United States; and a number of thoughtful historians have expressed the opinion that these overwhelming reparations were in large measure responsible for the rise of Hitler. For the Germans, crushed under financial burdens, were in a mood to welcome anyone who promised to deliver them from their economic distress.

After World War II the question arose: Would the Allied Nations repeat the disastrous policy of imposing heavy reparations on Germany?

The United States opposed such a plan. So did Great Britain and France. In fact, at the Paris Conference of Allies, held from November 9 to December 21 of 1945, a resolution was drafted which would do away completely with reparations. Heavy reparations, they all agreed, were bad for the victors as well as for the vanquished. The health of the world would depend largely on restoring Germany to a position in which her 80 million people would be able to trade with other nations. It was better, in other words, to make these 80 million people self-supporting than to make them economic vassals, helpless under the weight of reparation demands.

Did this mean that the Germans, who had launched the war against mankind, and the Japanese, who had subjected the United States to the infamy of Pearl Harbor, would go scot free,' unpunished, untaxed, unaffected in any economic sense by the results of the war? Were all the appalling costs of the conflict, all subsequent war claims of innocent victims, to be paid by the victors?

A NEW PLAN

An alternate solution was advanced by the United States, England, and France and urged upon the rest of the Allied Nations. Recognized as the most liberal and humane postwar terms of modern history, the plan embraced these factors:

During World War II the United States like all the Allied Nations, had immobilized German and Japanese holdings within its national boundaries. It had done this by seizing enemy property and vesting it in the control of the Alien Property Custodian. All such enemy assets were still in the possession of the Alien Property Custodian. Their total value, in the United States, was estimated at approximately $365 million at the time of appropriation.

According to the new plan, none of this seized property would be returned to the Germans and the Japanese. Instead, the Alien Property Custodian (and his counterpart in other nations) would be empowered to sell such properties. The proceeds of the sales would take the place of reparations.

True, whatever money was thus raised would be insufficient to pay for Allied losses. After all, the United States itself had expended some $300 billion in the war. It would be futile to expect that all of this could ever be repaid by the Germans and Japanese. But the sale of enemy assets would bring the Allies some compensation.

This plan was adopted by 18 Allied Nations in the Paris Agreement on German Reparation of January 24, 1946. In the words of the agreement:

"Each signatory government shall, under such procedures as it may choose, hold or dispose of German enemy assets within its jurisdiction in manners designed to preclude their return to German ownership or control."

The Bonn Convention of May 26, 1952, which was submitted to and approved by the United States Senate, specifically provided that (a) the Allies waive all claims for reparations from Germany, (b) Germany agree never to contest the retention of vested assets by the Allies, and (c) Germany agree to compensate the former owners of vested property. Japan had agreed to similar terms in the treaty of September 8, 1951, negotiated by John Foster Dulles and called by him a good treaty.

WAR CLAIMS ACT OF 1948

As for the United States, it has championed the plan from the start; and in its War Claims Act of 1948 it reaffirmed its policy:

"No property or interests therein of Germany, Japan, or any national of either such country vested in or transferred to the Government at any time after December 7, 1941, pursuant to the provisions of this act, shall be returned to former owners thereof or their successors in interest, and the United States shall not pay compensation for any such property or interest therein."

So the decision seemed firm and final.

What was to be done with the money received by the Alien Property Custodian if and when he sold the enemy assets?

"The net proceeds remaining upon the completion of administration, liquidation, and disposition pursuant to the provisions of this act of any such property or interest therein shall be covered into the Treasury at the earliest practicable date."

These funds were earmarked to help settle the war claims of Americans—primarily prisoners of war and certain civilian internees.

The number of enemy nationals whose property was placed under the control of the Alien Property Custodian exceeded 34,000. These, however, were not all firms doing business in America. The type of such assets ran into countless categories: For example, an empty lot somewhere on the outskirts of Brooklyn, bought by a German national for a downpayment of $250 as a rael-estate investment, was technically enemy-owned property. It was seized. At the other end of the list, however, stood such an industrial giant as the General Aniline and Film Corp., owned by Germany's I. G. Farben Industrie.

The total worth of German assets in the United States was estimated to be approximately $300 million at the time they were taken over by the Alien Property Custodian. But about 50 percent of the total value

was concentrated in the holdings of 435 industrial firms.

The Alien Property Custodian put these companies under American management. For the most part they prospered. As their business grew, they were sold, often at a sizable increase of value. The North American Rayon Co. which was worth about $8 million when seized as enemy property, was sold for $12,700,000; E. Leitz, Inc., of New York, seized as an asset worth $175,000, was sold for $787,000; the Schering Corp., worth $1,300,000 in 1942 brought the astonishing sales price of $30 million. Such examples of increased worth were numerous, the increases ranging from 10 percent to over 2,000 percent.

The Alien Property Custodian disposed quite rapidly of those assets whose previous ownership was not being contested. By July of 1956, according to the Department of Justice, 382 of the 435 industrial firms had been sold; of the remaining 53, the physical assets of 35 had been disposed of, though their corporate names still were owned by the Custodian. Most of the 18 that had not been sold hung under the shadow of legal uncertainties. General Aniline, the largest of them all, worth $35 million when seized, $100 million now, was being claimed by a Swiss company—a claim which was rejected by a United States Federal court.

THE DEMAND FOR RETURN OF ALIEN PROPERTY

This, then, was the general situation when a movement began in Washington to return all vested property to its former German and Japanese owners.

The demand, initiated by the Dirksen committee, was later sponsored by a group of Americans called the Committee for Return of Confiscated German and Japanese Property. They based their case principally on moralistic grounds. Confiscation, as they termed the seizure of enemy property, was held to be contrary to all American ideals. It violated the American regard for the sanctity of private property. In support of this contention members of the committee quoted the Bill of Rights:

"No person shall be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation."

But could this principle be applied with equal logic to the property of aliens who had just attempted to destroy the United States? To be more specific, were the American holdings of I. G. Farben, for example, which had been one of Hitler's mainstays, to be regarded as inviolate now and beyond the jurisdiction of the Alien Property Custodian?

Those who opposed a return of enemy property opposed every part of the plea. They began by pointing out that confiscation, in the usual meaning of the term, was hardly a word to be applied to a process on which all of the affected nations had agreed, calling the agreement liberal, humane, and sound. They further pointed out that no private individual in Germany would suffer from this so-called "confiscation" since the German Government had undertaken to reimburse its private citizens. The demand for the return of enemy assets, they argued, merely called upon the United States to reimburse German citizens instead of allowing the obligation to remain with the German Government. It was, in short, they maintained, "a grab for an American handout."

As one clergyman, writing to the Pulpit Digest, put it: "What a strange, new philosophy that is—that those who win a war in the cause of decency should be called upon to pay heavy reparations to those who lose it in the cause of intolerance."

To implement their indignation further, those who opposed return of enemy property—and the consequent repudiation of the Paris agreement made with our Allies—attributed the campaign to high-paid German lobbyists and produce the names of several who had registered as being in German employ. Congressman LEO W. O'BRIEN, of New York, speaking before the House Interstate and Foreign Commerce Committee, in April 1956, quoted expenditures by I. G. Chemie, or Interhandel (a Swiss holding company for I. G. Farben interests) of over $400,000 in 1954 and $350,000 in 1955 for lawsuit and attorney fees in the United States. "This, of course, is the action to gain the return of the General Aniline and Film Corporation," the Congressman said. "This is $750,000 in only 2 years." And it concerned only one of many German properties.

In spite of such disclosures the movement for the return of enemy assets had steadily gained momentum. Several Senators and Members of the House of Representatives were induced to work in its behalf. Senator EVERETT M. DIRKSEN, of Illinois, introduced such legislation in 1954, and the following year a joint resolution was introduced into the House of Representatives.

Neither these nor subsequent bills which have been introduced have reached a vote on the floor of the House or Senate.

Added to this has been the personal intervention of Chancellor Adenauer of West Germany who sent a communication favoring return to the President of the United States. In his reply of August 7, 1954, President Eisenhower stated that "None of the measures [for return of German property] has the approval of my administration." He added:

"Because of the great dislocation in the German economy which took place as a result of the war, the Allied Governments decided to look to German assets in their territories as a principal source for the payment of their claims against Germany. The recovery of the German economy, which has progressed so rapidly and so well under your administration, was thus not hampered by a large reparation burden. In considering the problem of the vested assets, it is necessary, therefore, to take into account legitimate claims on the part of American citizens arising out of the war for which some provision should be made, if the original approach is reversed."

Many persons on both sides of the issue attempted to demonstrate the legality or illegality of the proposal—indeed, of all measures intended to give property back to those who had been enemies of the United States. Would such an act be in conformity with international law? Or was the only applicable international law that which had been written in the 18-nation pact known as the Paris Agreement?

The American Bar Association assigned a special committee to report on the Dirksen bill. Though the committee voted by a margin of better than 3 to 1 against the bill, both sides concurred in the opinion that the question of returning enemy assets involved not legalities but rather a matter of national policy. Ten distinguished members of the bar association who professed themselves to be in favor of the Dirksen bill nevertheless asserted in a joint report: "The central problem is not whether privately owned German and Japanese property could lawfully be confiscated by the United States in 1942, under appropriate congressional authority, as an act of war, but whether those assets, having been vested, should now be returned as an act of grace. We therefore agree that the issue before the Congress is not one of juridical power but of national policy."

One of the most important phrases in the entire controversy lies in the four words: "an act of grace."

These words recognize, wherever they appear, that the return of enemy assets is not a matter of law, of obligation, or of compulsion; it is to be determined solely as an act of grace—which is to say, a matter of choice based on America's feelings. The decision to be reached lies not in legal texts but in the heart and conscience of the American people.

THE JOHNSTON BILL

The newest of the bills designed to return enemy property—the Senate bill 600, sponsored by Senator OLIN D. JOHNSTON, of South Carolina, is expected to be reported out of committee for a Senate vote in 1957.

The Johnston bill differs from the earliest bills and resolutions on the subject. The difference has evoked outraged protests from the bill's opponents. For, whereas early efforts to have alien property returned to the Germans and the Japanese concentrated on this single objective, Senator JOHNSTON's bill does not. It has added some 24 pages that bring together, in a single bill, all war claims against former enemy nations. The bill seeks to legislate for Americans with claims against the German and Japanese Governments as it legislates for Germans with alleged claims against the United States.

Senator JOHNSTON's bill asserts that this joint purpose "should strengthen the foreign political and economic policies of the United States; such a program is necessary to reaffirm and promote respect for the basic and fundamental concept of the inviolability of private property in our national and international relationships; * * * to that end it shall be the policy of the United States and the purpose of this act to provide a coordinated program for—

"1. Financing the payment of war damage claims of United States nationals against Germany and Japan in their conduct of World War II.

"2. Returning privately owned property, or proceeds thereof, vested by the United States as the property of German or Japanese nationals or the nationals of friendly neutral nations."

The immediate charge of those opposed to the bill is clearly expressed in the words of several New York attorneys:

"The effect of this joint-purpose bill is too obvious to be missed. A well-intentioned American legislator who would willingly and promptly do everything in his power to bring about the settlement of an American citizen's claim against Germany is stymied. He cannot vote for the interests of his American constituent without also voting for the interests of those who were recently enemy aliens. He is required to regard German demands as equivalent to and morally as compelling as American claims. This is political trickery of the most blatant kind, designed to send the German lobby's program through the Congress on the tails of a superficially patriotic attempt to help American citizens settle their claims. The device is unworthy of the Congress. It is unworthy of all who would give unbiased consideration to the problem of enemy property that is vested in the hands of the Alien Property Custodian."

Critics of the Johnston bill demand that it be divided into its two basic parts, each to be considered and voted upon separately: (a) the interests of American citizens and (b) the interests of former enemy aliens.

Yet proponents and opponents of the bill alike regard this change as wishful thinking. The bill has already been written, considered in committee, debated in newspapers. It is what it is. When it comes to the floor of the Senate for vote, it will undoubtedly appear substantially in its present form.

ARGUMENTS PRO AND CON

This fact, however, in no way alters the moral and ethical factors involved in the return of enemy assets. Whether these be judged by themselves or in conjunction with

American claims, the arguments for or against remain unchanged.

Some of the questions which the American people will have to weight, pro and con, are analyzed below.

Confiscation?

Those favoring the return of enemy assets hold that retaining them would amount to confiscation. They argue that the United States, dedicated to the sanctity of private property, should never sanction confiscation. It cannot set such an example to the rest of the world. As long as we preach the inviolability of individual rights, we must demonstrate our faith in such rights by our actions.

Those who oppose the Johnston bill insist that no confiscation of any kind is involved in the present issue. The Republic of Germany, in the Bonn Convention, undertook to safeguard its nationals against individual loss by compensating them from the German treasury. Considering the total amount at stake at the time—$300 million—this would subject the German treasury to far less strain than if it had to pay full war reparations to the Allies. Even the Germans never spoke of this method as being confiscatory—that is, not until their lobby began to operate in Washington. If German nationals have not yet been compensated by their government, the fault lies with the German Government itself, not with Americans. There is no reason why Americans should be penalized for the failure of the German Government to meet its promises to its own people.

Retaliation?

Continuing the argument against confiscation on another tack, the proponents of the bill warn of the dangers it threatens. We Americans, they point out, are constantly and peculiarly vulnerable to retaliation. To quote Mr. Charles R. Carroll, an attorney speaking before the American Bar Association:

"American private investment in foreign lands today is certainly not less than $23 billion * * *. These totals are made up of thousands of enterprises * * * subject to the attitudes and practices of the foreign governments under which they live * * *. If we use the incident of war as a justification for confiscation, we can expect that justification to be availed of against our nationals."

In other words, other nations may subject citizens of the United States to a quid pro quo, and we Americans have a tremendous foreign investment at stake. Let us not tempt others into hostile reprisals by setting a confiscatory example.

This argument, say the opponents of the bill, is an absurd threat calculated to stir our fears. It is founded on an illusion urging appeasement in the face of a danger which does not exist.

To begin with, the argument presupposes another world war, with Americans this time fighting all those nations in which they have their $23 billion investment—which is to say, practically the entire free world. It presupposes that having gotten into this war, the United States would then lose it; and that as a result of defeat all American property in foreign lands would be confiscated.

Under what other circumstances would enemy countries be in a position to retaliate for our refusal to return enemy assets today? This argument, say its opponents, has no reality or imminence.

RETURN THE FULL PROCEEDS?

If properties which were vested in the Alien Property Custodian have been sold, let the full proceeds be returned to the citizens of the Axis, say those in favor of the Johnston bill. This is the only fair and equitable procedure possible, even though many of the properties are worth more today than when they were seized. As a committee of 12 lawyers put it in a statement to the bar association: "To suggest that we should keep the excess over book value (the profit realized by the sale of the property) * * * is to use an accounting device as a measure of just compensation. Are patents, recorded at a value of $1, subject to seizure for that price? * * * Since the war the value of the dollar has been more than halved." How, then, proponents of the bill ask, can we provide an adjustment for this inflation? "To attempt to adjudicate just compensation in each case would be the work of years. We have, therefore, recommended that assets on hand be returned to those from whom they were vested; that if the properties have been sold, the proceeds be returned."

The demand that full payment be made to the Germans on the basis of the price for which their property was sold rouses instant moral indignation.

As has been indicated, the total value of the vested property in question had approximately doubled in value at the time of its sale, over what it was when sequestered. Put in figures, the $300 million in assets which the United States seized climbed to a worth of more than $500 million when sold. To return the full proceeds to the Germans on the terms suggested would give them a profit of more than $200 million.

Of this a minister wrote: "Do we now condone the recent Nazi efforts to destroy our civilization? If we do not condohe them, how can we be so illogical, so paradoxical, so utterly inconsistent as to reward those who tried to crush our liberties?" He pointed out that the $500 million which would be turned over to the Germans by this plan must ultimately come out of the American pocket; and he adds of the advocates of return: "They speak of the horrors of confiscation, as they piously plead the cause of former Nazis. But why are they in no sense concerned about confiscating $500 million from Americans?"

This minister urged that we "prove to all mankind that there can be no monetary profit in any Hitler-like attempt to rob civilization of its freedom." Maintaining that Americans are not a vindictive people—the United States has, indeed, given Germany over $4 billion for rehabilitation—he asserted that on the other hand Americans ought not to be foolish enough to be cruel and unjust to themselves.

Another speaker in opposition to the Johnston bill declared that if the United States penalized itself by returning all German property plus a huge windfall of profits, it would virtually be admitting it had been wrong in fighting Hitler. The return of property with the award of fat profits would constitute a recognition of our war debt to the Axis. We would, in effect, be paying a $200 million premium as the price of having opposed the Nazis.

Abrogate the Paris agreement?

Do we have the right in the United States unilaterally to abrogate the terms of the Paris agreement?

We have that right without question, say the supporters of the Johnston bill. The Paris agreement was not technically a treaty at all, they maintain. It was an executive agreement among representatives of the heads of state. When Secretary of State John Foster Dulles was asked to comment on this point before a subcommittee of the Senate Judiciary Committee, he said:

"In my opinion, the agreement, whatever its intent may have been as an executive agreement, was without authority whatever to bind the Congress of the United States in this matter. The property had been vested by action of Congress. I believe Congress has the right to decide what to do about the matter. I do not believe that the freedom of Congress in this matter has been curtailed in any way by this executive agreement. I am not a believer in the power of the President, through executive agreements, to cut across the normal legislative powers of Congress.

"I may say that, as a matter of interpretation of that agreement, it can be argued that it was not intended to operate in perpetuity but was designed as a temporary measure perhaps to assure against a revival of German militarism and the use of German important commercial assets possible as an instrument of German militarism.

"I think that that danger has passed and that if the agreement be given that interpretation, which I think is a reasonable one, then the action which you contemplate is not only compatible with the powers of Congress but also is compatible with the executive agreement itself."

Later in his testimony the Secretary of State made his position even more emphatic. He added: "I do not believe that there can be any executive agreement, not approved by the Congress in the form of legislation or a treaty, which would bar the Congress from doing what it pleases with respect to this vested property."

Such a declaration on the part of the Secretary of State brought an immediate response from those Americans opposed to returning enemy property. Was the United States turning its back on its recent allies, upon whom it had urged the retention of these same enemy assets at the Paris conference?

The Secretary's words also evoked instant protest abroad. Several of our allies made formal protests to the United States. One of the most articulate objections came out of the Netherlands. Conceding the fact that the retention of enemy property had indeed been done by executive agreement, this document, written by J. C. W. M. Huijsmans, declared:

"The limits within which the President is empowered to conclude executive agreements have never been precisely stated. In practice, the President himself decides on these boundaries. Foreign countries must rely on the President's not going beyond the extent of his powers. * * * No President will be willing to bind his country by agreements without having the certainty that these were within his powers to conclude and can be carried out. * * *

"On the basis of existing practice, the Netherlands and the other members of the Paris Agreement had good reason to believe that these agreements were authoritatively signed by the United States. * * * If this were not so, the United States would be permanently guilty of a shameful abuse of confidence of foreign countries with whom they conclude agreements almost daily in the form of executive agreements. * * * Furthermore, it is, to say the least, remarkable that an American Secretary of State, who is responsible for relations with foreign countries and who himself daily concludes executive agreements in the name of the United States or has them concluded, should confine himself to the constitutional aspects solely during the hearing spoken of above and does not say anything as to the fact that under international law, the United States is bound by executive agreements. * * * In any case, it is not permissible that this provision should be abrogated unilaterally by 1 of the 19 countries, involved in the Paris Agreement. A unilateral violation of the obligation assumed here would undermine the entire settlement, as laid down in the Paris Agreement."

As a matter of dollars and cents, the opponents of the Johnston bill say the United States may well be able to afford the gesture of turning $500 million over to the Germans and Japanese. Some of the other signatories of the Paris agreement, however, would find such an act a drain on their economies. Burdened by heavy debts incurred during

the war for the Allies' common survival, relying now on loans and assistance from the United States, they would deem it a shattering sacrifice to return former Nazi property with a bonanza of accrued profits. These are the lands that were recently overrun by German tanks and Panzer divisions; these were the lands that felt the full, crashing impact of German bombs. Are they now to be urged, by our example, to reward their former enemies with handsome profits, assuring them in spirit that their property was merely being held in friendly escrow during the battles? Such an attitude is declared unrealistic and unwarranted. Even Guatemala, which was not physically attacked during the war, refused by decree to allow the Germans to profit by the return of their property.

Generate ill will?

A report of the Senate Judiciary Committee, dated July 26, 1956, argues in favor of the Johnston bill: "In comparing relative values or costs, no one can estimate what it may cost the United States not to return the seized assets. Confiscation penalizes a few but generates ill will among many. We cannot afford to relinquish the good will which we have labored so assiduously at such great cost to promote." Later, quoting an aide memoire, the committee adds, "Membership in the family of nations imposes international obligations."

Opponents of the Johnston bill see in this bid for international good will only a bid for the good will of the former enemy nations. They cannot understand why the United States should now, to all intents and purposes, be siding with its former enemies against the economic interest of its allies. Does the good will of our allies mean less than the good will of former enemies?

Create individual hardship?

We should never forget, say the advocates of returning enemy property, that much of this property represents the sacrifice of individuals in modest circumstances. Only a few of the cases at issue concern huge corporations like I. G. Farben. The vast majority—thousands, indeed—affect persons who suffered bitter private hardship because of confiscation.

As illustrations of such hardships there are allegations such as the one of the boys who fought in the American Army in Korea. He was killed. The beneficiary of his $10,000 insurance policy was his mother—a German national. The policy was sequestered as an enemy asset. The mother has never been paid.

This type of case, multiplied by the thousands, represents some of the smaller war claims the Germans hold against us. As a matter of morality and humanitarianism, say the supporters of the bill, their property should promptly be returned.

The Alien Property Custodian has branded the story of the boy who fought in Korea as completely untrue. The story has been quoted by many proponents of return, and it has brought many letters. But the Custodian insists that his office does not and never did operate under a policy of seizing military insurance. Moreover, it had nothing to do with Korea. Whether the story is true or not, however, the opponents of return say they do not counsel unfair treatment of any individual, German or otherwise. Nevertheless, they do not approve of giving German nationals preferential consideration over Americans. Our own people, they point out, still hold over 13,000 unsatisfied claims as a result of war damage; and they repeat that these claims should not be tied up in a single bill with German demands. Why, these opponents ask, should Americans be left to wait while first we placate our former enemies? The only explanation they can see lies in the determined activities of the German-paid lobby. And the German lobby, they add, is supported by the great corporations like I. G. Farben, not by small claimants. When the administration offered to return seized German and Japanese assets up to $10,000 to each former enemy, pointing out that this would be a full return to 90 percent of the claimants (about $50 million to Germans and $7,500,000 to Japanese), this offer was rejected by the German lobby.

How much will it cost?

As a matter of banking and fund management, it will cost us little or nothing to return German property, say the advocates of return. The proceeds of its sale by the Alien Property Custodian, it should be remembered, were to be earmarked for paying American war-damage claims. But there exists another source for raising such sums.

The latest report of the Senate Judiciary Committee explains: "The United States expects to receive $1 billion from Germany for postwar economic assistance under the London Debt Settlement Agreement of 1953. Payments are to be made on this obligation semiannually. Payments currently being made are in the amount of $12,500,000 and represent interest only. Beginning July 1, 1958, payments are to be made semiannually in installments of $23,790,000, including principal and interest. There are to be 59 such installments and one additional final installment in the amount of the unpaid balance."

Those who would return enemy property would use these German debt payments to meet American war-damage claims. Since the money is already out of the United States Treasury, they argue, the fund to pay damages—or certainly no great additional amount—need not be taken from the Treasury.

This kind of reasoning, say the opponents of return, is false and illogical, and can lead only to uneconomic conclusions. The money from Germany is due the American Treasury. It is part of the Nation's assets. If we divert it, using it to pay war claims, we divert it from all the other uses to which it might have been put.

To siphon a billion dollars away from our Treasury is fundamentally to take it from the American taxpayers. In other words, to keep it out of the Treasury is tantamount to taking it out. The difference is one of semantics. In the long run the act will cost the American people a billion dollars.

Again, say the bill's opponents, we return to the principal of penalizing ourselves and our own citizens in order to satisfy the demands of former enemy aliens—and of the active lobby that now serves German interests in Washington.

As all parties appear to agree, the problem is not so much one of law as of national policy; not so much one of finances as of ethics and morality. The answer must lie in our Nation's heart and conscience.

St. Patrick

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the invocation by the Most Reverend John J. Russell on the occasion of the Hibernian banquet in Charleston, S. C., on March 16, 1957. We should all take this as our motto in these days "which try men's souls":

THE BREASTPLATE OF ST. PATRICK

I rise up today,
God's power guiding me, God's might upholding me,
God's wisdom directing me.
The eye of God looking before me, the ear of God listening for me.
The word of God speaking for me, the hand of God defending me,
The way of God, stretching out before me, the shield of God protecting me, the hosts of God guarding me,
From the snares of demons, from the seduction of vice, from the wicked desires of my nature,
From every man who plots against me, near or far, alone or with others.

Also included is a speech on the same occasion by the Reverend Louis F. Sterker, society chaplain. I have never found so much contained in so short an address.

Your excellency, Bishop Russell, distinguished guests, officers, and brother Hibernians, victory is the theme of St. Patrick's Day. Fifteen centuries ago St. Patrick, with zeal for God and the sword of faith, won a battle over paganism. The spoils of his victory is the joyous faith of the Irish people, who through the centuries have steadfastly held to this faith, and which faith they carried throughout the world.

What kind of a man was Patrick, and why is his victory so significant for us today?

St. Patrick was a spiritual giant who burned with love for the very people who enslaved him. This was not a natural but a supernatural love (a love like God's for us) which led him fearlessly face to face with the greatest obstacles to accomplish a mission of sharing his divine faith with the Druids of old.

The paganism of Ireland in Patrick's time was much the same as the communism of today. Slavery, fear, oppression enshrouded the place and people. The hostility against Christianity was as rampant. St. Patrick accomplished a devastating victory—paganism was destroyed and the faith planted among his beloved people. His battle was won with the weapons of prayer, penance, and personal zeal.

How many other Patricks are there in the world today? Men who are on fire with the love of a people, a mission, a homeland, from which they have been exiled, or in which they have been enslaved by the Communists. The Mindzenties, the Stepanacs, the missionaries, the thousands who are willing to suffer imprisonments, tortures, even death, for this same faith.

St. Patrick brought the blessings of Christianity to the Emerald Isle 15 centuries ago. We pray and hope that the blessings of faith will replace the evil of communism which has engulfed so much of the world today. We know the faith will not only survive, but will triumph over this evil; however, we must plan our defense against any eventuality on the part of the Kremlin. It would be well for us to ponder the victory of St. Patrick whose only weapons were prayer, penance, and personal zeal for the cause of Christianity.

Navy Appreciation

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. HERLONG. Mr. Speaker, most communities appreciate it when a service unit is moved into their area but I

dare say that few have taken one to heart as much as Sanford, Fla., has its naval air station. There a wonderful spirit has developed between the station personnel and the community. The city and its chamber of commerce, headed by Manager John Krider, and the newspaper, the Sanford Herald, and the Seminole County Junior Chamber of Commerce have cooperated 100 percent with the Navy and its wishes. On the other hand, the Navy has cooperated to the same extent with them.

Now to show what the people of Sanford think of the Navy, the folks down there are going to hold Navy Appreciation Day this Saturday. In this connection, I include the following editorial from the Sanford Herald of March 26, 1957:

FOLKS TO SHOW GRATITUDE AT NAVY APPRECIATION DAY, SATURDAY, MARCH 30

Saturday, March 30, is a day that will long be remembered in Sanford.

It will be Navy Appreciation Day for all of Seminole County. The entire day and festivities will be turned over to the honor of the United States Navy and all its personnel at the Sanford Naval Air Station.

Navy people—their entire families—will be admitted free to all of the activities which will include a gigantic fish fry with all of the trimmings, a baseball game between two of the New York Giants farm system teams at Sanford Memorial Baseball Stadium, fireworks early in the evening, and climaxed with a big street dance.

To make the event a complete success, the Seminole County Junior Chamber of Commerce, staking the daylong festivity, is asking that local citizens turn out in force to show their appreciation for all that the Navy has meant to them here in Seminole County.

Plans have been completed to feed more than 5,000 people—and to do that there will be more than 2 tons of fish, 6,000 ears of corn, and tons of other food to go along with making a fish fry an enjoyable and delicious meal. To be sure—the Jaycees even thought of butter for the corn on the cob.

All of Sanford will more than likely be out to proclaim the day one of importance to them for as each person in our community knows the Navy has been the bulwark of our economy.

The Navy, when the Sanford Naval Air Station was reactivated, brought with them hundreds of families, each one looking for housing, each one a customer in Sanford's fine stores, each one purchasing automobiles, gasoline, boats, fishing tackle, everything that makes life worth living—and most of those purchases have come from Sanford and Seminole County shops and stores.

Merchants of Seminole County well know that the Navy is important to our economy and the growth of the community. Merchants have prospered because of the increased sales, the movement of stocks which they had previously not carried, and because of the many intangibles Navy families purchase such as insurance, stocks and bonds, savings accounts in our banks, and investments of many kinds.

Best of all is the fact that Navy families have become Sanford families. They have made the finest of neighbors, joined parent-teachers associations, churches, their children have made fine and honored students, the concert series became a huge success because of their attendance, Sunday schools have been overflowing because of Navy family children, the Women's Auxiliary of our hospital have added many Navy wives to their roster and in turn they've rendered valuable service to the community—whatever the event, the organization, the group, you will always find someone from the Navy an important cog in the operation.

Now—Sanford and Seminole County want to show in a small way just how much the Navy means to the community.

The Seminole County Junior Chamber of Commerce has shouldered an enormous task in sponsoring and putting on the Seminole County Navy Appreciation Day. Naturally, these young businessmen have found it necessary to call upon other civic and fraternal organizations to help them out because of the huge number of people necessary to serve the meal and handle the big crowd that is expected to attend.

The Sanford National Guard, as they have done many times in the past, have pitched in to help and as these young men filter through the crowds Saturday we will see them again in action to lend a helping hand and doing their always exceptionally fine job of being courteous and helping others in their trouble.

Other organizations have spoken up and voiced their desire to take part in the job to be done in showing the Navy that "we like them." For instance, the USO girls are going to serve in one of the many serving lines, the Business and Professional Womens Club will take over one or two of the serving lines—and there will be other organizations speaking up to offer assistance in one of the biggest undertakings of the community in a long time.

The Jaycees are to be commended for the wonderful job they are doing—from every side there comes complimentary remarks about their agressiveness and willingness to do the tough jobs when they come along.

The president of the group, and the officers and board of directors, the committee heads and members, all deserve a round of applause from a grateful community for taking upon their shoulders of this gigantic task.

When Saturday night comes to a close there won't be a Navy person in Sanford who will not have been honored for the grand job they're doing in the service to their country.

Sanford is grateful for their being here and becoming a part of the community—Seminole County Navy Appreciation Day is just a gesture in letting everyone in the Navy know that they are appreciated—deep in the hearts of Sanford people there is a greater appreciation, one that just can't be shown by any event, no matter how large or how long.

The United Nations and Public Understanding

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 28, 1957

Mr. HUMPHREY. Mr. President, I wish to call to the attention of the Members of the Senate an address by the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs. This address was delivered before the National Council of Jewish Women, Tuesday, March 19, 1957.

Assistant Secretary Wilcox discussed the role of the United States in the United Nations during these recent critical months. He also appropriately emphasized the importance of public understanding of the United Nations—its assets and its limitations.

I call to the Senate's attention one paragraph from this excellent speech, where Secretary Wilcox said:

In this connection, may I remind you that the United Nations can only do what its members want and permit it to do. We should not make the mistake, therefore, of blaming the Organization for the doubts, the uncertainties, and shortcomings displayed by its members.

He reminds us of the great responsibility that the United States has as one of the members of the U. N.

I ask unanimous consent that the address be printed in the Appendix of the RECORD:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE UNITED NATIONS AND PUBLIC UNDERSTANDING

(Address by the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, before the National Council of Jewish Women at the Shoreham Hotel, Washington, D. C., March 19, 1957)

I am happy to take part in your public affairs panel this morning. The National Council of Jewish Women has a long and distinguished record of fostering enlightened understanding of national and international problems.

Your organization reflects an important segment of American opinion. Your help and your understanding will continue to be needed very much as we seek to establish through the United Nations the basis for a just and lasting peace in the Middle East.

I am glad to have the opportunity to be here to discuss some aspects of critical issues before the United Nations. The intense glare of publicity that has attended every step of the negotiations on Hungary and on the Middle East has not always been illuminating. It has at times perhaps highlighted the unessential, even the nonexistent, and at other times cast into deep shadow the main lines of policy and action. I should like to try to set in focus the role of the United States in the United Nations and the role of the United Nations in dealing with world problems, especially aggression and threats to the peace.

Set in its simplest terms it is United States policy to support the United Nations and to work through it to establish and maintain peace and well-being among nations. We believe it holds the best hope for the security and well-being of the American people.

We attempt to conduct our relations with other nations in conformity with the purposes and principles of the United Nations Charter. We avoid the use of force as a means of settling disputes between ourselves and other states. If a problem arises which properly belongs in the United Nations, we use our influence to bring it there. If, in our opinion, it is not a United Nations matter, we urge its settlement by other means.

The United Nations is a political organization which has its proper uses and its limitations. It is not a remedy for all the world's ills. Misunderstanding on this score is, I think, the basis of most criticism of both the United States role in the United Nations and the role of the United Nations when attempting to deal with world crises.

LIMITATIONS OF THE UNITED NATIONS

This past year has been a year of grave tests for the United Nations and a time of peril for world peace. The situations that arose in Egypt and in Hungary provided both the peril to mankind and the tests for the

efficacy of the United Nations. These issues have in common the fact that military force was used by one nation against another. This is the ultimate issue the United Nations was designed to meet and solve. The degree of success achieved by the United Nations to date in restoring peace with justice is a gage of its capabilities and its limitations as a peace-enforcing institution. Even more important, in my opinion, it is a measure of the extent to which member states will permit it to perform its peacemaking functions.

The criticism has been leveled at the United Nations that it has proved weak and ineffective. This was charged not only in the case of Hungary because of the Assembly's inability to get the Soviet Union to withdraw its forces, but also in the Middle East when compliance with the recommendations of the General Assembly lagged.

We must face the fact that with great power disunity reflected in the Security Council, the United Nations, for the time being, is handicapped in preventing breaches of the peace and bringing about restoration of peace. The role of the General Assembly is largely one of discussion and recommendation.

This does not mean, however, that the United Nations is without power to influence the conduct of nations. In some ways it may be likened to the role of the policeman in a community. In a well-ordered community he is a symbol of law and order, an arbiter, created by the community for its own protection. Called in on a dispute, he is not set upon by the mob. He is permitted to exercise a power which he does not in himself, possess. But this means that the community must be back of him.

The world, unfortunately, is not yet wholly made up of such communities. Where force alone is respected the General Assembly must still play a limited role based largely on the constructive power of world public opinion.

This state of affairs has not been fully appreciated in the two great issues with which the United Nations is still seized.

The United States, because of the leading role it has played in this historic session of the General Assembly, has shared to a considerable degree both the public approval of the United Nations successes and the criticisms of its failures.

In this connection, may I remind you that the United Nations can only do what its members want and permit it to do. We should not make the mistake, therefore, of blaming the Organization for the doubts, the uncertainties, and shortcomings displayed by its members.

THE CRISES IN EGYPT AND HUNGARY

The problems presented to the United Nations by the crises in Egypt and Hungary are well known. There was a fundamental difference in the nature of these problems, however. In Hungary Soviet troops, ostensibly there to protect Hungarian territory from outside aggression, turned their guns inward against the defenseless Hungarian people whose only crime was to seek peaceably a government of their choice. In Egypt, on the other hand, the clash was between the armed forces of the states involved.

Moreover, the Israeli attack occurred as a result of a long series of serious provocations and violations of the armistice agreement. There was no such conceivable excuse in the case of the Soviet use of armed force against Hungary.

Events so turned out that the United States found itself taking the lead in United Nations action in the case of both Egypt and Hungary. In neither instance did we really have any choice of the role we were to play. Both were instances of the use of force against the territorial integrity of another state.

In the former case, it was our grievous task to bring the charge of violation of the United Nations Charter against our friends and allies; in the latter, against a government and a system which is the implacable foe of freedom.

We pride ourselves on being a Nation of laws, not of men. The U. N. Charter likewise provides that nations conduct their relations on the basis of international law and justice.

We had to say to ourselves that if we ever hope to get anywhere with the peaceful settlement of disputes we must constantly take a stand against recourse to military force, as a matter of principle, and in the interest of our own Nation as well as world peace. Speaking to the nation on the Middle East situation on February 20, President Eisenhower said: "It is an issue which can be solved if only we will apply the principles of the United Nations."

Our reason for going to the United Nations, then, was to defend this fundamental principle—not because we were pro-Arab or pro-Israel or anti-Russian or because we were for or against any state or group of states.

I think there was no lack of public understanding and support in this country for the decisions taken by the United Nations on both areas of conflict. Certainly there was wide and strong backing from the membership of the United Nations. There was, however, great public impatience with the delay in the Middle East and the flat refusal in Hungary to comply with the terms of the resolutions adopted by the General Assembly aimed at restoring peace. It was quickly forgotten that in both cases what the United Nations was doing, or trying to do, was dependent on the voluntary cooperation of the offending states and the states offended against. The reason for this, of course, is that only the Security Council may take decisions of a compulsory character in such instances. With the power of the Security Council weakened by the veto, the United Nations has had to fall back on the General Assembly which has only the power to recommend.

Given these circumstances, I believe we should be encouraged by what the United Nations has so far accomplished in the Middle East. It has shown that the conscience and the moral consensus of the vast majority of United Nations members, when the chips are down, favors peaceful settlement of disputes and adherence to commitments assumed under the Charter, even when such course seems to run counter to individual national interests.

In the case of Hungary, the United Nations inability to secure compliance with its urgent and repeated recommendations has caused deep concern not only to the American people and Government, but to free peoples throughout the world. In the circumstances, it has been, perhaps, only natural for segments of public opinion to oversimplify the problem in seeking to place the blame. It has been charged that the United Nations is weak and futile; it has been urged that Hungary and the Soviet Union be thrown out of the United Nations for their defiance; it has been argued that the United Nations and the United States have applied a "double standard"—one for the weak and one for the strong.

I would like to attempt some clarification of this latter point. In his broadcast to the American people the night of October 31 on the critical situations in Hungary and the Middle East, President Eisenhower said: "There can be no peace without law. And there can be no law if we were to invoke one code of intenrational conduct for those who oppose us and another for our friends."

Though he was speaking about the attack on Egypt at the time, the record shows that the United States and the United Nations consistently adhered to this principle. The standard applied to the use of force in Egypt was likewise applied to the use of force in Hungary. The essential difference was that the countries directly concerned in the Middle East crisis responded to offers of United Nations assistance to bring about a peaceful settlement. In Hungary, such assistance was flatly refused. Had the response been the reverse there would now be no United Nations Emergency Force in the Middle East with a deterioration of the situation there which I leave to your imagination.

THE HUNGARIAN SITUATION

The crux of the problem of Hungary was what can the United Nations do when one of the major powers refuses to cooperate with the peacemaking efforts of the General Assembly?

The answers are fairly simple but not very satisfactory. We could attempt to terminate its United Nations membership. This is obviously not a very practical solution since the concurrence of the permanent members of the Security Council is required.

The General Assembly could recommend certain political measures such as breaking diplomatic relations. Unless it could persuade a large proportion of United Nations members to do likewise, this would not be a very effective sanction and in the case of the United States, would cut us off from a useful diplomatic contact.

The General Assembly could also recommend economic sanctions. Again, unless a large number of nations could be persuaded to join in such sanctions, the pressure thus exerted would be relatively slight. This is especially the case with the U. S. S. R. and its satellites whose total resources are great and where trade and economic relations with the West are already on a very small scale.

There is, of course, the possibility of attempting to introduce United Nations observer personnel, but their entrance would require the consent of the state concerned.

The final recourse would be to recommend the use of military forces. There is not the remotest likelihood, with the dangers involved in the atomic age, that the United Nations would vote for the latter action.

Depressing as this picture may be, it reflects the situation in which the world finds itself at the present time. This does not mean, however, that because outlaws exist in the world community, that the rule of law should not be applied wherever possible.

May I add just a word, here, about the so-called double standard. This is nothing new. In effect, the double standard was built into the United Nations Charter when the veto provision was inserted at San Francisco. This gave the great powers a privileged position in the organization.

But I think that we seriously misread recent history if we believe United Nations resolutions on Hungary failed to have an impact on the Soviet Union and its satellite system. These resolutions put the Soviet Union's barberous misdeeds squarely under the white light of world opinion. They did more to expose the implacable and diabolical nature of international communism than anything that has happened since World War II. Perhaps more important, the inherent weakness of a system that has to rely on force alone to impose its will on the majority was shockingly revealed.

The Secretary of State at Canberra last week said, "Throughout the satellite area, there is a revulsion against the brutal colonialism and exploitation of Soviet imperialism." It is my opinion that this revulsion, as a result of the facts revealed in General Assembly debate, has extended to the corners of the free world.

THE MIDDLE EAST

There was a great deal of public controversy over the possibility of the United Na-

tions imposing sanctions against Israel. Now it is true that at one time it appeared that a majority of United Nations members might have felt themselves compelled to impose sanctions if other methods had failed to bring about Israel troop withdrawal from Egypt and the Gaza Strip. As a member of the United Nations, the United States would have had to take its stand on such an issue should it have arisen.

We believed it essential that Israel should withdraw in its own best interests. This we felt was a necessary prelude to a solution of other problems in the Middle East.

I think it significant that the use of traditional bilateral diplomacy to supplement United Nations action with regard to the Middle East problem was of major importance in preventing the matter of sanctions becoming a divisive issue in the United Nations. In this connection, I would like to quote a statement of the delegate of Ceylon to the General Assembly after Israel had announced its intention to withdraw: "I, as a humble representative of a small nation, would like to pay my tribute to the Government of the United States of America for creating a set of circumstances which enabled the withdrawal of Israel troops. It is, in my opinion, a very useful act in the solution of the troubles before us."

UNITED STATES POSITION ON GAZA AND SHARM-EL-SHEIKH

The United States position on the Middle East problem has been made clear in various public documents beginning with the February 11 aide-memoire. During the long weeks in which the General Assembly has been occupied with the grave situation in the Middle East, the United States has sought a solution which would be based on justice and which would take account of the legitimate interests of all parties. On March 1 Israel announced in the General Assembly that it had decided to make full and prompt withdrawal behind the armistice lines in accordance with the General Assembly's Resolution of February 2, 1957.

In the course of this announcement, the Foreign Minister of Israel made certain declarations which, for the most part constituted restatements of what had been said in the General Assembly or by the Secretary General in his reports, or hopes and expectations which seemed to the United States not unreasonable in the light of prior actions of the Assembly.

On March 1, Ambassador Lodge, speaking for the United States in the General Assembly, took note of the statement of the Secretary General of February 22 in which he reported Egypt's readiness and willingness to make special and helpful arrangements in Gaza with the United Nations and some of its auxiliary bodies. In this connection, Ambassador Lodge said: "Obviously these matters are not for the United States alone to decide, but the United States can, I think, properly entertain the hope that such a useful role for the United Nations and its appropriate subsidiary bodies as the Secretary General has described could usefully continue until there is a definitive settlement respecting the Gaza strip or some final general agreement between the parties."

With respect to the situation in the area along the Gulf of Aqaba and the Strait of Tiran the United States position remains as stated in Ambassador Lodge's General Assembly speech of March 1: "It is essential that units of the United Nations emergency force be stationed at the Strait of Tiran in order to achieve there the separation of Egyptian and Israeli land and sea forces. This separation is essential until it is clear that the nonexercise of any claimed belligerent rights has established in practice the peaceful conditions which must govern navigation in waters having such an international interest. All of this would, of course, be without prejudice to any ultimate determination which may be made of any legal question concerning the Gulf of Aqaba."

Since then developments in Gaza have moved rapidly. We have kept in close touch with UN Secretary General Hammarskjold and with various members of the United Nations. Just yesterday Mrs. Meir, Foreign Minister of Israel, called at the Department of State to express her deep concern at the return of Egypt to Gaza, the reestablishment of its control therein and the reduction of responsibilities of the United Nations in the Gaza area. Mrs. Meir pointed out that Israel viewed this situation as contrary to the assumptions and expectations expressed by her and others in the United Nations on March 1 and subsequently. She also expressed her anxiety at reports and statements envisaging restrictions against Israeli shipping in the Suez Canal and the Gulf of Aqaba, and the maintenance of belligerency by Egypt.

SECRETARY DULLES

Secretary Dulles reaffirmed that the United States policy continued to be as publicly expressed in the speech of Ambassador Lodge in the United Nations General Assembly on March 1 and in the President's letter of March 2 to Prime Minister Ben-Gurion. The Secretary reaffirmed "that the United States would continue to use its influence in seeking the objectives of peace and tranquillity and the avoidance of any situation which would negate the great efforts which had been made by the world community to settle the current disputes in accordance with the principles of the United Nations Charter." The United States stands firmly by the hopes and expectations it had expressed with regard to the situation which should prevail in the area with respect to the exercise of the responsibility of the United Nations in Gaza, the free and innocent passage of the Straits of Tiran by the ships of all nations in accordance with international law, and the settlement of the Suez Canal problem in accordance with the six principles adopted by the Security Council and accepted by Egypt.

This Government will use its influence in every appropriate way to assist the Secretary General and the parties concerned to carry out the recommendations of the General Assembly and to create peaceful conditions in the area.

Very critical times remain with us. We have made progress along the road toward our objectives in the Middle East but the road ahead is long and difficult.

Our objectives have not changed. Through the United Nations there has been accomplished a cease-fire, the withdrawal of forces and the clearance of the Suez Canal has almost been completed. Immediately before us is the necessity for agreeing on interim arrangements for use of the canal and moving on to solution of the basic problems which gave rise to the present crisis. It is not sufficient to put out the fire, we must prevent it from breaking out again.

Getting at and removing the root causes is a formidable task. It is more than enough to challenge the patience of a Job and the wisdom of a Solomon. But can anyone seriously believe that a lasting peace will be possible so long as the boundaries between Israel and her neighbors remain unsettled and a feeling of insecurity pervades the entire area? Can we hope to avoid serious difficulties in the future unless real progress is made toward the solution of the Arab refugee problem and the development of the area's natural resources?

The solutions to these problems are as difficult as they are necessary. To find them, the United States is determined to continue to use every appropriate means both within and without the United Nations. In the process, we shall be serving the cause of peace with justice everywhere.

ENLARGED UNITED NATIONS MEMBERSHIP

I would like now to turn briefly to a development in the United Nations of great importance and, of late, of great public interest. That is the recent rapid increase in the size of United Nations membership—especially from Asia, Africa, and the Middle East. This reflects one of the great phenomena of the postwar period. In 12 years some 600 million people from this area have gained self-government or independence.

The United Nations is open for membership to all peace-loving countries able and willing to carry out the obligations of the Charter. The United States favors, within this definition, a United Nations as broadly representative as possible.

A United Nations that has grown in less than 2 years from 60 to 81 members and in which the Afro-Asian States now constitute more than a third of the total presents new problems and, I think, new opportunities. I do not think that it is necessarily cause for alarm.

Those who are concerned point to the fact that the General Assembly rather than the Security Council has become the voice of the United Nations and its most influential body. The relative strength of the Latin American States has been reduced. The conflict over so-called colonial problems has been sharpened. With the recent increase in membership the Afro-Asian nations alone, if they stood together, could no doubt prevent the passage of any important resolution.

This situation requires careful consideration. In actuality, aside from the U. S. S. R. and its satellites, these blocs do not often vote as an entity. We think of Afro-Asian as a unit. In fact, it is extremely diverse and contains sub-blocs of an ethnic, religious, or political nature.

On certain fundamental issues the Afro-Asian nations do stand very solidly together. I refer particularly to colonialism and economic development. On these they are often joined by the so-called Latin American bloc.

The fact is that the people of the world, regardless of their military or economic strength, want an increasing voice in world affairs. In the United Nations, and especially in the General Assembly, they find this voice. The traditionally great powers of the West whose greater economic and military strength give them a preponderance of authority and responsibility must heed this voice if they desire wide support for their policies and actions. They do not have to heed it, of course, and the General Assembly cannot enforce its recommendations on other members.

In my opinion, what is required of United Nations members in the enlarged General Assembly—where each State has one vote—is a special sense of responsibility. The smaller and undeveloped countries do have a collective power far out of proportion to their economic, military, and political strength. If they abuse this power, the General Assembly can become a center of contention and deadlock. On the other hand, the great powers, if their cause is just, should not lack the support of the majority of the General Assembly on important issues.

I believe, if we examine the record, that the performance of the 11th General Assembly reflected in general this sense of responsibility of which I speak.

On the Algerian question, for example, two Asian States, Japan and Thailand, played a leading role in developing a procedural-type resolution which avoided exacerbating the situation. This was an excellent example of Assembly moderation and restraint. On the Cyprus question, the General Assembly similarly avoided prejudging any substantive solution by adopting a simple resolution which has helped maintain an atmosphere reasonably conducive to future negotiations.

Here, too, an Asian State, India, was able to work out a compromise resolution generally acceptable to those principally concerned.

CONCLUSION

In conclusion, I should like to quote from an editorial in a recent issue of your magazine, Council Woman: "One thing is certain. The United Nations is the one solid hope of humanity for a peaceful and better world; and the United States can and must be its strongest supporter."

If the nations of the world had been compelled to live the past 12 years without a common meeting place; without basic rules by which they should conduct themselves; without machinery for the peaceful settlement of international differences; without a place to air disputes and seek agreements; then it is my opinion that the world might not have survived those 12 years. The stresses and strains have been so great; the ideological conflict so sharp, and the destructive power of the weapons available so immense, that without the unifying power of the United Nations we could have by this time, destroyed ourselves.

If the United Nations is indeed the one best hope we have for peace with justice, it is only commonsense to use it as the cornerstone for a sound, creative foreign policy. This does not mean that the United Nations dictates foreign policy to us or any other country. But enlightened self-interest dictates that we bend every effort to make the United Nations serve with increasing effectiveness the common and fundamental desires of mankind for a world in which "life, liberty, and the pursuit of happiness" are not only possible but attainable.

The Middle East

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following address by Sir Francis Rundall, K. C. M. G., O. B. E., H. B. M., British Consul General, in New York. Sir Francis Rundall delivered his address at the annual meeting of the New York State Bar Association, in New York City, on January 25, 1957:

THE MIDDLE EAST

(By Sir Francis Rundall)

Mr. President, distinguished guests, ladies and gentlemen, it is a great honor to be invited to speak to you today. I do so under the triple handicap of being an Englishman, a layman amongst lawyers, and a foreign-service officer. The first is really no great handicap, for during my time in the United States I have always found that Americans are ready—indeed eager—to listen to another's point of view. The other two are more serious. We are as a nation reputed—I am sure wrongly so—not to take lawyers seriously. I was told by an eminent professor of law at Cornell that the British were rash enough to undertake international negotiation with a minimum of legal aid—even to the point of letting laymen draft international instruments. The folly of this must be apparent to you all, but we remain, as he put it, curiously unrepentant. It is too sometimes stated that the British are both empirical and pragmatic in shaping their foreign policy—and neither quality should commend itself to a good lawyer. Finally, a Foreign Service officer should have no views of his own. He should ideally be a two-way mirror—reflecting the views and policies of his government to the country where he is accredited, without distortion or personal bias, and reflecting back that country's views equally objectively, without fear or favour. This being so, I can only try and remind you of some of the main problems in the part of the world I propose to discuss, and tell you what, in my understanding, the British Government and people would like to see done about them.

Having tried to establish my alibi in advance, may I turn to my subject—the Middle East—an area vital to my own country, vital to you as Americans and, indeed, vital to the peace and prosperity of the whole world. To say anything in the time available I must limit myself largely to that part of the Middle East which is now in the front pages of our newspapers and to the events of the last few months. In a way this is a pity, because one's views as to who is right and who is wrong in the Middle East tend to vary according to one's point of departure in its history. We need to take a long perspective in order properly to understand the intractable, basic problems that have plagued it for so long.

First then, why is the Middle East so important? Has it always been, or has it suddenly become much more so? I think both statements are true. Since the beginning of history it has been a vital piece of geography, the link between Europe, Asia, and Africa. It was vital enough to be the turning point in the Napoleonic wars, when Nelson won the battle of the Nile and denied Africa, India, and the Far East to the conquering French. It is now both the barrier and the bridge to Soviet expansion in the same direction. During the last 70 years it has contained the Suez Canal—the highway between Europe and the Far East—a highway increasing in importance as world trade has expanded, whose value we in Western Europe can truly measure now that the canal is blocked. During the last 20 years the Middle East has become the major source of industrial power for Western Europe. It contains two-thirds of the world's proved oil supplies. The world's oil consumption has doubled in the past 10 years and is expected to more than double again in the next 10. This oil is vital to 20th century industrial civilization, vital to the warmaking capacity of NATO. In short, the Middle East is an area which the free world, only at its peril, could afford to see pass into Communist control.

And this vital area is inhabited by a number of small nations—most of them lately emerged into independence and aflame with the heady nationalism which goes with new-won freedom. Countries where there is great wealth and also abject poverty, some with immense natural resources and some with none. Where some are governed on western democratic lines and some are as feudal as 1066. Countries divided from each other by dynastic intrigue and mutual fear, coalescing and parting like bubbles in a basin as the wind of world events blows upon them.

In this area too there is one of the most difficult international problems of our time—the problem of Israel. Opposition to Israel—to her very existence as a separate state—is the one thread which binds the Arab countries to each other. As the mandatory power in Palestine, Great Britain tried to hold the balance between Jews and Arabs for nearly 30 years. When we found the mandate unworkable, early in 1947, we placed the problem in the lap of the United Nations—who have so far been unable to solve it either. I should like to quote a sentence or two from the speech made in the House of Commons early in 1947 by the British Foreign Secretary of the day, because they seem to me to sum up the basic conflict as it existed then and as it exists still. He said this:

"His Majesty's government have been faced with an irreconcilable conflict of principles. There are in Palestine about 1,200,000 Arabs and 600,000 Jews. For the Jews the essential point of principle is the creation of a sovereign Jewish state. For the Arabs, the essential point of principle is to resist to the last the establishment of Jewish sovereignty in any part of Palestine. The discussions of the last month have quite clearly shown that there is no prospect of resolving this conflict by any settlement negotiated between the parties. But if the conflict has to be resolved by any arbitrary decision, that is not a decision which His Majesty's government are empowered as mandatory, to take. His Majesty's government have of themselves no power, under the terms of the mandate, to award the country either to the Arabs or to the Jews, or even to partition it between them."

You will remember the history of the next 8 years—the continued efforts of our two countries and France to prevent an arms race and to promote a permanent settlement between Israel and her neighbors. We were no more successful than the Security Council has proved to be in maintaining an effective true organization, or in having its decisions respected by either side. For some years now the armistice of 1949 has virtually ceased to exist.

To this confusion there have been added recently two new and sinister factors, Soviet expansionism and Colonel Nasser. It has, of course, long been a Russian dream to gain a foothold in the Middle East—in fact the Russian drive for warm-water ports dates back to Peter the Great. You will remember directly after the war the attempt to install a Communist government in Greece, the pressure on Turkey in respect of the Dardenelles, and the attempt to infiltrate Persia through the installation of a puppet government in Azerbaijan. All these failed. Since then Soviet expansion has been stopped in Europe, by the Berlin airlift and NATO; it was stopped in the Far East by the Korean war. In its ceaseless probing for weak spots the Soviet Union has now turned its attention to the Middle East.

Politically, economically and strategically the Middle East is tailormade for the kind of expansionism in which the Soviet Union excels. The stakes are high and the risks apparently low. It has consequently been their main ambition to keep the pot boiling, to prevent the relaxation of tension, to obstruct any chance of a permanent settlement. Having supported Israel at the time of her creation, political expediency dictated a complete switch of Soviet policy to support in turn the extreme wing of Arab nationalism. The Arab States have been protected by the use of the Soviet veto in the Security Council and encouraged in their crusade for the destruction of Israel. The uneasy balance maintained by the Western World in the supply of arms between both sides was overset by the arms deal with Egypt. The Baghdad Pact—which attempted to seal off the Near East from Soviet penetration—was outflanked.

And in all its Middle Eastern ambitions the Soviet Union has found a willing ally in Colonel Nasser. Although history may term it a mistake, I think it is to the credit of my country that we made an honest attempt to get on with Colonel Nasser when he first came into power. We negotiated with him the end of the condominium in the Sudan—seeing to it that the Sudanese were given their chance to opt for independence and were not, as Nasser wished, forced into the Egyptian orbit. We negotiated after much difficulty the evacuation of our great Suez base. Incidentally, we obtained from Nasser at that time a renewed affirmation of the international status of the Suez Canal—

for what that has proved to be worth. We saw in Nasser a new deal for Egypt, a possible center of stability in the Arab world who might in time develop the enlightened self-interest to negotiate a settlement of its problems.

We could not have been more wrong. Colonel Nasser has since made it very clear that his objectives are the elimination of western influence, both political and economic, from the Middle East; the destruction of Israel; and the creation under his leadership of an Arab empire which would control the canal, the pipelines, and the oil resources of the area. He has mortgaged his country's economic assets for $420 million worth of Communist arms and equipment. He has accepted a thousand or more so-called technicians from the Communist countries. He has played the Soviet game of propaganda and subversion even amongst all his Arab friends and in north Africa, with great success in Syria and Jodran, and with some success in Iraq. He has tried, but so far failed, to disrupt the Baghdad Pact. It is worth noting that the Egyptian military attachés in Iraq, Libya, and Ethiopia and the assistant military attaché in Lebanon were expelled by those governments during the past year for arms running or other subversive activities. Even the Saudi Arabian Government has arrested and imprisoned Egyptian military agents. Cairo radio is ceaseless in its attempts to stir up trouble throughout the Middle East and Africa.

Given such a situation, what is the cure? No easy or short-term one, to be sure. It is clear that the Middle East needs three basic things. First, external security—freedom from outside attack. This President Eisenhower's recent proposal, if endorsed by the Congress, should help to provide. Secondly, internal security—freedom from Russian or Egyptain subversion from within, from inter-Arab rivalries, and settlement, above all, of the Arab-Israeli dispute. Thirdly, economic development—proper use of the great wealth of the region for the betterment of its peoples. There is a crying need for education, for modern agricultural skills, for water development programs. Much of this could be financed by the Arab nations themselves, but most of the technology and some of the funds must come from the free world. If they do not, they will come, in other forms and for other purposes, from the Soviet bloc.

These three things are vital, not only to the countries primarily concerned, but also to the free world, including in particular my country. Historically Great Britain has carried the major responsibility for the defense of the Middle East. She is the only great power with ground troops there, the only great power east of Turkey with firm treaty commitments to defend the area against Russian attack. Great Britain lives by trade, by importing much of its food and raw materials and exporting its manufactures. If the channels of international trade are blocked she cannot survive. And the most important of these channels, from her point of view, is the Suez Canal. This is why we reacted as we did to Nasser's seizure of the canal last August, and why we and the other main user nations continue to resist the prospect of its operation under exclusive Egyptian control. More than a quarter of Britain's exports and imports normally pass through it; about one-third of the shipping that uses it is under the British flag. Furthermore, Britain and Western Europe have come to depend since the war upon the Middle East for more than 80 percent of their oil. If this is denied them for any considerable period, either by canal blockage or sabotage of the oil pipes, their economies must be vitally affected.

The analogy of the Panama Canal has been used often in the last few weeks. It is not a very close analogy, but it is nevertheless true that the Suez Canal, with over double the tonnage of Panama, is a much more vital interest to Great Britain than the Panama Canal is to the United States.

Nor is only Western Europe affected, but the whole free world. India, Africa, and most of Asia must depend on Europe as a source of capital goods and as a market for their products, and the highway of the Suez Canal is no less vital to them than it is to Australia and New Zealand. Unless the Middle East countries sell their oil to the West they are left virtually without any source of revenue.

It is thus to Great Britain's interest—and not to her interest alone, but that of Western Europe also and the whole free world, including the United States—that there should be peace with justice between Israel and her Arab neighbors. It is to her interest, and it is therefore her policy, to try and promote stability and prosperity in the whole area, so that the Middle East shall be a sure barrier against aggression or subversion from the Soviet Union instead of a fertile field for it. It is vitally to her interest that there should be freedom of navigation through the Suez Canal.

I do not want to dwell on recent events, with their legacy of frustration, recrimination, and strain in the relationship between our two countries. The record of what the British and French Governments actually said and did during the hectic days at the end of last October has been blurred in the following weeks. But I should like to try and answer the two most common questions—namely, why did we start and why did we stop?

It had been plain for some time that we—the free world, that is—were confronted with Soviet penetration and Egyptian subversion and aggression acting hand in hand. When after much provocation Israel reacted to the undeclared war on her borders, there was the clear risk that the whole Middle East would be engulfed in war. There was grave risk of damage to the Suez Canal—not just the sabotage which Colonel Nasser carried out, but permanent damage to its banks.

Accordingly, as you will remember, Great Britain and France called upon both sides to keep their forces 10 miles from each side of the canal. We asked Egypt to let us occupy, temporarily, the three main canal towns in order to separate the two armies and to protect the canal. Israel agreed and halted its forces; Egypt did not.

Who else could have moved? Not the United Nations. Not the United States. There was no time to lose. The French and ourselves were the only powers with troops in the area able to act quickly. And our action was fruitful. The Egyptian commander in chief has since revealed that he had called upon the armies of Syria, Jordan, and Saudi Arabia to attack Israel. When the Anglo-French ultimatum arrived, he hastily called them off. It is, I think, legitimate to ask our critics what they would have done, and what action they would have taken.

So much for why we started. Why did we stop? We stopped because both sides finally accepted the cease fire, and accepted too the proposal, put forward by Sir Anthony Eden as early as November 1, that there should be a United Nations force to supervise the cessation of hostilities. It has been argued since that perhaps we should have gone on—particularly because another 24 hours might have seen the Anglo-French forces deployed the full length of the canal. We did not foresee that Colonel Nasser would blow up the bridges, wreck the installations, and sink 50 ships in his own nationalized canal. But—our conditions were met, and there was a United Nations force in being. In passing, I do not think that the British Government took the threat of rockets and "volunteers" from the Soviet Union very seriously. In any event, President Eisenhower and General Gruenther made the reaction of the United States and the NATO alliance to such a threat exceedingly clear.

And our cease-fire was followed in due course by the complete withdrawal of our troops and those of the French. This was carried out under strong American economic pressure and in the hope and belief that the United Nations meant—what so overwhelmingly it had said—that the General Assembly would in due course tackle the long-term problems in the Middle East as well as the short-term ones.

Far more important of course is what happens next. The crisis is by no means over, it may in fact be only beginning. But in any analysis of the present position, if one tries to build up a balance sheet of profits and losses, there are a few obvious credit items, and perhaps a preponderance of debits.

Let us take a few of the debits first, relations between Great Britain and the United States have been put under severe strain, and, rightly or wrongly, there is a widespread distrust in my country of the policies and even of the motives of the United States. We are suffering from an oil shortage which could be serious if unduly prolonged. Happily our trading position is sounder than it has been for a long time, and the prompt measures which the Government took in December, with American assistance, to restore confidence in sterling have been fully effective.

There is a power vacuum in the Middle East. Hitherto it has been British power which has stopped the Soviet Union from crossing this land bridge into Africa and cutting off Asia from the free world. This power is now taken out of our hands, and the responsibility of exercising it lies with the United Nations and the United States.

The canal is still blocked and, in spite of the United Nations resolution, several weeks went by before clearance even started. The Egyptian Government has been exceedingly sticky in its negotiations with the secretary-general on this matter, and in particular has refused to allow any of the specialized salvage equipment collected by the French and ourselves to be used anywhere outside of Port Said harbor. Even when the canal is finally cleared, it is far from certain that the Egyptian Government will not try to discriminate against British and French ships and to keep the canal closed against the Israeli flag. No progress has yet been made, so far as I am aware, to repair the sabotaged pipelines running through Syria from Iraq. Clearly, the longer this state of affairs goes on, the more serious will be Western Europe's oil shortage and the economic dislocation in India and other countries in Asia.

Politically too there has been little progress—although it is perhaps early days to hope for any. Syria appears to have come still more closely under Communist influence in the last week or so. Russian influence in Cairo is certainly not on the decrease. Jordan has apparently renounced her annual subvention of some $30 million from Great Britain and will rely in future on her Arab friends to provide an equivalent amount—without which she cannot survive. Iraq, the only Arab country which is a member of the Baghdad Pact, has been under extremely heavy pressure to orient its policy away from the West. And at first sight we are further away than ever from any settlement of the Arab-Israeli problem and from any solution acceptable to the user nations on the future operation of the canal. Israel is evacuating the Sinai Peninsula, but is holding out in the Gulf of Aqaba, although United Nations pressure for her complete withdrawal is inevitably building up. Colonel Nasser has offset his military defeat by diplomatic victory, so that his prestige with the Arab people—not, I think, with the Arab

governments—is higher than ever. He is able, without much apparent impact upon the United Nations or world opinion, to "Egyptianize" all foreign assets in his country, to imprison and expel Jews and British and French nationals, and to seize their property without recompense. While there has been no overt action by the Soviet Union, Moscow is doing its best to make the Arab nations' flesh creep about the dangers of accepting American aid. It will clearly be Russian policy to support Egypt in every way to hinder any attempts for the settlement of current problems.

A gloomy picture indeed. But there are credit items. World war III has not broken out. The world has seen from the mass of military equipment captured by the Israeli army that the Russian buildup of arms in the Middle East was infinitely more serious than some western countries had supposed it to be. Nasser's army has had a good licking, and despite the efforts of Egyptian propaganda to convince the world to the contrary, news of this is bound to spread through the bazaars of Egypt and of her Arab allies. He has in addition lost most of the guns, tanks, and aircraft for which he has mortgaged his country's economic assets, as well as the income he received from canal dues. One can only speculate on this, but I think it is pretty certain that he has seriously frightened some of his allies. One doubts too whether the immediate resumption of Fedayeen attacks on Israel, in flat defiance of United Nations resolutions and the cease-fire he accepted, will add to his support in the General Assembly.

Another asset is of course the presence of the United Nations emergency force on the ground, whether it will be allowed to carry out its long-term mandate, beyond clearing Egyptian territory of British, French, and Israeli troops, or whether it will then retire upon Nasser's order, remains to be seen. There is clearly a growing opinion, which is now reflected in the United Nations, that it could have an important and longer term part to play in the pacification of the Middle East and in the protection of the just interests of Israel and her neighbors.

There is President Eisenhower's recent speech to the joint session of Congress enunciating a new United States policy for the Middle East. This speech had a somewhat mixed reception at first in the British press—there were those who said that the United States Government had become converted, at rather a late hour, to the British and French point of view about the dangers of Russian penetration. But on the whole comment was distinctly favorable. I think that there is general agreement in Great Britain, and in most of Western Europe as well, that this is the lead for which we have been looking. The Russians have had fair warning against any attempts at overt aggression and, subject, of course, to the views of the Congress, some provision is being made for economic assistance to the area generally. Much will, of course, depend upon how details of the policy are spelled out in practice, and also upon the response to it by the Middle Eastern countries themselves. It is already clear that some of the problems—internal subversion, propaganda, and aggression short of all-out war, are going to be particularly difficult to handle.

Perhaps the most significant and welcome development, however, is that the world has been forced to face up to the problems of the Middle East. The Russian threat. The Arab-Israeli dispute. The dependence of the free world upon oil. New ideas are emerging—the building of new pipelines and tankers being discussed or planned, even a new canal has been suggested.

One thing, however, is clear. Although my country voted for the most recent United Nations resolution calling upon Israel to withdraw completely behind her borders, this does not mean that we advocate going back to the status quo ante in the Middle East. This would be intolerable for everyone. The burden for seeing that this does not occur lies at the door of the United Nations, who have already committed themselves in their resolutions to seek a permanent and just settlement both of the Suez Canal dispute and the quarrel between Israel and her neighbors. But the United Nations cannot do more than express the collective will of its members, and that will often needs formulating, guiding, and leading. As the most powerful nation in the world today, some of that guidance at least must inevitably come from the United States. We cannot sweep all these problems under the rug again; we cannot draw a ring around them and hope that they will settle themselves nor, in my view, can the risks of internal conflict and external menace be kept separate. External protection only cannot be an effective substitute, in the long term, for removal of the basic causes of Middle East tension. But it should be possible for the United Nations, if the collective will is there, to insulate the sensitive spots inside the area against renewed violence whilst the basic problems are tackled.

There will be no quick solutions. There lies ahead a long, difficult, and undoubtedly frustrating period of patient and detailed negotiation before we reach in the Middle East the goal of peace, with justice, under law—the long-term solution that will survive. I know that my country is fully prepared to play its part in this work.

State of Tennessee Senate Resolution 40

EXTENSION OF REMARKS
OF
HON. JAMES B. FRAZIER, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. FRAZIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted in the Tennessee State Senate expressing gratitude to two outstanding citizens of Chattanooga, my home town, for their generous contributions and humanitarian achievements for Chattanooga and its citizens:

Senate Resolution No. 40

A resolution to express gratitude to the Honorable Mose Siskin and the Honorable Garrison Siskin for their untiring efforts and numerous achievements for the people of Chattanooga and Hamilton County, Tenn.

Whereas the city of Chattanooga in Hamilton County is blessed with a great number of people who are charitably and philanthropically inclined; and

Whereas in particular the individual efforts of Mose and Garrison Siskin have achieved success, and in that success have carried with them an idea of responsibility to the underprivileged people of their city and county; and

Whereas these two men have contributed unstintedly of their time and money on a nonsectarian basis, and have reached into all walks of life where good could be accomplished to their fellow men; and

Whereas one of their special projects for a number of years was the studious effort to aid incapacitated people, and did in many instances build camps and furnish wheel chairs so as to make the lives of these unfortunates a little more cheerful and afford them the opportunity to help themselves; and

Whereas at the time Billy Graham was invited by the many churches in Chattanooga to conduct an evangelistic campaign, these two men, of an entirely different religious belief, contributed approximately $50,000 toward the building of a tabernacle in which he was to conduct his services; and

Whereas together they have built for the benefit of Chattanoogans a beautiful chapel and a wonderful administration building in which the Mose and Garrison Siskin Memorial Foundation is conducted, with any organization, either Protestant, Catholic or Jewish, by proper application, having the right to free use thereof, and in the beautiful chapel of said building, weddings may be performed for people of any denomination without charge; and

Whereas recently they have built an annex on the above building to be used in the teaching of paraplegics, and

Whereas together they have recently purchased a building for the purpose of conducting a school for the deaf and dumb, and are now establishing in the same building a school for the blind in order that these unfortunates may be taught to become useful citizens and take their place in the community, and

Whereas their interest in the community has not been confined to the above projects, and at numerous times, have provided food and raiment for families for a long period of time until they could become rehabilitated: Now, therefore, be it

Resolved by the Senate of the 80th General Assembly of the State of Tennessee, That by this resolution we pay tribute to the said Mose and Garrison Siskin, and commend them for their humane interest to the less fortunate, and for their farsighted approach to the civic interests affecting all the citizens of Hamilton County; be it further

Resolved, That this tribute to these outstanding gentlemen be enrolled on the Senate Journal; be it further

Resolved, That a copy of this resolution be mailed by the clerk of this body to the Honorable Mose Siskin, the Honorable Garrison Siskin, the Chattanooga Times, the Chattanooga Free Press, and to the Siskin Steel & Supply Co., Inc.

Adopted March 13, 1957.

JARED MADDUX,
Speaker of the Senate.

United States Communism and Moscow

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FASCELL. Mr. Speaker, the so-called American Communist Party has a long and dishonorable record of abject subservience to Moscow. The party went all out in opposition to our defense efforts in 1940, and opposed all aid to the nations fighting Hitler until he invaded Russia. Then the party performed a complete flip and became all-out supporters of anything that would hurt Germany or aid Russia. Since the end of the war they have continued their calculated policy of aiding the Kremlin in any and every way.

At its recent convention in New York City this same so-called American Com-

munist Party has, supposedly, performed another flip. In the wake of worldwide reaction against Soviet action in Hungary and continuing criticism of Stalinism the convention adopted pious resolutions calling for loyalty to the American tradition and the right to independent interpretation of Marxism. This false front, however, is not going to fool anyone who looks at the facts.

For its clarity in unmasking this hypocrisy I would like to commend the author of the following editorial from the Americas Daily of March 15, 1957:

UNITED STATES COMMUNISM AND MOSCOW

It is convenient to comment, editorially, on the reaction of John Edgar Hoover, director of the FBI, to the calculated announcement of United States Communists that, because of a motion approved at their convention in New York, they are now divorced from Moscow.

There is a fortunate circumstance in the fact that Hoover has given a voice of alert, so that this great North American democracy will not be taken by surprise by Communist treachery, which pretends to maintain its dangerous penetration in this land whose ideological banner is the antithesis of communism.

The success that Communists may achieve in this country would have untold repercussions in the whole hemisphere. The surprise they may inflict on men of good faith and in Government circles of the United States could be a threat of great proportions which may have consequences in Latin America.

To prevent, by means established by democracy, the forward march of the Communist movement in the United States is, besides a necessary measure for national security, a support for the unity of the Americas, for that unity which the Communists are always trying to undermine. It would be very foolish on the part of the United States to be deceived in the way the Reds in this country are trying to do it, because that would give encouragement to the threats of Moscow against the institutions of the United States and against hemispheric solidarity.

Yesterday, today, and tomorrow, communism will always be the same, and will not break away from its physical supporter which is Russia, notwithstanding what it may be said at the ad hoc conventions, integrated by men who would accommodate themselves to any situation, with the ease liquids have to adapt themselves to the shape of the container in which they are poured.

Work for Equal Legal Rights

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mrs. ST. GEORGE. Mr. Speaker, it is my pleasure to call to the attention of the House the following excellent article on equal rights for men and women, which appears in the Business Woman for April.

Miss Hazel Palmer, the writer, is the president of the Business and Professional Women of the United States. This group has long supported the amendment, House Joint Resolution 127, and has done and continues to do yeoman's service for its enactment:

WORK FOR EQUAL LEGAL RIGHTS
(By Hazel Palmer)

Since 1937, the National Federation of Business and Professional Women's Clubs, Inc., has supported the equal rights amendment to the United States Constitution as the most effective means of assuring equal legal rights to women, and of adjusting legal inequalities based on sex which exist in the United States. Accredited delegates from the clubs and State federations in the 48 States, Washington, D. C., Alaska, and Hawaii reaffirmed support of the amendment at our national biennial convention held in Miami Beach in July 1956.

The Constitution has been construed as granting certain rights only to men. The 14th and 15th amendments would seem to give equal protection and political rights to all persons. However, the effect of court decisions has been to except women in certain of their applications. As an example of the discrimination women suffer because they have not been included, specifically, in the rights contained in the 14th and 15th amendments, the Executive order which sets forth the policies and procedures of the President's committee on Government employment prohibits discrimination "against any employee or applicant for employment in the Federal Government because of race, religion, color, or national origin." There is no prohibition against discrimination on the basis of sex. Similarly, the Executive orders which set forth the nondiscrimination provisions to be included in Government contracts prohibit discrimination "against any employee or applicant for employment because of race, religion, color, or national origin." There is, however, no prohibition against discrimination on the basis of sex.

The 19th amendment, in 1920, gave women the right to vote, but did not give them legal equalities in other respects. Over a period of years, there has been some improvement in women's status, through changes in State laws. However, in some States today the legal rights of men are far superior to the legal rights of women. In the absence of a constitutional amendment granting equal legal rights to women, what rights a State legislature may give this year, it can take away next year.

There need be no fear that the equal rights amendment will interfere with States rights to legislate on health, welfare, and civil matters. The only limitation that would be imposed by a constitutional amendment granting equal rights to men and women would be that laws shall apply to all citizens, regardless of sex.

The chief objection to the amendment seems to stem from a fear that it would nullify "protective" legislation.

Our federation believes that restrictive work laws for women only (minimum hours, wages, and conditions of work applying to women only) serve to make employment of women a matter of additional burden to employers, and result in discriminations in the employment of women. Women know that the equal-rights amendment would not force anyone to hire a woman, but they do know that it would give women the legal right to be hired if someone did wish to employ them, where such employment is now prohibited in some States under the guise of "protective legislation" for women.

The equal-rights amendment would not prevent enactment of protective legislation for classes of citizens—that is, mothers, widows, and children. Veterans' legislation, legislation for farmers, legislation for our elderly people, constitute examples of legislation for a "class" of citizens.

Such legislation is not based on sex, but on the circumstances of a group of citizens. We believe there is a real need for supplanting current protective legislation exclusively for women by new and broader laws protecting both men and women without discrimination. The National Federation of Business and Professional Women's Clubs believes that all workers should be assured favorable working conditions regardless of sex, and that legislative progress in this direction would be more rapid if working men and women enjoyed equality under this constitutional amendment. Both the Democratic and Republican National Conventions adopted platforms in 1956 pledged to the support of the equal-rights amendment. To not honor this pledge is to place a weapon in the hand of our ideological enemy, we feel.

The equal-rights amendment will not require more extensive testing by the courts than any other new law. Of course, there will be some changes in some State laws if this amendment is ratified. That is its purpose. But surely, legal equality under the laws of this country is well worth the necessary legal decisions in the courts if the questions are taken there.

To become a law, the equal-rights amendment will have to be ratified by 36 State legislatures. The thing we ask is that Congress submit the question to the States and give the people of America a chance to decide the future legal status of one group of citizens, women.

Efforts toward legal equality have proven successful. Federal law during the past World War placed women in the service on an equal basis with men in relation to pay, status, and benefits. This gave impetus to the acceptance and utilization of women's capacities, and proved the value of women as an integral part of the service. Our country needs the intelligent acceptance of responsibility by all of its citizens. More than 50 percent of the American people are women. With women under legal disability, this means that over one-half of our citizens are prevented from making their maximum contribution to the solution of the critical problems which face us.

The United Nations Charter, to which the United States is signatory, stated in its preamble as one of its purposes "to reaffirm faith in the equal rights of men and women." By subscribing to the charter, each nation has endorsed this principle. Internationally, so far as equal rights are concerned, we lag behind countries which the United States itself has encouraged to grant equality to women. Egypt, Burma, Greece, Japan, Western Germany, and Pakistan have all given constitutional equality to women. The prestige of the United States is assailed by Russia on the grounds that it does not grant its women equal legal rights. If our Constitution contained the equal-rights amendment, the United States would not be placed in the position of endorsing this principle in theory but violating it in practice.

The equal-rights amendment would give women equal legal rights in such areas as inheritance, guardianship of children, and property rights. These are urgent matters that need to be corrected. We recognize that the intangibles of social inequality cannot be solved by legislation. Nevertheless, it can hardly be doubted that nondiscriminatory law is basic to the achievement of a just society, and the only apparent way the several States can be assured of nondiscriminatory laws and permanency of them, is by the passage of the equal-rights amendment to the United States Constitution.

We urgently and respectfully seek your wholehearted support of this very important legislation. The women of America seek only their just rights as full citizens. To those of

you who have fought beside us in the past for our full citizenship, we are grateful. To you who will now join us, may we say, "Thank you," and express our deep appreciation.

If You Really Want To Cut the Budget

EXTENSION OF REMARKS
OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 27, 1957

Mr. SHEEHAN. Mr. Speaker, all of us Members of Congress are highly conscious of the resentment of the citizens back home with reference to their attitude on the enormous budget.

The Chicago Daily News and its editor and publisher, John S. Knight, have been cognizant of the possible ill effects of the huge budget on our economy from the very moment the budget was disclosed. Mr. Edwin A. Lahey, chief of the Washington Daily News office, and David Kraslow went over the 1,249 pages of the budget and gave a comprehensive and interesting report to the readers of the Chicago Daily News.

I personally feel that the message they tell is must reading for everyone interested in economy and efficiency in Government. Their article is as follows:

MEMO TO CONGRESS: IF YOU REALLY WANT TO CUT THE BUDGET

(By Edwin A. Lahey and David Kraslow)

WASHINGTON.—President Eisenhower has challenged Congress to find places where it can cut his budget for the fiscal year of 1958.

Members of Congress, egged on by mail from irate taxpayers, are stirring about these days, looking for soft spots in the budget.

Citizens who wish to make suggestions to their Congressmen for cutting Government expenses might get some ideas from browsing through the 1,249 pages of the Federal budget.

Many of the items in it might send the taxpayer dashing to his desk to pen an angry note to his Congressman about the apparent nonessentials that seem to get loaded into the evergrowing cost of Government.

A trip through the budget book is a long and tedious journey, but it is of more than passing interest to the individual taxpayer, as distinguished from the corporate or excise taxpayer.

The taxpayer looking for things to tell his Congressman about might:

Do a double take over an item of $300,000 that the Army spends to finance Sunday morning recreation for civilian members of thousands of private rifle clubs.

Be indignant to learn that a "hearing board" gets $70,000 for devoting 23 days hearing cases in 1 year.

Show some irritated interest in the fact that one commission is spending $4,710 just traveling in and around Washington to find a spot for a memorial to Franklin D. Roosevelt.

Want to ask his Congressman where they are taking the Botanic Garden greenhouses, which are being relocated in 1958 at a cost of $587,000.

A $4 million item to enable the Department of Agriculture to give trees to the States for planting should also capture the interest of a citizen writing to his Congressman.

President Eisenhower wants us to approach this budget in a wholesome frame of mind.

You must think big, as becomes a citizen of a great nation. A government must provide the services its people need.

Like, for instance, making certain that Senator LYNDON JOHNSON, Democratic leader in the Senate, has the most expensive Cadillac in the regular line. The price, with accessories, $8,226.57.

And like paying $16,500 a year to the fellow who's known as doorkeeper of the House of Representatives. Only he doesn't open doors and has a Republican assistant who gets paid $12,500 a year, also apparently for not opening doors.

The going rate for doorkeepers at hotels in Washington is about $2,600 a year, with tips.

Maybe that's what the President meant when he said we must think big.

It should also actually make your proud to learn that you are participating in a program for air-conditioning Federal buildings at a cost of $328 million.

They are giving it to you in easy doses, stretched out over 7 years.

Mr. Eisenhower's words of cheer should also sustain you when you ponder with us why the "miscellaneous items" in the contingent expenses of the House of Representatives should be increased from $1,165,000 this year to $2,165,000 in 1958.

There are dozens of little items in the 1958 budget to give the uninitiated pause, or even irritate them.

But you'll have to take the solemn word of your temporal rulers that this is a "tight" budget, a spending program that a rich and proud Nation can well afford.

And you will have to grit your teeth and hang on to your faith when you read the innocent report of a bureaucrat to Congress that he seems to lose money when he sells stockpile material at less than he paid for it.

Optimistic as the White House is about our future, somebody over there must think that a lot more of us are going bankrupt next year. They've asked Congress to increase the salaries of referees in the United States courts from $1,233,500 in 1957 to $1,699,000 in 1958.

JOB FOR IDLE EXPERTS

The hopeful type of taxpayer might get a lift out of one item in the 1958 budget.

There is a sum of $335,000 left over from $400,000 appropriated in 1957 to pay experts $75 per day "to assist the President * * * the establishment of more efficient business methods in Government operation."

Mr. E. can turn a lot of experts into production at $75 per day with this, and they could find a lot to intrigue their fancy.

In the Rivers and Harbors and Flood Control Division of the Army Corps of Engineers, for example, there is indicated a need for some flood control work at the hiring hall.

The budget for this branch of Government (which carries out the provisions of the annual pork-barrel bill) has increased from $172,645,137 in 1956 to $196,385,000 in 1958.

The increase in money is about 13 percent.

The jobs in this agency have been increased 23 percent, from 16,507 in 1956 to 20,257 in fiscal 1958.

The experts also might discover that Federal payrolls sometimes expand more rapidly than the duties assigned to the payrollers.

The Public Housing Administration wants to add $6 million in 1958 to its "annual contributions to public housing agencies."

It has asked Congress to increase this item in the budget from $93 million in 1957 to $99 million in 1958.

And for the arduous task of giving away $6 million more than this year, the PHA needs a boost in its administrative budget, the man says, from $10,700,000 to $13,300,000.

The President's $75-per-day efficiency experts might take more than a second glance at a small agency with five employees in the Department of the Interior.

This agency, the Federal Coal Mine Safety Board of Review, puts its budget need for 1958 at $70,000.

Coal mine operators who object to orders issued by Federal safety inspectors may appeal to this Board for review, revision, or relief from these orders.

In 1956 this agency determined four appeals which required a total of 23 days of hearings, the book says.

Then there is an item in the Census Bureau's estimate calling for $212,189 to collect certain agricultural statistics. The official description of the work for which this $212,189 is requested is as follows:

"Information is compiled on cotton ginned at 11 dates during the ginning season."

The gathering of information is a big operation over at the Department of Agriculture.

The Agricultural Research Service in this Department has increased its budget from $94,416,000 in 1957 to $102,580,000 in 1958.

The home economics branch of this service reports this year that it needs some extra money to expand its inquiries into the problems of fat in human nutrition.

The cost of making crop and livestock estimates has also shot upward. This branch at agriculture had $4,626,854 in 1956. It went to $5,229,900 in 1957, and wants $5,737,100 in 1958.

There's a different twist to an information item in the budget request of the Department of Commerce.

They have a little branch over there that wants money to kill information, rather than to collect it.

The book says this Bureau is "for development of national policy on, and evaluation of, the flow of unclassified information to minimize access to such information by unfriendly nations."

A committee of Congress has recommended that this Bureau be abolished. But it keeps coming back for more and more money. It had $49,710 in 1956, and wants $105,000 in 1958.

Another note for the attention of the $75-per-day experts is detected in a passage of the voluminous budget estimates of the Veterans' Administration.

The VA reports that it needs an extra $67,760,000 right now "to cover uncontrollable education and training costs which are exceeding the original estimates."

MILLIONS FOR LOVE

We invest heavily in culture these days to win the love of people in other lands.

The President has a special international program in this connection. It had a $9,900,000 budget for 1957. Mr. Eisenhower wants $20 million in 1958, most of it for trade fairs in foreign countries.

Some $3,100,000 of this Presidential fund would be spent for artistic and athletic presentations abroad, under the direction of the Department of State.

The Department conducted 90 such invasions in 1956, and 47 in the current fiscal year. Secretary Dulles wants 59 of these artistic and athletic presentations to go to foreign lands next year.

The Department of State has still another cultural device for buying love, through educational exchange activities.

The purpose of this project is to promote the foreign policy of the United States through exchange of key persons, selected for their capacity to build up a receptive climate of public opinion overseas.

This pursuit of love cost us only $18 million in 1956. In the current year the bill will be $20 million.

But for fiscal 1958, Mr. Dulles wants to spend $30 million in the creation of a receptive climate of public opinion overseas.

On top of this $30 million, the program would benefit from $3,575,000 in foreign currencies, generated by the sale of surplus commodities.

The Department of the Interior is also very culture conscious. One of its permanent projects is the Commission of Fine Arts.

"The Commission advises the President, Congress, and the department heads on matters of architecture, sculpture, painting, and other fine arts," the prospectus says.

Cost to the taxpayer: In 1956, $22,200; in 1957, $31,000; in 1958, $35,000.

There are four payroll jobs on this commission.

United States membership in a large crop of international organizations might be included under the head of culture, or as a phase of our political maturity.

Membership dues are on the rise.

We paid $33,859,285 in the current fiscal year to belong to international agencies. The Department of State is asking $37,475,552 for this purpose in 1958.

The United Nations is our most expensive club. Membership here for 1958 will cost $29,603,337.

The cost of belonging even to the teensy-weensy little organizations is going up.

Our duties in the International Bureau of the Publication of Customs Tariffs are increasing from $2,233 in 1957 to $8,658 in 1958.

EVEN FISH, WE GOT

Our Government thinks of recreation, as well as culture, in its budget.

The National Board for the Promotion of Rifle Practice, a bureau in the Army, wants to spend $300,000 in the coming year for recreation for the civilian members of 3,300 rifle clubs in the United States.

The rather tenuous justification for this project seems to be that a citizen who is good with a rifle can prove mighty handy if we're invaded, provided some other Government agency doesn't evacuate him.

The $300,000 is for ammunition for issue to members of rifle clubs and to competitors at authorized matches. Also, for the issuance of trophies, medals, and badges for marksmanship to civilian members of rifle clubs.

A lot of travel goes with this rifle club gambit.

The travel budget for this activity in 1956 was only $4,407. In 1957 it jumped to $30,000.

And in 1958 the National Board for the Promotion of Rifle Practice wants to spend $80,000 on travel.

The National Park Service of the Department of the Interior, a great source of recreation for the public, looks onward and upward in its annual budget estimates.

For 1956 the service had $10,443,000. It is asking for $14,523,000 for 1958.

The park and recreation program of the Service has a separate budget that is almost triple what it was in 1956 ($1,988,746, compared with $702,000).

This program provides technical services essential to public use in the fields of biology, geology, history, and archeology. Also, archeological investigations and salvage on Federal water-control projects and surveys of historic American buildings and sites.

When a taxpayer grows weary of watching antics of the bears under the jurisdiction of the Department of the Interior, he can drift off to a forest that will be well kept for him by the Department of Agriculture.

The Forest Service in Agriculture wants $11,500,000 from Congress next year for a new program of recreational facilities in the national forests.

This agency wants an additional $4 million to give to the States for tree planting.

Recreation to many people means fish, and fish we got in this budget for 1958.

The Fish and Wildlife Service of the Department of the Interior, which had a budget of $6,539,317 in 1956, is asking Congress to come up with $11,500,000 in 1958.

Some of the big items of expense for this Service are the management of fishery resources, administration of wildlife resources, and the control of predatory animals and injurious rodents.

There is also a Bureau of Commercial Fisheries, down for $5,985,00 in 1958.

Its purposes are scientific and economic studies, conservations, management, investigation, protection, and utilization of commercial fishery resources, including whales, sea lions, and related aquatic plants and products.

The United States also belongs to an International Fisheries Commission, which seems to get more expensive every year.

In 1956 our participation in this Commission cost us a modest $455,000.

In 1957 the budget is $1,265,587. And for 1958 the Department of State, which has a man in charge of fish, says it needs $1,654,000 to keep up appearances in this organization.

This Commission is made up of seven subcommissions that study measures necessary to the preservation and expansion of the world's stock of halibut, salmon, tuna, and other tidbits of the sea.

COMMISSIONS? AND HOW

Did we says commissions? You name it, we've got it. One of the most intriguing is the Alexander Hamilton Bicentennial Commission, which had $200,000 from Congress to commemorate the 200th anniversary of the birth of that eminent hard-money man.

The birthday was celebrated on January 11, 1957.

But they will probably be cleaning up the field until June 30, 1958, the end of the next fiscal year. The 1958 budget has $15,000 in it to wind up the labors of this Commission.

Then there is a grant of $225,000 to the Booker T. Washington Centennial Commission, "to promote interracial good will."

This Federal grant actually is a grant to the Commonwealth of Virginia, whose legislature created the Booker T. Washington Centennial Commission between innings of their antidesegregation debates on interposition.

The Boston National Historical Sites Commission had $40,000 for the purpose of preparing an inventory of historic sites and buildings in Boston and vicinity, together with an analysis of their condition.

There is also the Franklin D. Roosevelt Memorial Commission, which got $10,000 from Congress to formulate plans for location, design, and construction of a permanent memorial to Franklin D. Roosevelt in Washington or its immediate environs.

The challenging feature of this Franklin D. Roosevelt Commission is that of the $10,000, the Commission is spending $4,710 in travel in 1957 just to locate a place in Washington or its immediate environs, where we have the cheapest taxicab rates in the United States.

The Jamestown-Williamsburg-Yorktown Centennial Commission had $115,000 appropriated in 1957 and is down for $88,000 in 1958.

This Commission is authorized to pay experts $50 a day to plan a celebration commemorating the 350th anniversary of the founding of Jamestown in 1607 and the winning of independence at Yorktown in 1781.

Soo Locks Centennial Celebration Commission * * * minor league operation * * * only $15,000 authorized, 2 budgets ago.

Theodore Roosevelt Centennial Commission, $144,000 appropriated in 1957. It will spent about $55,000 in 1958 to prepare plans and program commemorating the 100th anniversary of Theodore Roosevelt's birth.

Travel expenses for the 6 payrollers on the TR Commission increased from $1,200 in 1957 to a planned $3,000 in 1958.

The Woodrow Wilson Centennial Commission, $51,500 in 1956 and $48,500 in 1957.

What has this Commission done with $100,000?

The budget book says it cooperated with other organizations in commemorating in 1956 the centennial of Woodrow Wilson's birth. That's all it says.

There is also the Permanent Committee for the Oliver Wendell Holmes Devise. The books says the committee had $434,812 in 1956, $14,700 in 1957, and should have $14,000 in 1958.

The purposes of this committee are to prepare a history of the Supreme Court of the United States, to set up an annual lecture or series of lectures, and to publish a memorial volume of the late Justice Holmes' writings.

There's a brandnew one in the 1958 budget.

It's the National Monument Commission, for which Congress is expected to provide $25,000 in the coming year.

The 2 members of this Commission would be permitted to spend $6,000 of this on travel.

This Commission will be responsible for securing plans and designs for a monument to the Nation symbolizing the ideals of democracy as embodied in the freedoms of speech, religion, press, assembly, and petition.

Finally, there is the National Security Training Commission. It had $50,000 in 1957 and wants $75,000 in 1958 for its 6 payrollers.

And who would argue with its purpose?

This Commission is concerned with the development of policies and standards governing the welfare, health, morals, and safety of reservists undergoing 6 months of training.

POLICING PARADISE

A few paragraphs of the budget carry a note of sadness for those who believe that man is essentially good.

The 58,000 natives on the 2,141 Pacific islands that became our trust territory after the defeat of Japan are about the gentlest souls you could find outside an old people's home.

But they could be dead-end kids the way the cost of a "judiciary" for these islands increases.

The "judiciary" for the Trust Territory of the Pacific Islands cost the United States taxpayers $44,310 in 1956. This year they want $53,000.

The cost of the high commissioner's office for these sleepy islands has also increased from $34,766 in 1956 to $61,500 in 1958.

Our whole civilian administration of these Pacific islands—including grants—costs us about $85 per native.

In the Bureau of Employment Security of the Department of Labor, there is another item that casts doubt upon the basic goodness of man.

This bureau supplies United States farmers with seasonal workers from Mexico, under terms negotiated with the Mexican Government.

This program, devised solely for the convenience of American farmers, cost the taxpayers $1,957,000 in 1956. They want $2,683,000 for 1958.

And part of that increase is for the rising cost of "investigation of contract violations." This is going up from $331,536 in 1956 to $634,700 in 1958.

In other words, in spending $2,683,000 of tax money to get seasonal workers for United States farmers in their hour of need, the Government must use $634,700 of this to see that the farmers are not cheating.

CRUTCHES FOR BUSINESS

In its concern for the welfare of all branches of the society, our Government has not forgotten the private industrialist and businessman.

Programs connected with defense production, particularly the stockpiling of strategic materials that western mining interests find

to be slow moving, offer surprising bits of information in the big budget book.

One program for the expansion of machine tool producing capacity provides for "installing under lease Government-owned machine tools in the plants of private producers."

Another paragraph on defense production reveals "a program to round out capacity to produce steam turbines and turbine gears by installing machinery and equipment in plants of private contractors."

The biggest part of this defense program, of course, is the acquisition of strategic minerals. The budget for 1957 provided $21 million for the minerals program.

For 1958 Congress is asked to provide $40 million for the purchase of domestic tungsten, asbestos, fluorspar and columbium-tantalum.

It will come as no shock to the taxpayer that these programs are conducted at a loss out of the revolving fund used to build up stockpiles and to keep manufacturing facilities of private industry up to par.

In 1956 these losses to the Government (meaning the taxpayer) totaled $19,700,000. In 1957 the loss will be $38.5 million.

In 1958 the Government expects to set a peacetime track record, with a loss of $42 million in conducting the programs of all the defense production agencies.

The reasons for this loss belong in the history of economics as a science.

"These losses primarily result from the resale of high cost material at market prices," the Budget Bureau reports to Congress.

(They probably didn't know it, but this line is an indirect steal from an old recording called Two Black Crows. One of the characters tells how he raised goofer feathers at a cost of $4 and then sold them for $4. "You can't make money that way," said the second Black Crow. "We found that out," the first man replied.)

Our natural concern for mineral stockpiles calls for a lot of surveys.

The Department of the Interior has one survey going for "coordination and advice to the Federal Government on all phases of metals, minerals, and solid fuels, including mobilization planning."

This survey had $225,000 in the 1956 budget. For the coming year, the Department is asking $313,000 for the project.

In the Bureau of Mines at the same Department, there are bigger and more expensive surveys underway for research and investigation of ferrous and nonferrous metals, and nonmetallic minerals.

This survey weaseled along on only $14,743,000 in 1956, but the Department wants $19,575,000 in 1958.

There is one more survey in the Department of the Interior that we'll bet you never heard about.

It's the cadastral survey, Division of the Bureau of Land Managment. This survey will cost $500,000 in 1958 to "locate and identify legal boundaries of lands under application for lease and disposal, including submerged lands on the outer Continental Shelf."

BOY, DO THEY TRAVEL

A trip is good for what ails you, the travel ads say.

Your servants in the Federal Government like to travel, too.

The Civil Aeronautics Administration got $3,852,160 in 1956 for travel expenses. Business must have increased considerably in 1957 because the CAA was given $5,910,188 for travel.

And the President has asked Congress to jump the agency's allowance for travel to $9,522,534 for 1958.

There is a 600-percent jump in travel expenses for the Bureau of Foreign Commerce—from $10,998 in 1956 to $82,500 in 1957 and 1958.

The Foreign Agricultural Service wants its travel allowance virtually doubled—from $240,000 in 1957 to $474,100 in 1958.

The Office of the Administrator of the Housing and Home Finance Agency spent $492,676 for travel in 1956. The budget makers felt like rounding off the figure for 1958—at $1 million.

The Interstate Commerce Commission did $659,815 worth of traveling in 1956. For 1958, the request is just about double—$1,247,700.

There are many more examples attesting to the boom in Government travel, such as the Civil Service Commission (up from $464,700 to $609,000), the Federal Trade Commission (up from $163,861 to $272,500), and the Atomic Energy Commission (up from $2,800,000 in 1956 to an even $4 million for 1958).

In fact, there are few instances where agencies asked for less travel money than they have been getting.

Business is so good.

Your public servants also travel in cars, like ordinary folks. In most cases the vehicles are Government-owned. But many millions are spent for the hire of motor transportation. In either case, it's at your expense.

Let's take a look at the largest and by far the most expensive part of the Government—the Department of Defense.

The Department operated a fleet of almost 45,000 motor vehicles—the great majority being cars—in 1957.

For 1958, the Department wants to buy 6,719 vehicles and plans to get rid of 6,347 "over age and wornout" buggies. This would mean an overall increase of 372 vehicles in the fleet.

The cost for the 6,719 new vehicles—only a few hundred of which would be ambulances and busses—is set at $14,386,900.

On top of that tidy sum, the Department has asked for $6,598,000 to pay for the rental of cars.

LANDLORD PAYS RENT

When you moved out of the rented apartment into the home you bought, there were no more worries about paying rent to a landlord.

That's the way it was with you. But not with our Department of State.

The Department has been spending—at an increasing rate—a lot of money buying buildings overseas to house our diplomats and their staffs.

So, does the figure in the budget for the rental of buildings abroad go down? It does not. I goes up.

The Department purchased $8,500,000 worth of buildings overseas in 1956, $19 million in 1957, and the request for 1958 is $20 million.

At the same time, the overseas rental and utility costs for the Department went from $1,755,701 in 1956 to $1,866,895 in 1957, to a request of $2,230,802 for 1958.

Uncle Sam's Government is a big and growing operation and his hunger for bigger and better office buildings seems to be insatiable.

The supersecret Central Intelligence Agency, about which only a few select officials know anything, is going to get a new home in Washington. Cost: $49 million.

The money was appropriated in 1957's budget, but the bulk of it is to be spent in 1958 or later. Not even the plans will be completed until late this calendar year.

The Smithsonian Institution is going to get a new Museum of History and Technology. Cost, $33,712,000.

This money was provided in the 1957 budget, but less than $2 million has been spent and the plans are still in the works. Construction cannot be started until temporary buildings are removed from the site selected for the museum.

Even the Federal flowers are headed for a new home. There's a new appropriation request of $587,000 in the 1958 budget so that the greenhouses of the Botanic Garden can be relocated.

Repair and improvement of 4,500 Federal buildings under the management of General Services Administration is going up from $42,600,000 in 1957 to a requested $85,500,000 in 1958.

The big jump will enable thousands of Federal workers to keep a cool head on the job.

Included in the total figure is $41,850,000 to pay for the first full year of a 7-year air conditioning program. Cost of the entire program will be $328,000,000.

Only $963,358 was spent on air conditioning in 1956. It skyrocketed to $18,138,200 in 1957.

Congressmen, who already have two huge office buildings, are getting a third. There was a $10,000,000 appropriation for this in 1957 and another $7,500,000 is asked for 1958. The entire cost is estimated at $60,000,000.

This has admittedly been a sketchy review of this magnificent volume entitled "The Budget of the United States Government for the Fiscal Year ending June 30, 1958."

A truly adequate discussion would fill a library shelf. A simple taxpayer could not even understand the necessity for spending hundreds of millions on a bomber that might be outmoded before it flies.

But we hope we've given you a general idea. After reading through this budget, we feel as though we've finally achieved the life ambition of every literate adult and read "War and Peace."

Long-Range Farm Program

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, March 28, 1957

Mr. DOUGLAS. Mr. President, in the March 16 issue of Prairie Farmer, there are two very important items. One is an editorial by their distinguished editor, Mr. Paul C. Johnson. In it Mr. Johnson calls for Congress to work now on a long-range farm program. He quite rightly complains that at present we have a patchwork of programs which are not helping farmers in any major way but in many respects have been accentuating his problems.

However, Mr. Johnson is no anarchist and accepts the fact that if farmers are to share fairly in the national income, they must have some form of Government program. He urges Congress to get busy on that now.

I ask unanimous consent that his very fine editorial be printed in the Appendix of the RECORD and that the second article which describes a specific program by Mr. Melvin Gehlbach, of Lincoln, Ill., be printed immediately following Mr. Johnson's editorial, which refers to it.

My office has worked closely with Mr. Gehlbach on numerous occasions over the past 2 years and I believe he has a fresh and constructive approach to the farm problem. From time to time, I have encouraged him and have drawn his proposals to the attention of my colleagues

on the agricultural committees. I hope other Members of Congress will read them too.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

CONGRESS SHOULD DECIDE NOW ON A LONG-RANGE FARM PROGRAM

(By Paul C. Johnson)

Another year has rolled around, bringing very little improvement in our congested farm economy. The so-called soil-bank which was legislated about the middle of 1956 will hand out some Government money. It may take some marginal land out of production, but most farmers are pessimistic about what it will do for agriculture in the long run.

Again we find ourselves waiting for Congress to act. This time we need an acreage law to patch up a nearly impossible corn program. As this is written there is no assurance that Congress will make its decision before corn-planting time.

This practice of holding off farm-management decisions, while the Washington lawmakers maneuver for political position, is getting tiresome.

In the meantime, our overexpanded agriculture slips another cog to a poorer bargaining position as compared with other parts of the economy. Farmers shake their heads in bewilderment.

Clearly, we need a fresh and bold approach to farm programing. Too many persons from whom we should expect leadership are hashing over old programs and defending former positions. At a time when agriculture needs a strong, unified front, farm policy is cut into many pieces too often opposed to each other. Conservative farm organizations, bent on preserving free enterprise in agriculture, are still hoping that price problems will be solved by greater efficiency and decline in the number of farmers.

The farmer is getting precious little of the fruit of this efficiency. It is going to the processors, handlers, and consumers. But the leaders have little to offer but more of the same.

In the meantime, ever-increasing pressure for efficiency is jamming the markets. Farm size may not stop at 300 or 400 acres but may go on to 1,000 or 1,500 acres.

There are other alarming signs. Egg and pork production, like the broiler business, is going into the hands of feed companies and financial promoters. The same thing can happen with cattle feeding. Are these omens of a new kind of feudal system in agriculture?

Radical farm organizations are exploiting the present discontent and trying to hasten the day when we will remodel our farming on European patterns, with price fixing and complete control of land and production. They preach their doctrine with emphasis on higher prices but say little about the police state that goes with socialized agriculture.

Our cooperatives are busy making money and enlarging their operations in safer and more profitable areas of marketing and merchandising. Too often they forget their original purpose which was to fight for the farmer's interest and improve his bargaining power in areas where the need is greatest.

USDA is in a state of confusion. Starting with a commendable goal of decentralization and greater freedom in agriculture, the farmer's own department of government has compromised itself into the impossible position of stimulating production of products not needed, and also paying farmers to refrain from producing them. The surpluses are still with us, depressing the markets, in spite of anything that can be done. The farmer isn't getting any richer.

Congress helped create our problems and we can never clear up the present mess without some cleancut, honest leadership from our lawmakers in Washington. It's about time they were thinking more about the long-range welfare of farming and less about getting reelected.

Prairie Farmer also deserves criticism in connection with the present farm situation. We had hoped that improving our efficiency and freeing our markets would put farming on solid ground, and we have worked hard with that in mind. We are ready to admit, however, that efficiency alone will not give farming the bargaining power it needs so desperately at the present time.

Where do we go from here? What should we ask of Congress in the present session?

It looks now as if we will have to accept the principle of strengthening the bargaining position of agriculture with substantial Government authority. We can still hope that this may be done without robbing the individual farmer of the power of decision, leaving room for ambition and good management. We should strive also for a program which can be operated with honesty and a minimum of policing.

With these things in mind, Prairie Farmer is presenting on page 9 of this issue an explanation of the Gehlbach soil-bank which is also called the Soil-Bank Association plan.

While it needs many refinements, and it must meet intelligently many of the criticisms now lodged against it, this plan looks as if it may have the basis for the long-range solution of our farming predicament. We commend it for your study.

We hope that our farm leaders everywhere will put aside old positions and old animosities and give this plan an honest hearing. If agreement can be reached among farm organizations and other agencies of farm leadership, the time is here to push hard in this session of Congress for a long-range farm program before 1958.

Prairie Farmer believes a farm people are ready for a new and bold step toward the solution of our problems. There is nothing easy or wishy-washy about this Gehlbach soil-bank. It still calls for hard work and good farming.

At the same time, it seems to get at some of the basic problems on which our other farm programs have failed in the past. It leaves the farmer comparatively free to choose his crops and his livestock enterprises.

There will be no perfect plan. But any program that we can live with over a period of years must adhere to laws of economics and common sense. Let's keep this in mind as we consider the soil-bank plan, or any other plan for the unification and strengthening of agriculture.

SOIL-BANK ASSOCIATION OFFERS NEW FARM PLAN

(By Dick Albrecht)

Prairie Farmer presents here an outline of the revised Soil-Bank Association farm program which will get a lot of attention in the next few weeks.

Melvin Gehlbach, Logan County, Ill., farmer and farm-management fieldman, worked up the original soil-bank plan in 1953. The term "soil bank" caught on, and is now commonly used for the Agricultural Adjustment Act of 1956. However, while our present acreage reserve has some of the features of Gehlbach's plan, it definitely is not his plan.

In the past 4 years Gehlbach has presented his proposed farm program to many agricultural leaders. He has worked diligently on it, using his own free time and limited funds.

The Soil-Bank Association plan has been changed and further developed so the price-support program wouldn't work against the soil-bank features. Gehlbach has been working these past few months with economic advisers to President Eisenhower as well as United States Department of Agriculture officials and the House Agricultural Committee.

He has always recognized that price supports on grain crops, even low ones, help to stimulate production beyond our present needs. And even a slight overproduction seriously hurts grain prices. On the other hand, a 10-percent reduction in supply will normally increase prices 20 percent.

Gehlbach also believes, however, that farmers need some price supports to make them financially able to reduce production. Merely lowering farm price supports does not reduce production when farmers have no alternative way to get the income they need to meet their obligations.

So the Soil-Bank Association plan makes use of two economic factors. It uses high price supports to bolster farm income. And it utilizes a true soil bank to reduce production and store up fertility until needed by our growing population.

Any successful farm program must effectively reduce the quantity of farm products going to market. Yet Government purchase and storage programs tend to collapse. Holdings eventually reach unmanageable proportions and they must be sold. But public opinion seems to favor some Government holding and storing of food supplies to give us a cushion against drought and war.

Farm people also prefer a program that will leave them free to make as many of their own cropping and livestock production decisions as possible. And for a healthy agriculture, the major part of farm income should come from products sold on the open market, and not as a dole from a fatherly Government.

The soil-bank association plan appears to meet these basic requirements fairly well.

It is a bold plan. And we need a bold plan if we are going to cope with the many problems of agriculture.

Gehlbach's proposed soil-bank looks as if it would be fairly effective in reducing overproduction. It is aimed at expanding soil-building acreages to reduce the acreage of crops in oversupply.

NOT ACCOMPLISHING MUCH

Our present acreage reserve is not reducing grain production very much, says Gehlbach. Land already is pasture or summer fallow may be shifted into acreage reserve or other crops.

Farmers who reduce corn acreage may put leftover land into wheat, soybeans, or sorghums, and wind up with more acres devoted to crops than before (and still get soil-bank acreage reserve payments). In like manner, wheat and cotton farmers can shift to corn, soybeans, and grain sorghums.

Gehlbach's plan will shrink this loophole by assigning each farm a minimum soil-building acreage. Based largely on land use, this soil-building acreage must be kept out of grain production (with no soil-bank payment) if the operator is to receive price supports and soil-bank payments on the rest of the farm.

We now have around 170 million acres of land in sod crops, in fallow, and temporarily idle. This is our normal minimum soil-building acreage. It could be broken down by counties and eventually farms. This acreage will range from 10 or 12 percent on level farms to 50 percent or more on farms that need more conservation.

This minimum soil-building acreage must be kept in hay and pasture or left idle, and additional cropland put into the soil bank, if we're going to make any headway in reducing surpluses.

Individual farm assignments of minimum soil-building acreages will not be based on a farm's cropping history, however.

A county will be divided into 1, 2, or 3 land-use areas. Your minimum soil-building acreage figure will then be based on the prevailing percent of cropland in soil-building crops for comparable land use in your

county. You will not be penalized if you have been keeping more land in soil-building crops than your neighbors.

Government payments would be made in two ways. You become eligible for soil-bank payments when you (1) meet the minimum soil-building acreage requirement, and (2) shift additional land into grasses and legumes. When you put a prescribed minimum into the soil bank you also become eligible for price supports at full parity on a portion of your grain crops (about 30 percent).

Under the Soil Bank Association plan, needed crop reductions would be brought about by means of a soil bank only. Acreage allotments on grain crops would be dropped. The soil bank payments would tend to shift the lower-yielding acres into the bank. Also, the acres normally used for growing lower-profit grains would tend to end up in the bank.

Farmers will use their best land to produce crops that are most profitable in their region. The present incentives to shift crops out of their best-adapted areas will be eliminated.

Here is the way this soil bank will work on an average 240-acre Corn Belt farm with 200 acres of cropland. The remainder is in farmstead, roadways, and untillable pasture. Say the minimum soil-building acreage assigned the farm is 40 acres.

The first requirement to become eligible for soil-bank payments, then, is to have this 40 acres of cropland out of grain production. The next requirement is to put at least enough cropland into the soil bank to meet the minimum requirement that is set up each year. Let's say the soil-bank acreage minimum is 20 acres.

You must put this 20 acres into the bank. You can put more in the bank if you want to. This soil-bank acreage may be used for seed, hay, or pasture and still get a soil bank payment.

But if you don't use this acreage for feed or seed, it will get a premium soil-bank payment that would be double the standard rate. But the choice to use or not use the soil-bank acres remains with the farmer.

The remaining 140 acres of free-choice cropland may be planted to any crop or combination of crops, or part of it may be added to your soil bank. There are no restrictions on its use, so you can pick the crops that are likely to be most profitable, and that fit your soil and skills best. Here is the way the 200 acres of cropland is divided: 40 acres minimum soil-building acreage; 20 acres soil-bank; 140 acres free-choice grain crops.

A portion of your normal grain production would be supported at full parity. To start with, Gehlbach thinks 30 percent is about the right portion to bring about needed adjustments. The supports will cover all freed grains as well as soybeans and wheat.

The supports will be on a bushel basis, and support may be taken on any crop or combination of crops grown. Different crops will be equalized by a formula. Using corn as a base, 1 bushel of each grain is assigned a value according to their parity prices. Right now the values are roughly: corn, 1; wheat, 1.4; soybeans, 1.7; oats, 0.5.

All crops will be figured in terms of crops units in figuring supports. One crop unit is equal in value to 1 bushel of corn. Say the normal production on the 140 free-choice cropland acres is 8,400 crop units. If 30 percent is supported, then the farm is eligible for supports on 2,520 units (if soil-building and soil-bank requirements are met).

This would be 2,520 bushels of corn, 5,040 bushels of oats, 1,482 bushels of soybeans, 1,800 bushels of wheat, and so forth. Since you can take your supports on any crop or combination of crops, you could feed your corn and oats and get supports on, for example, 1,482 bushels of soybeans.

FREE MARKET FOR PART

Any grain production above the supported portion would, of course, have to be fed, sold at current market prices, or held on the farm for higher market prices. Price supports would not stimulate overproduction as in the past. All that a farmer grows above the supported portion would have to be fed or sold at market price.

Much of the grain eligible would receive price support, and go into Government bins. Gehlbach plans to place upper limits, however, on the amount of any grain crop that the Government can accumulate in storage. Though not fully spelled out now, it would be a logical step to pay farmers the difference between the open-market price and the support price, and let them feed the price-supported portion of grain when Government storage bins are full.

When any grains approach the upper limit set on Government holdings, they would be released to the open market on a regular schedule. In this way an oversupply will be reflected through market price, and encourage farmers to accept soil-bank payments for retiring land instead of producing for the Government. This is the key of the entire Soil-Bank Association plan.

Each year each farmer would have to decide whether to produce corn on all available land or put more into the soil bank.

Which way the decision went would depend largely on the cash grain price. But if the price is too low to allow much profit by growing grain, you have a good alternative choice that produces income—the soil bank.

Farmers who get fairly low yields may soon decide to produce only enough crops to take advantage of their bushel support quota. When they do this, production is reduced and the open-market price will rise. Then the swing will reverse, and more will decide to grow crops for cash sale or livestock feed.

Here are some of the advantages of the Soil-Bank Association plan as we see them, realizing it's not possible to tell exactly how people and markets would react to it.

Our present agricultural problems point to more and more controls, and the Gehlbach plan puts on what appear to be effective controls, yet leaves farmers free to make most of their own management and cropping decisions.

He merely shifts incentives somewhat from grain to grass. The incentive payments given to take land out of production will help maintain farm earnings while difficult adjustments in production are made.

A farmer is free to go it alone if he chooses and put his entire farm in corn. But he must accept open-market price for all of it and give up Government aid.

On the other hand, the farmer who keeps extra cropland out of grain production will be rewarded with soil-bank payments and high-price supports on a portion of his grain crop.

This plan takes in all grain crops, and it gets supports off the acreage basis onto a bushel basis. Both these changes are desirable for a fair, practical, long-range program.

Open-market prices, not Government allotments, will determine what farmers grow. There'll be no more production solely for Government bins or warehouses. Stored commodities will be fed back into the market to discourage production when reserve supplies reach fixed levels.

The poorest land will be taken out of production and conserved in the soil-bank first. This tendency will be true both on a national basis and on a farm basis. In other words, fringe farming areas where income is low anyway will be banked, and the market left for the more efficient, high-producing farms.

Most important, perhaps, of all features in the long run is that the Gehlbach plan will encourage good farm management practices. Farmers who comply will have fewer crop acres to use, so they will grow crops that are best adapted and yield the highest return.

FEWER DISLOCATIONS

Wheat is likely to move out of the Corn Belt, corn out of the wheat and cotton areas. More land will be kept in grasses and legumes.

Most corn grown will be first-year corn, with resulting high yields and low per-bushel costs. More pasture land, and low or moderate open-market grain prices, will encourage more livestock production and higher meat consumption. Here lies our greatest opportunity to use more acres in food production—marketing more of our crops through livestock.

The program also appears to have some disadvantages that can, perhaps, be eliminated with further study and refinement. The cost of operating it, especially for the first few years, may be a real problem. Present stored surpluses greatly complicate the job of getting the new plan in operation.

Our production facilities will keep the open market pretty well loaded up with all grain and livestock products, in spite of the banked acres, as it appears to us. The open market price will probably hover around the average cost of production for each item.

Some economists will say this is not a disadvantage, but a natural working of the law of supply and demand. And, the less-efficient producer has an alternative—he can take maximum advantage of soil-bank payments.

Cost of production, as the term is used here, is not as bad as it may sound. It includes a 4-percent charge for investment and a $1-an-hour labor charge. If you're average or better, you can make a living when prices equal production costs.

CHIEFLY FOR CORN BELT

Gehlbach has designed his plan primarily for the Corn Belt, and ways have to be worked out to fit cotton, wheat, and other specialized farmers such as cattle and sheep ranchers. Perhaps it would be necessary to superimpose a cotton acreage allotment program, and a two-price plan for wheat on top of Soil-Bank Association plan.

Since minimum soil-building acreage allocations are set according to long-time county land use, the dairy farmer in a strictly grain county will get favorable allocations.

On the other hand, the grain farmer in a heavy dairy county may be penalized because most of his neighbors keep a lot of land in pasture.

The features of the Soil-Bank Association plan will get a thorough going over in the next few months. They may well be the basis of common ground on which various farm organizations and factions can reach agreement. Gehlbach is aiming all his activities at getting it into law this summer for use in 1958, realizing that it's already too late to get the plan into operation this year.

United States Money to Poland?

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. BEAMER. Mr. Speaker, I enclose two editorials on different subjects.

However, both of these subjects require more money if they are implemented by the Congress. I feel that the press of the country has rendered an admirable service if it could help to make the taxpayer and the legislators conscious of the fact that we dare not continue the policy of attempting to buy friendship and, at the same time, we do not need more Government jobs.

Under unanimous consent I include in the Appendix of the RECORD an editorial from the Kokomo (Ind.) Tribune and an editorial from the Marion (Ind.) Chronicle, both dated March 25:

[From the Kokomo (Ind.) Tribune of March 25, 1957]

UNITED STATES MONEY TO POLAND?

The idea of sending United States aid to Communist Poland is downright shocking to a lot of Americans. Why, they ask, aid a government that is allied with the master Communist conspirators in Moscow?

The answer is that our own Government thinks it is possible that the alliance between Poland and the Soviet Union rests on a thinner basis than is generally realized. Our State Department is exploring the possibility that the gulf between Warsaw and Moscow may be widened if the present Polish Government can be helped to stay in power. One way to help it hold on is to furnish economic aid which could improve living conditions for the Polish people.

All this would be taking a big risk. Russia might tolerate Poland receiving United States aid and then appropriate most of the aid itself. Or the Soviets might use United States aid as an excuse to crack down hard on the Poles and install a more Russian-minded government in Warsaw. And a great amount of American cash would be lost in the process.

The argument in favor of making a stab toward aiding Poland is that by doing so we might encourage increased resistance to Russian domination of eastern Europe, to an extent that the end of Soviet occupation there might be hastened.

With the stakes as high as they are, some risks seem worth taking. If aid from us at this important point in history would provide the further spark that would keep alive the hope of freedom and actually give it some emphasis, we ought not miss the opportunity.

No one knows how good the chance to win this advantage may be. We are not sure yet, at this point in history, whether United States aid to Yugoslavia, for instance, has done the free world any service or whether it has been a waste of money.

It is, then, a real gamble if we send economic aid to Poland. It could wind up in a throwaway of American money or it could further undermine the Soviet grip on the satellites. If it weakened that grip, it would ease our overall burden in the world struggle, and we would be thankful that we had taken the gamble.

[From the Marion (Ind.) Chronicle of March 25, 1957]

MORE GOVERNMENT JOBS

Officials of the United States Department of Agriculture will go before a House subcommittee on manpower utilization this week to explain why they need a requested increase of 25 percent during the next 15 months in the Department's work force. They should have no great difficulty. The soil bank set up by Congress last year, with an annual $1.2 billion to distribute among farmers, probably accounts for most of the additional jobs.

Other departments and agencies may have more trouble in convincing the Congressmen that they need more hands. The Eisenhower budget, now under attack from many quarters, calls for an increase of 73,000 Federal employees. Representative JAMES C. DAVIS, Democrat, of Georgia, chairman of the House subcommittee, says that would add $360 million to the Government payroll. He suggests that the time may be at hand to put an overall ceiling on Government jobs or even to reduce them by 10 percent. "The situation confronting Congress today calls for action over and above the ordinary."

During the first 2 years of the Eisenhower administration 200,000 employees were separated from the Federal payroll. This compared 140,000 added during the first 2 years of Franklin D. Roosevelt. The firings were labeled reductions in force but Democrats in Congress complained that jobholders of their political persuasion were being rolled out of office on the slightest pretext. Civil employees of the Federal Government now number about 2.5 million, as against 3.8 million at the end of the war of 1945.

A Salute to NTA Film Network

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. DOLLINGER. Mr. Speaker, I take this opportunity to welcome a new member to the family of television networks. April 1, 1957, marks the coming of age of the Nation's first television film network—the NTA Film Network—whose film programing is being carried by 133 television stations throughout the United States and its possessions.

Despite the existence of three powerful television networks that operate on a coast-to-coast basis, the NTA Film Network, a newcomer to the field, possessed the vision and courage to launch a new film network, one dedicated to provide outstanding film programing to the American viewing public.

The network, which achieves commercial status on April 1, asserts that it was organized to fill two basic needs; the first to provide an important and major new source of film programing to stations; the second to provide another market place for the national advertiser—one which will offer him the convenience and prestige of network and the flexibility to conform with his market pattern in line with an economically sound advertising body.

The new film network is a subsidiary of National Telefilm Associates, one of the Nation's major television film distributors. It is jointly owned by National Telefilm Associates and 20th Century-Fox Film Corp.

The full import and significance of this new network was expressed by its president, Ely A. Landau, who, in a recent address before the Radio and Television Executive Society, declared:

We already offer an opportunity for advertisers to reach the country's TV viewers at a cost that adds up to sensible advertising economics. We already represent a vital new source of film programing to our affiliates. But we are fully aware of the fact that our scope today is, and must be, restricted by the limitations of today's television economy.

The problems of this tight television economy exist and we must face up to them. We have tried to build a film network that would be a practical operation in television's restricted economy today and an important contender in television's expanded tomorrow.

The blueprint has practically drawn itself. It is not in our power to expand the number of stations, but we can help to enhance the potential strength of those stations already in existence. We can't stretch the standard 24-hour day; we believe we can, however, make more of those hours important audience hours.

Fortunately, some of the country's important markets have four stations or more; that means there is at least one station in each now denied the programing strength only possible through national exposure. In such important concentrations of populations as New York, Chicago, Los Angeles, Denver, Milwaukee, and others, we have affiliated with independent stations, who heretofore have lacked that programing strength.

By strengthening the program structure of independent stations we can broaden the base of television. In a market where an independent, the exact mechanical counterpart of the wired network affiliate, has had to sell its time for a fraction of its competitor's rate card, we can help put them on a more evenly competitive basis.

In markets where no independent station was available we signed agreements with stations already affiliated with other networks. On many of these stations we asked for so-called marginal times, times under the direct control of the station. In this time period we are programing top-quality feature motion pictures.

And so it is that to the television-set owner the NTA Film Network means more and better entertainment. He gets the benefit of new creative thinking, and the accelerated creativity of present programing sources, stimulated to greater activity by fresh competition.

To the national advertiser, hitherto plagued by availability and clearance problems, the NTA Film Network represents a new, convenient and sensibly priced central market place for buying nationwide coverage. The new network gives him buying leverage; he is now less dependent on the only networks previously available to him.

The successful formation of the NTA Film Network, the first film network ever to reach the operational stage, is a significant development. The acceptance of its basic concept by two of the Nation's leading advertisers who will sponsor the network's premiere performance show presages an expanded television era, an era of revolutionary change that will benefit the station, the advertiser, and the public to whose service this great medium is dedicated.

To the new NTA Film Network, I say, welcome and congratulations.

Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. DORN of South Carolina. Mr. Speaker, I commend to the House this

excellent statement by Gov. George Bell Timmerman, Jr., of South Carolina:

This statement is made in response to a telegram from Congressman RALPH W. GWINN, of the 27th District of New York, member of the House Committee on Education and Labor. The telegram reads as follows:

"State department of schools reported to United States Office of Education, South Carolina short 1,953 classrooms and needed to replace 4,500 classrooms. Can you get answers these questions?

"How many of the 1,953 needed are in poor school districts unable to meet own needs? How many of these districts can meet their needs by State aid? How many school districts are unable to meet their need from local and State financing? How many are unable to finance themselves without Federal aid? Is this data exact or estimated? How many school districts are there in South Carolina? How many school districts supplied the information? Was the information supplied by the superintendent of the local school district? Was any part of the data regarding schoolroom shortages supplied by school boards themselves or other political body acquainted with the facts? Questions apply to both figures.

"RALPH W. GWINN."

The figures "1953" and "4500" mentioned by Mr. GWINN were reported January 1957 in the United States Department of Health, Education, and Welfare, Office of Education, Circular 490 (cols. 21 and 22), as the number of classrooms needed to relieve pupil overcrowding (see text) and to replace unsatisfactory facilities as of fall 1956. Circular 490 contains 23 columns of statistical data, 3 pages of text, and the facsimile of a questionnaire which was used in collecting the data. A copy can be obtained from the Superintendent of Documents, United States Government Printing Office, Washington, D. C., for 15 cents.

THE FIGURE "1953"

The figure "1953" is actually an estimate of new classrooms in various stages of completion as of fall 1956. It reflects no need for Federal aid. The estimate was based on a capital outlay for new classrooms. It is not a statistic of a shortage which was not being met. It is an estimate of a need which was being met. It was determined in the following manner.

The questionnaire, facsimile of which is printed on pages 7 and 8 of circular 490, was sent first to our State department of education. Although it does not administer our school-building program, that department undertook to supply the requested data. Its estimates for item 5, columns 2 and 3 of the questionnaire, entitled "Number of pupils enrolled in excess of normal capacity" are reported in columns 14 and 15 of Circular 490. These estimates are important because they are the immediate basis for the estimate of the figure "1953."

In footnote 1 of the questionnaire printed on page 8 of Circular 490 are set out certain criteria to be followed in supplying data for item 5, columns 2 and 3. A reading of this footnote will reveal that the criteria are overlapping, and, if followed, the estimates would be erroneous and misleading. For this reason, the State department of education quite properly employed its own criteria.

The estimates for item 5, columns 2 and 3, were based upon a fifty-eight-odd-million-dollar figure found in the following quotation from the 88th annual report of our State superintendent of education for 1955–56, to wit:

"From July 1, 1951, to June 30, 1956, school districts reported a total of $110,134,141 for new school plants put into use. The total capital outlay reported during the same period is $168,814,858. These figures indicate that $58,682,717 of new school plants were in various stages of completion June 30, 1956, the majority of which will probably be put into use during the 1956–57 school year."

I now quote from the report on how the estimates for "item 5, columns 2 and 3," were made, to wit:

"At the end of the school year 1955–56 there was approximately $58 million already expended on schools in various stages of completion. We figured that some $6 million worth of plants would be completed prior to the opening of the 1956–57 school year, leaving some $52 million of school plants to be completed in the future. We then figured that a classroom in a complete school plant would cost $25,000. This gave us a capital outlay of 2,080 rooms which we rounded off at 2,100 schoolrooms. Twenty-one hundred schoolrooms would house between 50,000 and 63,000 pupils depending on whether or not they were high school or elementary school pupils. Thus we arrived at an arbitrary figure of 15,500 high-school pupils and 40,000 elementary school pupils."

The figures "40,000" and "15,000" then were inserted in item 5, columns 2 and 3 of the questionnaire and subsequently reported in columns 14 and 15 of circular 490 as the number of pupils enrolled in excess of normal capacity.

The figure "2,000" mentioned above was inserted in item 8 of the questionnaire as the number of instruction rooms scheduled for completion during the 1956–57 school year, but it is not reported in circular 490.

The figure "2,100" did not suit the United States Office of Education, and back came the questionnaire, but not to the Department of Education. This time it went to the office of the Educational Finance Commission. In lieu of the 2,100 instruction rooms scheduled for completion during the 1956–57 school year, the figure "1,186" was inserted in item 8 of the questionnaire and subsequently reported in column 23 of circular 490. It was in fact a guess-estimate of the number of newly built classrooms completed for occupancy in the 1956–57 school year, exclusive of library rooms, gymnasium classrooms, and shop-rooms (all of which could be made available and are used for classrooms when needed).

Actually there is no way to predetermine with accuracy the number of classrooms to be completed during any given time. There are too many variable factors, and our school-building program is too vast.

This brings us directly to the figure "1953." It was inserted in item 7 (a) of the questionnaire which reads as follows:

"7. Additional public elementary and secondary instruction rooms needed (as of fall 1956) for housing the pupils enrolled:

"(a) Needed to accommodate excess enrollment reported in columns 2 and 3 of item 5."

As requested by this item, the enrollment estimated in "item 5, columns 2 and 3" of the questionnaire was translated into classrooms by dividing the 40,000 elementary pupils reported in column 2 by 30 and the 15,500 high school pupils reported in column 3 by 25 and totaling the results.

The figure "1953" was the result. It is reported in column 21 of circular 490 as "additional instruction rooms needed (as of fall 1956) to accommodate excess enrollment."

In this connection, it should be noted that while the statistical tables in circular 490 and the questionnaire speak of "excess enrollment" and "pupils in excess of normal capacity," the text of circular 490 substitutes "pupil overcrowding," which is vastly different in meaning.

It thus will be seen that the figure "1,953" is an estimate of new classrooms in various stages of completion as of "fall 1956." Obviously, we would not have been building them had we not thought we needed them.

All this illustrates how fickle statistics can be without sufficient information for proper interpretation. The State Department of Education started with $52 million. It translated the $52 million into 2,080 classrooms by the use of the norm 25,000, rounded off the 2,080 to 2,100 classrooms, and translated them into 15,500 high school pupils and 40,000 elementary pupils, only to have the office of the Educational Finance Commission at the request of the United States Office of Education translate the pupils back into classroom figures. Only this time it came out 1,953 instead of 2,100 because of the use of different norms.

I repeat: The figure "1,953" is not a statistic of a shortage that is not being met. It is an estimate of a need that is being met. In no sense does it reflect a need for Federal aid. The estimate was based upon an existing capital outlay for new classrooms then in various stages of completion. The questionnaire asked how many were needed. It did not ask how many could we not provide. The questionnaire also asked how many pupils were enrolled in excess of normal capacity. It did not ask how many pupils were "overcrowded."

THE FIGURE "4,500"

The office of the Educational Finance Commission also supplied the figure "4,500" mentioned in Mr. Gwinn's telegram. It is reported in column 22 on page 5 of Circular 490 as "additional instruction rooms needed (as of fall 1956) to replace unsatisfactory facilities (exclusive of those in column 21)." Actually, the figure "4,500" is a guess-estimate made "as of fall 1956" as to future construction expected to replace existing classrooms under our present State aid program by 1960. It does not represent "unsatisfactory facilities" in the sense that 4,500 classrooms are now inadequate. It represents classrooms that are well-lighted, well-heated, and well-equipped, and of sufficient size and design, but which are old (not obsolete) models, in comparison with the more than 8,000 new, modern classrooms already constructed under our new building program. Some of these will be eliminated by future consolidations. Also, we are meeting our needs so quickly that many taxpayers are thinking now in terms of replacing all old buildings with modern buildings. Most of our Negro pupils are housed in new buildings. Many of our white pupils are housed in old buildings. Taxpayers with children in good but old buildings also want their children housed in modern structures. The building of these future needs is well within our own means, and our own ability to determine.

SCHOOL BUILDING PROGRAM

Since our current school building program was begun on July 1, 1951, South Carolina as mentioned in my earlier statement has allocated more than $170 million for the construction of approximately 8,000 new classrooms, although we have the third lowest per capita income and the second highest percentage of school children.

Despite our disproportionately heavy educational burden, we have increased our State aid to schoolteacher salaries 150 percent within the last 10 years, almost double the earned income gain for labor in the United States during the same period.

As of February 14, 1957, the exact total of expenditures under our present building program was $173,113,006.45, the exact total of allocations was $170,948,141.45; the exact total remitted to school districts on projects was $154,900,461.25; and the exact total of allocations made but to be remitted to school districts on approved projects was $16,047,680.20. These figures involve State funds only. They do not include local funds for school construction.

The total debt service on State school bonds, including principal, interest, and bank service charges, was $18,212,545.30 on February 14, 1957. In comparison, the proposed Federal aid program appears insignifi-

cant. South Carolina would receive only about $9 million over a 4-year period which, as you can see, would be hardly enough to finance our bonds.

In order to evaluate properly statistical data concerning our schools, you should know that under our school building program the average cost of constructing a classroom for 36 pupils (not to be confused with the average number of pupils in a class) is about $15,000. But since a bare classroom, unattached to a completed school unit with its many necessary appurtenances, would be of little value, a more realistic average would be about $21,000. Our State department of education, which, among other activities, compiles statistical data for publication annually by the State superintendent of education used an average cost figure of about $25,000. In dealing with millions of dollars, several million pupils, or thousands of classrooms, the use of different norms can produce some widely different conclusions.

How many school districts could finance their own school construction without aid is a debatable question. Indirectly, they all contribute to our school building program. The State gets the revenue to finance the program from a sales tax. It is paid by people in every district. There are 106 school districts in our State now. Prior to our consolidation program there were more than 1,600.

STATE EDUCATIONAL FINANCE COMMISSION

As Governor, I am also chairman of our State Educational Finance Commission which administers the allocation of State funds to local school districts for school construction under our present school building program. The allocation of public moneys for public-school construction carries with it the responsibility of making wise allocations.

The commission does not impose school building funds or school buildings upon local communities. We allocate funds on the basis of approved applications. We advise with local authorities on their school building needs and they in turn, if they desire, apply for construction funds, subject to our approval.

The whole program is geared to the actual needs of the local community and to the ability of the people of our State to maintain our schools once they are built. This program is not based on unrealistic statistics. There is little point in building for bankruptcy.

CIRCULAR 490

Circular 490 is an illustration in point. Therein has been collected and reported as a "panic starter" the total number of students in the Nation in excess of "normal capacity" in all the classrooms of America. That means that if 30 is the norm for classrooms in State A, then the number of students in excess of 30 in every classroom in State A goes into that total. To translate such a total into classrooms and base an appropriation of several billion dollars on it is ridiculous. Where would these classrooms be built? Surely you would not build a classroom for a student just because a class happened to have 31 students in it last fall. Since most classrooms with students in excess of the norm have only 1, or 2, or 3 more than norm, are you going to build a classroom for those 1, 2, or 3 students, or are you going to collect students from all classes in the school in excess of the norm? If the latter alternative is selected, the students in the new classroom would range in ages from 6 to 18 and in grades from kindergarten to the 12th grade. Are you then going to put 13 teachers in that classroom, one for each grade? If you do, the class would sound like a bazaar in Basra. You could collect excess students from all schools in a district and maybe make up enough of the same age and grade to fill several classrooms, but how would you get them from home to school and back again without at least great inconvenience? They now attend schools reasonably near their homes but these classrooms can't be split into parts and distributed among the several schools. They would have to be located somewhere. Unless they are attached to a school, they would be worthless as classrooms.

To plan or administer a school building program out of the abundance of one's ignorance would be a calamity. No one on the national level is endowed with sufficient knowledge to predetermine accurately the future needs of the whole country. The problem of public school construction is too intricate to be handled by long distance. Too many variable factors are involved in intelligent planning. These factors multiply as we move from the district level to the community level and then to the local school level. It is farcical to think that a program can be developed in Washington to meet the needs of the Nation.

While I sincerely hope this statement may contribute toward the prevention of what threatens to be a monstrous $2 billion Federal blunder based upon statistical data which is utterly worthless for the purpose of establishing either a need or a base for Federal aid to school construction, I gravely doubt that my effort will make any more impression on some proponents of Federal aid than the weight of a gnat's wing on a 90-foot wave in the middle of the North Atlantic during a midwinter cyclone.

With a blind prejudice against representative government, the moguls of centralization go left-winging along in a frenzied rush to outdo the other side of the Iron Curtain in nationalizing everything presently involving a free people's choice.

First, in the name of democracy the Bible was expelled from our public schools. Then Myrdal's American Dilemma was enrolled. Next the States were denied the legal right to prohibit subversive activities. Now comes the effort to nationalize our public schools, and, under the guise of civil rights, abolish the right of trial by jury. History already records the tragedy of the reconstruction era. A similar niche in future history waits our presentday resurrected-reconstructionists.

Polish Aid

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Star on the subject American Aid to Poland:

POLISH AID

We do not know why Senator KNOWLAND has chosen to attack a possible Polish-aid program as being the forerunner of a "Communist Marshall plan" for Eastern Europe. For such a plan would be eminently worthwhile if it could be as successful in rescuing the Eastern European states from communism as the Marshall plan was in saving Western Europe from the Communists.

A Polish delegation is negotiating with the State Department for American farm surpluses and loans with which to buy American farm and mining machinery. It has been estimated that this would amount to $300 million over a 2-year period.

Aside from the cost, Senator KNOWLAND's main objection seems to be that American aid to Poland would relieve the Soviet Union of the burden of supporting its own satellite. This may be true, but it is an argument which must be appraised in the light of the possible alternatives. And the only alternative we can see is a policy of no aid, which would leave the Poles totally dependent on Russia or drive them to a desperate and futile revolt.

It seems to us that this is another case in which the judgment of the responsible administration officials should be trusted. It is certain that the Polish people, and it is probable that the Polish Government, would like to follow in the path of Tito and break away from subservience to Moscow. If an American-aid program will accelerate this trend it may well be a desirable project to undertake. But it is absurd for Senator KNOWLAND to suggest that the Polish Government must demonstrate its independence before qualifying for American aid. If any appreciable independence comes to Poland it will come slowly and by degrees. To insist now on some spectacular gesture of independence would merely be to invite the Russians to march in and reenact the butchery of Hungary.

Commissioner John J. Allen of the Salvation Army

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. VORYS. Mr. Speaker, on March 29, Commissioner John J. Allen, of the Salvation Army, retires after 50 years of distinguished service. Although he served all over the United States and in countries around the world, we feel that he belongs especially to us in Columbus, Ohio, where he served the Salvation Army and the community for many years. Here are some facts about Commissioner Allen's life and achievements:

Born in Hazleton, Pa., in 1887.

Commissioned Salvation Army officer over 50 years, rendering distinguished service.

Held the position of chief of staff of the Salvation Army for 7 years in London. This is the highest appointive position in the Salvation Army.

During the First World War, he was senior chaplain of the 77th Division. His organizing genius was recognized by military authorities and he was transferred to General Headquarters, Chaumont, where in addition to administrative work, was appointed senior chaplain of advance section service of supply.

As a chaplain in the United States Army, Commissioner Allen was decorated for bravery with the Croix de Guerre at Vesle River.

During the Second World War, Commissioner Allen was called to be a member of staff of Chief of Chaplains in Washington, D. C.

In October 1940, the commissioner suggested and effectively organized the heads of welfare organizations that had served in World War I and formed what later became the United Service Organizations.

For the past 3½ years he has traveled around the world as special representative of the general of the Salvation Army, holding conferences with top world leaders in government, church, and educational fields with a view to seeing how the Salvation Army can better serve, especially in the underdeveloped countries.

Commissioner Allen has been a great servant of the Lord, and richly deserves to live long to enjoy the retirement to which his long record of splendid service to his country and to the Salvation Army entitles him.

School Integration

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. ABBITT. Mr. Speaker, the other day on the floor of this House I had something to say concerning the question of surrendering principles for political advantage. I have been highly pleased with the wide endorsement of these views in the press of our State. Our Virginia papers have had a good deal to say on this matter during the past few days, and it is interesting to note that there is almost no evidence of support for the kind of thinking which contends that we should give up our fight to preserve segregation in Virginia and throughout the South.

There have always been some in our midst who are adroit in criticizing someone else for what they are doing in connection with a great problem. This has been true since the beginning of time. But these same people are never willing or capable enough to suggest ways of doing differently. It is easy to knock down what the other fellow proposes, but it is a lot harder to map out a program of your own, to put it into force and to get the people to agree to it and have it successfully administered.

Those who would oppose all we have attempted to do in Virginia apparently are in this category. They contend that what we have done is wrong, although the vast majority of the people of Virginia think it is right and have approved it overwhelmingly by the vote of the elected members of our assembly and through their public expressions.

The people of Virginia will never willingly submit to the theory of integration and they have shown overwhelmingly that they respect efforts of those who are trying to preserve it. They are not about to change their minds and put their confidence in people who are of the opinion that the best we can do is to keep the white schools as white as possible and at the same time accept some integration.

I wish to include with my remarks a splendid editorial from the Farmville Herald of Farmville, Va., dealing with this question and, as usual, Mr. J. Barrye Wall, the paper's editor, has grasped the essential truth of the problem. He poses some vital questions and puts in proper perspective this question which is now before us.

No man in Virginia has been more forceful or effective in presenting his views on this problem than has Mr. Wall. On several previous occasions I have included in the RECORD some of his fine comments on this problem of segregation in the schools. Mr. Wall edits his paper in the community from whence came one of the first suits which resulted in the infamous Supreme Court decision in 1954 and yet no man is more respected in that community—by white and Negro citizens alike. He is fair and honest, yet he is a man of his convictions and those convictions are shared by the great majority of the people of our section.

Mr. Wall was one of the original group of Virginians who foresaw this problem and who began immediately to deal with it. He has not wavered one iota in his conviction that the only way to preserve our way of life is the determination to resist integration anywhere. He has lived long enough to see our great school system in Virginia grow and develop until we have a system of which we can be proud. This applies to both white and Negro schools. More of our people are being educated better today than ever before. Our people are improving our schools every year and we will continue to do so, unless chaos should come with an attempt to integrate and thereby force the closing of large numbers of schools under the laws of the State.

Mr. Wall recognizes these problems as well as any man in the State and people of Virginia are fortunate to have him in the capacity he holds so that his voice may continue to sound loud and clear for the maintenance of our way of life. We must stick together on this and reject as utter folly the suggestions made by well-meaning, but misguided individuals who would sell out all we hold dear for political advantage.

I commend the reading of this editorial to the Members of the House and congratulate Mr. Wall upon his continuing efforts to make our people aware of the seriousness of this situation and as long as we have those who are willing to stand for these principles, our way of life will be maintained.

The editorial follows:

SENATOR DALTON SETS STAGE

Republican State Senator Ted Dalton set the stage Saturday for the gubernatorial campaign in which we expect him to be in the months just ahead. Though he disavows his intention to carry the Republican gubernatorial banner he certainly is placing himself in a position to be its candidate, which he can be by merely saying the word.

His statements before the Republican central committee were nothing new, except that he took occasion to oppose the principle of massive resistance renewed last week by United States Senator HARRY F. BYRD. Mr. Dalton is not out of character in this. He opposed the interposition resolution, in the regular session and the Governor's school program in the special session. He maintains that Virginia can accept the principle of nonsegregation laid down by the United States Supreme Court, and then keep white schools white under law and order but keep the public schools. Just how this will be done has not been detailed by Senator Dalton, nor by anyone else. It is a slogan of several other Virginia politicians, some Democrats, who overlook the important governmental principles of usurpation of power by the Federal courts, and the ineffective experience of other States and cities—Washington, D. C., New York City, to mention just two—in maintaining public schools efficiently on an integrated basis. We presume that Mr. Dalton and those who follow his reasoning will accept, first a little racial integration in schools, which will inevitably lead to more and more integration with its complexities of administration, breeding of racial discord, and loss of efficient operation.

The State of Virginia, under the Constitution, is a definite unit of government. Its laws must be effective in all parts of the Commonwealth. There will be no integration at any place in Virginia, or there will be racial integration in all parts of Virginia. So, those who would accept, maybe, a little racial integration in some of the counties with only 25 or 30 Negroes, like Carroll County, must realize that the schools in other parts of the State may find much larger percentages. Further, with the integration of public schools, integration of faculties will follow naturally. The problem becomes more and more complex.

But this is but a part of the question. The overshadowing phase is the usurpation of the powers and sovereignty of the States under the United States Constitution. We have seen no recognized legal authority which has stated unequivocally that the school decision of the Supreme Court on May 17, 1954, is according to law and precedent. The present trend toward government by judicial fiat, executive orders, and bureaucratic interpretations transcends the question of racial integration of schools as imminently important as that is. Our entire system of government is at stake. Will the Constitutional Republic stand or fall? Will there be sovereignty of the States or will we submit to the political whims of an all powerful judiciary or executive oligarchy? Will Congress be stripped of its powers, or through inertia retreat from its duties? These are questions which cannot be answered simply by using the school and racial issues for political advantages. There is no way under the sun that the school and racial issues can be eliminated from the forthcoming gubernatorial elections, but for goodness' sake do not overlook the important principles of government which are directly connected with those questions.

We hope Mr. Dalton's trial balloon explodes, and quickly.

Election of President and Vice President

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. CURTIS of Massachusetts. Mr. Speaker, Mr. Irving Edinger of Brighton, Mass. has made a study of the various improved procedures which have been suggested for the election of President and Vice President, and has written a thoughtful letter which has been published in one of Boston's outstanding newspapers. Because of the current interest in this question, I believe that

Members may be interested in his point of view. His letter was as follows:

To the EDITOR:

The question of an amendment to the Constitution to determine the fitness or disability of a President while in office also involves the vital factor that the man replacing the President under a condition of disability be one who has been chosen and selected by the people themselves and not by proxy.

To accomplish this it will also be necessary to include in this amendment a change in the manner of selection of the Vice President.

Many might have observed in the last election that when they went to push the lever down for President they also found the name of the Vice President covered by the same lever. In other words, they actually voted for President, but whatever name was under his received the same amount of votes.

It gave the people no voice, choice and selection, and we the people could say very little about it when we market the ballot. In case of disability the Vice President would become President, and anyone holding that office should only be one who has received the direct mandate by the people to occupy that office. Anything less than that is not a true representative form of government.

The way the election is set up today we do not have it. The President picks his man; the delegates sanction it and that's the end of it as far as the voting public is concerned.

But if the delegates could pick a 3 or 4-man slate of vice presidential candidates who could work in harmony with their presidential candidate, and put them on the ballot for the people to choose one, we would not only have a truly representative form of government, but the people would have a choice, a selection and a direct vote for the next best man to govern them, and we would be setting an example of real democracy in action.

IRVING EDINGER.

BRIGHTON.

United States Army Command Management School, Fort Belvoir, Va.

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. ZABLOCKI. Mr. Speaker, I am pleased to insert some observations by the distinguished chairman of the Committee on Foreign Affairs, Hon. THOMAS S. GORDON, as a result of his recent visit to the United States Army Command Management School at Fort Belvoir, Va. As the guest of the post commander, Maj. Gen. David H. Tulley, and the commandant of the school, Col. Frank Kowalski, Jr., Congressman GORDON was accorded a 17-gun salute, 4 ruffles and flourishes, and the playing of a march by the 356th United States Army Band, during which he inspected the honor guard. I think Members of the House will find his remarks on the mission, the methods, and the accomplishments of this important training institution most informative:

Last week it was my distinct pleasure to participate in a program at the United States Army Command Management School at Fort Belvoir, Va. I would like to share with you some of the impressions that I gained from this gratifying experience.

The primary mission of our Army is the defense of the Nation's security, but in recent years the Army has realized that it has become in peacetime a complex business as well as a fighting force. The present precarious world situation dictates that we maintain poised and powerful military forces at all times: However, even a Nation as abundantly endowed with resources as ours does not possess an inexhaustible supply of money, material, and manpower. Therefore, it is most important that in this nuclear age, we match technological preeminence with administrative and managerial proficiency. The integration of advanced business techniques and procedures into our Army will do much to increase our combat power. In extension of this progressive program, the Command Management School was established to assist our senior commanders and key staff officers to prepare themselves for the important tasks of managing our worldwide Military Establishment.

The school is located at the fringe of metropolitan Washington in Fort Belvoir, Va., the engineer center. This fort is held in high esteem throughout the military world for its efficient operation, high level of military decorum, and single mindedness of purpose of its troops. A great deal of this well-deserved reputation is directly attributable to the inspiring leadership of Maj. Gen. David H. Tulley, the post commander.

While the school is located physically at Fort Belvoir, it is under the direct command supervision of Gen. W. G. Wyman, Commanding General of the United States Continental Army Command. This distinguished military leader, who directs all our land combat forces in the United States, voiced the central theme of the school's program when he said, "The science of management must be taught here in its perspective as a tool for the successful building of thought and action which will result in Armed Forces prepared to win a war of any dimension."

The school offers its participants an intensive 3-week executive development program. It is concerned with practical problems of command and is designed to give the commander a better understanding of the management tools which are available to him in his operations. If one single thought of the school could be raised above the others, I believe that it would be the essentiality of cost consciousness, cost consciousness not only in the sense of dollars but also the cost of the resources of money and material. As you well know, before steps can be taken to effect economies in the vast complex of Government, a point of view must first be established. The establishment of a permissive intellectual climate at this school in which the participants are encouraged to explore the entire field of management, military and civilian, is a fundamental requirement in the Army efforts to place the peacetime operation of its forces on a sound economical basis.

You will be interested to know that the school has found the case method of instruction particularly effective in its program. This method avoids academic generalizations and encourages the participants to develop their own practical solutions to daily operating problems. The cases which are studied here are uniquely Army cases reflecting actual management situations encountered in daily operations. These serve the dual purposes of providing a vehicle for broad management discussions and a means of introducing the class participants to the new business tools and techniques now being integrated into the established Army structure. There are no approved or school solutions. Each participant is urged to express his views and to test his thinking against the views of his classmates. We can be assured that in this dynamic climate, there can be no dogmatism or stagnation.

An extensive guest speaker program supplements the case method, bringing to the school outstanding executives and educators from many diversified fields. The list of speakers includes such men as Secretary of the Army Wilber M. Brucker; Gens. Matthew B. Ridgway and Maxwell D. Taylor; Harold Smiddy, of General Electric; Don Mitchell, of Sylvania; and John Kusik, of the Chesapeake & Ohio; along with Peter Drucker, of New York University; Dean Stanley Teele, of the Graduate School of Business Administration at Harvard; and Dean Arthur Upgren, of Dartmouth. These lecturers bring to the classes the latest thinking, innovations, and techniques in military and civilian management. The spokesmen from private industry and educational institutions make a significant contribution to the solidification of the bond of understanding and friendship between leaders of private industry and education and their military counterparts. The speakers from the Department of the Army, after facing the critical scrutiny of the Command Management School participants, return to the Pentagon with a new insight into problems which the commnaders have grappled with on a day-to-day basis in the field.

This school for executives is more than a classroom. It is, in effect, a meeting place where the participating officers live, sleep, and breathe management on a 24-hour basis. Long after the formal classroom discussions have ended, the participants who are organized into small discussion groups, continue their pursuit of solutions to the thought-provoking management problems confronting them. The assemblage of 50 officers and civilians, each with 20 or so years of service ,represents a vast pool of experience that can be utilized by colleagues and is shared among all. The key to the school's success is the discussion of down-to-earth problems and the exchange of ideas of how best to solve them.

The Army realizes that no school can be any better than the men who administer it. Its reputation in military and academic circles along with the unbounded praise of its 1,200 alumni is testament enough to what the commandant, Col. Frank Kowalski, Jr., and his astute staff have accomplished in just 3 short years.

In conclusion, I should like to point out that the complexities of logistoics and the magnitude of our Military Establishment makes it necessary for alert military leaders to balance their skills in tactics and logistics with proficiency in day-to-day management. I am happy to say that this challenge is being met at Fort Belvoir. Among the graduates of the school are commanders of our largest installations and activities. More than 50 general officers, one admiral of the United States Navy, and 1 out of every 7 or 8 colonels on active duty in the Army have attended the school.

We, the Congress of the United States, are the great board of directors of the United States Army: we make the allocations, we periodically examine its functions, and we check its balance sheets. The Command Management School is important to us because it shapes the thinking of those who manage the day-to-day operations of our Army.

I am sure that every Member of this body would be impressed with the school if they availed themselves of the opportunity of visiting Fort Belvoir and observed this prime example of our Army's forward thinking. You will find a visit a most interesting and thought-provoking experience and you will derive a clearer perspective of some of the problems that our Army is faced with today. I think we might do well to remember the motto of this outstanding school: "From knowledge the power of decision."

Ray Moley's Comments on the Report of Campaign Contributions and Expenditures

---

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the 85th Congress must modernize our election laws relating to campaign expenditures and contributions. As the chairman of the Republican Congressional Campaign Committee, I am well aware of the problems which confront us in this area.

A study of the 1956 campaign was undertaken by the Subcommittee on Privileges and Elections of the Committee on Rules and Administration in the other body. This study has been reviewed by Ray Moley. I feel that his comments are of sufficient interest to my colleagues who must ultimately deal with this problem that I am bringing them to their attention through this extension of my remarks. His first article on this subject appeared in a syndicated newspaper column on February 22. The others were in Newsweek in its issues of March 4 and 11, 1957.

[From the Waterbury Republican of February 22, 1957]

STATISTICAL SMEAR

(By Raymond Moley)

Some congressional committees actuated by political considerations have in the past made low marks in honestly presenting the facts, but an especially created Oscar for the smear of the year should go to the Subcommittee on Privileges and Elections in the 84th Congress. Senator ALBERT GORE was chairman, and MIKE MANSFIELD, and CARL T. CURTIS were the other members. Senator CURTIS, it should be noted, disagreed vigorously with the report as well as with the methods followed in conducting the investigation.

The full report with exhibits is a mighty affair, nearly as large as the President's budget. Perhaps the very size of the thing precluded a careful examination by writers who have commented on it in magazines and newspapers. Perhaps they took merely the summary that it pleased the majority of the committee to air to the public. In any event, the content of the report, bad as it is, has been made worse by sloppy reporting thereon in at least one magazine and in two signed columns that I have seen.

There is space in this article for only a few specimens of the outrageous abuses of statistical method followed, but I shall make it my business in due course to do what is within my power to expose this malicious hoax.

The basic data for the study were obtained by collecting information both from the givers and the receivers of money for the campaign. But the period upon which the major conclusions are based was only from September 1 to November 30. By this method the contributions made to the two party organizations appeared very large while the amounts spent in money and manpower by labor organizations over the entire year are small. It is also basically a misrepresentation because these contributions include only money spent for professedly political purposes. Thus there is omitted what is spent out of union funds for what are called "education and news dissemination" in print and on the airwaves.

There are various categories selected in order to show that a very large percentage of the money was contributed to the Republican Party. While it is clear from a close reading of the report that the contributions were from individuals, it has been easy for people who choose to smear corporations and business associations to say that companies or firms or associations gave the money. This, of course, is not true.

The aggregate for such a category as military prime contractors, for example, is made up of contributions from officers and directors. The same person and his contribution can appear in several categories. One man and his contribution, for example, appear in the largest military prime contractors, the largest oil companies, the American Petroleum Institute, the National Manufacturers Association, 12 selected families, and probably in several other groups in which individuals are not specified. Therefore the meaning of the statistical compilations vanish in a series of duplications. If this committee were not entirely interested in political pay dirt, it might have found that this man was a very large contributor to many causes of a religious, philanthropic, and civic character.

One category lists the contributions to the parties by 37 leading advertising agencies. Presumably, as one commentator has indicated, this is to show that some of these companies were interested in getting business from the parties. The pay dirt was thin, for only $51,600 was unearthed. It is worthy of note that the subcommittee failed to mention, in connection with this item, that the widow of a man who headed one of these agencies in his lifetime gave $64,400 to the Democratic Party.

One of the most interesting items in the book is the identity of the largest individual contributor to either party. It was Lansdell K. Christie. He gave $70,564 to the Democrats, and $2,600 to "miscellaneous."

[From Newsweek of March 1, 1957]

DOCUMENTING A SMEAR

(By Raymond Moley)

It would be sound public policy to limit by law the overall amount an individual can contribute to a political campaign. It is sound to prohibit contributions by corporations, associations, and labor unions—a policy now under adjudication by the Supreme Court. But the smearing of all of business by selective figures and sly insinuations is demagogery.

That is exactly what is contained in the bulky report of the Senate Subcommittee on Privileges and Elections on the campaign of 1956. Responsible for this distortion of the facts are Senators ALBERT GORE and MIKE MANSFIELD, majority members of the subcommittee. Senator CARL CURTIS vigorously dissented.

The report is really an attempt to document the major contention of the 1956 Democratic campaign which was in essence that American businessmen, especially successful businessmen, are the untouchables in public life—benighted, predatory, and unfit for public office or trust.

This week, I offer a small sample of its misrepresentation of American business; next week, its effort to obscure the part taken in the campaign by some labor unions.

CONSPIRACY

The report arranges the contributions which it uncovered, mainly to the Republican Party and almost entirely by business men and women, in categories suitable to serve the implication that business management and great wealth are engaged in a conspiracy to ravish the Republic.

There are several such categories which include groups of corporations such as 100 largest industrial firms, 25 largest utilities, 88 corporations participating in the atomic-energy program, 100 largest military prime contractors, etc. Then there are trade associations and groups such as the American Petroleum Institute and Chamber of Commerce of the United States. There is also a group of members of 12 selected families. These are not claimed to be the richest families. They just happen to be mostly Republican.

It is admitted that business groups and corporations do not contribute as such. The report lists gifts from their officers, directors, and members.

The joker in the report is not only the insinuation that these groups and corporations contribute as such, but the reiteration of literally scores of single contributions by including the same people in many groups. For example, one man is a member of the 12 families, a director of one of the largest corporations, a director of a corporation participating in military contracts, and a member of two trade associations. Thus his money is mentioned five times.

DUPLICATION

The report views with alarm the total contributions of $751,914 by "selected groups," including trade associations. Without attempting to show how many times the same contributions are counted in that total, I note that the contribution of an ambassador (there is a category of "heads of diplomatic missions") is counted as such, and it is again counted in a list of the Business Advisory Council of the Department of Commerce. Another man's contribution is counted twice in the total since he is a member of the Business Advisory Council and a director of the Iron and Steel Institute. There are other such duplications which, if taken into account, would greatly change the total.

There is a category of the "37 leading advertising agencies." The selection shows that officers of these contributed $51,600 to the Republicans and nothing to the Democrats. This is hard to believe, unless the selection was deliberately made to show Republican unanimity. But the widow of a man who made his fortune in one of the largest agencies gave $64,400 to the Democrats.

The largest contributor to either party was Landsdell K. Christie, who gave more than $70,000 to the Democrats. He is president of the Liberia Mining Co. There is the Greek, Aristotle Socrates Onassis of Monaco, bearing gifts to both parties—$1,500 to the Republicans and $3,000 to the Democrats. Retrospect over prospect is true generosity. Or maybe his information service missed the boat.

I find no mention of Perle Mesta. Perhaps the levelers' revel provided for the party of the poor at the Chicago convention sufficed.

[From Newsweek of March 11, 1957]

MEANINGLESS REPORT

(By Raymond Moley)

Last week in this space I described some of the insinuations and misrepresentations in the report on 1956 campaign contributions and expenditures prepared by Senator ALBERT GORE's Subcommittee on Privileges and Elections. Now let us see what the report has to offer on the subject of the contributions and expenditures of politically inclined unions.

The figures are sketchy and their presentation clumsy. Either the subcommittee was overwhelmed by the volume of what they collected, or they were anxious to minimize the help given by the unions to the Democrats. The net result is meaningless and incomplete.

The report fails to make clear what a political expenditure really means. The unions

decided for themselves what was "political" and what was "education." The smaller part of union activity in politics is supported by "voluntary" contributions by members, while the larger part, called education, is paid out of union funds.

MANY SOURCES

In the general table in the report listing direct campaign expenditures, "labor" is down for $941,271. Later in the report there are listed "transfers" from "national labor groups" to labor campaign committees, Democratic candidates for the House and Senate, Democratic Party committees, and other labor or Democratic committees, totaling $1,209,560. This amount was buried in the expenditures of the Democrats or of the labor organizations. Another tabulation appears for expenditures of "State and local labor groups." These come to $890,344, half of which they spent directly, and half of which they transferred to other labor and Democratic committees and candidates. Thus it would seem that labor groups raised and spent, from "voluntary sources," $2,981,175. Another tabulation lists the receipts from specific unions. This shows that about 80 percent came from the United Auto Workers, the Steelworkers, the Ladies Garment Workers, and Railway Labor's Political League. Note that this covers only national, not local contributions.

But the report also shows that a very considerable number of labor organizations did not comply with the subcommittee's request for information. Hence the figures cited above are far below even the actual voluntary contributions and expenditures. Also, it should be noted that contributions for the most part are limited to the 3 months from September 1 to November 30. Traditionally, that is the season when the contributors to the Republican Party give birth to the heaviest contributions. Political labor organizations are year-round affairs.

A WIDE FIELD

Enormous funds are spent for what are actually political purposes out of union treasuries. Representatives of the unions cited the following activities which they consider they are permitted to support out of general union funds: "(1) Systematically organized drives for registration of voters; (2) carry out a systematic program of political education, including organization of schools where political questions are discussed, and the compilation and distribution of voting records; and (3) exercise the right of free speech by expressing their views on political questions in print and by means of radio, and television, and otherwise." Since such drives for registrations are limited to those whose minds are prepared by the educational methods described, these three activities cover about all that is ordinarily mean by politics. Altogether, it is a fair guess that the total of contributions by the unions to the Democrats is greater than that contributed by Democrats as such. This means that in many of the Northern and Western States the unions actually dominate the Democratic Party.

Finally, there is invaluable manpower furnished by paid union officers, shop stewards, and others. This contribution cannot be evaluated in monetary terms, but it is very great. It was stated in the publication Labor's Daily last year that "the expenditure of manpower * * * is the real power of the UAW in the political arena."

It is not only in what the subcommittee's report admits, but in what it conspicuously omits that there are portrayed the dimensions of political power which may well dominate the political life of a nation.

H. R. 4602

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. WEAVER. Mr. Speaker, during the recent debate on H. R. 4602, there was considerable discussion about discount practices and their relation to the 4½-percent interest rate on Veterans' Administration guaranteed and direct loans. I want to further discuss this matter in some detail to call to your attention the many complexities of this somewhat technical question. The discount practice is a device where the lender enlarges his net interest yield by obtaining a bonus in excess of the interest rate established by law. The practice has been prevalent throughout the United States for several years.

The amount of the discount or bonus which the lender demands depends on the geographical area in which the loan is made. During most of the 10 years in which the veterans' loan program has operated, money has been loaned at par—no discount—on the east coast. Discounts in the South and Midwest have varied from 2 to 5 points during the last few years and they have varied from 4 to 8 points in the Southwest and on the west coast. The law prohibits the veteran from paying the discount, or bonus, to the lender for the loan; therefore, it is paid by the builder, if the real estate in question is a new house, or by the seller of the property if it is an old house. The simplest form of the discount transaction is as follows:

A builder, planning to build a new subdivision of 100 houses with a sales price of $15,000 and a downpayment of $1,000, goes to a savings and loan bank or life insurance company and asks for an advance commitment of mortgage financing from that company. The company will guarantee that financing will be available for a loan for a veteran when the houses are complete and a veteran purchaser who is otherwise qualified contracts for the house. At that time the lender and the builder agree as to the amount of the discount. The houses are constructed by the builder, usually on a short-term construction loan which he obtains from a local bank, and the veteran and builder, after approval by VA, go to closing. The veteran pays his $1,000 downpayment and makes a note to the lender for $14,000; however, the lender pays the builder only $13,300—5 percent less than the face value of the note—for the $14,000 note. This means that the builder has sold a $15,000 house and has actually only realized $14,300 cash from the sale. On the other hand, the lender owns a $14,000 note signed by the veteran and guaranteed by the Veterans' Administration bearing 4½ percent interest, for which he paid only $13,300. In its simplest from, this means that the builder has paid a bonus to the lender of $700 per house to induce the lender to make money available to veterans who purchase his houses. On the project being described of 100 houses, this means that the builder has paid the lender a bonus of $70,000. The lender will realize, with interest of 4½ percent per annum paid him by the veteran on the note, and the discount, or bonus, paid by the builder, a net interest yield of 5.01 percent through a maturity period of 25 years. If the loan is paid off in 12 years, the net interest yield will be 5.15 percent.

A discount transaction involving old, or existing, property is slightly different. An owner of an old house applies to VA for an appraisal. If the appraisal of VA is suitable to him, he finds a veteran purchaser who is willing to pay the price asked for the property, so long as it is not more than the appraised price by VA. The veteran and the seller of the property are then confronted with the problem of obtaining a source of permanent financing for the loan. Application is made to a lender for permanent financing and the lender advises the seller of the property that he will require a discount of five points. If the loan being requested by the veteran is $14,000, the lender takes the veteran's note for $14,000 at 4½ percent, but actually only pays the seller of the property $13,300. This means that the lender has the veteran's $14,000 note for $700 less than its face value. In this instance, the net interest yield to the lender would be 5.01 percent on a 25-year loan, even though the maximum interest permitted by law is 4½ percent. The veteran is prohibited by law from paying the discount.

Where a builder enters into a commitment to pay a discount on his new houses, there is a very good chance that the quality of the houses will suffer as the builder attempts to cut corners and preserve his profit margin despite the discount he is paying. In these cases, the veteran pays the discount indirectly, since he is getting an inferior product for his housing dollar.

The discount practice has proved an impediment to the veterans' direct loan program. Before Veterans' Administration will make a loan to a veteran, they refer his application to the Voluntary Home Mortgage Credit Program—VHMCP—in order that that organization may attempt to find a private lender. If a private lender is found, the lender is permitted to require the seller of the property to pay a discount of up to 2 points. If the seller of the property refuses to pay the discount, the veteran is not permitted to renew his application with the Veterans' Administration for a direct loan, since the VA has approved the 2-point discount requirement as being reasonable.

Even though the discount practice is used to enlarge net interest yield and is, in effect, an interest charge, lenders

resorting to this practice are not affected by the State usury laws, since technically and legally the discount has not been held to be an interest charge.

A demand has been made for an increase in interest rate on VA loans from 4½ to 5 percent. With the discount practice being followed, lenders are now obtaining net interest yields of 5 percent or more in some instances on Veterans' Administration loans. The proposals before the Congress was that the interest rate be raised from 4½ to 5 percent; however, there was no prohibition against discounts in the amendment. Had the amendment been adopted, the veteran would be required to pay the higher rate of 5 percent and the lender would be permitted to obtain all the discount points from the builder or seller that he could obtain. The interest rate was raised in December of 1956 on FHA loans from 4½ to 5 percent. Even with this increase, the discount practice has not disappeared from that class of loans. FHA loans are being made today in many parts of the United States at discounts varying from 3 to 5 points.

Departments of Labor, and Health, Education, and Welfare and Related Agencies Appropriation Bill, 1958

SPEECH
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6287) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1958, and for other purposes.

Mr. LONG. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I know a lot of you are ready to vote. Well, I have been here all day and I was here nearly every other day listening to the debate, so surely you can spare me about 4 or 5 minutes. I am vitally interested in this subject. I have vigorously opposed this Mexican labor bill every time there was any part of it on the floor, and I expect to continue to do that very thing. Many say, "Oh, they pay the same wage for this labor as they do for local labor." That is the same as saying that the veteran does not pay the discount when he buys a home. I live in a district that uses Mexican labor, too, and am familiar with how the program operates. I live in a district where they have been shipping in Hungarian labor also, and I want to talk about that, too, if I have time. But, this Mexican labor comes there and lives in small shacks.

They arrive by the truckload. Just as they ship in livestock, I have seen as many as 30 or 40 packed into 1 flat-bodied truck. They travel all the way from the Mexican border in the trucks and unload at the farm of the contractor. Here they are domiciliated in tiny shacks which amount to no more than a lean-to shelter. There is no such thing as sanitation or plumbing, and what water they use they haul it in barrels. Many of them do not even to bother to live in these shacks but simply bed down on the ground without any shelter.

Customarily they have a so-called foreman who is able to speak some English, and he is the spokesman for the entire group. He comes to an agreement with the farmer and handles all the money or the group. There is no such thing as wage standards, and no one knows exactly what was paid except the farmer and the foreman. Wage standards and living conditions are thrown out of the window, and it is a matter of each person making the best deal possible. That is the way this program works in the Eighth Congressional District and the adjoining districts in the State of Louisiana.

In my district there are some large plantations, and in other areas there are small farms. In the area where the small farms are predominant the people do some truck farming and raise a small amount of cotton or corn but principally make their living working away from home. A considerable source of employment is on the larger plantations, and this category of labor is being deprived of the opportunity to work by the importation of Mexican labor. The residents of the Eighth Congressional District of Louisiana perform an honest day's work and in turn expect to be paid a fair and prevailing wage.

We are all proud of the living standards and conditions in our country, and these conditions are made possible only by payment of a fair wage scale. The entire balance is upset when cheap foreign labor is imported at the expense of many for the benefit of a few.

Apart from the displacement of local labor, I object to the morals of these imported Mexican laborers. My experience with them has been limited, but it is obvious that law-enforcement officers encounter a problem when the Mexican laborers are in any given vicinity. One was understood to make this reply upon learning that he would spend some time in jail for theft, "So what, it's O. K. with me; I will get three meals and a place to sleep."

Let us not misunderstand this thing. I am in support of knocking out the $2.5 million or any other amount for the importation of Mexican labor or other foreign labor that comes here in competition with local labor. If you want to vote for those few who hire this labor under contract for little or nothing, then vote for it, but do not be misled.

In the little city of Pineville, La., which has less than 10,000 population, there are about 15 Hungarians who have displaced 15 local citizens in jobs within the creosote and other plants.

Mr. GATHINGS. Mr. Chairman, will the gentleman yield?

Mr. LONG. I yield to the gentleman from Arkansas.

Mr. GATHINGS. Before any of this labor can come into this country there must be a certification that local labor is not sufficient to take care of the needs in the area.

Mr. LONG. The program does not always work as intended. In my area I see every day during the cotton-picking season, the farming season, literally hundreds of good American boys walking the streets begging for jobs while the Mexican labor does the work.

Mr. GATHINGS. Let me tell you what they do in trying to get local labor. They preach the need for labor from the pulpit. They ask for this labor in every conceivable manner to do this work.

Mr. LONG. I am telling you of my experience with this program. I live among these people in my district and I know what is going on.

Mr. GATHINGS. How many of those Mexicans who worked in the gentleman's district were convicted of thievery? We have not experienced too much difficulty from these people. They are peaceful and largely law abiding.

Mr. LONG. I have no way of knowing how many of the Mexican contract laborers have been convicted of thievery but I do know that in every locality where contract labor is used there are complaints and law enforcement officers are kept busy in seeing that these laborers behave themselves.

We want to practice a little economy, and we want to keep the Government out of private business. We want the Government to quit interfering with the farmers and other people who have business to transact. I believe this is a very good place to begin. Stop the wetbacks from coming into this country and if we do not have a treaty to back it up, let us make one.

Adequate Safeguards in Tariff and Trade Legislation

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. SIMPSON of Pennsylvania. Mr. Speaker, in many instances the voice of our people first expresses itself in the decisions of our various State Legislatures. A recent action by the General Assembly of the Commonwealth of Pennsylvania is a particularly timely and important example of this phenomenon.

Recognizing the many serious dangers to the welfare of American labor and industry resulting from rising trends in imports of foreign products, the general assembly has approved a resolution memorializing Congress to provide adequate safeguards for the legitimate interests of millions of our citizens by adopting appropriate trade and tariff legislation. There is no question in my own mind but that it is absolutely essential to the health of our Nation's economy for the Congress to give serious attention to this vital problem. In adopting this resolution by a near unanimous voice vote of both houses, the assembly has rendered

a great service to the citizens of Pennsylvania and of the Nation.

The resolution as approved is as follows:

SENATE CONCURRENT RESOLUTION MEMORIALIZING CONGRESS TO PROVIDE ADEQUATE SAFEGUARDS IN TARIFF AND TRADE LEGISLATION

The increased importation of numerous products that come into competition with the output of factories, farms, and mines of Pennsylvania, replacing the products of Pennsylvania's industries, is a constant menace to the State's continuing economic stability.

The lower wages paid abroad make it impossible for many of our smaller and medium-sized producers to compete with imports without resorting to ruinous price cutting, which in turn would result either in financial losses or heavy pressure for wage reductions and outright unemployment.

Our national obligations have reached such extreme proportions that the national income must be maintained at its present unprecedented high level, or close thereto, lest we become insolvent.

Unemployment caused by the imports of residual oil, which represented 3.43 times the average of 45 million barrels imported in 1946, to approximately 154 million barrels in 1956, or the yearly equivalent of 36,640,000 tons of coal; and unemployment caused by imports of crude oil; various types of glass, steel, aluminum, brass and zinc products; pottery and chinaware; granite, tiles, cement, hardboard, plywood, hardware, plumbing, flat glass, and other building supplies, lace, carpets, and all kinds of woolen, cotton, and synthetic fiber manufactured goods; leather and fabric gloves; bicycles; hydraulic turbines; machine tools and other machinery; heavy electrical equipment and other electrical industry products and electronics; watches, clocks, and parts; optical industry products; cutlery; scientific apparatus; pencils and pens; pins, clips, and fasteners; soft fiber; insulation board and manufactured cork products; chemicals; toys; mushrooms; farm, dairy and dried milk products; wallpaper; hats and millinery; printing industry products; ladies hand bags and leather goods; nails, wire, screws, bolts, and nuts, and many other commodities; will render the upholding of the economy at its high levels most uncertain and difficult unless all import trade is placed on a fair competitive basis and the potential injury therefrom thus eliminated.

Agricultural products such as wheat, wheat flour, cotton, butter, cheese, and peanuts, enjoy the protection of import quotas.

A maximum of satisfactory trade results from a prosperous domestic economy freed from the threat of a breakdown resulting from unfair import competition: Therefore be it

Resolved (*the house of representatives concurring*), That the General Assembly of the Commonwealth of Pennsylvania memorializes the Congress of the United States to provide adequate safeguards in tariff and trade legislation, including import quotas and an effective prohibition against dumping of imports in the United States; against the destruction or lowering of our American standard of living, the labor standard of our workmen, and the stability of our economy by unfair import competition and that the existing trade agreements legislation be amended accordingly; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the Vice President of the United States, the Secretary of State, the Secretary of the Treasury, the Secretary of Commerce, the Secretary of Labor, the Secretary of Agriculture, the Chairman of the United States Tariff Commission, the Speaker of the House of Representatives and each Senator and Representative from Pennsylvania in the Congress of the United States.

School-Aid Extravagance

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SCHOOL-AID EXTRAVAGANCE — CONGRESSMAN BOW REVEALS WHAT HAPPENS IN FEDERALLY SUPPORTED SCHOOLS

(By Raymond Moley)

In his pleas for Federal aid for school construction, including his not very successful controversy with the Chamber of Commerce of the United States over the validity of the administration's figures on the need, Secretary of Health, Education, and Welfare Folsom gives every assurance that Uncle Sam will just give the money and look the other way so far as spending is concerned. In short, the impression is given that there will be no Federal control of schools. But isn't such control inevitable, considering the itchy hands of Washington bureaucrats? Would not the Federal Government be under an obligation to be responsible for the grants to the States in this case? Thus the administration is caught in a serious dilemma. It must assure—perhaps should assure—Congress that it will see that the money appropriated is providently spent. And it must, so far as the political exigencies are concerned, assure the States that it will not interfere with the operation and maintenance of the schools.

Also involved in the whole question is the established fact that when State and local agencies are spending their own money they are more careful to avoid extravagance than when they are spending everybody's money. That is obvious.

Secretary Folsom takes great pains also—both in his statement before the House committee considering the subject, and in his letter to the Chamber of Commerce of the United States—to claim that while the Federal Government for some years has been giving hundreds of millions for the construction and maintenance of schools in areas overburdened because of Federal defense installations and other Federal activities, it has not exercised any control over the expenditures of those funds.

According to the revelations to the House by a very useful Member, Congressman FRANK T. BOW, of Ohio, somebody ought to be supervising such gifts because of evidence of wanton extravagance. The Congressman's interest was aroused because of the refusal of the school board of Arlington County, Va., to make public the details of its budget for 1957–58.

It appears that because of the great Federal burden on Arlington County, the Federal Government paid about 10 percent of the costs of the schools there, both for maintenance and construction.

Upon investigation, Congressman BOW turned up some very interesting items. There is in the budget, he says, $6,000 to pay expenses of employees to conventions and for training courses at schools. Those attending these conventions, whose expenses the Nation's taxpayers are thus paying, then pass ringing resolutions in favor of Federal aid.

Of course, there are many items in school maintenance and construction other than the classrooms that the President and the Secretary are talking about so much. There are incidentals such as school bands. There are requested in Arlington "several sousaphones at costs ranging from $700 to $850," and also a harp at $1,500, and 4 pianos at $500 each. The children of the Federal bureaucrats living in Arlington will thus be amply supplied the means if not the reality of music.

But the abuse of those musical instruments must be something frightful: For there is an item of $1,900 for piano tuning. Congressman BOW found that a good piano tuning job can be done for a non-Government-owned piano for $8.50. Thus there must be 224 pianos already in Arlington in 44 schools. Strange that they should need any more—that is, pianos.

A ping-pong table is needed at $50. This seems high. There are also items of furniture for tearooms in some schools. Children, according to Secretary Folsom, are crowded in unfit, insanitary schools, but teachers must have their tea, perhaps so that they can best stand the horrible sight of crowded children.

This delineation of what a school seems to need these days makes it clear that Federal aid is not merely to provide good, comfortable rooms and desks and blackboards where children may learn the three R's. There must be fringe benefits. Or are they benefits?

Water Diversion and the Seaway

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. GRIFFIN. Mr. Speaker, H. R. 2 and companion bills, if enacted, would permit diversion of great amounts of additional water from the Great Lakes at Chicago. Recently I registered with the Public Works Committee of the House my vigorous objection to such proposed legislation.

While I am concerned with the protection of valuable and vested property rights belonging to thousands of Lake Michigan real-estate owners in my district, I would like also to focus the attention of Congress upon the tremendous stake and interest which the Federal Government, as a whole, and all the taxpayers of the Nation, have in this matter. The protection of a huge Federal investment should certainly be important in these days when the Members, as well as their constituents, are economy conscious.

To date, Congress has already authorized $105 million toward this country's share of developing the St. Lawrence seaway.

A bill has been introduced in the House in this session seeking authorization of an additional $35 million, which will make the total cost of this vast project $140 million.

The purpose of the St. Lawrence seaway development, of course, is to enable deeper draft oceangoing vessels to use the Great Lake ports.

The legislation proposed to divert Great Lakes water is working directly contrary to, and at cross-purposes with, the seaway project.

Cargo ships presently are operating within an inch of the bottom of the Great Lakes in some areas. The evidence is clear that even a so-called tem-

porary diversion of additional water through the Chicago waterway will cut that navigation tolerance to less than one-half inch.

It is clear that the diversion of additional water will affect not only Lake Michigan, but most of the other Great Lakes as well.

If the diversion proposal should become law, the cost of the entire St. Lawrence seaway development project must be reevaluated. The expense for deeper and deeper dredging would inevitably add vast sums to the overall cost of the project.

Accordingly, it should be clear that part of the cost of providing sewage disposal for the Chicago area, which should be financed locally by that municipality, would be borne not only by Lake Michigan property owners, but also by all taxpayers of the United States who are underwriting the St. Lawrence seaway.

The background and issues involved in the diversion proposal were well presented in an editorial by Don Gordon writing in the Leelanau Enterprise Tribune, recognized as one of the outstanding weekly newspapers in the Nation. The editorial follows:

[From the Leelanau (Mich.) Enterprise-Tribune of February 7, 1957]

FUTURE OF THE GREAT LAKES IS AT STAKE

We of Leelanau County, surrounded as we are on three sides by the waters of Lake Michigan, should be particularly alert to efforts of Illinois to extend large volumes of emergency diversion of water from Lake Michigan to relieve low-water conditions in the Mississippi River.

Fourteen bills already have been introduced in the House of Representatives to allow the Chicago Sanitary District to draw additional water from Lake Michigan for sewage disposal purposes. Other water diversion proposals are rumored. Decisions reached will affect 2 nations (United States and Canada), 8 States, plans for the St. Lawrence seaway, power stations along the Great Lakes and St. Lawrence River, and Great Lakes shipping. Looking at the problem from a selfish standpoint, every inch of Lake Michigan frontage around our shores is threatened.

The water diversion controversy arose from 1892 to 1900 when Chicago carried out a plan to dispose of sewage by cutting a canal across the low continental divide about 10 miles west of Lake Michigan, and discharging sewage of the entire metropolitan area into the Mississippi watershed by way of the Chicago sanitary canal, Des Plaines and Illinois Rivers. To achieve this purpose, it was necessary to reverse the flow of the Chicago River, and to take water from Lake Michigan and divert it into the Illinois and Mississippi River drainage basins.

For nearly 40 years, until at the insistence of our Senator Vandenburg, the Supreme Court in 1930 relieved the situation, enormous quantities of water were drawn out of Lake Michigan * * * as much as 14,000 cubic feet of water per second. Many local persons still remember what a disastrous effect this drainage had on our shorelines.

The Supreme Court held that the Chicago water diversion had caused a lowering of 6 inches in the levels of the Great Lakes. It held that the lowering of lake levels by approximately 6 inches caused a substantial and injurious effect upon the carrying capacity of vessels, and deprived navigation and commercial interests of facilities which otherwise they would have enjoyed in commerce on the Great Lakes. The Court held too that the 6 inch lowering of the Great Lakes had caused substantial injury in connection with fishing and hunting grounds, beaches, summer resorts, and public parks.

The Court ordered Chicago to provide other means of disposing of the sewage of the sanitary district. It also ordered diversion of water from the lakes to be reduced permanently to 1,500 feet per second.

The sanitary district since then has argued that more water is needed from Lake Michigan for navigation, public health, recreation, community use, agriculture, restoration of fisheries, and atomic power. Each of these claims has been disproved.

The Supreme Court did, however, just 2 months ago, modify its 1930 decree to allow temporary diversion of 8,500 feet per second from the date of that decree (December 17) until January 31, 1957, Illinois has petitioned the Court to extend this emergency diversion until the end of February.

The Great Lakes Basin now is confronted with a bold demand that waters of the Great Lakes be used to restore water levels in the Mississippi River system and to maintain navigation at normal levels in the Mississippi and its tributaries, despite a prolonged drought in the Mississippi Valley. If the precedent is established that the Great Lakes are to become a storage basin for the Mississippi Valley and other great river systems, what of the future of our Great Lakes?

These new and unprecedented demands for water come as the Great Lakes themselves move rapidly toward a low water cycle. Levels of the Great Lakes dropped 3.5 inches during November, reflecting reduced precipitation for many months over the Great Lakes Basin, exactly the same natural phenomenon which has impaired water levels in the Mississippi and its tributaries. Lake levels have dropped more than 3 feet since the high levels of 1952. If you find that hard to believe, check the Lake Michigan beaches and harbors anywhere around Leelanau County.

The Great Lakes Harbors Association, port cities, the Lake Carriers' Association, and the governments of the States bordering the Great Lakes have been united in opposition to the demands of Chicago that the waters of Lake Michigan be exploited for the political or financial benefit of the Chicago Sanitary District. The Canadian Government repeatedly has protested the attempts to take water from an international basin for the benefit of a single community.

It has been the long-standing position of many interests on the Great Lakes that if Chicago has a legitimate basis for adjustment of the 1930 decree, it should go back to the Supreme Court and make its petition, which will become the subject of reasonable and thorough investigation. This important issue, affecting a great watershed, 2 nations and 8 States, should be decided by the judicial processes and not by political methods.

Status of Forces

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. BOW. Mr. Speaker, article VII of the NATO Status of Forces Agreement which surrenders criminal jurisdiction over our servicemen to the foreign countries where they are serving purports to throw certain safeguards around an accused who is subject to such jurisdiction. Section 9 of article VII provides that whenever a member of a force or civilian component or a dependent is prosecuted under the jurisdiction of a receiving State he shall be entitled—

(a) To a prompt and speedy trial;

(b) To be informed, in advance of trial, of the specific charge or charges made against him;

(c) To be confronted with the witnesses against him;

(d) To have compulsory process for obtaining witnesses in his favor, if they are within the jurisdiction of the receiving State;

(e) To have legal representation of his own choice for his defense or to have free or assisted legal representation under the conditions prevailing for the time being in the receiving State;

(f) If he considers it necessary, to have the services of a competent interpreter; and

(g) To communicate with a representative of the Government of the sending State and, when the rules of the court permit, to have such a representative present at his trial.

When Attorney General Brownell appeared before the Senate Foreign Relations Committee on June 24, 1953, to support this agreement, he said that these provisions constituted "civilized standards of justice." He did not appear to be concerned that these provisions did not give to an accused any of the following rights:

First. A right to bail.

Second. The right to be tried by a fair and impartial court.

Third. The right to have a reasonable time to prepare his defense, after being informed of the charges against him.

Fourth. The right to be present at his trial.

Fifth. The right to be presumed innocent until proven guilty.

Sixth. The burden of proof on the Government in all criminal cases to prove such guilt beyond a reasonable doubt.

Seventh. The right not to have involuntary confessions used against him.

Eighth. The right not to be compelled to testify against himself.

Ninth. The right to cross-examine the witnesses against him.

Tenth. Protection against double jeopardy.

Eleventh. Protection against ex post facto laws.

Twelfth. Protection against bills of attainder.

These are all rights guaranteed to an accused by our Constitution. He will lose most of them in foreign courts. Are we to consider that these rights are uncivilized standards and that our Constitution is wrong in granting them to an accused?

In discussing the effect of Article VII of this Treaty it is generally considered that the jurisdiction over our servicemen has been surrendered to civil authorities of the foreign states. This is not necessarily true. It would be possible under the treaty for a foreign power, having refused to waive its jurisdiction, to try an accused in its own military court. In fact that has been done on at least one occasion. Those who justify the treaty on the ground that sentences in foreign courts are less than would be meted out by an American court-martial should consider the effect if such a practise of trial by foreign court-martial becomes general.

The Constitution—Temple of Liberty

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. BOYKIN. Mr. Speaker, I am pleased to include in the RECORD the prize-winning essay in the Alabama American Legion essay contest, entitled "The Constitution—Temple of Liberty," Mr. George Kinzer, of Demopolis High School, Demopolis, Ala., took first place honors in school, county, district, and area contests before entry in the State finals, and in placing first, young Kinzer received $100 in United States savings bonds from the Department of Alabama American Legion in addition to school and local American Legion Post awards. There were entrants from practically every high school in Alabama participating.

This annual essay contest is one of the many Americanism Programs promoted by the American Legion which moulds the minds of the youth of today to make them the citizens and governmental leaders of tomorrow.

Naturally we, in my district, are quite proud of young George Kinzer.

The essay follows:

THE CONSTITUTION—TEMPLE OF LIBERTY

(By George Kinzer)

There is a beautiful marble building in Washington, D. C., which houses many of the treasures of our Nation's past and present. In this structure resides yet another physical part of the United States' early history. It is found in a white altar-like casing in the most hallowed room of the building. To gain the entrance of this chamber you must walk along halls that seem to be the echoing corridors of time. As you enter, your eyes are irresistably drawn to a softly lighted spot which seems dazzling in comparison to its shadowed surroundings. There, on its pedestal, lies the mighty document which made America; our great Constitution.

We, as a Christian nation, believe that our creator made all people with equal rights and freedoms. Our Constitution is our physical assurance that no person, group, or nation will ever violate our rights while it is within the power of the Government to prevent it. It is the provision that our forefathers made for an everlastingly strong government which will insure justice and freedom for all. The principles and ideals incorporated into our Constitution were formed by the men who fought and died and by those who fought and lived to fight again. Their fierce hunger for liberty and freedom seems to fill every space between the lines of the Constitution. The wisest men of our country during that time saw what a young and growing nation would need. Around this, our love for freedom and our need for democratic government, those great men built our Constitution and from that, our Nation. Our Congress, the President and his Cabinet, our system of courts, all were provided to serve and protect us. They serve us by uniting our people, keeping law and order supreme in the land, providing education for all the children and other necessary services. A mighty armed force protects us from physical harm; and our laws, an even mightier force, protect our God-given rights and freedoms.

The framers of the Constitution set down all the laws and rulings needed to successfully build our Government. When they had finished this, most of the men realized, with justifiable pride, what had been accomplished and were satisfied. Others in the group, along with most of the common people, were not. They felt that there should be some assurance that this strong government would never break down its barriers and trample the people's liberties. Those of our forebears who felt this way demanded and received this assurance in the form of our Bill of Rights, the first 10 amendments to our Constitution. The 10 additions state emphatically what our rights are and afterwards decree that no power shall remove these holy freedoms.

In our life are constant reminders of these freedoms. A man knocks on our door and asks us to sign a petition for better city playgrounds for the neighborhood children. We fiercely argue with each other over everything from baseball to ballots. On Sunday some of us attend the church, temple, or synagogue of our choice while others see fit to devote their day to sandtraps, fishing, or extra sleep. We may, during the week, attend a political rally called to let a candidate tell how he will correct the wrongs of the present government if elected. Our sporting arms are never subject to confiscation as revolutionary equipment. No transient military officer can violate our home in time of peace and find a free place to spend the night. All citizens are entitled to the same legal rights regardless of their position in society. No dictatorial judge can, in a fit of ill temper, sentence us to death for a minor crime. We will be punished, but it will come through a jury. No arm of the law is so long that it can search into our home or impound our property without a search warrant and completely legal cause. We are rarely ever slow to claim our rights, but we often seem to forget that one of the 10 assurances states that our rights and liberties extend and are legal only to the point where they do not impair the freedoms of others.

These are our rights, tempered in the fires of war, encased in the gold of peace. They are God-given freedoms which shall forever be protected by our sturdy Government. We stood before their origin in that hallowed marble chamber. We live among them in every moment of our life. The spirit and feeling of liberty embodied in these historic words cannot be incased in that shining pedestal with the aging sheaf of parchment. They are free and flowing, existing in every corner of the land. And the people who owe their freedom to those rights should forever stand, humble and awed, before that sacred temple of liberty: our Constitution.

Editorial Praise for United States Senator Lyndon B. Johnson

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. PATMAN. Mr. Speaker, I am inserting herewith two editorials from prominent newspapers published in the congressional district I have the honor to represent. They represent the sentiment in our section of the Nation in praising our very fine and able United States Senator from Texas, the Honorable LYNDON JOHNSON, majority leader in the United States Senate.

They are as follows:

[From the Paris (Tex.) News of March 24, 1957]

PRESS NOTES JOHNSON LEADERSHIP

The Nation's press is sitting up and taking notice of what some commentators call "the new position of leadership" taken in the Senate by the majority leader, LYNDON B. JOHNSON of Texas.

Although the Texan is not even a member of the Foreign Relations Committee, many viewers of the Washington scene hail him as the one man who has had most to do with the formulation of foreign policy from the Senate angle since the retirement of Senator George (Democrat, Georgia), the longtime chairman. One writer brackets JOHNSON with Senator George and the late great Republican foreign policy expert, Senator Vandenburg of Michigan, as giving breadth and purpose to our foreign policy.

Some of the Nation's top columnists broke out in praise of Johnson for his skill and effectiveness in guiding the Eisenhower Doctrine through the mazes of congressional confusion when it looked for a time as if it either had no chance in the first place, or would be riddled beyond recognition.

Robert C. Albright, columnist of the Washington Post, says JOHNSON stepped into George's shoes largely by common consent. Officially, the post of bipartisan foreign policy leader does not even exist, says Albright, "But when it became quite apparent during 2 months of foment over the President's Middle East resolution that bipartisan cooperation had badly deteriorated, JOHNSON started to move."

The Democrats were in a dilemma, says Gerald Griffin of the Baltimore Sun, when JOHNSON stepped in and by a few slight changes in the George pattern soon had his fellow-Democrats with him.

The New York Herald Tribune's Roscoe Drummond notes that in the wake of the administration's "bumpy and often acrimonious struggle with the Middle East" several consequences are emerging.

"There is, first of all," writes Drummond, "an increased appreciation in the White House for the effectiveness and intellectual competence of Senate Democrtic leader LYNDON JOHNSON."

The fact is, he goes on, "that Senator JOHNSON demonstrated a responsiveness and an independence which can create a new relationship between Congress and the President in foreign policy."

Another Herald Tribune writer, Rowland Evans, Jr., wrote:

"Senator LYNDON B. JOHNSON of Texas has staked a claim as the Senate's foreign policy leader with a deftness that has impressed even those accustomed to his political artistry. And, at least privately, the White House and the State Department have welcomed the Texan to this new role."

So, once more, as he has on many other occasions, the Texan has demonstrated his worth to State and Nation in a critical moment.

[From the Texarkana (Tex.) Gazette of March 21, 1957]

SENATOR JOHNSON ASSUMES NEW ROLE

The political astuteness of Senator LYNDON B. JOHNSON, of Texas, is becoming more and more evident in Washington. His skill in the science of government long has been recognized and now it is producing for him a new role—that of foreign policy leader in the Senate.

Virtually all of the Washington news analysts have taken note of the strides Senator JOHNSON has made in this direction since the first of the year.

Says Howard Evans, Jr., Washington correspondent for the New York Herald Tribune: "Senator LYNDON B. JOHNSON, of Texas, has staked a claim as the Senate's foreign policy leader with a deftness that has impressed even those accustomed to his political artistry. And at least privately, the White House and the State Department have welcomed the Texan to this new role. Minutes after the Senate finally endorsed the President's Middle East resolution, Mr. Eisenhower called Senator JOHNSON to say how delighted he was with the 72-to-19 Senate vote. Secretary of State John Foster Dulles also offered congratulations. The two calls were symbolic of an unstated agreement to heal a serious rupture between the executive branch and the Senate on highest matters of foreign policy. The shattered lines of communication have been restored, the breakdown in confidence at least temporarily repaired, and the Senate's influence in foreign policy vastly enhanced. For that, Senator JOHNSON must be given the lion's share of the credit, under any objective analysis."

Gerald Griffin, of the Washington bureau of the Baltimore Sun, writes as follows: "Senator JOHNSON has moved into a new position of leadership in the Senate, on foreign policy, and has made some changes in the pattern set by former Senator George. The revisions which JOHNSON has brought about were reflected in the handling of the Middle East resolution, and they are expected at the Capitol to result in more consultations and a freer exchange of ideas on foreign issues, from now on, between the Eisenhower administration and Democratic leadership."

Says Roscoe Drummond, also of the Herald Tribune: "In the wake of the administration's bumpy and often acrimonious 58-day struggle to get the Middle East resolution through Congress, several consequences are merging. There is, first of all, an increased appreciation in the White House for the effectiveness and intellectual competence of Senate Democratic Leader LYNDON JOHNSON. The fact is that Senator JOHNSON demonstrated a responsiveness and an independence which can create a new relationship between Congress and the President on foreign policy."

This new role that Senator JOHNSON has taken on is not merely significant from a foreign policy standpoint, it also shows that JOHNSON is demonstrating that he has the stature that goes along with a Presidential nomination. His actions since the first of the year, in our opinion, have strengthened materially whatever claim he may make to the nomination.

World-Policy Council Seen as State Department Need

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 25, 1957

Mr. MULTER. Mr. Speaker, it is obvious to all Americans that our State Department is in need of something or someone to help it formulate policy.

David Lawrence, in the following article which appeared in the New York Herald Tribune of March 21, 1957, proposes a World-Policy Council. Mr. Lawrence's article is interesting and it reads as follows:

WORLD-POLICY COUNCIL SEEN AS STATE DEPARTMENT NEED

(By David Lawrence)

WASHINGTON, March 20.—Sometimes, in fact, too often in Government, the obvious is overlooked.

Today it is obvious that no one man can run the entire Government of the United States, and in the same sense no one man can run the Department of State, either. The tasks are too big, and the position of the United States in world affairs is more exacting than at any time in its history.

A Cabinet whose members are freed from administrative responsibilities and which could sit as a council to the President every day if necessary would help him shape national and international policies.

The problem in almost every Government Department is the same, the responsibilities have grown so large that no one executive head can administer and also have time to think about the making of policy.

Although the Constitution gives the President the duty of conducting foreign relations, this has always been delegated to a Secretary of State. He, in turn, has had to rely on ambassadors abroad with the natural limitations imposed upon them in getting promptly information concerning world problems. But today, with intercontinental telegraph and telephone, communication is instantaneous. Cablegrams and reports by telephone and letter pour in every hour from all parts of the globe. No one man at the head of the Department of State can examine them all and have time for anything else. Also, personal diplomacy, direct contacts with the heads of other governments, is tremendously important and takes time away from Washington.

WORLD POLICY COUNCIL

Congress has authorized a number of Assistant Secretaries to administer the different Divisions of the Department of State, but what is needed is a world-policy council of which the Secretary of State would be chairman. This would be the policy-planning instrument of the Department, and it should not be left to staff men and subordinates to carry on.

The suggestion is not new, but it has an even more compelling reason in the state of world affairs today than when it was first mentioned by this correspondent in an article on November 14, 1952—before the present Secretary of State was selected and when the whole concept was presented on an impersonal basis. Here is the way it was set forth at the time:

"Last May (1952) this writer was sitting in General Eisenhower's office in Paris chatting with him about fundamental principles of governmental organization. The General listened attentively to some thoughts about present-day government derived from many years of intimate contact with the Government at Washington. Before I began, the General had said:

"'I want new ideas. I don't know what the future holds in store for me but, if I am called to a high position of responsibility, I will want new ideas.'

"The main idea that I suggested was based on this realistic fact: Our National Government today has become too big to be run by one man.

"Even some of the big Government departments are too big to be run by single Cabinet officers to whom vast powers are usually delegated.

BIGGEST RESPONSIBILITY

"Making the foreign policy of the United States nowadays is almost the biggest responsibility in Government. It covers not just diplomatic relations with other governments. It covers also economic cooperation involving billions of dollars in grants, loans, and trade relationships. It covers delicate questions of military cooperation affecting 50,000 boys who are drafted every month. All this has its impact on taxes and on almost every phase of our economic life. No such complexities have ever confronted us before in time of peace.

"The truth is that we need a policymaking board of 5 men in the Department of State, 4 of whom should be completely separated from all administrative responsibility. The Secretary of State should be the chairman of such a board. He should have sole responsibility for operating his Department and executing policy. But the views of the four other members as well as those of the Secretary should be at all times given directly to the President of the United States, individually or as a group, orally or in writing.

"Five able men, paid adequate salaries, who are disconnected from all private interests and will give their full time to the making of foreign policy, are bound to improve our international relations. It means a better chance for long-range planning and for thoughtful evaluation of the mass of data that comes in hourly from sources around the globe."

There is need also, of course, for a divorcement of administrative duties from policymaking in every one of the other major departments and, particularly, in the overburdened United States Joint Chiefs of Staff. But the most acute need at the moment is to give the Secretary of State a freer hand and the aid of a council of men of great ability and national stature to help formulate world policies.

Mail Service Facing Breakdown

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include a pertinent editorial from the Weekly Mayfair of San Jose, Calif., on Thursday, March 21, 1957, relating to the danger of a serious breakdown in postal services as a result of postal workers leaving their jobs for better paying positions elsewhere.

The editorial follows:

MAIL SERVICE FACING BREAKDOWN

"The postal service is in grave danger of a serious breakdown because postal workers are leaving their jobs in droves for better paying jobs and that postal worker turnover in many cities has reached the alarming rate of 33⅓ percent.

"Among employees with less than 5 years service it amounts to better than 50 percent." This was a statement made recently by William C. Doherty, president of the National Association of Letter Carriers.

A check reveals that the San Jose Post Office is having much the same trouble, and in addition, is finding it increasingly hard to recruit new employees because of the low pay offered.

The civil service register for letter carriers is practically exhausted and very few applicants are offering to take the examination. Out of those who take the examination a very small number take jobs offered, and out of those who accept many soon quit for better paying jobs.

All of this has a morale-depressing effect that permeates all departments.

Further checks show that there is never more than barely enough employees on hand to execute a complete delivery schedule, and it is not impossible that a wave of sickness would cause cancellation of mail deliveries in parts of the city.

Further complicating this situation is the fact that Congress, now faced by a budget dilemma, has cut the Post Office allocation. Locally, there is no fat to trim and it is possible that Saturday service may be curtailed.

Post Office salaries last year averaged $4,350, which could be regarded as a level of bare existence in these times. The many who receive less find it impossible to make ends meet, so seek other employment. Those who stay, unless their wives work, put in 20 to 30 hours per week at an extra job in order to live decently.

The only hope that postal employees thave to ease and correct these situations is that postal patrons in large numbers contact Senators and Congressmen and urge them to work something out that will prevent this hamstringing of our main means of communication.

Anniversary of Byelorrussian Independence

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. DINGELL. Mr. Speaker, the geographic location of Byelorussia has determined the history of the country. This innocent nation, situated between Western and Eastern Europe, has been throughout most of her history under the domination of foreign powers. For over 3½ centuries the Byelorussian people had to endure enslavement by her predatory neighbors. It was not until the First World War, when the advancing German armies forced the Bolsheviks to leave the subjugated country, that the Byelorussian people, on March 25, 1918, proclaimed their independence.

With the establishment of the republic, the Byelorussians zealously set to work to expand activities in every aspect of national life. Although their period of independence was short, the Byelorussian people made concrete progress in the social, economic and cultural fields. In the international field, this infant nation demonstrated its ability to take its place among the community of nations.

Unfortunately, however, this tiny nation could not resist for long the encroachments of Soviet imperialism. When the German armies withdrew in November of 1918, once again the Red forces advanced into Byelorussia. The independence for which the Byelorussians struggled so valiantly was again lost. At first, while they were consolidating their hold on the country, the Soviets were relatively tolerant to the people; but by 1928 they instituted a policy of Sovietization aiming at the elimination of all vestiges of Byelorussian nationalism.

The extent of Soviet genocide was incredible. It has been estimated that over 4½ million Byelorussians have been liquidated since the Soviet occupation. The Kremlin was well aware that although the Byelorussian people had been enslaved for centuries they had managed to retain their national identity. Consequently, to make sure that these brave people would be subservient, the Communists set out to completely eradicate Byelorussian national feeling and to substitute for it a Soviet culture.

For the last 39 years the Byelorussian people have suffered under this inhumane Soviet brutality. However, they have never voluntarily accepted communism. By constant passive resistance and acts of sabotage these brave people have shown their reaction to Red rule. Their desire for freedom has never been obliterated. As long as there is any hope, this spirit of liberty will remain in their hearts.

Accordingly, it is appropriate on this anniversary of Byelorussian independence that the free world bolster this hope by assuring these enslaved people that their unquenchable desire for freedom will eventually triumph over alien rule. It is also appropriate on this occasion that the American people promise the captive Byelorussian people that we have not forgotten them; and that our minds will not be at ease until they, once again, are free.

Dr. Henry Steele Commager on the 22d Amendment

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. UDALL. Mr. Speaker, as I announced earlier this week, from time to time I intend to place in the RECORD replies received from historians and political scientists who respond to my cross section survey of opinion on the wisdom of the 22d amendment.

I present today the reply of Dr. Henry Steele Commager, of Amherst College, in Massachusetts. Dr. Commager has authored many works on the history of American government. He is, I believe, one of our eminent authorities in the field of American history.

Dr. Commager's statement follows:

AMHERST COLLEGE,
DEPARTMENT OF HISTORY,
Amherst, Mass., March 17, 1957.

DEAR MR. UDALL: I opposed the 22d amendment when it was proposed, and I have been a consistent critic of it since it was ratified. It was, as President Eisenhower said, an act of retroactive vindictiveness. It is wrong for the reasons you indicate; it is wrong, too, because an amendment of that kind has no place in the Constitution at all—that document should concern itself with principles, not with mechanical details of the principles.

The fundamental and, to my mind, irrefutable criticism of the 22d amendment is that it represents a vote of no confidence in democracy. It says, in effect, that our generation cannot trust any other generation to make the right choice. It denies to the American people the right to do what they have a natural right to do—the right to elect to the Presidency the man they prefer. It is based on an arrogant assumption that we somehow have more wisdom than our children and their children will have.

There is another and practical objection that should be stressed. The only time the American people ever had a chance to vote on the question, namely in 1940 and 1944, they voted overwhelmingly in favor of more than two terms. The vote of the State legislatures, therefore, is an act of defiance of the American public. Clearly it misrepresents that public, as it misrepresents history. It should never have been written into the Constitution; it should come out of the Constitution.

Sincerely yours,

HENRY S. COMMAGER.

Who Profits From Trading Stamps?

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial on trading stamps from a Salt Lake City, Utah, newspaper, the Deseret News:

[From the Deseret News, Salt Lake City, Utah, of March 13, 1957]

WHO PROFITS FROM TRADING STAMPS?

Through the years, competitive enterprise has been the foundation on which America is built. Any effort to regulate that competition, and certainly some regulation is necessary, should be critically examined.

But the growing public reaction to trading stamps, as evidenced in part by recent letters to this page, clearly indicates that it is time to ask whether regulation isn't required in that field.

As a matter of fact, nearly half the 45 State legislatures in session this year, are considering bills to curb or regulate trading stamps in one way or another. Tennessee has led with a law, signed by the Governor last week, levying prohibitive taxes on stamp operations. Maryland has a bill requiring stamp firms to pay the State the face value of all stamps unredeemed after 1 year. South Carolina is reviving an old law prohibiting trading stamps with food purchases. Other States, including Idaho, are considering taxes on stamps or other means of controlling them.

The trading stamp craze, obviously, isn't confined to Utah, though what has happened here recently represents about as thorough a saturation as exists anywhere. The Department of Agriculture estimates half of all United States families save stamps. Sales covered by stamps run to about $11 billion a year.

The typical system works like this:

A store pays from $10 to $15 for a packet of 5,000 stamps, which it distributes to its customers with their purchases. A customer's book of 1,200 stamps, representing purchases of $120, costs the merchant from $2.50 to $3.75. Thus, the cost of the stamps to the merchant is 2 percent to 3 percent of his gross sales. This is a big cost item in businesses such as grocery stores or service stations where competition keeps markups at a bare minimum.

The stamp company then redeems the 1,200-coupon booklet (for which it has received $2.50 to $3.75) for an item retailing for $2 to $3—but which costs the company much less at wholesale. The markup from wholesale to retail represents the stamp company's profits. In addition, it has a 100 percent profit from the stamps that are never redeemed—and estimates of stamps redeemed vary widely, from less than 50 percent to 97 percent.

What's wrong with all this? Asking that question is a sure way to start a heated argument in almost any group.

For one thing, stamps increase the cost of the things you buy. It is strange that people who complain about the "middleman's profit" seem to give no thought to the fact that an entirely new, profit-making but nonproductive operation has been introduced into the market system. The customer, of course, pays for profit the trading stamp company makes.

It is argued by the stamp promoters that a company offering trading stamps increases its volume of business and thus is able to keep its prices at competitive levels. With some reservations, this is true. But what of an area, like most of Utah, in which virtually all food stores and service stations offer stamps? There is no overall increase in volume, but there is an overall increase in the cost of doing business.

There are, of course, other objections. There are persons who prefer not to lick stamps and who would rather trade in the coin of the realm at established stores rather than at premium centers. For these people, the saturation of trading stamps forces a choice between savings stamps or paying the higher prices without even a partial compensation.

As for the stores, the nuisance and increased costs of handling stamps has set many retailers against them.

What the future holds for this peculiar kind of merchandising, we don't pretend to know. There will be no stamp-curbing legislation in Utah this year. Moreover, as long as there is private enterprise in America, there will be premiums or free balloons for the children or other ways of bringing the customers in.

But the saturation of trading stamps in this area, along with the price increases that have accompanied it, have brought the public to the point of recognizing the futility of paying to keep an extra, unneeded operation in business. Public reaction is now in the position of accomplishing what legislation will not.

In other words, some smart businessman is going to make a killing one of these days by advertising that he does not give stamps and by displaying lower prices to prove it.

Carpenters Hit Fifth Amendment Use in Probes

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 14, 1957

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting news story which appeared in the Sacramento (Calif.) Bee, of March 23, 1957, under the heading of "Carpenters Hit Fifth Amendment Use in Probes."

CARPENTERS HIT FIFTH AMENDMENT USE IN PROBES

The Sacramento-Yolo Amador District Council of Carpenters has announced it is in complete agreement with the national AFL–CIO executive council's statements denouncing the use of the fifth amendment by any trade-union official for his personal protection and to avoid scrutiny.

"We invite any and all properly authorized committees of law enforcement agencies of the State of California or of the United States to scrutinize all records, books, and files governing our council," a policy statement declared.

RECORDS AVAILABLE

"The officers and elected representatives of this council are hereby directed to make available to any such legally authorized person or persons such books, records, and minutes as are requested.

"The officers and representatives are also directed to extend whole and complete cooperation to such committees and to not take refuge by use of the fifth amendment if such requests are made to them."

The statement was signed by Robert Georges, president; J. B. Russell, financial secretary, and Victor LaChapelle, business agent of the council.

PROMPTED BY PROBE

LaChapelle said the statement was prompted by current investigations of the teamster's union by a congressional committee and the actions of some of the union's officials.

"We want to let the people know," he said, "that if evils exist they are not present in the trade union movement generally. We are not afraid to let any constituted authority take a look at our operation."

Attacking the Moon by Rockets

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. O'HARA of Illinois. Mr. Speaker, among the many men and women of world stature in the district that I have the honor to represent is Dr. Harold C. Urel, of the University of Chicago, winner of the Nobel prize and one of the great scientists of our times. My colleagues will be interested to learn that Dr. Urey now is engaged in an important work in the laboratories of the University of Oxford in England, where he has advanced the suggestion that by use of long-range rockets we can chip off pieces of the moon, eventually to reach the earth for use in scientific research.

The suggestion of this distinguished, world-famous scientist is so intriguing that I am extending my remarks to include the following news article from the New York Times of March 24, 1957:

DR. UREY DRAFTS ATTACK ON MOON—HE SUGGESTS ATOMIC ROCKET TO CHIP OFF SOME PIECES FOR SCIENTIFIC TESTING

LONDON, March 20.—The suggestion that long-range rockets with atomic warheads should be fired at the moon has been put forward in a technical journal here by Dr. Harold C. Urey, of the University of Chicago. His idea is that the resultant explosion would chip pieces off the moon. These pieces, he believes, would arrive later at the earth's surface intact and unheated, thereby enabling geophysicists to say what the moon is made of and why its visible surface has such a pock-marked appearance.

Dr. Urey is at present working at the Clarendon Laboratories, University of Oxford, on the composition of meteorites. His suggestion has been published this week in the British astronomical journal, the Observatory, as one peaceful use of the military employment of atomic energy and intercontinental ballistics.

The idea of bombarding the moon has arisen as a result of arguments at recent meetings of the British Royal Astronomical Society about the origin of the features of the lunar surface.

One school of thought has argued that the smooth appearance of the moon's craters has been caused by an outflow of lava from the moon's interior. The rival school says that the crater holes were caused originally by the impact of a mighty flock of meteorites, now covered over by thick beds of lunar dust.

Dr. Urey is an impact theorist. He also considers that the moon's surface was sculptured when the satellite was at a low temperature, arguing that the enormous mountains on the moon would sink into the interior if the surface was or ever had been as plastic as the earth.

In this view, he is supported by Dr. Thomas Gold, former chief assistant to the British Astronomer Royal. Dr. Gold considers that the original landscapes of the moon have been eroded or cracked and worn down by intense solar energy. The resultant dust, he says, has slowly crept down the side of the moon mountains, filling craters, fissures, and the so-called seas or maria.

Dr. Urey approves of the dust idea but considers Dr. Gold in error in assuming how it got there. The sun, he believes, did not create the dust. It was caused, he believes, billions of years ago in a relatively brief period when the moon was bombarded by enormous meteorites or planetesimals.

The still-visible remains of one of them (Imbrium) would make a layer about 1,000-meters deep if spread uniformly over the moon's surface. His idea is that after each large planetesimal collision a great cloud of dust and water vapor rose above the moon. The dust settled out and the water fell as rain.

The rain washed the dust off the mountain peaks into the lower levels and sank into the dust and crevices, turning the lunar silicates into hydrates and eventually disappearing, leaving the dead, cold, motionless moonscapes known to present astronomers.

The bombardment, Dr. Urey says, was due either to the moon running into a flock of objects passing through the solar system, or else he considers it was part of the terminal stage of the formation of the earth and the moon. He favors the latter theory.

And because the flock of objects (the preplanetary basis of the solar system) was traveling in the same orbit as the slowly building-up fragments of the moon. Dr. Urey considers that the impact velocity that left craters on the moon would not have been excessively high.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

The American Bar Association's Program for Lawyers in the Armed Forces

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 29, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding address which was delivered by the Honorable Charles S. Rhyne, of Washington, D. C., before the Judge Advocates Association and the Judge Advocate Chapter of the Reserve Officers Association on March 27, 1957.

Mr. Rhyne, who is chairman of the House of Delegates of the American Bar Association, was nominated recently to be president of the American Bar Association during the coming year. This address, entitled "The American Bar Association's Program for Lawyers in the Armed Forces," presents a very factual discussion and a keen analysis of the need for procuring and retaining experienced lawyers in the Armed Forces.

I recently introduced a bill, S. 1165, which would accomplish much of what Mr. Rhyne has in mind.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN BAR ASSOCIATION'S PROGRAM FOR LAWYERS IN THE ARMED FORCES

(Address by Charles S. Rhyne, Washington, D. C., chairman, House of Delegates, American Bar Association, before the Judge Advocates Association and the Judge Advocate Chapter of the Reserve Officers Association, March 27, 1957, Bolling Air Force Base Officers Club, Bolling Field, Washington, D. C.)

It is indeed a genuine pleasure to be here this evening and meet with you, the members of the Judge Advocates Association and the Judge Advocate Chapter of the Reserve Officers Association and your guests. I am familiar with and heartily endorse your fine work in seeking to explain to the organized bar the disciplinary needs of the Armed Forces and in seeking to explain to the nonlawyers in the Armed Forces that the American tradition requires for the citizen in uniform equal treatment with the citizen out of uniform. You are entitled to the highest commendation for helping to bring about a broader and truer understanding of the relationship between the law and the man in uniform.

* * * * *

Because of your interest in the Armed Forces and affiliation of the Judge Advocates Association with the American Bar Association, I wish to discuss with you tonight some of the things the ABA intends to do for the military lawyer. This program's broad objectives can be stated simply as an effort to obtain for lawyers in the Armed Forces a fair professional recognition, including the same status with respect to rank and compensation as is presently granted doctors and dentists. This program resulted from a study which indicated that the military lawyer was not enjoying the professional prestige to which his educational attainment and comparable standing in the civilian community entitled him.

I am happy to be able to further this ABA program because for many years I have been intimately acquainted with many lawyers in the military service and have learned much of their outstanding work for our country, about their problems and the discriminations that exist against them.

Because of this background it is my firm conviction that ABA's program to sponsor legislation providing equality of rank, pay and other considerations for lawyers in military service is long overdue. We in the organized bar have been too slow in recognizing and doing our duty here—a duty which if performed would result in great benefits to our country and to our profession as well. Tonight I wish to discuss this important subject with you, review the facts as we understand them and enlist your aid in performing our duty.

The relatively inferior status of the attorney in the military service, in my opinion, costs the United States Government many millions of dollars each year. In order to maintain peace in this world, it is essential that the military service obtain the greatest value for each dollar expended in its multibillion-dollar procurement program. It must also obtain the highest possible morale for each member of its combat team. Military lawyers make a tremendous, though little recognized, contribution to these objectives. I would summarize the work of military lawyers which aids in achieving these objectives, as follows:

1. Reviewing contract actions for legal sufficiency and rendering legal advice in the field of military procurement; assisting the Attorney General's office in litigation cases which involve a military department; administering laws relating to claims in favor of and against the United States Government; representing the military departments in contractual disputes; and handling patent and copyright matters concerned with weapon, transportation, and communication systems of the present and future; and

2. Protecting the constitutional rights of our fighting men at home and abroad; rendering aid and assistance to the families of our fighting men; and assisting our fighting men in matters concerning marriage, divorce, wills, adoption, insurance, taxes, claims, landlord-tenant relations, and in many other fields.

You could undoubtedly add many other duties to those I have listed, but these illustrate the tremendous field of responsibility of the military lawyer.

Our study reveals that there is an excessively high turnover rate among military lawyers. Most military lawyers can hardly wait to return to civilian life. In addition to its adverse effects on legal service and assistance, this high turnover rate is inordinately expensive in terms of travel costs for the officer, his dependents, and household effects; uniform allowances, and wasted man-hours. When one considers administrative processing, security checks, physical examinations, initiation of records, training, terminal leave, and travel to and from stations, it is obvious that the actual useful time of a 2- or 3-year man produces very little for the United States Government. Concurrently, the training period decreases the productivity of the experienced military lawyer who trains the inexperienced military lawyer.

I am familiar with the requirement that military lawyers perform certain functions under the Uniform Code of Military Justice; with the requirement that a military lawyer must attend all trials of military personnel by foreign courts; and with some of the individual service requirements for military lawyers to perform professional services in various administrative situations. It is obvious that if the mass exodus to civilian life of professionally qualified military lawyers is not stopped, the military services will not be able to comply with the law of the land in the manner contemplated by Congress.

Let me emphasize a point, numerically the number of military lawyers on duty, while below that authorized, is not critical. However, experiencewise, the loss is staggering. For, I am told that approximately 50 percent of our military lawyers are inexperienced and only recently graduated from law school.

Specifically, we must face up to the fact that lawyers do not desire to make a career of the military service because of (1) inadequate pay; (2) lack of promotion, and (3) lack of prestige. Because of the post-college years he must spend in law school and preparation for his bar examination, the military lawyer commences his career 3 to 4 years later than does his college contemporary in the line and most of the other staff corps. This causes him to remain permanently behind his contemporaries in both promotion and eligibility pay. It makes his 3 to 4 years older upon reaching retirement eligibility. In the event he is retired for physical disability, his retirement pay at a given age is less—due to the longevity factor. All during his career the military lawyer loses up to 4 years' longevity pay credit and receives approximately $50 per month less than his line officer contemporary. It should also be noted that military lawyers are required to finance their own professional educations.

For these reasons primarily, because obviously there are other reasons such as frequent moves and family life disruptions, assignment to station of choice, eliminations of nonlegal duty details such as OD, inventory officer, etc., young lawyers do not often seek a military career. Since virtually every young lawyer gets out of the service as soon as his required tour of duty is completed, obviously he would not have come in at all if it were not for the fact that he owed some military obligation to his country. Thus, the Selective Service Act indirectly has the effect of drafting young lawyers for the military legal departments. Senior military lawyers are being retired involuntarily each month. We are told that the majority of career military lawyers have indicated an intention to retire voluntarily at the end of 20 years' service (when they first become eligible to retire) because of the dim outlook for promotion and pay increases. These departing officers are being replaced by young lawyers recently graduated from law school, who too, at the end of 2 or 3 years will also return to a more rewarding and lucrative civilian practice.

The December 1956 issue of Survey of Current Business, published by the United States Department of Commerce, states: "The aver-

age net income of lawyers engaged in all forms of legal practice was $10,220 in 1954." If this trend continues, in a few years the only military lawyers remaining on active duty will be those who have just graduated from law school and have no legal experience. And, as I have stated many times previously, a young lawyer is not fully ready to practice law when he graduates from school. The gap between law in practice and law in the books has not been adequately bridged by our law schools. The young lawyer should serve an internship before actually practicing law. Yet in the military service young inexperienced lawyers represent the United States Government in matter concerning millions of dollars and in matters concerning the life, freedom, or death of our servicemen. Brilliant as a young lawyer may be, without experience and maturity he is not completely competent to be the adversary of the highly skilled and experienced counsel of many business interests, or to defend an accused against a murder or rape charge. There is no substitute for experience. Experienced lawyers must be retained in the military service.

With regard to the possibility, often mentioned, of utilizing greater numbers of civil-service lawyers, there are limits on the number that can be utilized and more important, on the number that can be procured. In general, civilian lawyers in significant numbers can only be obtained in or near large population centers where they have professional and cultural advantages. When civil-service lawyers are employed, they usually receive higher pay (and their pay is also too low), and have shorter working hours than their military colleagues; they are also entitled to overtime pay and are not subject to military regulations and responsibilities, change of assignment, combat and operational orders, or overseas duty.

Further, in accordance with the established policy of the American Bar Association, I believe that legal assistance should be kept as a military operation. The giving of personal legal advice and assistance to servicemen should be accomplished within the Armed Forces only by lawyers in uniform and not by civil-service employees. The utilization of civil-service lawyers is not the solution to the problem of retaining more military lawyers on active duty. This most disturbing situation can be resolved only by furnishing sufficient incentives to encourage some of the well qualified younger lawyers to make a career of the military service.

At the midwinter meeting of the house of delegates in Chicago last month, the American Bar Association, at the suggestion of a great Vermont lawyer, Osmer C. Fitts, who I understand also is a director of your Judge Advocates Association, resolved:

"Unless legislation is promptly enacted by the Congress which will provide realistic, scientific pay schedules for all members of the armed services sufficient to provide the incentive to keep competent officers and technical enlisted men on a career basis, thus saving huge sums now lost by the rapid turnover of highly trained and experienced personnel in all branches of the armed services, then this association considers it essential to provide compensation along the lines of Senate bill No. 1165 and H. R. 4786, of the 85th Congress, 1st session, for members of the legal profession serving with the armed services commensurate wtih the special professional pay schedule now available to the other learned professions."

I have been informed that the Cordiner committee recommendations, which are referred to by implication in the ABA resolution, were released late yesterday. While I have not seen these recommendations I have heard a lot about them. From what I have heard, grave doubts exist in my mind that adoption by Congress of the Cordiner committee recommendations would solve the problem of retaining career lawyers in the military services. The proposed pay rates of the Cordiner committee are too low in the critical grades of lieutenant, captain, and major to be of sufficient help in the military legal career field. It is interesting to note that the Cordiner committee recognized that special incentive pay would still be necessary to procure and retain medical and dental officers, and hence supports medical incentive pay as a continuing means for attracting and obtaining an adequate supply of dental and medical officers. There is no doubt that this premise is equally applicable to military lawyers. The preservaiton of basic legal rights is just as essential to the well being and morale of the citizen in uniform as medical or dental care.

Senate bill No. 1165 and H. R. 4786 which provide for the procurement of judge advocates and law-specialist officers for the Army, Navy, Air Force, and Coast Guard, go a long way toward solving this whole problem. In addition to professional pay, they provide for additional service credit and early promotion to place military lawyers on an equal footing with their contemporaries in the service. Surveys among members of the bar reveal that enactment into law of S. 1165 and H. R. 4786 will procure more desirable experienced lawyers for a military career and also induce desirable military lawyers to remain on active duty as careerists. It is pertinent to notice that Congress solved a similar problem concerning military career doctors and dentists with the passage of the Medical and Dental Career Incentive Act of April 30, 1956.

On February 7, 1957, Senate bill No. 1093 and H. R. 4787 bills providing in part for each Judge Advocate General to serve in the rank of lieutenant general or vice admiral, were introduced by the Honorable STROM THURMOND and the Honorable DEWITT HYDE, respectively. These bills come within the principles of the American Bar Association's resolution. In addition to raising the prestige of the military lawyer, the Judge Advocate General would be receiving only his just due. Each of the three Judge Advocates General acts as the senior member of one of the world's largest law firms. For example, let us look at the responsibilities of just one of these Judge Advocates General. He supervises a force of over 1,300 lawyers, 500 enlisted personnel and 1,100 civilian employees, such as stenographers, court reporters, clerks, and the like, employed in approximately 400 different legal offices throughout the world. During a normal year, his service will prosecute in the name of the United States more criminal cases (37,697 in 1956) than are filed by the Attorney General in the United States district courts. With few exceptions, these cases will be defended by military lawyers and the records of these trials will be judicially reviewed by various appellate agencies within the structure of his department. This tremendous responsibility in the field of criminal law is equaled if not surpassed by many facets of his civil law responsibilities—claims, military affairs, patents, litigation, and procurement counseling.

Because the Government is a self-insurer, it does not carry public liability on its ships, vehicles, or aircraft. Yet, at times these instrumentalities have accidents and cause damage and personal injury. The responsibility for the adjudication and settlement of claims for damages arising from military activities is vested in the Judge Advocate General's Department of the service concerned. In effect, the Judge Advocate General supervises a large casualty insurance company.

Through personal friendships with Judge Advocates General—who, like all other lawyers, talk about their work—I have learned of other phases of their duties and responsibilities such as rendering thousands of formal legal opinions annually to commanders and their staffs concerning jurisdiction, military and civilian personnel law, administrative law, criminal law, marriage and divorce, international law, foreign law, and other subjects.

The Judge Advocate General's Office often represents its service in matters before the tribunals of the United States Patent Office and assists the Department of State in its dealings with eight foreign governments with which our Government has entered into patent exchange agreements. Authority to settle claims for the unlicensed use of inventions by the Government has been delegated to the Judge Advocate General.

The Office of the Judge Advocate General assists in representing the Government in cases resulting in litigation when the individual service is concerned. These cases have involved bankruptcy, receivership, labor, public utilities, taxation, admiralty, employees compensation, torts, subpenas, and procurement of witnesses. I can testify from personal experience of some 20 years on the other side of various matters that a good job is constantly being done by military lawyers.

Military lawyers are required to review certain procurement actions for legal sufficiency. In fiscal year 1956, military lawyers of one of the services reviewed for legal sufficiency procurements valued at more than $7 billion and rendered legal services in approximately 15,000 procurement actions. Military lawyers write and review contracts, render advice to contracting and purchasing officers of the United States Government. They try cases before the Armed Services Board of Contract Appeals in matters of contractual disputes wherein the Government's opponents are represented by the best legal talent which business corporations can obtain.

Overseas, in addition to routine legal duties, our military lawyers are engaged in leasing real estate for the United States Government and protecting our Government in tax matters. Thus, they must be acquainted with not only our real property and tax laws, but also with companion laws of foreign nations. As one example of a new field of law, Air Force military lawyers recently assisted in the writing of the agreements between the United States and Spain for air leases there. More and more frequently military lawyers are called upon to assist in on-the-spot negotiating with foreign nations.

For the above reasons, it can easily be seen that the responsibilities of the Judge Advocate General are equal to those of his civilian counterparts in business and industry, and are in fact, equal to those of the incumbents of positions which already have been allocated the rank of lieutenant general and vice admiral.

The American Bar Association is now preparing proposed legislation to implement that portion of the report to Congress of the Hoover Commission which concerns the establishment of a JAG Corps in the Navy. This organization would be similar to the other Navy Staff Corps while yet paralleling the Army JAG Corps and the Air Force JAGD. Physicians, dentists, civil engineers, and chaplains have their professional staff units. It appears that the only way in which a strong professional spirit can be regained by lawyers in the Navy, with consequent benefit to the service, is by establishing a staff corps or its equivalent for legal specialists which would assure opportunities for career development in their profession. It is particularly important that the Navy Judge Advocate General and his assistants be selected from such a corps.

I would not feel as strongly as I do concerning the critical need for procuring and retaining professionally qualified military lawyers on active duty, if it were not for the same concern being expressed by nonlawyers who know the true value of military lawyers

to the United States Government. It is most reassuring to have seen letters from military commanders who are not lawyers, which strongly confirm our concern with the continuing loss of experienced attorneys from the service.

With the indulgence of those of you—alas, too few—who are active in and cognizant of the many specific activities of the American Bar Association, may I point out exactly where our bar association is striving to do some special jobs in collaboration with the armed services?

Not only are we deeply concerned with the problem of status and recognition and compensation of the lawyers as a member of the armed services—the special charge of our special committee on lawyers in the armed services, but we also try to keep current in the administration of justice within the armed services through our special committee on military justice, and ever since the establishment of the legal assistance program during World War II we have enthusiastically collaborated upon that program through our special committee on legal assistance.

And the two host associations here tonight have through their members almost always supplied the greater part if not all the personnel for the members of this committee of ours.

This is not the first ABA fight to eliminate a glaring injustice in the field of public service. I served as General Counsel of the Federal Commission on Judicial and Congressional Salaries. There, our hearings revealed a most shocking picture of enormous loss to the public because of low pay for Members of the Congress and Federal judges. The evidence revealed that these positions of important public service could not always attract or keep the most able men of our Nation because of the low pay scales then in existence. You know that Congress did partially adopt that Commission's recommendations, chiefly because the ABA mobilized the support of the public through a program which carried the facts to the grassroots. On the problem of which I speak tonight a similar job must be done. The people do not know the facts—not yet. But they will. I am informed that local bar associations representing attorneys from every part of the United States are already considering resolutions strongly endorsing Senate bills S. 1093 and S. 1165, and their counterparts in the House, H. R. 4786 and 4787. This stimulus flows from ABA action and is a first step in the right direction.

For years ABA has fought for adequate pay for Federal hearing examiners and for the elimination of inequities in their pay scales. I served as counsel for the Federal Trial Examiners Conference in litigation which served to push the agencies into accepting essential reforms. And there the battle is not yet won because the highest pay scale is, like that of military lawyers, still too low for the duties and responsibilities performed.

We in the ABA are also fighting now for broad improvements in the whole legal service of the Federal Government. Here, too, the organized bar has neglected its plain duty too long.

All of these programs for improvement of the public service fit in with the general ABA program to strengthen the whole of the legal profession. Such a program is essential if our profession is to fulfill its duties and obligations in the critical age of crisis in which we live. These programs are referred to here in order to demonstrate to you in soldier's language that the organized legal profession is on the march.

These efforts we are making to enhance the status and increase the pay of the lawyer in uniform are not motivated solely by selfish motives—although such motives are quite legitimate. Our interest is broader, and extends to the public at large. We believe that one of the most vital interests of the public at large is to have a strong legal profession in our country. All over the world today the battle is going on to determine whether freedom and individual rights will survive. Patrick Henry's "Give me liberty or give me death" has taken on new meaning in a world where our chief adversary denies individual liberty and glorifies the all-powerful State. In today's world the legal profession is one of the strongest bulwarks on the side of individual liberty. From the time of our Government's inception to the present zenith of its power, lawyers have been the chief creators and defenders of individual liberty. Despite occasional public misunderstanding of the role of the lawyer, the American legal profession has never shirked its duty to provide legal defense for unpopular causes and persons. You and I as lawyers are aware that the protection of individual rights and liberties is as important and essential to our country as is the maintenance of our military might and our economic well-being. We know also that for the legal profession to continue to fulfill its historic role as the protector of individual rights it must jealously guard its dignity and prestige and—let us not be too modest to state it—be willing to insist that its members be rewarded financially as befits their profession's important status in our society. For I do strongly believe that in a strong legal profession lies the liberty of the people of the United States and in the liberty of the people of the United States lies the hope of the world.

The Soviet Attitude Toward Stalin

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Friday, March 29, 1957

Mr. JOHNSON of Texas. Mr. President, to the people of the Western World one of the greatest riddles of Soviet communism will always remain its attitude toward the late Dictator Josef Stalin.

It is a paradox that a man who can be accused of some of the most horrible crimes in history can still be honored by the very men making the accusations. That is precisely what has happened.

This situation is admirably summed up this morning by the distinguished historian and commentator, William Henry Chamberlin, in an article in the Wall Street Journal. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of March 29, 1957]

STALIN'S GHOST: IT STILL HAUNTS HIS KREMLIN HEIRS AS THEY VACILLATE BETWEEN CONDEMNING AND VINDICATING HIS CRIMES

(By William Henry Chamberlin)

The ghost of Josef Stalin dies hard. Ever since Soviet Communist Party boss, Khrushchev, delivered his sensational indictment of the dead dictator a little over a year ago, Soviet official comment has vacillated between condemnation and vindication of Stalin.

At the moment the trend toward vindication seems to be gaining. For example, "Pravda" marked the fourth anniversary of Stalin's death early this month by calling him "an outstanding revolutionary, a devoted Marxist-Leninist theoretician and a great organizer."

Even Khrushchev, the man who delivered the devasting expose of many (by no means all) of Stalin's acts of cruelty and oppression, has been speaking of the deceased tyrant in milder accents of late. And several major developments—the revolt in Hungary, the demand for more national freedom in Poland, the breaking away of a number of individual left-wing intellectuals from the international Communist movement—are related in some degree to Stalin's rule as denounced by Khrushchev.

Within the Soviet Union the immediate reaction to these developments was to stiffen party discipline, to close ranks and to suspend, for the time being at least, inconvenient discussion of Stalin's shortcomings. Yet it would seem difficult, if not impossible, to erase from the memory and consciousness of Communists in and out of the Soviet Union the impact of such grim phrases as fill Khrushchev's report:

PROLONGED TORTURES

"Rudzutak who spent 10 years in Tsarist prisons was broken in 3 months * * * Monstrous falsification of cases * * * Executions and arrests increased tenfold in a year * * * Prolonged tortures * * * The most brutal torture and oppression * * * 'Tormented from the time of my arrest until I began to write nonsense' * * * Thousands executed without trial * * * 'Everything has it limits, my torture has reached its extreme' * * *"

And Khrushchev brought out beyond the shadow of a doubt that the ferocious terror which raged in the rank of the ruling Communist Party itself in the thirties took place with Stalin's full knowledge and sanction. He cited cases where Stalin personally gave orders for extorting confessions by any and all means of physical pressure.

No anti-Communist survivor of a Soviet concentration camp could have composed a darker and more sweeping indictment of Stalin's methods of rule than did Stalin's lieutenant, Khrushchev. One would have imagined that after these facts had been brought to light, Stalin would have been thrown with ignominy out of the Soviet pantheon. In a sense this was what happened in Hungary, where Stalin's huge statue was the first target of the insurgents, and in Poland, where the comparatively few places which had been named in Stalin's honor have now been renamed.

But in the Soviet Union retributive condemnation seems to have fallen considerably short of what might have seemed the clear implications of Khrushchev's indictment. Stalin's embalmed corpse still lies in state with Lenin's. The Stalingrads, Stalinabads, Stalinos—towns which assumed some variant of the dictator's name—have not been rechristened. And, although there has been no return to the fulsome adulation that prevailed during the dictator's lifetime, it has now become more fashionable to dwell on Stalin's alleged merits than to pursue further the subject of his crimes.

Even at the time of Khrushchev's speech two significant reservations could be noted. First, the concluding verdict seemed out of line with the gravity of the charges. According to Khrushchev, Stalin had been guilty of crimes suggestive of the worst tyrants in history, of Nero and Ivan the Terrible. But this nightmare of wholesale arrests, false confessions extorted by torture and executions, often of veteran Communists, was euphemistically set down to Stalin's cult of personality.

Second, the indictment was highly selective. Stalin was called to account for what he had done to Communists and to leaders of the Red army. His claim to military infallibility was questioned; serious political and military errors in the conduct of the war against Germany were admitted for the first time.

FOUR TERRIBLE YEARS

But many of Stalin's most ruthless acts were not mentioned at all. Stalin himself once remarked in a wartime conversation with Winston Churchill, that the stresses of war had not been as bad as the collective farm struggle, about which the Soviet dictator, after giving 10 million as the number of resisting peasants affected, said: "It was terrible. Four years it lasted."

During those 4 years hundreds of thousands of families of the more well-to-do peasants, the so-called kulaks, were uprooted, deprived of all their property and sent to slave labor in remote northern timber camps and new industrial centers. Several million peasants perished of famine in the winter and spring of 1932–33.

Khrushchev did not mention these cruelties. Nor did he refer to the mass deportations from Poland and the Baltic States or to the massacre of some 15,000 Polish war prisoners in the Katyn Forest and elsewhere or to the institution of a gigantic system of forced labor concentration camps. Nor was there any reference in Khrushchev's speech to the blotting off the map of several of the Soviet nationality republics and areas where the people were considered too sympathetic with the incoming Germans in World War II. Recently the Soviets announced that some of these groups had been reinstated.

It is easy to understand why the indictment of Stalin's crimes was so selective and why the verdict, "cult of personality," was so inadequate in the light of the factual allegations. Khrushchev and his associates are all Stalin's men, brought up in his school, profiting from many of his acts of ruthlessness, and ready to repeat these acts when they feel the situation demands it, as the suppression of the Hungarian movement for freedom showed.

ALTERNATING APPRAISAL

There have been and probably will continue to be zigzags in the official appraisal of Stalin, periods of criticism alternating with periods of rehabilitation. But, there is too much continuity in the Soviet system to enable its present leaders to make a clean, conclusive break with Stalin and Stalinism.

That can come only when there is a far more fundamental change in the Soviet regime than there has been during the 4 years since the death of Stalin. Meanwhile the ghost of the dead dictator will continue to haunt his heirs.

Capitalizing on the Capitol

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, March 29, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the March 27, 1957, Manchester Union Leader, Manchester, N. H., entitled, "Capitalizing on the Capitol." This article was written by Mr. Francis H. Buffum, who is an outstanding New Hampshire citizen, and both an author and an authority on historical matters pertaining to New Hampshire.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITALIZING ON THE CAPITOL

(By Francis H. Buffum)

The ancients pictured "opportunity" as a minor, but very important, deity. In view of a decision which is about to be made here in the capital city of New Hampshire, this writer takes the occasion to recall said deity from obscurity, dust him off and proclaim his importance.

The unique feature of this demigod is the forelock on his otherwise bald head. In his course through life he is said to approach, at one time or another, every man, group and leader of men, and especially when important decisions are pending. But only those who grasp him by the forelock can get the priceless service he has to offer. So it will be with those who are charged with planning for the future in respect to the land and buildings necessary to house city and State governments here and accommodate the Federal Government, at least to the extent of a central site for a new post office building when that becomes necessary.

I believe this matter is of sufficient importance and interest to warrant a brief résumé of our State capitol buildings and what they point toward in future expansion and, it is to be hoped, consolidation. It appears that the New Hampshire provincial assembly (the legislative embryo from which the general court of New Hampshire grew) met at first in the taverns of Portsmouth, and later in the courthouses of Portsmouth and Exeter.

When John Wentworth, the last royal governor, fled from Portsmouth in 1775, Exeter became the seat of State government and remained so for 6 years. From 1782 to 1808 the legislature met in eight different cities and towns in Portsmouth, Exeter, Dover, Charlestown, Amherst, Hanover, Hopkinton and Concord. Finally, it came to Concord to stay, although Salisbury and Boscawen wanted it. The first session in Concord was held in the Old North Meeting House in 1782 on ground now occupied by the Walker school. From 1790 to 1819 its sessions were held in the new town house built where the Merrimack County Court House now stands. But our then slowly growing State government found its quarters in the Concord Town House inadequate, and after a hectic contest settled upon the present site for a State house. This location for our capitol has been contested only once, so far as the writer knows. That was in 1909 when Manchester made a strong bid for its removal to that city.

The original Capitol Building was completed in 1819. It was only two stories high and limited in breadth and depth to the east side of the present building. By 1863 this building also had become inadequate, and another story, together with dome and pillared portico were added, and interior changes made.

During the next 44 years another chapter in the story of growth in State government and inadequacy of housing it was written, and closed as the previous chapter did. An addition to the old building "as amended" was made on its west or State Street side. Finally, in 1938 the present State Office Building, or Annex as it is better known, was erected.

Let it be noted that the word "finis" has not yet been entered on the record, for today much of our State government is scattered here and there in the city of Concord. The necessity for housing existing State departments outside the original Capitol Building and Annex is evident. What is not so evident, but still real, is the desirability of bringing them together in one compact area for the benefit of those who seek their services as well as for economy of operation. However, the immediate question as I see it is not whether either the State or Federal government is ready at this time to put up a new building; but whether the block now occupied by Parker School and the Unitarian Church is to be held as public rather than private property.

While serving as State House guide I was impressed by what I heard one day from a far westerner who was touring New England in a study of public buildings and their sites. He was one of a commission chosen to produce a plan for undoing the hodge-podge job done in the environs of the State House. "It could have been done at reasonable cost by foresight and timely action," he said. "But private interests moved in, and when we finally decided to have a Capitol Building and grounds worthy of our State, with allowance for future growth, the cost was enormous." "You have a very beautiful civic square here," he continued. "I hope you keep it so." Whether or not it is kept an unbroken civic square may be decided at the meeting of the school board on April 1, and at a meeting of the city council on April 8. "Opportunity" will have come and gone unless it is grasped then by the forelock and held until the wishes of the people of Concord and the State of New Hampshire can be learned.

Postal Pay Increase for Postal Employees Living in Localities of Over 500,000 Population

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. SHEEHAN. Mr. Speaker, I have introduced H. R. 6453, a bill to provide cost of living increases in the compensation of postal employees living in localities of 500,000 population or more.

This bill would provide a salary adjustment for postal employees living in metropolitan urban areas, which areas have much higher living costs than rural areas. In the bill, postal employees of any incorporated area and its surrounding suburbs whose population exceeds 500,000 or more, as disclosed by the 1950 census, shall receive an increase in their existing rate of basic compensation of 20 percent per annum, and employees paid on an hourly or part-time basis shall receive additional compensation at an equivalent additional hourly rate.

The Hoover Commission has made extensive studies in the matter of postal wages, has clearly seen the need to increase postal remuneration, and has so advised Congress. Since the Commission submitted its report the financial plight of the postal worker has been aggravated, and thus, a more realistic solution to his problem has become more urgent.

The need for a raise by the city postal employees in metropolitan areas—and especially in the Chicago area—is most forcefully brought out by the cost-of-living statistics. According to the United States Department of Labor Bureau of Labor Statistics, living costs hit an alltime high in Chicago in February of this year. The February living costs were 2.7 percent above a year ago and

the index for the same month was 121.5—the 1947–49 averages equaling 100. According to Mr. Adolph Berger, of Chicago, the regional BLS Director, all major groups and services were up over February 1956.

A great number of the employees of the postal service working in the Chicago area are at a disadvantage in their average workers' income when compared with the average for the city as a whole. According to the U. S. News & World Report, February 15 issue, the average worker's income in Chicago was $4,816, which was an increase of 3.7 percent over a year ago. The difficulty of recruiting new postal employees in the Chicago area and practically all other metropolitan areas has been tremendously magnified due to the low starting rate of salaries as compared with the average salary.

Faced with the spiraling cost of living and the unfulfilled promises made on their behalf for a living wage increase in keeping with the inflationary times, many trained postal employees are leaving the postal service. This failure to retain a trained force compounds the cost of processing and expediting the mails. This is especially true in the large metropolitan cities with populations of 500,000 or more. Former President Hoover pointed out recently to the high cost of Government turnover when he said of Government service that "with inadequate pay for top executive skills and the uncertainties of promotion, our best employees become the easy recruits of private business."

I do not think it is necessary to go into a detailed analysis of the many items which increase the cost of living for city and urban postal employees. In my own city of Chicago the greatest majority of postal employees have a cost for transportation to and from work of anywhere from $8 to $30 per month, and this includes only public transportation systems. The cost of housing in Chicago is tremendous. Just the other day the Congress passed a bill for rural housing benefits for veterans. In the House the limit on mortgages was raised from $12,000 to $13,500, and this is supposed to represent from 80 to 90 percent from the value of the House. Where in the city of Chicago can one even begin to build a 5- or 6-room house for $15,000? Rental units for new houses in urban areas like Chicago run from $90 to $150 per week. I could go on endlessly stating the much higher costs a postal employee faces in metropolitan areas over and above the rural areas.

Today, in Chicago, the Post Office Department is begging for employees and a regular distribution clerk is offered $3,660 per year as a starting salary, which is approximately $70 per week. Realistically, the fact must be faced—in areas like Chicago—that high-school graduates coming out of school, in a great many positions, command the same salary with no experience and no family obligations to take care of.

The foregoing are pertinent and commanding reasons why the general public should give its full support to the legislation I propose. The expansion of service and facilities necessary to cope with the increasing population has overburdened our postal worker. While it is true that automation has alleviated the daily work in the form of mechanized output, the need for better remuneration remains. If the postal service of our great country is to properly serve all segments of our working society, a more realistic approach must be taken to better the situation of the postal employee.

H. R. 6453 is as follows:

Be it enacted, etc., That as a salary adjustment for postal employees in those localities having high costs of living, each employee in the postal-field service resident or working in any incorporated or unincorporated city, town, or other metropolitan area or locality, having a population of 500,000 or more as disclosed by the 1950 decennial census shall receive an increase in his existing rate of basic compensation of 20 percent per annum; except that employees paid on an hourly or part-time basis shall receive additional compensation at an equivalent additional hourly rate.

SEC. 2. (a) No rate of basic compensation shall be reduced by reason of the operation of this act.

(b) No postmaster, officer, or employee shall receive compensation at a rate in excess of $19,000 per annum by reason of this act.

SEC. 3. This act shall take effect on the first day of the first pay period which begins after the date of enactment of this act.

Federal Grants-in-Aid to States and Local Governments

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, March 29, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Joker in Federal Grants," from the March 29, 1957, issue of a prominent newspaper, the Camden, S. C., Chronicle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOKER IN FEDERAL GRANTS

Federal grants-in-aid to the States and to local government—which are now made for all manner of purpose, running the gamut from airports to traveling libraries—are "the biggest con game in politics." And it is an ever-expanding con game, which is currently adding $5 billion a year to our Federal tax bill.

That is the opinion of a man who has had considerable experience with these grants-in-aid, Alfred E. Driscoll, former Governor of New Jersey. His account, written in collaboration with Charles Stevenson, appeared in a recent issue of the Reader's Digest.

Governor Driscoll defines grants-in-aid as "nothing more than our own taxes which Federal bureaus distribute to States and localities for specified services, usually with the requirement that the recipients put up some matching cash." In an earlier era, the grants involved comparatively small sums of money, and most of that was earmarked for roads. Today, by contrast they have become, in his words, "the fastest growing gimmick in politics," and they embrace some 50 different programs.

The grants have come in for heavy attack from authoritative quarters. The governors' conferences have demanded their curtailment time and time again. The Commission on Intergovernmental Relations, created at President Eisenhower's request early in his first administration, came up with all kinds of evidence of waste. "Yet," says Governor Driscoll, "pressure groups and politicians, lacking the ability or courage to sell their projects to their own hometown or home State constituents for financing at home, prevail upon Congress to hand out more and more Federal tax money."

There is, as the article makes clear, nothing "free" about this money. In the first place, Government rules concerning wages and other matters tend to run the costs up. Payments to contractors may be long delayed, so bids are frequently increased to compensate for this. According to a Missouri official, "In most cases a community could build an adequate facility for less than its half-share of the Federal aid project." Then there are so-called concealed costs, such as Federal administrative overhead. No one knows how big this total comes to, but an investigatory commission found that for every dollar granted for slum clearance, about 22½ cents went for Federal overhead and the figure for low cost housing is estimated at 39.9 cents.

Governor Driscoll disputes the claim that the grant money goes to areas so poor they can't supply their own essential services. He says, "Since qualifying for a grant usually means putting up matching funds, the biggest returns go to those States which repudiate economy and, at the sacrifice of real requirements, put the bulk of their cash into Washington-blessed programs designed to produce handouts at the expense of somebody else."

The root-trouble of the grant-in-aid concept seems to have been well summed up by our own James F. Byrnes in these words: "Whenever a State or county receives a grant which officials can spend without the responsibility of collecting the money by taxes, you are certain to have extravagance." Governor Driscoll quotes that and concludes, "Let us destroy this free-money myth before it destroys us."

Born in Slavery 106 Years Ago, Louis Burns Held Present Generation Weaker—but Wiser

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. PRICE. Mr. Speaker, a respected citizen of East St. Louis, Ill., died Sunday last—less than 3 weeks short of his 106th birthday.

His name—Louis Burns.

Louis Burns lived through a changing world. He began life as a slave. He had many pleasant remembrances and he had memories of the worse things that men can do to each other.

He was very young when the shackles of slavery were unloosed. He spent most of his life as a freeman who contributed much to his family and associates through good example and sage advice. He was an industrious, hard-

working man—the kind who makes a valuable citizen in any community.

Mr. Burns lived over such a long span of years that he had the opportunity to observe several generations. Of the present he gave this appraisal: "This generation is weaker—but wiser."

Born in slavery, Louis Burns lived a full life that came to an end among his free people, mourned by a community which admired and loved him.

Mr. Speaker, under leave to extend my remarks in the RECORD I herewith include an article which appeared on page 1 of the East St. Louis (Ill.) Journal of Tuesday, March 26, 1957:

BORN IN SLAVERY, MAN, 105, DIES

Louis Burns, who was born in slavery and probably was the oldest area resident is dead. He would have been 106 on April 12.

Mr. Burns, who was blind and in failing health the last 2 years, died at 10:20 p. m. Sunday at home at 1308 Market Avenue of a cerebral hemorrhage.

Funeral arrangements are incomplete. The Green Funeral Home has charge.

Mr. Burns was born on a plantation near New Madrid, Mo., April 12, 1851. Regarding his age, he often said, "It ain't my goodness that has kept me alive, but the goodness of the Lord."

He was noted for colorful remarks. Asked last April how it feels to be 105, Mr. Burns said: "It don't feel any different, but I wish I was 100 again, then I could move around more and do things."

Asked to compare his generation with the present generation, he summed it up by saying "This generation is weaker—but wiser."

REMEMBERS HISTORICAL FIGURES

As late as his 105th birthday the former slave could recall his days as a youth on the the Missouri plantation. He also remembered meeting such historical figures as Gens. Stonewall Jackson, Robert E. Lee, and Ulysses S. Grant.

Less pleasant remembrances included the whipping post present on every plantation, knife duels, cockfighting, and dogfighting.

Mr. Burns came to East St. Louis in 1910 and started work in a packinghouse. He then worked for a roofing firm and finally the Alton & Southern Railroad. He retired from this firm in 1939 because of failing eyesight.

An accurate count of his living descendants is impossible according to his son Ora Burns, of East St. Louis. At the last count, in addition to 7 children, he had 26 grandchildren, 48 great-grandchildren, and 6 great-great-grandchildren.

Mr. Burns' wife, Parthina, died in 1948 at the age of 84.

The surviving children are Mrs. Addie Janes, 70, of Fireworks Station; Mrs. Marcella Garner, 69, of East St. Louis; Leonard Burns, 64, of St. Louis; Mrs. Gussie Hendricks, 62, of East St. Louis; Mrs. Blanch Harrell, 60, of Kansas City, Mo.; Mrs. Leola Brooks, 58, of East St. Louis; and Ora Burns, 52, of East St. Louis.

Jury Service of Basic Importance in Maintaining Ideal of Justice

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, March 29, 1957

Mr. JOHNSON of Texas. Mr. President, one of the outstanding newspaper editorial pages in Texas is that of the Waco News-Tribune. Recently this great Central Texas paper commented forcefully on a statement by the State bar regarding the fundamental importance of the right of trial by jury.

I ask unanimous consent that this eloquent expression by the State Bar of Texas and the comment of the Waco News-Tribune be printed in the Appendix of the RECORD.

There being no objection, the editorial containing the statement was ordered to be printed in the RECORD, as follows:

[From the Waco News-Tribune of March 20, 1957]

IT IS IMPORTANT TO KEEP IN MIND THE IDEAL OF JUSTICE

The State bar of Texas has put into words the essence of why citizens ought to respond to the call of jury service. It goes this way:

"My forefathers wrested my right to serve as a juror from tyrants.

"Under our law no one's life, liberty, or property can be taken without due process of law.

"Trial by jury is our basic right. All who seek their day in court should have a fair hearing. They will get it from me.

"I will not ask to be excused from jury service except in emergency.

"On my oath I will well and truly try each case before me, and a true verdict render under the law given me by the judge and the evidence introduced at the trial—without fear, favor, or hope of reward.

"I will listen closely, with open mind to all of the testimony, instructions, and arguments. I will not make up my mind until all the facts are in and the judge has instructed the jury on the law.

"I will search for the truth regardless of wealth or poverty, friendship or enmity, of any party or witnesses.

"To someone my decision may mean the difference between freedom or imprisonment, poverty or wealth.

"Justice, once but a dream, is a reality when I, as a juror, do my full duty. No act of mine shall bring shame to our system of liberty under the law."

This is an expression of the ideals of jury service. Perhaps if citizens fixed that ideal in their minds, the inconveniences, the discomforts, the confusions, and delays involved in answering the rollcall on a jury panel would be submerged. For the other side of the picture, we can refer the lawyers and judges to a cogent article written not long ago by Associate Justice W. St. John Garwood of the Texas Supreme Court. Mr. Justice Garwood accurately described the lack of perfection in the historic ways of treating prospective jurors, of handling juries in civil cases and in generally obscuring the jury ideal in actual practice.

By continuing to discuss our judicial system, we may generate ideas that can lead to improvements in the interests of true justice. The feelings and surroundings of the jurors play a part. The endless hairsplitting delays in the law play a part. Devotion to the ideal can motivate the solutions.

The United States and Latin America

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, March 29, 1957

Mr. CHAVEZ. Mr. President, in Miami Springs, Fla., there is published a newspaper called the Americas Daily, mostly for Latin Americans.

On Tuesday, March 26, 1957, and Wednesday, March 27, 1957, editorials were published in that paper entitled, respectively, "The United States and Latin America" and "What Benefits Can the United States Obtain From a Poor Latin America?"

I ask unanimous consent that the editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Americas Daily, Miami Springs, Fla., of March 26, 1957.]

THE UNITED STATES AND LATIN AMERICA

Too often, almost continuously, we hear semidogmatic references—even with assurances of infallibility—about the 170 million human beings, soon to reach the 200 million figure, that constitute Latin America. The opinions expressed about these extremely rich regions, that hold the key to the future, are dictated by individual or collective reactions generally determined by vested interests.

The 20 nations located south of the border have a powerful role at present, even though relative if compared with their fantastic future potential.

Latin American potentialities are indeed underestimated, not only in the United States but, even if in a smaller extent, in the proper Latin American countries as well. The realities buried beneath the mountains of in their fertile valleys greatly exceed the most flattering calculations voiced in the capital cities of the respective countries. Those mountains and those valleys contemptuously bounce the opinions that about them are expressed abroad and within the national confines; because their resources lie unknown in their true and incalculable value.

Latin America represents the future in the Western Hemisphere. Should there be no need for continental interdependence and if we could unfortunately talk about isolation instead of unity, the United States would stand for the present.

But since the spirit of continental solidarity has to prevail at all times, and this solidarity should categorically be based on cooperation between the present and the future—the United States and Latin America, respectively—both have to move together, through a well planned coordination, toward one ultimate goal.

Today the Latin American countries contribute very significantly to the preservation and progress of the greatness of the United States. The United States, in due time, will have to reciprocate accordingly to the Latin American nations. But both sides, sharing common ideals and interests, united by a common fate, should provide to themselves and to the world an example of the prevalence of justice, of liberty, and of economic and social wellbeing. Along these lines, the development of Latin America will never mean the decadence of the United States. Latin Americans and North Americans together will strengthen the formidable, constructive and generous reality that America is, each contributing in the proportion permitted by the period and their historical circumstances.

This unity cannot be brought forth by the geographical circumstances alone; neither can it be produced by the assurances of the experts nor the smiles of the Presidents, ex-diplomatic representatives. Presidents, experts and diplomats, united with other leaders of American nations, should direct their efforts to achieve a more solid hemispheric unity based on human understanding, cultural relations and economic cooperation. With these elements at hand, the political ideal of democracy will have

a new birth, more vigorous than ever, to be enjoyed by our internal institutions and to offer a challenge to Communist imperialism, a common enemy of the United States and Latin America.

[From the Americas Daily, Miami Springs (Fla.), March 27, 1957]

WHAT BENEFITS CAN THE UNITED STATES OBTAIN FROM A POOR LATIN AMERICA?

The question used as title for this editorial comment has only one answer: There are no benefits for the United States in a poor Latin America.

But not only this must be answered, because, more important and more transcendental than that is to point out how much, how very much, damage for the United States, there is in a Latin America which is poor, within her wealth. Yes, poor within her wealth, because even if there are now multiple economic difficulties for the development of her great resources, it is undeniable that the vast Latin American region possesses immense wealth.

In the strictly economic field, the United States needs the Latin American markets, in order to increase production and to export to those 20 countries. But if they are not enjoying adequate economic conditions, it is very difficult for them, not to say impossible, to import from the United States the products offered to international markets by industry in this great North American nation.

Regarding military security of the people of the United States, it is well to take into consideration that economic prosperity in Latin America must determine its development in the increase of production, and that production must play, as it has already done, a very important role, almost decisive for the United States in times of war. If only when an emergency appears is that the machinery for production in Latin America is put to work, much time would be lost, and during a war the factor time may well signify victory or defeat.

In the political and social field, economic crisis of the Latin American people creates a critical problem for the United States, because, within such crisis, Communist agitation and infiltration find a propitious atmosphere.

Political stability, of course, is not determined in absolute form by economic well-being. However, it is evident that such stability could suffer serious setbacks as a consequence of the lack of economic equilibrium which, speaking in general terms, leads to social crisis, which is the gateway to communism.

It is for this reason that the lack of economic development in Latin America is not only unprofitable, but it is greatly harmful, as much in trade as in the military and political fields for the United States. Naturally, this means that the leaders in the United States should channel their activities, according to circumstances, toward achieving improvement of economic conditions in the 20 Latin American countries.

Southwest Research Institute Works To Save Water and Money

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 29, 1957

Mr. JOHNSON of Texas. Mr. President, a just cause for pride among Texans is the Southwest Research Institute, located at San Antonio. This institution, staffed by a large group of outstanding scientists, is engaged, among numerous other activities, in research into ways and means of conserving our water supplies.

Notable progress in this connection was the subject of comment in a recent editorial in the Dallas Times Herald, a leader among Texas newspapers. I ask unanimous consent that this editorial comment be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAVING OF WATER, MONEY FORECAST

Texas, where the sun for 8 years of drought, has blazed over its parched lands, will welcome the news issuing from the Southwest Research Institute in San Antonio whereby we learn it will soon be feasible to prevent as much as 45 percent of the enormous evaporation which loses nearly as much water each year as Texas uses. And, says the institute, the means whereby this may be achieved is both simple and inexpensive.

The institute's experiments are still going on but sufficient progress has been made to justify the announcement. The trick lies in covering surfaces of lakes and reservoirs with a filmy hydrocarbon, a petroleum derivative of the paraffin series known as hexadecanol. This film would be about the thickness of a molecule, sufficient to arrest evaporation yet permit oxygen to be exchanged between the atmosphere and the water.

Hexadecanol is used by manufacturers of lipstick. The institute tests initially sought to guarantee that it would prove harmless not only to humans but to plant, animal, and fish life. United States public health officials agree with the findings of the institute, so soon all we will have to do is sit back and wait until sufficient supplies of the chemical will become available. The cost, says the institute, will be $1.60 to save each acre-foot—325,850 gallons. Certainly this should be worth a try. Its practical value would lie in the fact that, granting it works, the system would save us the cost of building a great number of reservoirs that otherwise would have to be constructed to catch and hold surface water for use.

Accounting by Members of Congress for Travel Expenses

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, March 29, 1957

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Shop Talk at 30," written by Robert U. Brown, and published in the magazine Editor and Publisher for March 23, 1957. The article deals with the subject of accounting by Members of Congress for travel expenses.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOP TALK AT 30

(By Robert U. Brown)

The attention of Congress and of the American people has been turned on the subject of expense accounts because of Senate committee disclosures of questionable practices in the Teamsters Union.

It would be a good idea if Senators and Congressmen found time to give a little thought to disclosure of their own expense accounts especially those incurred while junketeering at the taxpayer's expense. This is not said to belittle the work of the present investigating committees or those that have traveled on Government business, but to suggest that here is an area of information that should be made the public's business.

Senator THEODORE F. GREEN, of Rhode Island, is the only Member of Congress to reveal such an expense account in a long time. Recently returned from a tour to study economic and technical assistance in Africa, Senator GREEN reported in terms of French francs, Libyan pounds, Egyptian pounds, Ethiopian dollars, East African shillings, Moroccan francs, and United States dollars, and the total bill to the United States Treasury was $806.01. This covered overseas expenses of the Senator and a staff assistant, Alwyn V. Freeman, and not oceanic travel.

As can be seen, the amounts involved individually are not necessarily large. The total might be sizable. But the principle is important.

Senator JOHN J. WILLIAMS, of Delaware, has urged a full accounting. He said "many Members of Congress who have traveled abroad * * * have said they would be glad to see the cloak of secrecy removed in order to prevent suspicion of those who have made these trips for constructive purposes and spent the money in conscientious manner."

But still there seems to be some reluctance to do so.

Pat Munroe, correspondent for the Albuquerque Journal, has been conducting a one-man crusade at White House press conferences and elsewhere to obtain such disclosures on congressional junkets. After several tries in the past year he seems to have received assurance that the information will be forthcoming sometime in the future.

President Eisenhower, at a recent press conference, said: "There is no expenditure of public moneys, except only involving that where the public security itself is involved, that should not face the light of day any time any citizen inquires for it."

Subsequently, legislation has been introduced in Congress to require a full accounting of funds used for congressional travel abroad. Whether anything will come of it, we don't know.

Mr. Munroe says in addition there are two laws which should be amended or repealed to require a public accounting of funds spent thereunder by executive departments. Last year the Pentagon quoted to him two laws as its reason for not giving out any information of this kind, citing section 1314 of the Supplemental Appropriation Act, 1954 (67 Stat. 438) and section 502 (b) of the Mutual Security Act of 1954, as amended (68 Stat. 850).

He says the late Representative Thurmond Chatham, of North Carolina, sought a ruling from the General Accounting Office on these two laws and on December 17, the Comptroller General, Joseph Campbell, wrote:

"Information regarding the purpose for which funds, made available under either of the two statutes concerned, were expended by congressional committees would have to be obtained from the committees involved." And so far they won't talk.

"This reporter has written all committee chairmen of Congress," Munroe writes, "asking for the release of information on junketing and their responses can be summed up: 'We'll do it if everybody else does. But we're not going to be the only ones dancing around the May Pole.'

"It goes entirely against human nature to suppose that a Member of Congress can be in any other than a vacation mood, instead of in a mood to make a thorough check of foreign spending, when he leaves this

country knowing he's the free guest of the agencies he's supposed to be inspecting. And that nobody will ever tell the folks back home about his big trip."

We won't go as far as Mr. Munroe does in suspecting that every Member of Congress who makes a trip abroad automatically lives high off the hog at the taxpayers' expense. There may be some who do. But it is entirely possible that many, if not most, of the Senators and Congressmen and their staffs who go factfinding abroad do so on legitimate business and are conscientious about their expenditures. It would be foolish to deny, however, that there have been some excesses and some unjustified use of public funds in this direction.

Therefore, it would be to the interests of all to have this information a matter of public record. In the interests of public confidence in Congress, good relations with other countries, and orderly procedure in the dispensation of Government funds, Congress should adopt legislation to reveal travel expenditures in detail.

Most of the Members of Congress should have nothing to hide. Those that do should be brought to light.

Importance of United States-Flag Shipping Between Great Lakes Ports and Foreign Lands

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 29, 1957

Mr. WILEY. Mr. President, yesterday there opened in Chicago a most important hearing before the Federal Maritime Board. The hearing relates to applications of 5 United States steamship lines for charters for Government-approved service between Great Lakes ports and foreign lands.

I have previously pointed out how essential it is that the United States Government give the go-ahead sign for American-flag shipping to serve lake ports and foreign ports. The quicker that ships flying our own flag can begin to gain experience on what is known as "essential trade route 32," the stronger will be the United States merchant marine in years to come when the St. Lawrence seaway is open with a 27-foot depth throughout.

While we welcome the fine service rendered to us by foreign-flag ships, we are naturally especially interested in adequate service by our own United States-flag shipping.

I ask unanimous consent that a New York Times article of yesterday, describing the current hearing, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIVE SHIP LINES SEEK LAKES SUBSIDIES—UNITED STATES OPENS CHICAGO HEARING ON CHARTERS FOR EIGHT LIGHT VESSELS IN RESERVE

CHICAGO, March 28.—Five United States steamship lines sought charters for subsidized service between Great Lakes ports and foreign countries today.

Arguments supporting their applications were offered before Edward C. Johnson, examiner of the Federal Maritime Board. The hearings opened today.

No vessels of the United States flag are operating between ports of the Great Lakes and overseas points. Operations are limited to small-tonnage vessels and are conducted by lines registered under foreign flags.

The Grace Line is seeking the establishment of a trade route between Great Lakes ports and northern ports of South America. It also seeks charter rights to 8 light cargo vessels of approximately 4,000 tons loaded displacement. The ships are owned by the Government and are being held in the reserve merchant fleet.

Four other applicants for the vessels are arguing their requests in the United States Court of Appeals Building. They are: Isbrandtsen Co., Inc.; United States Lines Co.; T. J. McCarthy Steamship Co.; and Einar H. Crown.

Isbrandtsen has applied for 8 of the ships; United States Lines for 8; McCarthy Steamship for 4; and Crown for 2.

GRACE ARGUES ITS CASE

Grace representatives told the examiner that the expense of establishing operations for light cargo vessels between the lakes and South America would prove too expensive unless service could be established with this year's shipping season.

The other lines presented arguments in favor of their transatlantic routes over the South American routes of the Grace Co.

The port directors of Cleveland and Milwaukee urged that American-flag service be established between lake ports and foreign ports as soon as possible to provide valuable experience for the opening of the St. Lawrence seaway in 1959. William J. Rogers, director of port control of Cleveland, said exports from his city via deep-water shipping had jumped 400 percent since 1950.

H. C. Brockel, Milwaukee port director, expressed the hope that in the future, Great Lakes service also would go to the Far East.

Subsidies are being sought by the lines to offset foreign shippers' advantages in lower costs of operation, repairs, insurance, and crew pay scales, it was explained.

Freedom Versus Servitude

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. REED. Mr. Speaker, the leopard, Russia, has not changed her spots in the last 122 years. Freedom was the objective of the American struggle then as it is today. Servitude was the objective of Russia then, as it is today. Thus, the French humanist and traveler, Alexis De Toqueville, wrote in 1835 as follows:

There are at the present time two great nations in the world, which started from different points, but seem to tend toward the same end. I allude to the Russians and the Americans. Both of them have grown up unnoticed; and whilst the attention of mankind was directed elsewhere, they have suddenly placed themselves in the front rank among the nations, and the world learned of their existence and their greatness at almost the same time.

All other nations seem to have nearly reached their natural limits, and they have only to maintain their power; but these are still in the act of growth. All the others have stopped, or continue to advance with extreme difficulty; these alone are proceeding with ease and celerity along a path to which no limit can be perceived. The American struggles against the obstacles which nature opposes to him; the adversaries of the Russian are men. The former combats the wilderness and savage life; the latter, civilization, with all its arms. The conquests of the American are therefore gained by the plowshare; those of the Russian by the sword. The Anglo-American relies upon personal interest to accomplish his ends, and gives free scope to the unguided strength and common sense of the people; the Russian centers all the authority of society in a single arm. The principal instrument of the former is freedom; of the latter, servitude. Their starting points are different, and their courses are not the same; yet each of them seems marked out by the will of heaven to sway the destinies of half the globe.

C. N. Florence

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to offer my felicitations and best wishes to my good friend, C. N. Florence, formerly of Corbin, Ky., in my own congressional district, and who recently retired from active duty after many years of service to our war veterans in the capacity of representative of National Rehabilitation Commission, National Headquarters Branch, Washington, D. C. I feel that no man I have known has rendered more dedicated service to veterans, rich and poor, black and white, famed and unknown, than this Kentuckian, C. N. Florence, a good and faithful servant to thousands of his comrades throughout the passing decades of time. I have traveled with him, been on programs with him, and had good fellowship with him on many occasions. He always kept his sense of humor and retained his deep interest in veterans and veterans affairs in a consistent and admirable manner during the many years I have known him and been honored to claim him as a friend.

In the November 1956 issue of the Kentucky Legionnaire, published at Louisville, Ky., there appeared the following tribute and commendation for this amiable, worthy, and skilled leader of veterans at the time of retirement of "C. N.," as he has been well and affectionately known by many people over a long period of time. The well-deserved tribute is as follows:

RETIREMENT OF C. N. FLORENCE IS ANNOUNCED

(By Frank H. Dyer)

Word has been received that C. N. Florence, known to thousands of members of the American Legion as "C. N.," has retired as representative of the National Rehabilitation Commission at National Headquarters Branch, Washington, D. C.

As a representative of the National Rehabilitation Commission, "C. N." appeared before the various Government agencies having charge of veterans and their dependents in behalf of the claims of ex-servicemen.

With an unsurpassed knowledge of the laws pertaining to the rights of veterans, and a pleasing personality, "C. N." was equipped to represent the cause of the veteran and to win for them their rights, previously denied.

Before going with the National American Legion, "C. N." served for many years here in Kentucky as representative before the Veterans' Administration of the Kentucky Disabled Ex-Servicemen's Board and as department service officer. His success here in our State brought him national recognition as an advocate in behalf of the ex-serviceman fore the Veterans' Administration.

We of the Department of Kentucky, especially the disabled among our members, during all the years "C. N." was active, always had a true and kindly friend, for he is first and always a loyal Kentucky Legionnaire and never so happy as when winning a cause for a fellow Legionnaire from "Old Kentucky."

"C. N.," now in retirement, resides in the beautiful city of Arlington, Va., the home of President George Washington and General Robert E. Lee. We wish for him many, many happy active years ahead with his loved ones. We shall never forget his years of service to the disabled veterans.

Low Bid Rejected by United States

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. SMITH of Mississippi. Mr. Speaker, one of the reasons we have difficulty in holding down the cost of Government is our costly purchasing practices. An example of this is reported in the following newspaper story:

FOREIGN LOW BID REJECTED BY UNITED STATES—INTERIOR TO BUY TWO TURBINES FROM DOMESTIC CONCERN AT 20 PERCENT AND 70 PERCENT MORE

WASHINGTON, March 14.—The Interior Department is about to award two contracts for turbines to a domestic manufacturer despite foreign bids lower by 20 percent and 70 percent.

Foreign bidders, under a Presidential order interpreting the Buy American Act, are generally supposed to get the contract if they are 6 percent or more below the domestic bid.

The reason for the forthcoming awards to the domestic bidder is a finding by Arthur S. Flemming, Defense Mobilization Director, that the domestic manufacturer is essential to national security.

In one case the Interior Department had already decided to make the award to the foreign bidder. But, under the urging of the domestic manufacturer, the Department submitted the case to Mr. Flemming for review on the question of its essentiality to national defense.

REJECTS A FLAT ORDER

Despite his decision in this case, Mr. Flemming, it was learned, sent a letter last week to the National Electrical Manufacturers Association rejecting the association's demand for a flat order barring acceptance by Government agencies of all turbine bids by foreign manufacturers.

Mr. Flemming in his letter did, however, promise to consider the issue on a "case by case" basis.

In the first test case, Mr. Flemming decided to buy American. Mr. Flemming left office today, to be replaced by Gordon Gray.

The test cases involved turbines for two reclamation projects, one in Colorado and one in Montana.

On the Colorado project, the low foreign bid, by American Elin Company of Austria, was $56,280 and the low domestic bid, by James Leffel & Co., of Springfield, Ohio, was $65,989.

AWARD REVERSED

The award to the foreign bidder on this project was reversed by Mr. Flemming's decision.

On the Montana project the low foreign bid, again by American Elin, was $168,400 and the low domestic bid, again by Leffel, was $199,156.

ODM officials said the Leffel company was of especial importance because, unlike most turbine manufacturers, it was in a dispersed location—that is, not in or near a major urban center.

They also said that turbine-making capacity was one of the major elements in the mobilization base, and was short of the desired full mobilization capacity.

Declaration of Freedom

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. ULLMAN. It was my good fortune to be present with my family at the special services at the Washington Cathedral on Sunday, March 17, 1957, commemorating the independence of Ghana. The outstanding message delivered by the Reverend James H. Robinson, D. D., L. H. D., senior pastor at the Church of the Master in New York City, was an inspiration to me as I am sure it will be to the other Members of the House.

Under leave to extend my remarks in the RECORD, I wish to have included the text of Reverend Robinson's sermon:

DECLARATION OF FREEDOM

(The Reverend James H. Robinson, D. D., L. H. D., senior pastor, the Church of the Master, New York City, preached at the Washington Cathedral, March 17, 1957, on the occasion of a Divine Service of Thanksgiving)

A new and exciting chapter is being added to the history of free people. It was written in this year of grace, 1957, at Accra, West Africa. In a very few years, from the relative perspective of historical progress, the people of the former Gold Coast colony have blended the progress of the West, which they have eagerly grasped, with the heritage of their past which they do not mean to give up, to evolve the new nation of Ghana, which may very well combine the best of both and, we hope, escape many of the evils of both. The very name of the new land Ghana, is in itself a remarkable indication of the ability of the people of the land to combine the truth of the new and the old. The truth that makes men free, is the truth which helps men to grow, to create, to think, to organize, to worship, and to govern. This is the truth which springs in the hearts and minds of men everywhere. Ghana's freedom is a dramatic example that this truth will never be crushed.

But this is a freedom, which is not merely freedom from something—although it is that in part, for it is freedom from superstition, from tyranny, from oppression, from colonialism, from ignorance and poverty and from outside control. Whenever we define our freedoms by the height of our discarded ambitions or measure them by negatives this is just another form of slavery. But, it is more than freedom from something. It is freedom to be something, freedom to do something, freedom to create, to take one's full share of responsibility in a family of responsible people or a world of free and responsible nations. This is the truth of freedom which sets men really free. It is that, that Ghana prizes and we who also love freedom and are willing to purchase it with our labors, our fortunes and if necessary our lives, are grateful for the opportunity to give thanks to Almighty God today in this great cathedral on behalf of this young nation with such a great future.

The freedom which brought Ghana into the family of independent nations is a cause in which the whole world can rejoice. The achievement of their dreams was long delayed, but they never despaired of its fulfillment. The citizens of Ghana and their government leaders can rejoice because freedom and independence are now their proud and cherished possession, which they have won by the labor of their own hands and the wisdom of their own minds. The people of England can rejoice because they had the wisdom to recognize the necessity for progress and change and both the courage and the grace to evolve a new partnership based upon equity and mutual respect. Both peoples can rejoice, even more, because Ghana's freedom lifts Great Britain to a greater height and raises Ghana to that place of dignity and self-respect which is basic in the heritage of freedom.

It is not without great significance that this exchange both of power and political relationship at the birth of this new nation, was achieved democratically and without violence, at the very same moment in time that millions of other people, in several areas of the earth are struggling for the same freedom of self-determination, respect and human decency, who are wrenched by bitterness, seamed with hatred, torn by strife, crushed by armed violence, and drenched in blood.

But those of us who are neither British nor Africans can also rejoice. American citizens can take pride that many of the most capable political, educational, and religious leaders of Africa were educated in our institutions. Our share may be small in comparison to Britain's, but its potential is tremendous. The role of African leaders in every field of human endeavor, who received their education here, is large and honorable enough to excite the imagination and inspire the hearts of all of us.

Ghana's declaration of freedom, which alines it with all those nations standing for self-determination, should cause us to redouble our efforts to welcome many more sons of Africa for training and preparation for its future—a future which is all before it. There is no better, nor more permanent, investment we can make for both Africa's future and our own. This is one way in which our thanksgiving could stand up and march towards Ghana's brighter future.

And that segment of our population—Americans of African descent—can greatly rejoice because Ghana's freedom will help them to have both a new pride in themselves, and to lose that unspoken stigma of shame because of their African origin. This was a psychological problem of greater depth than most of us realized and, if we did, that we

could even to ourselves, because it was so painful, admit. This is a fact of greater significance than either Negro or white Americans, in our country, have as yet fully understood.

Above all else, Africans all over that great continent can rejoice because they can see the definite evidence that freedom for all of them is both a possibility and a reality which can withstand all frustration and overcome all tyranny which denies men their freedom. The event for which we give thanks to Almighty God "who loveth all his children" gives added hope to all Africans who look for the dawn of a brighter day. They need not succumb to the false illusions of freedom in a regimented dress, which promises all but guarantees nothing and offers independence, which is really the worst of all slaveries. Here is positive proof that the democratic method can and does work on the contrary, and that it produces the right for a people to govern their own destiny.

Although this newest nation will face many perplexing problems, the good auspices of its beginning is one of the best guaranties of its success. It is quite apparent that the people of Ghana know this as well as the rest of us. Although one would not think so because of the frequency and the manner in which the fact is alluded to by many of us. We need to understand that their problems will be no greater, no weightier and no more perplexing than those every other nation has faced and overcome in the early days of its history. Furthermore, they have help at hand from ourselves and England, which neither of us had when we weathered many political, international, industrial, religious, and economic upheavals of our difficult beginnings. The reservoirs of our largess, our services and our people are Ghana's for the asking, as they themselves must determine.

The basic idea of a free society of free men is, after all, a moral idea. The individual and collective responsibility of a democratic society are grounded in a moral order which sustains the rights of men as children of God whom he loves as brothers. This is an order in which human personality is precious and every human being is sacred. It was this moral order by which Great Britain judged itself to the extent of recognizing failure of finding a better way of relationship with the people of Ghana, and it is this same moral order which inspired Prime Minister Nkrumah and his associates to pursue their tactics with strength and determination by the methods mitigated with peace, commonsense, dignity, and justice to achieve their ends.

Behind the advent of Ghana's freedom is the fundamental order of a universe grounded in the eternal purpose of Almighty God. No impersonal dialectic of contradictory notions can achieve good and just ends by using negative and despicable means. Ghana is the achievement of men of faith who believe in a moral order, guided by a loving God to the end of a more equitable and secure society where "all men might have life and have it more abundantly." "Faith is not a leap into the dark," as someone has said, "but a leap into the dark which passes into light." Prime Minister Nkrumah was such a man of faith who leapt into the dark which has lead into the light of freedom.

Of all the forces which have helped to shape the destiny of Ghana—and there are many—none is any more important than the Christian religion. It has not always been what it ought to have been; it has had some miserable failures and very often it has been weak, but it has been bravely there, educating the new leaders, inspiring the people, developing a sense of integrity and justice, creating a moral atmosphere, and pointing out that everyone of them was important to God; that their rights were grounded in the righteous will of God and that hope springs eternal. But Christian missionary forces still provide education for 80 percent of all schoolchildren in Africa.

Religion has had a more powerful and positive impact upon Africa than any other single force; and Africa, on its part, has been exceedingly receptive of the Gospel. In fact, Christian missions have won a million more converts in Africa than in all the other missions lands of the world combined. Both we in the West and the people of Africa, despite all our failures and mistakes, owe more growth in social responsibility, political freedom, and progress to religion than to any other single factor in our culture. It is this foundation upon which Ghana has been started, and this anchorage will not fail it in the trying but glorious days ahead.

Minnesota Presents Excellent Library Services for Its Rural Areas

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mrs. KNUTSON. Mr. Speaker, in this session, the House will have an opportunity to reaffirm its true belief in the value of educational assistance, such as the excellent Library Services Act, Public Law 597, passed by its predecessor Congress in the interests of providing library services to the Nation's vast rural areas, now completely without such services, or very sparsely served by inadequate bookmobile service. This was a splendid dream realized after years of effort to secure such legislation. The rural areas of the country looked forward to its development with keenest anticipation of a need soon to be satisfied.

Now the administration has proposed that this dream of educational assistance shall not be adequately financed—in short, the dream will not come true. The Congress has this one opportunity to back up its fine action in the passage of the act during the last session. Will it have the courage to back up its own action and vote the full authorized amount of $7,500,000 which is little enough at best for services in 48 States and United States Territories? By the time this RECORD goes to press, we will know if this Congress will take the independent action of approving the full amount neded, or negate its own action of last year in the act's passage.

Given adequate financing, Minnesota plans a fine library service to its rural areas. This excellent plan, I ask permission to insert here into the RECORD:

THE MINNESOTA PLAN FOR THE DEVELOPMENT OF RURAL LIBRARY SERVICES UNDER THE LIBRARY SERVICES ACT

1. THE FIRST STEPS

The first money ($40,000), which has already been qualified for and received, is being spent to prepare for efficient and economical use of funds in succeeding fiscal years. Two modern adequate bookmobiles have been ordered which will be used to demonstrate the bookmobile idea, to survey bookmobile service patterns as they are developed, and to institute service in newly served rural areas while local bookmobiles are on order. The time factor of nearly 6 months between order and delivery of bookmobiles on the present market make this advisable. The library division is in the process of securing two professional field workers to assist local rural areas in developing their plans for creating and establishing local public library service. The division is also in the process of securing additional clerical personnel to relieve professional personnel of clerical duties. These personnel positions are included in the division budget now before the Minnesota legislature.

A third step in the preparation will be the acquisition of a large collection of standard public library books and other library materials which will serve as the basic collections for library service in the areas where new rural service is developed. At present, in the areas most in need of service and most enthusiastic about new developments, there is not a sufficient supply of books to sustain service to wider areas and larger populations.

2. THE SUBSEQUENT STEPS

A bill (Senate file 12) is now before the Minnesota legislature, having been reported favorably out of both House and Senate Education Committees, to provide the full amount of required matching funds for the full Minnesota allocation under a full appropriation by Congress as provided in the Library Services Act.

The Minnesota plan provides that this money shall be used to develop systems of libraries, serving rural people, which would cover two or more counties. A minimum of local support is required to qualify for aid.

The Federal and State aids would be combined to provide sufficient money to help cover the high initial establishment costs (books and other materials and equipment, including bookmobiles) and a sliding schedule is provided for future development so that in a few years local support would carry the costs of the local library operations.

These library systems would be organized under the joint exercise of powers statute, be under the management of library boards appointed to represent the local areas involved in the system, and under the direction of a fully qualified trained librarian. The supervision required by the Federal act will be performed by the library division under the rules and regulations established by the Minnesota Board of Education.

In the last few months, eight meetings have been held, scattered over the State, which were attended by a total of over 400 people interested in local library development. As a result of these meetings, tentative plans are being prepared for further discussion with local library leaders and public officials for the following developments:

1. A library system in the northwestern section which would serve Kittson, Roseau, Marshall, Pennington, Red Lake, and Polk. Except for the cities of Thief River Falls and Crookston, the library service in the area is extremely limited, and most of the population has no library service at all.

2. The extension of the Clay County library service to one or more neighboring counties, now having no rural library service at all.

3. A library system serving 5 or 6 counties in the west central area where there are only a few small city libraries, a very small amount of rural service, and an unserved population of over 50,000 people.

4. The development of the two rural systems of library service in the southern part of the State, basing the initial strength on existing county library organizations and serving from two to four presently unserved counties in each system.

5. The development of a library system in the metropolitan fringe area where the present rural services are inadequate in both organization and support to cope with the rapid increase in rural population. A considerable percentage of Minnesota's unserved population resides in this area.

6. The development of an eight county library system in the northeastern area.

We realize that the sums involved in the full appropriation are not sufficient to establish adequate service in all of the above areas in any one year, but we are confident that the development of local organization and support will be sufficient in enough of them to require the full appropriation to make an adequate beginning in at least three areas.

It is our intention to concentrate on adequate development in a few large areas rather than scatter the aid in small inadequate sums in many small areas, in order that really satisfactory long-term benefits to rural development may take place. We feel that this coincides with the intent of the Congress in passing the act.

Dark Domestic Conspiracy

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks, I include a significant editorial which appeared on March 2, 1957, in the Northern Virginia Daily, of Strasburg, Va.

The editorial follows:

DARK DOMESTIC CONSPIRACY

In its February 25 issue, the one with the nightmare mask on the cover, Life magazine presents an article on "A Dark International Conspiracy." The conspiracy concerns the Dominican Republic and its director, Generalissimo Trujillo. Life magazine infers that the American pilot who flew the kidnapped Columbia University professor into the Dominican Republic has, with the professor, been murdered by the Trujillo regime.

Jesus de Galindez disappeared from New York City on March 12 and has not been heard from since. Professor Galindez was a political foe of Trujillo. As we pointed out in an editorial on June 5 of last year, it is thought that Trujillo had him done away with.

However, what most impressed us about the article was its matter-of-fact first sentence which read: "Every year 10,000 persons disappear from the streets of New York, raising no hue and cry and leaving little trace."

New York is a vast city, but one would think that at least a slight hue and cry would be mustered for the annual 10,000 who mysteriously disappear. We wonder, too, what happened to the civil rights of these poor people.

At present the New York Congressmen and Senators are leading the chant for protection of civil rights of Negroes in the South. Perhaps the southerners should start a counter chant demanding the protection of the lives of the lost 10,000 of future years.

And Mr. Brownell certainly should direct his energies toward this more severe wrong.

Southerners, perhaps, should suggest that the annual loss of 10,000 citizens would indicate that the New York police department is inefficient and should be bolstered by the forces of the Federal Bureau of Investigation and that a special division should be established in the Federal Department of Justice to oversee police protection in New York City.

Of course, those New Yorkers still lucky enough to be walking the dangerous streets would feel offended. They would oppose the intrusion of the FBI. They would state that this would all be an invasion of States' rights and the local municipal government.

Yet, New York representatives lead the drive to create a Federal gestapo to oversee the South. They want the FBI and a special division in the Federal Department of Justice to snoop around the South and to punish those folks "about" to violate a Negro's civil rights.

This is a conspiracy between unprincipled politicians and the National Association for the Advancement of Colored People. This is an even more dangerous conspiracy than any international conspiracy which this Nation may face. This is a sinister conspiracy that comes from within. This is a dark domestic conspiracy.

Tribute to New York State Senate Leader Joseph Zaretzki

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. ANFUSO. Mr. Speaker, it is my happy privilege to call to the attention of my colleagues on both sides of the aisle the fine tribute paid by the New York Times today to my very good friend and minority leader of the New York State Senate, the Honorable Joseph Zaretzki.

Senator Zaretzki is a learned lawyer and a great student of government. Above all, he has an innate sense of justice.

In these days, when the United States has to carry the expense and the burden of international leadership in order that the free world may survive, it is reassuring to know that our most populated State and the greatest contributor to the Nation's economy should have the benefit of the astute leadership of a man like Senator Zaretzki.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the article on Senator Zaretzki published in the New York Times today, Friday, March 29, 1957, and which reads as follows:

VOCAL MINORITY LEADER: JOSEPH ZARETZKI

ALBANY, March 28.—When Joseph Zaretzki first ran for the State senate in 1947, he viewed the upper house of the legislature as a chamber remote, austere, and at all costs dignified.

"You would have thought he was trying to be elevated to the House of Lords," a friend of the Washington Heights senator recalled. "In the first place he would make the grade; in the second place he could get into the chamber without stepping on his own toga."

Any resemblance between this shy and uncertain legislator of 10 years ago and the small, round, intense lawyer who was chosen Democratic leader of the Senate this year is accidental.

So complete has been Mr. Zaretzki's transformation into a fist-shaking, desk-thumping, free-wheeling orator that some of his fellows have privately chided him for threatening the dignity of the upper house.

He was projected into the leadership this year by the insistent hand of Carmine G. De Sapio. This made him party to behind-the-scenes negotiations, such as those today scuttling a day-old agreement on civil-rights legislation with the Republicans.

A POSE FOR POLITICS

One of Mr. Zaretzki's favorite poses as a debater has been that of the naive, untutored lawmaker unfamiliar with the complexities of politics. It has stood him in good stead, in getting laughs on the floor and in cutting to the essence of an issue under debate.

Therer was a time when this was not merely a pose. In the depression days a member of Mr. Zaretzki's local Democratic club approached him with news that the Port of New York Authority was thinking of disposing of the George Washington Bridge to private investors.

Mr. Zaretzki, who did not know his fellow club member was under investigation by the district attorney, contributed money to help organize a corporation that was to buy the bridge and wax rich on its tolls.

Before this year, his best-remembered contribution to the senate debate took place in 1954, hard upon revelations that a number of major political figures had reaped rich rewards from the State's harness-racing industry.

Weekly, sometimes daily, Senator Zaretzki would bounce from his seat and in his high, shrill voice remind the lawmakers of the sins he declared the Republicans had committed. As his charges grew louder, he was challenged to repeat them outside the chamber, where he would enjoy no immunity from slander actions.

After a few false starts, Mr. Zaretzki named a time and place at which he would emerge from his senatorial cloak. When reporters kept the date, all he did was read them a magazine article on the harness scandals.

Mr. Zaretzki has practiced law in New York City for 22 years. He is a veteran of World War I and a graduate of Columbia College and the Columbia Law School. He lives with his wife, the former Helen Case, and their daughter, Meredith, at 160 Cabrini Boulevard, Manhattan.

Will the Budget Be Cut?

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. MACDONALD. Mr. Speaker, I would like to take this opportunity to bring to the attention of my colleagues an editorial which appeared in the March 26, 1957, edition of the Malden Evening News and Medford Daily Mercury, both prominent daily newspapers published in my Eighth Congressional District. The editorial, entitled "Will the Budget Be Cut?" was written by Dave Brickman, publisher and editor of the Malden Evening News, who presents one of the most penetrating analysis I have seen of this entire problem.

The whole matter of Federal spending has been a subject of great concern to the country and at the present time a large part of my mail relates to it. I know that my colleagues are also being deluged with letters from their constituents on this important problem. Almost everyone in concerned and wor-

ried. Mr. Brickman sets forth clearly what some of these problems are and the possible solution. The editorial is very timely and I hope the membership of the House will read it.

The editorial is as follows:

WILL THE BUDGET BE CUT?

The biggest budget in the country's peacetime history, calling for Government expenditures of a whopping $72 billion in the fiscal year starting July 1, has stirred up a storm of protest. With demands for steep cuts in Government outlays pouring in from constituents, Members of Congress seem more determined than in years to do something effective to hold down Federal spending. Congressman MACDONALD, Democrat of this district, reports that he, like so many of his colleagues, receives letters from constituents asking budget cuts.

Senators and Representatives, chambers of commerce, and the National Association of Manufacturers, among others, are talking of overall budget cuts ranging from $2 billion to $8 billion. Proposals to put mandatory ceilings on spending or on tax rates are being revived. Revision of budgeting and appropriating procedures is receiving more than usual attention.

Meanwhile, the legislative and executive branches—the one controlled by the Democrats and the other by the Republicans—have been jockeying over whose job it is to take the lead in budget cutting. The House of Representatives adopted a resolution by a party-line vote in mid-March, asking the President to indicate where substantial reductions might be made. But the President fired back that any big cuts would require slowing down or eliminating important Federal programs, and it was up to Congress to say which ones.

The House proceeded to vote a 23-percent cut in the White House offices budget and went on to approve a half-billion dollar (9 percent) cut in the big independent offices money bill. Foreign aid, however, was expected to take the heaviest rap.

Congress will have to cut at least $3 billion from proposed expenditures for fiscal 1958 merely to hold spending at present levels. Whether it can do that, or better, is problematical. It is easier to talk in general terms of making a $5 billion cut than it is to follow through and reduce or eliminate the individual items that add up to that sum. Budget cuts made by the House often generate pressure among affected interests that leads to restoration of the slashed items by the Senate.

Other factors, however, tend to limit the power of Congress to keep spending under control. For one thing, the Federal Government has assumed ever-increasing responsibilities entailing large financial commitments. For another, rising prices have increased the cost of all Government services. Finally, the increasing complexity of Federal activities has outrun in some measure the capacity of Congress for detailed supervision of spending.

Various statutory expenditure commitments are actually or virtually beyond the power of Congress to control. Interest on the public debt cannot be touched, and it will amount next year to $7.3 billion. Veterans' payments, amounting to around $5 billion, are susceptible in practice to only relatively minor reduction. National defense expenditures, with which Congress is loath to tamper, now account for well over half of total spending.

Congress has been handicapped by a lack of machinery for keeping total expenditures within the limits of total revenues. Appropriations are included in a dozen or more bills which are taken up separately. Experiments after the war with a legislative budget and appropriation ceilings failed to hold actual appropriations under the ceilings. When an omnibus appropriation bill was tried in 1950, budget estimates were cut substantially, but the new method was abandoned after only a year's trial.

An accrued expenditures budget, recommended by the Hoover Commission, won Senate but not House approval last year. This year it got the cold shoulder from a House Appropriations Subcommittee as a snare and a delusion in effecting budget savings. So there is also a possibility— politics being what it is—that the whole economy drive may collapse, except for picayune and token savings.

Blaming the Public

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. BARRETT. Mr. Speaker, at the request of my very good friend and former colleague, the Honorable Edward L. Stokes, of Pennsylvania, under leave to extend my remarks, I wish to include the following article written by Mr. Henry Hazlitt for the February 25 issue of Newsweek:

BLAMING THE PUBLIC

(By Henry Hazlitt)

To all those who are so justifiably concerned about the dangers of further inflation, the most dismaying development of recent weeks was an announcement by Mr. Eisenhower (in his press conference of February 6) that unless business and labor imposed on themselves certain unspecified self-restraints, the Government would have to move in more firmly with so-called controls of some kind, and when we begin to control prices and allocations and wages, and all the rest, then it is not the America we know.

This statement, unfortunately, cannot be dismissed as a mere slip of the tongue. It was preceded by a distinct hint in the President's state of the Union message that unless business and labor exercised self-discipline the Government might be forced to return to price and wage controls.

FALSE REMEDY

It should not be necessary to point out at this date that price and wage controls are a completely spurious cure for inflation. We need merely recall the words of Mr. Eisenhower himself, in his first state of the Union message on February 2, 1953: "Direct controls, except those on credit, deal not with the real causes of inflation but only with its symptoms. * * * They have proved largely unsatisfactory or unworkable. They have not prevented inflation; they have not kept down the cost of living. * * * I am convinced that now—as well as in the long run—free and competitive prices will best serve the interests of all the people."

The truth is that government policy alone—particularly fiscal and monetary policy—must bear practically the full responsibility for inflation. For the actions of private bankers, businessmen, and labor leaders that increase inflation are themselves encouraged by monetary policy.

The Eisenhower administration is spending more welfare funds in more directions than any of its predecessors. It supports laws that continue to undermine the ability of private employers to resist union demands for excessive wage rates. It is artificially supporting farm prices. It is artificially stimulating an unprecedented housing boom. It has encouraged or permitted the country's money and credit supply to increase by $23 billion since it came into office. For an administration with this record to turn around and blame private business and labor for the inflationary result, and to start disrupting production with price and wage controls, would be the height of irony.

The remedy for inflation lies wholly in a changes of governmental policy. And it lies not in giving still more discretionary, arbitrary, or dictatorial powers to government bureaucrats, or still more discretionary powers (more techniques, tools, or weapons) to our monetary managers but, on the contrary, in taking away some of their present discretionary powers and obliging them to abide by fixed and predictable rules.

It must be pointed out once more that a free competitive enterprise system cannot function effectively in the face of constant uncertainty concerning what the monetary managers are going to do—particularly when those managers may not even know themselves. The country is especially fortunate today to have at the head of the Federal Reserve Board a man who combines the rare understanding, integrity, and courage of Chairman William McC. Martin Jr. But the political pressures put upon him are excessive. They could be substantially lessened, and the dangers of inflation similarly lessened, by changes in our monetary rules or laws.

RULES VERSUS DISCRETION

I suggest two:

1. Congress or the Federal Reserve Board could adopt a rule similar to that put into effect by the Bank of Canada last November, under which the discount rate is changed weekly so as to maintain a fixed margin of one-fourth percent above the latest average tender rate for Treasury bills.

2. The legally required gold certificate reserves of the Federal Reserve banks could be restored approximately to the former requirement of 35 to 40 percent instead of the present war emergency requirement of only 25 percent adopted in 1945. Our controllers will not control inflation until they accept controls on themselves. Meanwhile they should stop scolding the American people.

Permit Our Farmers To Feed Own Wheat

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. MUMMA. Mr. Speaker, I noticed a news article in the Harrisburg (Pa.) Patriot of March 28, 1957, with reference to pending legislation which would exempt poultry and livestock raisers from wheat allotment penalties where the grain is fed to stock on their own farms. This is of much interest in my part of Pennsylvania.

Six bills have been introduced in the House in this regard, I understand. I sincerely hope this much-needed legislation is enacted during the present session.

Over a year ago, when Secretary Benson met with Republican Members of

the House from Pennsylvania, this matter was brought up by several of those present, including myself, and was discussed very thoroughly. At that time the Secretary said he was in favor of the exemption mentioned above. It came up for consideration in the last Congress, along with other proposed amendments to the Agricultural Adjustment Act, but it was defeated. To my mind it was defeated through a coalition of those interested in certain other subsidized products.

In Pennsylvania we have had several cases of prosecution for violation of this provision of the law, which have attracted nationwide attention and support. However, the Supreme Court has sustained the law in each instance, so again I hope this legislation in behalf of the Home Farmer will be adopted. If this is done, it may in some degree keep more people on our farms and encourage others to return.

In accordance with the privilege granted me, I include the article from the Harrisburg Patriot, which is as follows:

BILL IN CONGRESS WOULD PERMIT FARMERS TO FEED OWN WHEAT

Pennsylvania poultry farmers may be able to feed homegrown wheat to their chicks without running afoul of the Government's wheat-allotment program.

The turning point in this longstanding battle between poultry interests and the Federal program rests in the legislation tossed into the House of Representatives hopper by KENNETH B. KEATING, Republican, New York, it was revealed yesterday by Larry Kegerreis, Palmyra poultryman.

The Pennsylvania poultryman is an official of the Northeastern Poultry Producers Council (NEPPCO), a regional poultry-producer organization that has spearheaded the running battle to free growers from current restrictions.

BILL PROPOSED

"I believe it's fundamentally wrong and contrary to the American system of free enterprise to prevent poultry farmers, through Federal regulation, from free utilization of land for the production of grain for feeding their own flocks," Kegerreis declared.

The proposed bill, H. R. 271, would amend the Agricultural Adjustment Act of 1938 to exempt poultry and livestock raisers from wheat-allotment penalties where the grain is fed to stock on their own farms.

So far the Government has won a hands-down victory in test cases in New York, Pennsylvania, and other States involving violations of wheat-allotment agreements, where the grain was fed to livestock on the farm where it was raised.

FEED USE LIMITED

Current regulations forbid, under penalty, the raising of any wheat in excess of acreage allotments, even though the grain is fed right on the farm and does not reach market channels.

"It's high time that this type of autocratic legislation be wiped from the record books," said the council official. "It clearly abrogates a fundamental right of American farmers, that of freedom of choice.

"The council has vigorously campaigned to ease these harsh regulations, and has defended earlier test cases," he continued. "It will continue to do so until the job is accomplished."

NEPPCO has been a leader in a nationwide drive by farm organizations to amend the original legislation. Although previous efforts have been unsuccessful, council leaders are pinning their hopes on a renewed nonelection-year campaign.

John P. McGrath

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. KEOGH. Mr. Speaker, John P. McGrath, of New York City, former corporation counsel of the city of New York, was appointed to the bistate waterfront commission by Governor Harriman about 1 year ago. Considerable erroneous opinions were expressed as to the motives which prompted Governor Harriman's original appointment. Those of us, however, who knew Mr. McGrath knew then that he would discharge the duties of that important assignment in a most creditable manner as he has in all assignments which he has undertaken. He recently submitted his resignation effective on the designation of his successor. That has been done. I think that it is proper that the CONGRESSIONAL RECORD include the comments that were made at the time of his resignation, all of which justifies the confidence which Governor Harriman reposed in Mr. McGrath and completely answers all of the critics. I, therefore, include the following editorials, the first of which appeared in the New York Times of Tuesday, January 1, 1957; the second in the New York Journal-American of January 4, 1957, together with an article which appeared in the New York Times of December 29, 1956. It should also be noted that the Joint Legislative Committee on Government Operations on the Waterfront Commission of New York Harbor commended the operations of the waterfront commission during the past year. I should like also to include the following text of the minority report of the joint legislative committee:

[From the New York Times of January 1, 1957]

MR. MCGRATH STEPS OUT

John P. McGrath, whom Governor Harriman appointed to the waterfront commission, has resigned after little over a year as 1 of the agency's 2 commissioners. His selection, coming on the heels of the resignation of Lieutenant General Hays, an appointee of Governor Dewey, brought charges that Governor Harriman was attempting to weaken the commission. Mr. McGrath's service has dispelled these fears. He deserves the appreciation of the public in both New Jersey and New York.

The bi-State compact has set up two objectives for the waterfront commission, one negative and the other positive. Its first duty, of course, is the abolition of the racketeering and corruption which the crime commission so startlingly revealed. But it also is charged with improving labor conditions on the docks—"not by force," as the commission itself stated in its second annual report, "but by inspiring management and labor to raise their own standards and do their own policing." And the compact also makes it clear that the commission, with its extraordinary police powers, is a temporary agency justified by conditions which jeopardized the public welfare, but whose ultimate aim should be the elimination of the need for its own existence.

In view of all this it is encouraging that Mr. McGrath has told Governor Harriman that "much has been accomplished of a constructive nature" by the commission in the past year, that "the rank-and-file dockworker * * * has now stable and larger earnings than at any time in the past" and that because "there is no longer any reason for a kickback to the hiring boss * * * this practice has virtually disappeared." New York Shipping Association payroll figures bear this out. In the last ILA contract year the average annual wage of longshoremen was $4,072, with over half of them getting $5,000 or more—largely due to the limitation of casual dockworkers by the waterfront commission and to seniority systems instituted by ILA locals themselves.

Governor Harriman has the opportunity—and the duty—to fill Mr. McGrath's place with someone especially qualified to further the constructive aims of the waterfront commission—a person wholly free of political entanglements and thoroughly experienced in the fine art of modern American human and industrial relations, yet beholden to neither management nor labor.

[From the New York Journal-American of January 4, 1957]

MERITORIOUS JOB

We regret that the press of personal business has led John P. McGrath to resign as a member of the Bi-State Waterfront Commission. Mr. McGrath's services during the year he served on the commission merit the appreciation of the public in New York and New Jersey. Today, rank-and-file dock workers find it no longer necessary to kick back to hiring bosses and wages have become stable. Mr. McGrath's place on the commission should be filled by a man of equal stature and qualification to implement the campaign to stabilize waterfront conditions and eliminate criminal elements.

[From the New York Times of December 29, 1956]

MCGRATH RESIGNS WATERFRONT POST—HIS APPIONTMENT TO BI-STATE AGENCY LAST YEAR STIRRED A POLITICAL TEMPEST

(By Jacques Nevard)

John P. McGrath, whose appointment a year ago as this State's member of the New York-New Jersey Waterfront Commission stirred a major political storm, resigned yesterday from that position.

Governor Harriman announced in Albany that he was accepting the resignation "with genuine reluctance." The Governor said the resignation was to become effective next Monday, but he added that Mr. McGrath had agreed to stay on until a successor could be named.

Mr. McGrath, a former New York City corporation counsel and manager of Mr. Harriman's Democratic campaign for Governor in 1954, said he was leaving the $17,500-a-year position because of the pressure of private business.

Governor Harriman appointed him to the bi-State agency on November 1, 1955, after forcing the resignation of Lt. Gen. George P. Hays, who had been named to the post by Gov. Thomas E. Dewey, a Republican.

WEAKENING WAS CHARGED

The action brought charges that Governor Harriman was attempting to weaken the commission. The agency was established by the two States in 1953 to curb the power of the racket-ridden International Longshoremen's Association and to bring law and order to New York Harbor.

The sharpest criticism of Mr. McGrath's appointment came from New York Republican legislative leaders, but even Democratic Gov. Robert B. Meyner, of New Jersey, said he was "surprised" by the move.

It was generally agreed yesterday, however, that Mr. McGrath's service did not weaken the commission in any respect.

In fact, by a twist of circumstances, when the Republican-controlled New York State Legislature meets January 9 it will have to

consider proposals drafted under the aegis of Mr. McGrath and his New Jersey counterpart to expand greatly the powers of the commission.

The situation will be doubly ironic because, possibly before it tackles the new proposals, the legislature will hear a report from its Government Operations (watchdog) Committee dealing with the Hays dismissal and the McGrath appointment. The committee began its investigation last January.

MEYNER SIGNS BILL

The changes sought in the New York law were signed into New Jersey law yesterday by Governor Meyner. They will not become effective for the bistate agency until New York State acts.

Before he signed the bill Governor Meyner turned down a last-minute appeal for a delay from Capt. William V. Bradley, president of the unaffiliated longshore union.

If the new law is adopted by New York State, the commission will have the power to register waterfront carpenters, coopers, sweepers, and maintenance men, as well as longshoremen.

In addition the changes would:

Set higher standards for registration of checkers, timekeepers, and clerks.

Authorize the fining of stevedores in amounts up to $5,000.

Give commission witnesses immunity from prosecution.

Give commission investigators the power of arrest.

Bar loitering within 500 feet of the waterfront.

Both Governor Meyner and Harold Kolovsky, the New Jersey member of the commission, expressed regret at Mr. McGrath's resignation.

Governor Meyner said "Mr. McGrath had done a fine job."

In announcing the resignation, Governor Harriman thanked Mr. McGrath for his capable and effective service.

Governor Harriman's office released the letter of resignation, in which Mr. McGrath said, "that the recent death of Edward A. Richards, president of the East New York Savings Bank, Brooklyn, will require me to take a more active part in the bank's affairs as chairman of its executive committee." He said he had agreed to assume that position effective next Tuesday.

Mr. McGrath wrote that be felt much has been accomplished of a constructive nature during the last year on the New York waterfront.

"Certainly," he declared, "the rank-and-file dockworker has had greater employment opportunities and more stable and larger earnings than at any time in the past. There is no longer any reason for a kickback to a hiring boss, and this practice has virtually disappeared."

He added, however, that "it would be naive to assert that force and fear are not still potent factors governing the worker on the docks."

STATE OF NEW YORK—MINORITY REPORT OF THE JOINT LEGISLATIVE COMMITTEE ON GOVERNMENT OPERATIONS ON THE WATERFRONT COMMISSION OF NEW YORK HARBOR

In the hearings conducted by this committee more than a year ago in the manner of the Waterfront Commission of New York Harbor and the so-called dismissal of General Hays, only one side of the story was heard. We, the Democratic members of this committee, desire to give the other side of the story as gleaned from matters of public record and public statements made in relation to this subject.

The only conclusion that can be drawn from all the facts is that Governor Harriman has at all times supported the authority of the waterfront commission, and that the authority and effectiveness of the commission have in fact been materially strengthened by the Governor's actions. That this is true is now generally recognized, and this is reflected in the report of the committee majority.

The record shows that at his first meeting with General Hays and Sam Lane in Albany on January 13, 1955, Governor Harriman expressed his views that the law did not give the commission sufficient power, and invited suggestions for legislation to increase the effectiveness of the commission in carrying out the purposes of the law.

We have learned that at this meeting the Governor was requested to make a statement of confidence in the commission. The Governor replied that he was not prepared to give the commission as it then existed a blank check by a blanket endorsement of all of its past and future actions, but that he had no hesitancy in supporting the authority of the commission in carrying out the purposes of the bi-State compact. This authority Governor Harriman has consistently and strongly supported throughout his term as Governor.

The majority report attempts to make much of what it calls the attempt to create a buffer committee. The fact concerning the suggestion that a citizens' advisory committee be established, which appears to have originated with a representative of the shippers, have been publicly stated by Judge Daniel Gutman, the Governor's counsel. They show that Judge Gutman discussed the idea with representatives of the shippers, the union, and the waterfront commission, but made it clear that such a committee would be set up only if the commission approved.

Governor Harriman's position was clearly stated by him on August 26, 1955, the day when the suggestion first received public notice. The Governor's statement said:

"It is clear that some way should be found to relieve the tensions on the New York waterfront, and that this cannot involve any impairment of the authority of the waterfront commission.

"Several times in the past my counsel, Judge Gutman, has been able to bring the parties together in informal talks which have led to clarifying the misunderstandings that existed. However, both Judge Gutman and I feel that methods should be found to deal with grievances without resort to the Governor's office.

"Among the ideas suggested to assist the commission and the union in dealing with grievances and misunderstandings was the creation of an informal advisory committee. I authorized Judge Gutman to discuss this or any other ideas that might be proposed with the parties concerned. I have not, however, given my approval to any specific proposal.

"After all, the adoption of any plan would, in the last analysis, be a matter for the commission to determine."

It is clear that when Sam Lane resigned as executive director, Governor Harriman recognized the opportunity that was offered to increase the effectiveness of the commission's operations, by separating the offices of executive director and general counsel to the commission, both of which titles Lane held, and obtaining the services of a man of outstanding and recognized qualifications as executive officer of the commission. The Governor's insistence on this point led to the resignation of General Hays and eventually to the selection of Inspector Michael J. Murphy of the New York City Police Department, a lawyer and administrator as well as a trained law enforcement officer, as executive director of the commission.

The selection of Inspector Murphy, for which Governor Harriman was principally responsible, was widely acclaimed at the time. The New York Herald-Tribune, a Republican newspaper, said editorially:

"The impasse in the waterfront commission over the selection of a new executive director has been well resolved. Inspector Michael J. Murphy, commanding officer of the New York Police Academy, is an excellent choice. He is thoroughly qualified and his record is of a high professional order. He is regarded as a first-class administrator with an expert knowledge of all the problems of personnel, selection, and training. Mr. Murphy has a trained legal mind; he is a summa cum laude graduate of Brooklyn Law School. For good scholastic measure, he also holds a business administration degree from City College.

"On top of that, the new waterfront director is a fearless law-enforcement official who clearly owes nothing to politics or special influence. He can be counted upon to press ahead with the port cleanup with the same vigor as that of his predecessor, Samuel M. Lane. It is most encouraging that Governors Harriman and Meyner, as well as Commissioner Weintraub and Commissioner-designate McGrath, are uniformly enthusiastic. They could not agree among themselves, but these differences were happily eliminated in the Murphy nomination by Austin J. Tobin of the port authority. For these good offices the entire community owes thanks.

"The integrity and independence of the waterfront commission have been upheld. Now the port of New York can continue to move forward."

Other newspapers similarly praised the appointment, and events have amply justified the confidence which Governor Harriman and the public placed in this fine public officer.

As successor to General Hays, Governor Harriman appointed John P. McGrath, a former corporation counsel of New York City and a leading member of the New York bar. After more than a year's service as a member of the commission, Mr. McGrath announced on December 29, 1956, his desire to leave the commission in order to devote more time to his law practice and business interests. The newspapers, reflecting the popular judgment, unanimously praised Mr. McGrath's contribution to bringing about a more effective operation of the commission and a more stable situation on the waterfront. We cite two editorials from the many which appeared at that time.

The New York Journal-American said: "We regret that the press of personal business has led John P. McGrath to resign as a member of the Bi-State Waterfront Commission. Mr. McGrath's services during the year he served on the commission merit the appreciation of the public in New York and New Jersey. Today, rank-and-file dockworkers find it no longer necessary to kick back to hiring bosses and wages have become stable. Mr. McGrath's place on the commission should be filled by a man of equal stature and qualification to implement the campaign to stabilize waterfront conditions and eliminate criminal elements."

The New York Times said editorially: "John P. McGrath, whom Governor Harriman appointed to the waterfront commission, has resigned after little over a year as one of the agency's two commissioners. His selection, coming on the heels of the resignation of Lieutenant General Hays, an appointee of Governor Dewey, brought charges that Governor Harriman was attempting to weaken the commission. Mr. McGrath's service has dispelled these fears. He deserves the appreciation of the public in both New Jersey and New York."

Governor Harriman's support of the authority of the waterfront commission, of which he assured General Hays and Mr. Lane in January 1955, has been given firmly and consistently. The Governor's actions during the longshoremen's strike, which began September 7, 1955, show this support.

On September 8, Governor Harriman issued a public statement in which he said: "Lawful authority cannot be defied. Our laws

provide for the manner in which appeals can be taken from the decisions of the commission. The way to appeal is not by strike."

On September 11, in response to a telegram from Captain Bradley requesting his intervention, Governor Harriman telegraphed the ILA leader, calling on him to order "an immediate end of the work stoppage," and to "submit your grievances to the commission."

On September 12 the governor again telegraphed Captain Bradley: "As I have repeatedly made clear, the solution of your problems rests with the waterfront commission that has been established by law. I have already announced that the commissioners have assured me that they would grant a fair hearing if grievances were properly submitted."

On September 14 the ILA called an end to the work stoppage.

Governor Harriman has not only supported the authority of the commission, but throughout has favored giving the commission any additional legal powers needed to increase its effectiveness in carrying out the purposes of the law.

It will be recalled that in the January 1955 meeting with General Hays and Sam Lane he invited suggestions for such additional legislation. According to the majority report, "both General Hays and Lane stated that they had been able to accomplish a great deal under their present powers and were not prepared to ask for additional powers."

It was only after Commissioner McGrath and Inspector Murphy had assumed their new duties that the commission formulated a comprehensive program of needed new legislation. These proposals were submitted to Governor Harriman and to Governor Meyner in the annual report of the commission on July 30, 1956. On the same day Governor Harriman issued a public statement endorsing these legislative proposals and stating that if adopted they would enable the commission to "tighten controls over waterfront activities," and "make possible a more effective and vigorous program for ridding the Port of New York of unwholesome influences."

Later, copies of the bills were received from the commission, and on September 15, 1956, Governor Harriman stated his specific approval of this proposed legislation.

On January 22, 1957, the Governor sent a special message to the legislature noting that the bills had already been approved by New Jersey, and that "passage by your bodies is now required to make them operative. Prompt action is therefore essential."

We are pleased that the majority members of this committee are gratified that the affairs of the waterfront commission during the past year have continued to be conducted in accordance with the principles upon which the creation of the waterfront commission was based. We are further pleased that the majority members of this committee have given their support to this much-needed legislation.

Respectfully submitted,

JOSEPH R. CORSO,
Secretary.

SAMUEL L. GREENBERG.

Stockpiling and Wasting Assets

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, March 29, 1957

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an article which appeared in Barron's National Business and Financial Weekly, of March 4, 1957, entitled "Wasting Assets—Stockpiling Is Making the United States Weaker, Not Stronger."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASTING ASSETS—STOCKPILING IS MAKING THE UNITED STATES WEAKER, NOT STRONGER

Philip M. McKenna, founder and president of Kennametal, Inc., Latrobe, Pa., is a man of extraordinary ability and strong views. Sales of his company, which mines tungsten and manufactures alloys used in metalworking tools, have increased some 400 percent during the past decade; profits have risen better than tenfold. His achievements in the realm of technology are no less impressive. Mr. McKenna years ago invented the first hard carbide to cut steel. These days, among other activities, he is busy carving out new metallurgical frontiers in columbium, tantalum, and titanium. Perhaps most noteworthy of all have been his ceaseless efforts in behalf of a sounder United States minerals policy. Specifically, Mr. McKenna vigorously has opposed Federal subsidies to domestic tungsten producers, of which Kennametal happens to be one. Financial aid of this kind, he said the other day in a sharply worded letter to his Congressman, is neither necessary nor desirable.

Such candor has endeared the industrialist not a whit to those lawmakers, especially from Western districts, who are seeking new bounty for the industry. Mr. McKenna, cried Representative CLAIR ENGLE, Democrat, California, no more represents the tungsten miner than the wolf does the sheep. The same solon, outraged by revelations that the United States has built up a huge tungsten supply, last week charged the head of Kennametal with a breach of security. While his popularity may have suffered in a few mining areas, the forthright gentleman from Latrobe plainly has earned the gratitude of the citizenry at large. The fact is that through some mischievous Washington alchemy, United States purchases of tungsten and other base metals, once undertaken in the name of defense, have been transmuted instead into a vast, costly boondoggle. What is perhaps worse, they are thrusting the Federal Government ever deeper into the minerals industry. To the Nation, in short, stockpiling has become a growing source of weakness, not of strength.

The United States has been squirreling away so-called strategic raw materials since World War II. Over the years, in an effort to reach the minimum stockpile deemed essential to the national security, it has invested $6.5 billion in some 75 commodities, including such items as waterfowl feathers and castor oil. Outlays of this kind, notably for cobalt and copper, are slated to continue and, indeed, to rise. Beyond the immediate objective, the defense planners have set their sights on an ambitious long-range target as well. While the new program, launched in 1954, remains obscure in many respects, one thing about it is perfectly plain; its cost is mounting. First estimated at $2 billion, projected spending under it by last year had ballooned to twice the original size. The budget for fiscal 1958 would raise the ante for both programs another $600 million, including $40 million for fluorspar, columbium-tantalum, and tungsten.

While admittedly heavy, the price would not be too much to pay for an added measure of national security. On this score, however, as Barron's has noted before, the Nation is getting short weight for its stockpiling dollars. Tungsten is a glaring case in point. Western legislators, as noted, are pressing for continued Federal purchases. Yet, according to official estimates, the United States at latest reckoning had enough metal above ground to last for 6 years at the peak wartime rate of consumption. As for lead and zinc, which already have cost the taxpayer some $200 million since 1954 alone, the administration long ago abandoned any tattered appeal to the flag. Instead, under the vague and ill-defined mandate of the long-range program, it continues to pursue what has become nothing more than a handout to industry.

Thus, the evidence indicates, the strategic value of stockpiling is largely illusory. The economic drawbacks, however, are painfully real. For one thing, like some malignant lodestone, the lure of its subsidy inevitably has attracted other mineral producers. A few weeks ago, to illustrate, the head of American Smelting & Refining Co., pointing out that the United States hoard of copper was too low in relation to those of other nonferrous metals, suggested that greater United States purchases would be logical. By the same token, a leading oil company executive recently threw out a similar guarded hint concerning storage of petroleum products.

Wherever it ultimately may lead, the program already has had serious repercussions in the metal markets. Three years ago, merely by announcing its decision to acquire more lead and zinc, Washington effectively raised their prices several cents per pound. Today, the trade agrees, its buying both here and abroad keeps them at prevailing levels. Sooner or later, in view of its long-term contracts with several producers, the Government is apt to become a ponderable factor in copper as well. Indeed, some observers feel that such purchases may put a floor under the red metal not far from current quotations.

The stockpilers, finally, have been guilty of far worse than meddling with the workings of supply and demand. By lessening or destroying incentives to risk and experiment, their activities, in effect, have thrown a monkey wrench into the wheels of technological progress. According to Mr. McKenna, who has been dealing with the stuff for decades, this is true of tungsten. The same obviously may be said of manganese, so essential to steelmaking. To utilize lean grades of this vital ore a new smelting process has been developed, not in the United States, which subsidizes producers, but in Canada, which does not.

Far from advancing the Nation's interest, in sum, stockpiling plainly works against it. Happily, after years of easy assent, some lawmakers have begun to perceive this fact. As a consequence, the tungsten subsidy, once considered certain of passage, has come under heavy attack in the House of Representatives; its ultimate fate is now in doubt. The wave of protests against excessive buying of the metal is surely to be welcomed. However, it is, or should be, just the beginning. What is needed most is a hard and critical reappraisal of the whole stockpiling program. For a nation grows strong, not by wasting its assets in futile hoarding, but by using them wisely.

Inadequate Allowances for Career Diplomats: An Inequity Which Is Harming United States Diplomacy

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. PORTER. Mr. Speaker, it becomes increasingly evident that career employees have need for allowances sufficient to enable their appointment to

high spots. I should like to call to the attention of my colleagues an article by Joseph Alsop, published in the March 22, 1957, edition of the Washington Post, which delves into the matter of diplomatic appointments. I sincerely believe there is a necessity to persuade this administration of the importance of having competent representatives abroad, and, indeed, is great harm done to the United States of America by unqualified political appointees in diplomatic posts.

I intend to introduce legislation similar to that introduced in the Senate so that career employees will have allowances sufficient to enable their appointment to the top spots. However, I realize that the real problem is to persuade this administration of the importance of having competent representatives abroad and, indeed, great harm is done to the United States by unqualified political appointees in diplomatic posts.

In connection with this, I would like to call your attention to the following article by Joseph Alsop which was published in the March 22, 1957, edition of the Washington Post:

DIPLOMATIC APPOINTMENTS RECORD CALLED SQUALID

(By Joseph Alsop)

PARIS.—The Eisenhower administration's traffic in diplomatic appointments has now reached a stage that calls for public comment.

The latest news is that Senator JOSEPH R. MCCARTHY'S deputy in the State Department, Scott McLeod, is to receive the Embassy in Dublin as his just reward for having done more harm to the American Foreign Service than any one else in recent memory. Perhaps McLeod will not do a great deal more harm in Ireland, but why on earth should he be sent there at all at the expense of the American taxpayer?

But this is a relatively minor incident in a long and squalid story. This year most of the diplomatic posts in Europe have been crudely placed on the auction block and sold for cash on the barrelhead.

By sheer accident, some of the very rich men who have thus been named to represent the United States abroad ought to make excellent Ambassadors. John Hay Whitney in London, for instance, is the sort of man who ought to receive a political apointment to a major embassy quite without regard to his Republican contributions. Then, too, the administration must be credited with at least two really admirable nonpolitical appointments, those of David K. E. Bruce in Germany and Ellsworth Bunker in India.

All the same, the overall record is really pretty unappetizing. Some recent incidents suggest, on the one hand, that the price of diplomatic appointments has now reached a level that is downright scandalous. There is the case, for example, of the present Ambassador to Denmark, the experienced, ex-Foreign Service officer, Robert Coe.

It is an open secret that Coe's original appointment was recognition not of his Foreign Service training but of his family's enormous contributions to the 1952 campaign fund. In the last campaign he was again approached by an old friend, who was one of the Republican comittee's money collectors, with the delicate intimation that it was once more time to cough up.

"It's going to have to be a deep bronchial cough, too," added the friend.

In total, Coe's cough reached the sum of $7,000—surely a respectable extra cough from a man who has always been a generous Republican contributor in his adopted State of Wyoming. But it was not enough, and Coe was summarily informed that his services would be dispensed with this spring. He is to be replaced by a professional diplomat, Miss Frances Willis, Minister to Switzerland, who is being moved to make room for a political appointment.

On the other hand, a really disdainful disregard for the feelings of our allies (and therefore of the interests of United States) is frequently shown. Belgium, for instance, may be a small country, but it is an important country in NATO. Four years ago the Belgians were not too pleased to be handed over to a large Republican contributor.

But now this first Republican contributor, Fred Alger, of Michigan, has presumably failed to give a sufficiently deep bronchial cough. (His cough was only $1,500 deep.) So he is being replaced by another contributor, John Clifford Folger, of Washington, who has no known qualifications for the post except his service as Republican committee treasurer and his check book. (Together with his wife, Folger coughed to a depth of $11,500). In neighboring Holland, an able professional, Ambassador H. Freeman Matthews, is being replaced by loyal Republican Civil Service Commission Chairman, Philip Young.

In still other cases, public untruth has been freely indulged in. The present American Ambassador to Moscow, Charles E. Bohlen, is the leading Russian expert remaining in the American Government's western community there. Perhaps in tribute to Bohlen's suitability for Moscow, it has been officially given out that he is being transferred by his own request.

This is plainly not true. Bohlen was entirely willing and even eager to carry on in Moscow. In fact he is being sent to Manila to make room in Moscow for our present Ambassador to Vienna, Llewellyn Thompson. The shift of Thompson from Vienna is another move in the game of diplomatic musical chairs. Thompson, as it happens, is an exceedingly capable diplomatic professional. But the United States would have been far better served by leaving both Thompson and Bohlen where they were.

There is no use continuing the sorry tale. Its point is all too simple. We are not living any longer in the 19th century, when the traffic in ambassadorships did no great harm. America now has incalculably great interests abroad, and America's Ambassadors are the necessary guardians of those interests. It does not matter whether they are rich or poor, Foreign Service officers or outside recruits. What matters is whether they are well qualified.

The expense of embassies is a phony excuse. Surely the United States can afford the few extra hundreds of thousands of dollars by the sole test of knowledge and ability. And surely the cheaply political traffic in ambassadorships, with its sordid checkbook side, has become a really shocking business.

Our American Heritage

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. REED. Mr. Speaker, I am delighted to know that the Jamestown (N. Y.) Post-Journal, published in my congressional district, is conducting a crusade to bring home to the people the great heritage of liberty which is theirs, to be defended and preserved not only by them, but by their elected representatives.

Under leave to extend, I am inserting an editorial which appeared in the March 16, 1957, issue of the Post-Journal:

"THE CONDITION UPON WHICH GOD HATH GIVEN LIBERTY TO MAN IS ETERNAL VIGILANCE" (JOHN PHILPOT CURRAN, 1790)

Perhaps in this year of 1957 our ruling generation is bungling. Men debate the issues, arguing the merits of high wages, short hours, dishwashing machines, fancy cars rushing over superhighways, mass millions with TV sets and the highest standard of material living in world history.

Perhaps this generation is just a facsimile of those which suffered the hectic prosperity of the twenties, the shock of the depression thirties, or tribulations of two wars in the forties and emerged into the cold war days of the fifties. Perhaps this ruling generation is a bit more apathetic, a bit more calloused, a bit more willing to live in the clouds of a boughten sense of security, without considering the cost. Many years of accepting something for nothing, of cradle-to-the-grave security propaganda, can becloud the thinking.

You can look over your shoulder to the thirties when a Nation pyramided experiment upon experiment, debt upon debt, to pull out of a depression, and see the beginning of the wearing away of the individual honesty in national thinking. We swept shadows off the sidewalks, we learned through WPA and PWA how public works can be paid from the other pocket. Federal and State aid to communities at the city and county level in larger and larger doses was an inevitable step. We learned how to grab without a pang of conscience. (Somebody is going to get it, why not us?) So tighter and tighter draws the web, higher and higher go the taxes, higher and higher the national debt.

Do we as individuals have a national conscience left? Do we know or understand why the Founding Fathers gave us our Constitution and its Bill of Rights and what they were guarding against? What is freedom? Do we still have it if we become mere pawns of a Federal or State bureaucracy? Is a stalemate with Russia of any value if we plunge recklessly on to threaten our own economy?

Back in 1790 John Philpot Curran in a speech of the right of election, uttered some prophetic words. He said:

"It is the common fate of the indolent to see their rights become a prey to the active. The condition upon which God hath given liberty to men is eternal vigilance."

Perhaps this generation and the ones who have immediately preceded it have bungled at home and abroad. But the greatest Nation in the world has moved steadily ahead. However, we cannot forever play tag with the shoals.

We must now place our hopes with the next generation which should be better educated and better equipped materially to steer our national course. But can this generation grasp and hold the fundamental truths our Founding Fathers gave us in the Constitution, that the Bill of Rights sought to safeguard—the supreme stature and freedom of the individual—the American able and willing to make his own way on his own merits, unshackled by a Federal Government that should be his servant, not his jailer? There were generations of Americans who believed supremely in the birthright of freedom. These generations have gave their lives, their property. They carved out the wilderness, moved across the plains, built railroads, and made possible the massive economy that can withstand today's squandering. But they left a heritage far more valuable than the material strength, great as that is. They left the torch of indi-

vidual freedom, the supreme glory of the individual who can walk proudly and enjoy the freedoms of speech, worship, and the other human dignities with his fellows.

Our national birthright must not be sacrificed on the altar of apathy or the myth of security by beneficient "handout" government. That is why the Post-Journal today is publishing in full-page form on page 16 the Constitution of the United States and the Bill of Rights. We would like to see it reread and restudied by the thousands of you who may have forgotten the sovereign individual you are. As a public service we shall be pleased to furnish reprints on glossy paper of this full page in any quantities desired, free of charge, to individuals, schools, patriotic groups, or anyone else interested, as we are, in reemphasizing the fundamental facts of the American way of life.

For eternal vigilance is the price of liberty.

Condemnation "Fixture" Damage

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, March 29, 1957

Mr. POTTER. Mr. President, the enactment of the vast new highway program will produce a host of problems in many areas of Government activity. One such problem area may include condemnation procedures for acquisition of land. I ask unanimous consent to have printed in the Appendix of the RECORD an article by Jeremiah J. Kenney, condemnation clerk of Detroit's recorders court on fixture damage in condemnation, published in the Detroit Lawyer for March 1957. This article, by a recognized authority in the field, illuminates one important aspect of land acquisition by Government agencies.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONDEMNATION "FIXTURE" DAMAGE—PROCEDURE OUTLINED FOR ESTABLISHING "FIXTURE" REMOVAL DAMAGE CLAIMS IN RECORDER'S COURT CONDEMNATION CASES

(Urban redevelopment and other projected municipal improvements involve the relocation of hundreds of businesses of all types, with resultant calls upon attorneys for counsel in the majority of cases. A shortage of textbook material in this field suggested the invitation by the Detroit Lawyer to Jeremiah J. Kenney, condemnation supervisor of the Recorder's Court to discuss procedure for establishing claims in recorder's court condemnation cases. Mr. Kenney has served the court for many years in this capacity, directing the hearings in the Gratiot redevelopment area, East Side slum clearance, civic center, and many others in which such claims have been presented.)

(By Jeremiah J. Kenney)

To begin with, "fixtures" as the term is used in condemnation cases, is a misnomer.

Bert R. Sogge, assistant corporation counsel of the city of Detroit, is probably right (he has that habit) when he says they aren't fixtures at all. Fixtures are valued with the land. What we talk of, he says, are chattels annexed to real property. The courts often contain the term in quotation marks as though recognizing its hybrid character.

A lawyer for a laundry in Des Moines used it, the Gratiot Avenue case took it from there and since it is accepted if not accurate, trade fixtures or fixture damage will be used here. In this discussion, at least, the term shall mean the reasonable cost of detaching trade fixtures and reattaching them elsewhere.

A motion for a new trial in this court criticized the use of the term fixture removal damage in the charge to the jury as implying that only the cost of removal could be considered.

The history of fixture removal claims in Michigan where the condemnor takes the entire interest is brief.

There are only four cases, starting in 1940, with the city of Detroit's appeal from Judge W. McKay Skillman's ruling in the Gratiot Avenue widening case reported in 294 Michigan 569.

In that case (p. 573) the court said: "The sole question on this appeal is whether it was proper for the jury to award damages for removal costs of trade fixtures." The court then concluded (syllabus): "Trade fixtures used in conduct of drugstore, jewelry store, and gear manufacturing business were not stocks of goods nor, usually considered, purely personal property, and while considered personal property as between landlord and tenant, in condemnation proceedings they were properly considered as realty and damages were allowable for removal costs" (Const. 1908, art. 13, p. 1).

The above quotations from the Gratiot Avenue case are taken from *In re Slum Clearance* (332 Mich. 485, at 491). In the latter case the Supreme Court states the question (p. 489):

"When a condemnation jury is to reflect in its award the cost of the removal of trade fixtures, should the jury consider the cost of removing chemical solutions in the tanks of a plating company, and the cost of removing the molten metal in its furnaces?"

CONSTRUCTIVELY ANNEXED

Judge Paul E. Krause, in the recorder's court—admitting all other removal damage testimony, refused to allow that regarding the solutions and molten metal. The Supreme Court, conceding the impossibility of actually affixing or annexing these items to the real estate so as to become part of it, held them, under the circumstances of this case, to be constructively annexed. The case includes a discussion of fixtures.

The question appears again *In re Civic Center D. & C. Navigation Co.* (335 Mich. 537). The navigation company asked at least $59,300 for the expense of moving four passenger vessels from docks which were taken. Here, the court said, the vessels failed to meet the test, namely, the intention to make the vessels a permanent accession to the freehold and held it was not error to refuse to allow the jury to consider evidence of the cost of moving the vessels. Just as an historical note: These were the same vessels which recently had their final blaze of glory in Lake St. Clair.

The latest decision *In re John C. Lodge Highway* (340 Mich. 254) involved the right of tenants to fixture damage, and the effect of condemnation clauses on that right. Apparently, because Act P. A. 1911 (No. 149, sec. 5, cl. 1948, sec. 213.25, Stat. Ann. 8, 15) did not specifically include "those in possession" the Wayne County Road Commission had rejected the claims of certain tenants. Meanwhile, the city, under the charter (title 8, ch. 1, sec. 3) which contains that language, had been paying.

"Fixture removal damage" claims in recorder's court are settled in most cases. Trials of the main issues of necessity and value of the fee are often protracted as a wide area of disagreement is possible, but costs of trade fixture removal can with reasonable accuracy be determined. The present practice, which has arisen by consent, results in a stipulated figure which is submitted to the jury with the request that they return that sum in the verdict roll.

Counsel who desire to settle are advised that upon receipt of a trial notice estimates of the cost of removal of trade fixtures may be submitted to the office of the corporation counsel. It is suggested that estimates be made by competent, responsible persons with experience in the field, i. e., refrigeration firms for refrigerators and electricians for wiring. The Jack-of-all-trades is not highly regarded in this age of specialization and may be vulnerable under cross-examination.

ALL SUCH CLAIMS CHECKED

Estimates are checked by E. A. Walinske of the real estate bureau of the corporation counsel's office. He and his staff have checked all such claims since their recognition by the courts, either for settlement or for rebuttal and he is conversant with most of the problems. His experience extends from abattoirs through wineries. When difficulties have prevented claimants from obtaining estimates he has been known to make his own to the satisfaction of counsel and client. No one does much better than that.

All but a few of the businesses and industries in the wholesale district were settled without contest. The west side of Woodward, including Richmond & Backus' extensive printing equipment, Stouffer's restaurant, Whalings, and others were stipulated figures.

When differences occur between the estimate submitted and those of Mr. Walinske, counsel is asked to discuss them. This negotiation between "eminent counsel and trusted public officials" (343 Mich. 629) usually results in a stipulated figure.

Of course, not all cases are settled. An honest difference of opinion may require a trial. The nature of certain trade fixtures, e. g. chemical solutions and molten metal, passenger vessels, etc. makes it difficult to agree that certain installations fall within the category.

The status of murals which furnished atmosphere in a bistro was left for the jury to decide. The testimony having shown that atmosphere was the essence of a bistro, the jury found for the claimant with a substantial, perhaps liberal, award.

When negotiations do fail, it is necessary to present the claimants case. This is done in turn, by parcel number, at the conclusion of the testimony relating to the real property.

According to Assistant Corporation Counsel Sogge, a walking compendium of condemnation law and lore, the Gratiot Avenue case established the pattern of procedure which prevails today. In the first trial to follow that case, counsel submitted to the jury fixture removal costs which included the cost of detaching the fixtures and removal to a truck outside the building—their removal from the truck at a new location and attachment in the new location. Forget about them while they are on the truck because "the cost of transporting severed trade fixtures could not be awarded because it is too speculative."

The Michigan Supreme Court in this connection cited *City of St. Louis* v. *Railroad Co.* (226 Mo. 694) and the language of that case is pertinent here.

"At first glance it is to be concluded that there exists a difficulty in finding a reason for not compensating the owner of personal chattels who is compelled to remove them for his expense in so removing them to a point at least beyond the edge of the right-of-way. It is equally clear, on the other hand, that no logical reason can be found for compensating him for the expense of re-

moval beyond such point. This is so, for the reason that A might desire to move his chattels only into the next adjoining house, while B might desire to have his taken several blocks or even several miles and C on the other hand, his business broken up, might desire to remove his goods to some other place or city. No reason in logic, therefore, can be found for the condemnors paying more than is sufficient to move the personal property off the right-of-way. A rule which would require the condemnor to do more than this would be variant and indefinite, and, therefore, speculative."

BURDEN OF PROOF ON CLAIMANT

The city takes the position, which has not been challenged, that the burden of proof in fixture cases is upon the claimant, and that the minimum and maximum rule (which applies to real property) does not hold in fixture cases.

The authority cited is *In re Widening of Harper Avenue* (237 Mich. 687).

"On the item of business damage * * * no testimony was offered by the city of this item of damages on any of the parcels, but considering its necessarily speculative character, counsel had a right to rest content with the cross-examination of the owner's witnesses.

"But the jury was not necessarily required to accept the conclusions of the owners in this regard, even though there was no direct evidence to the contrary." That the court said *In re widening of Woodward Avenue—Appeal of Demery* (264 Mich. 326): "Damage to fixtures was capable of quite accurate estimate and computation" has not affected the practice. The Demery appeal had a most unfortunate history. As a result of this decision the case was tried again in recorder's court with the same result. Following a second appeal (304 Mich. 417), it was tried again. This jury was advised of the previous actions and strongly urged (the judge cannot give binding instructions (244 Mich. 377)) to follow the supreme court ruling and return a verdict. The jury, exercising their prerogative as judges, chose instead to follow the precedent of their constitutional predecessors and once more gave nothing.

Demery had made a fatal move. Anticipating the widening, the store was revamped previous to the trial and the fixtures moved. This precluded a view, in place, by the jury. The jurors might reasonably be reluctant to pay for that which they were never able to see. The safer practice, in view of this, would be to await the settlement or the jury's view.

Reasonable time for moving and relocation can usually be obtained. Many remain in possession until a writ of assistance is issued. However circumstances differ in each and "possession of private property condemned for public use may be obtained immediately, where there has been a judicial determination of the necessity for the taking and of the compensation to be paid therefore by paying such compensation and obtaining immediate surrender of the premises." *State Highway Commissioner* v. *Ottowa Circuit Judge* (339 Mich. 390 (Syllabus)).

There is confusion regarding business damage claims. The Harper Avenue and Woodward Avenue cases (and there are others), speak of business damage claims. In these cases, only part of a building was taken. When there is a partial taking respondents are "permitted to recover for such loss occasioned by the interruption of their business as they were able to show, with reasonable certainty, will occur during the time it will necessarily be interrupted." *Commissioner of Parks* v. *Moesta* (91 Mich. 155).

Grade separation cases, by statute also permit recovery for interruption of business and moving costs.

NOT PROPER ITEMS

Counsel have cited *Detroit* v. *C. H. Little Co.* (146 Mich. 373) and *Grand Rapids, etc.* v. *Weiden* (70 Mich. 390) to support claims of business loss. The text of the Little case shows it to be a grade separation. The Weiden does not, but the rule as it applies when the entire interest is taken is repeated ((1954) 341 Mich. 420). "Loss of profits due to interruption of business necessitated by moving and the expense of removal of personal property are not proper items to be considered in making the awards."

The factors which lead to settlement in other types of cases are found here. Proving a fixture claim is tedious at best—each detail is an item on the cost sheet and proof is time consuming. A review of the verdicts presents an uncertain picture for the claimants. In the Gratiot case as reported the drugstore claimed $500, the verdict was $150; the jeweler asked $1,584.50, the verdict $600; the Gear Co. asked $5,255.75, the verdict was $4,000. A recent recorder's court case showed a claim for $26,500 and a verdict for $6,000. This was appealed and later settled by the city at a higher figure.

The present procedure results in settling all but the hardest cases.

And the owner of an old established business property, dislocated by the slum clearance, says emphatically "It's the best thing that ever happened to us." Incidentally, he settled his fixture claim.

When the verdict is confirmed, counsel is notified. The client is also notified that his award is ready for payment. Harold Repp, of the city treasurer's office, advises that a lien officially filed will place counsel's name upon the check which issues thus providing a timely reminder of services rendered.

Post Office's Job Is To Serve the People

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by Mr. William C. Doherty, president, National Association of Letter Carriers, which appeared in the April 1957 issue of the AFL–CIO American Federationist, the official monthly magazine of the American Federation of Labor and Congress of Industrial Organizations.

The article, entitled "The Post Office's Job Is To Serve the People," follows:

THE POST OFFICE'S JOB IS TO SERVE THE PEOPLE

(By William C. Doherty)

History will verify that our postal system is older than the Nation itself. A year before the Declaration of Independence was framed, the Continental Congress appointed Ben Franklin as the first postmaster general of the new United States Postal system.

In addition to its longevity among Federal departments, the postal establishment has another claim to fame—albeit of somewhat dubious character. In the years since Ben Franklin's era, there has seldom been a letup in the controversy about the role our postal system should play.

Arguments can be advanced by both proponents and opponents on the question: "What is the role of the postal establishment?"

Is it primarily a public service which, like other Federal departments and agencies, is adjudged worth what it costs? Or is it primarily a business venture operating within the framework of accepted business concepts? In brief, should our postal system break even or, indeed, make a profit, or should it not?

Not only has this controversy generated a considerable amount of heat but—unlike many other arguments—it has also produced a great deal of light. Unfortunately, no solution has been reached on the main issue.

In the early days of the Nation, the role intended for the postal system was clearly degned. The Founding Fathers made abundantly clear what they had in mind when they instructed the first postmaster general:

"If the necessary expense shall exceed the produce, the deficiency shall be made good by the united colonists."

President George Washington, in an early message to Congress, advocated transmission of publications free of charge through the mails as a means of unifying the new Nation. The lawmakers agreed with him. In reply to Washington's message, Congress said:

"The circulation of political intelligence through these vehicles is justly reckoned as the surest means of preventing the degeneracy of a free government."

Proponents of the service first concept can take comfort in these and subsequent pronouncements. In 1814 Congress returned to this policy after a brief experiment in authorizing new post roads only when they could show that a profit would be realized. In 1844 the self-sustaining theory was again rejected after a careful study by a postal commission appointed by Congress. In 1851 Congress stated firmly:

"The Post Office is primarily a service organization."

Many postmasters general have associated themselves with this service concept, although the thesis that the Nation's postal system should be self-sustaining is not without its vigorous supporters.

Postmaster General Creswell, in 1869, was of the strong conviction that a pay-as-you-go policy was the only sane way in which to operate. However, he made a complete about-face 2 years later and, in his report to Congress, argued against the profit motive. He thought it was necessary for private enterprise but stated that "a government system, managed in the interests of the people, pursues exactly the opposite course."

In 1920 Postmaster General Will Hays said: "The Post Office is not for profit nor for politics, but for service."

Congress, the executive branch, and mail users still demand good postal service, but sometimes their enthusiasm for resolving what is popularly referred to as a postal deficit defeats these demands.

It would be neither accurate nor fair to say that anyone has publicly suggested the complete abandonment of the service concept to embrace an all-out drive for a self-supporting postal service. They have not reached for the profit goal as yet, but in their zeal to prove that a postal deficit exists they are willing not only to refuse to underwrite the necessary cost of a mail service in an ever-expanding and dynamic national economy, but they also willingly forfeit existing services.

This happened in 1950, when several vital postal functions were either curtailed or eliminated. These cuts were made under the pious guise of balancing the budget. Currently there is thinking along the same lines.

Perhaps our generation has developed a blasé attitude toward the contributions made by the postal service to the growth and development of our Nation. The mails have aided our commerce, diffused knowledge among our people, and served to unify the Nation. Given the proper tools, the postal establishment will continue to make and enlarge upon these contributions.

Proper tools are not exclusively fair and reasonable postal rates, as some would believe, but must include a modern wage structure, labor-management policies, supplies, and equipment.

The motives of those who believe increased postage rates will cure all the ills of the postal establishment are not questioned. Their arguments are sincerely presented and well intentioned. However, it does seem that more emphasis, more information, more public enlightenment should be directed toward the positive features of the postal service. This suggestion would hold true in the field of costs to the taxpayers, as well as statistics pointing up the multiplicity of services performed—both postal and nonpostal.

It is one thing to say that service is provided to 70 million citizens from 37,000 local offices, spread out over more than 3,600,000 square miles of American territory. The magnitude and complexity of the postal system require more than 520,000 employees. They work in terminals, on trains, in small and large post offices.

Each year rural carriers cover 1,500,000 miles of good roads and some not so good, 135 horseback routes are still in existence, 96 carriers deliver mail by boat, 32 routes call for delivery by private airplane, and more than 100,000 city letter carriers whom I have the honor to represent trudge the streets collecting and delivering more than 50 billion pieces of mail a year.

These statistics will prove that the American postal establishment is an enormous undertaking in an era of giant commercial enterprises and huge corporations. But these Bunyanese characteristics standing alone neither prove nor disprove that postal operating expenses are as costly as some would have us believe. An examination of the facts discloses that these operating costs are not the major contributing factor to the national budget problem we hear so much about these days.

It is true that postal revenue seldom has exceeded expenditures. All agree on that. No one has asserted or attempted to prove that it is not so.

What constitutes the principal unresolved area of disagreement is whether the disparity between operating costs and revenues is to be treated differently in the Post Office Department from the way it is treated in other departments and agencies of Government. It is because of the absence of a clear-cut policy on the subject that the postal system has become the whipping boy in any discussion of Federal spending.

The facts do not support this unenviable role of spendthrift of the Nation. A look at the figures reported in the President's budget for fiscal 1955 discloses a gross postal budget expenditure of $2,714 million. Applicable receipts of public enterprise for the same period are listed at $2,390 million. This indicates that approximately 88 percent of its costs were recaptured in the form of postal charges and other revenue.

Compare this 88 percent figure with some of the other Federal Departments for the same fiscal year. The following table shows that the postal system comes closer to paying its way than any other agency:

	Gross budget expenditures	Applicable receipts
	Millions	*Millions*
Agriculture	$6,018	$2,974
Commerce	1,142	18
Health, Education, and Welfare	1,994	2
Interior	546	34
Justice	179	(1)
Labor	401	1
State	142	(1)
Treasury	1,153	644

[1] Less than $1 million.

These figures reflect the expenses and revenue from measurable services performed. The Post Office, in addition, provides many immeasurable services, some of which are nonpostal in nature. In this category is included the unmistakable contributions a good postal system makes in the unending effort to think together and work together toward building a world community of free peoples through communication.

There are also many measurable nonpostal services performed by the Post Office which are reflected in its operating costs. Among those in this category are the handling of documentary stamps and the collection of duty for the Collector of Customs.

Everyone these days is conscious of Federal spending. Well they might be, in view of the taxes levied against all of us. In this connection, the interest of postal employees is no less lively than that of other citizens. But in one area they have a particular stake because invariably their legitimate economic interests are involved.

This particular phase of public spending is the cost of operating the postal service. As long as no policy exists to identify the proper role of the service, it is unlikely that the controversy over the alleged postal deficit will subside. And until it does or until it is clearly understood what constitutes the deficit, postal employees are going to be squarely in the middle. Every time in recent years they have gone before Congress for a wage increase, they have been confronted with the bugaboo of a postal deficit.

Once again the employees are about to be put through the wringer in their quest for a fair and adequate wage scale. Before a congressional hearing 2 years ago, I presented a statement bearing directly on this point. I said:

"It has always been difficult for postal employees to rationalize the fish-on-the-one-hand-fowl-on-the-other thinking when their wages are concerned. No one suggests paying a forest ranger on the basis of admittance charges to any of our national parks. Army personnel are not paid according to PX receipts.

"'Why, then,' asks the postal employee, 'must my salary always be tied in with postal revenues and postage rates? Why not determine it on the basis of the very human need for adequate wages to enable me to purchase food, warmth, shelter, to say nothing of recreation and health and education of my children?'

"It is a justifiable inquiry."

A recent report submitted to the Senate Post Office and Civil Service Committee by a Citizens Advisory Council, created in the 84th Congress, commented as follows:

"We fail to see why there should be any connection between postal rates and postal pay. The laborer should be worthy of his hire, and the fact that it costs money to operate the postal service should not influence the level of postal pay."

In private enterprise no reasonable person would maintain that a company would be justified to remain in business only because inadequate wages make it possible to continue to meet competition. This is the position which some would have the Government adopt in relation to postal wages. The Government has no more right to use poor wages as an excuse for staying in the postal business than General Motors has to deny fair wage treatment on the grounds that it must follow that course to compete in the automotive industry.

The time-honored procedure for effectively burying a wage request from employees is to establish a study group or a committee whose charter can be indefinitely continued. In recent weeks this method was given a severe jolt.

Secretary of Defense Charles Wilson appointed a committee headed by Ralph J. Cordiner of General Electric. The complement of the Cordiner committee listed other equally distinguished leaders from the industrial world. The group was known formally as the Defense Advisory Committee on Professional and Technical Compensation. Its study was confined to positions in professional and technical categories of the Defense Department.

However, its findings and recommendations have equal application in many areas to all Federal employees, including postal workers. Stripped to its essentials, the Cordiner committee's report simply states that the wages of Government workers have not kept pace with the compensation paid to workers in private industry.

At this writing, the report has not been official released. Newspaper stories suggest the White House is reluctant to allow the report to be released. On the basis of excerpts from the report appearing in news stories, one might readily say that White House reluctance is understandable.

The report is said to be critical of the unconcern at the "progressive lowering of the level of the department's civilian work force" resulting from inadequate Government pay. That criticism would have application in any agency of the Federal Government.

At another point the Cordiner committee's report is said to puncture one of the most prevalent misunderstandings about Federal employment. It is the area of so-called fringe benefits. Newspapers have published the following excerpt:

"Furthermore, the Federal Government has lost the advantage it once enjoyed in the area of fringe benefits. In brief, the magnet of interesting work and public service is no longer strong enough to overcome the pull of higher salaries in non-Federal employment."

The report also is said to comment on recruitment problems within the Defense Department. This is not a problem exclusive to that agency. The Post Office Department also finds this a headache, and a costly headache.

In Minneapolis, for example, 53 civil-service examinations were conducted in an effort to recruit needed postal personnel. One a year or two at most would normally suffice. From the 53 examinations, 1,343 men were given followup assignments to report to work. Of this small number only 526 accepted. The others apparently had been disenchanted by the meager pay offered.

"Pay is the most tangible condition of work to a newcomer to the labor market," the Cordiner report says.

It is interesting to note that of the 526 men who did accept postal employment in Minneapolis, 320 quit for greener financial pastures within a year.

When it is considered that cost estimates range from $100 to $300 simply to recruit and put a man on the job in the postal service, it will be readily seen that a high-quit rate is a tremendous drain on the National Treasury.

Although most of the Cordiner committee's conclusions have specific reference to limited segments of employment in the Defense Department, one conclusion is applicable to every person who works for a living, in or out of government. The report says:

"Employees must receive sufficient compensation to enable them to establish and maintain a standard of living which will allow them to discharge their responsibilities to their families and to their employers."

It is to be hoped that, when the question of wages for postal workers comes before Congress at this session, the matter will be considered on its merits and in the light of the philosophy that every man is worthy of his hire. It is to be hoped, further, that it will be remembered that the postal worker is not merely a statistic in the Federal or postal budget, that the presence or absence of proper postage rates is not involved, that

a bookkeeping difference between revenues and expenditures should be balanced in the light of numerous immeasurable services.

A fiscal policy for the Post Office Department should embrace proper rates in relation to operating expenses, fair treatment to mail users and such intangible factors as the role the service is to play in our lives. A wage policy for the department should be separate and distinct, based on traditional American concepts of living costs, productivity and the right every man has to discharge his responsibilities to his family, his employer and his community.

There must not be a double standard of morality, one standard for employers in private industry and another standard for the Government. And low wages, inadequate wages—anything less than a saving wage—cannot be morally justified. Unfortunately, this is precisely the position in which the Federal Government now finds itself.

Postal employees will continue to look to their colleagues in the American labor movement for moral support in the fight to bring Government wages into line with reality. When the time comes and the shouting begins about "postal deficits" and "raiding the Treasury"—cries that were heard in 1955—it might be a good idea for all of us to recall that our postal system costs us 12 percent of the amount appropriated by Congress.

As the well known commercial slogan might be paraphrased, no other Federal agency can make that claim.

Unionism: A Crusade, Not a Business

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the American Federation of Labor-Congress of Industrial Organizations executive council at its January meeting established a new cardinal principle for organized labor. No union officer, the council declared, should continue in the labor movement if he finds it necessary to hide behind the fifth amendment in refusing to report to a proper governmental body on his handling of union funds.

This new policy reflects the progressive and aggressive leadership of President George Meany, as well as the spirit of the united labor movement.

In its decision at Miami Beach, the labor movement proclaimed that the sense of responsibility is an indispensable requirement for trade union leadership.

The AFL–CIO executive council is meeting in Washington today in special session to consider the situation. I am certain the council will fulfill its responsibility and act to restore the confidence of the public in the labor movement.

I include here as a part of my remarks an editorial by the distinguished president of the International Ladies' Garment Workers' Union, David Dubinsky, on this very subject. Mr. Dubinsky is a vice president of the American Federation of Labor and Congress of Industrial Organizations and a member of its five-man ethical practices committee. The ILGWU is, without question, one of the greatest unions in our country and the entire world.

The editorial follows:

UNIONISM: A CRUSADE, NOT A BUSINESS

Dave Beck, teamsters' chief, was careful not to incriminate himself during his appearance before the special Senate committee last week. But he didn't mind incriminating the labor movement with conduct which President Dubinsky characterized as a tragic spectacle.

The vast majority of those who serve the labor movement look upon their calling as a crusade. They understand the great responsibility which rests on them as officers entrusted with safeguarding the security and welfare of millions of individual union members. They realize that the funds they administer have been accumulated not to generate profits, but rather to provide protection for working men and women on the job, in sickness, in old age.

But if Beck is guilty of the terrible charges made against him, it is only because he has brought with him into the labor movement the concept that trade unions are not a cause, but just another business to be considered the personal property of union officials. But unions must not, cannot be so considered. They are not the property of any official, no matter what his title. They belong only to their members. And legislation alone, whether punitive or not, cannot provide the complete remedy for the cash-value approach to unionism.

The American Federation of Labor-Congress of Industrial Organizations executive council, at its Miami Beach meeting last January, established a new cardinal principle for organized labor. No union officer, the council declared, should continue in the labor movement if he finds it necessary to hide behind the fifth amendment in refusing to report to a proper governmental body on his handling of union funds.

It is to the credit of the organized-labor movement that this policy, as proposed by AFL–CIO President George Meany, was adopted by the council in a sweeping vote of 24 to 1—with the sole dissenting vote being Beck's.

This new policy reflects to progressive and aggressive leadership of President Meany, as well as the spirit of the united labor movement. It threatens only such stragglers from the field of big business who, like Beck and Brewster, invoke union autonomy and the fifth amendment in order to cover up their free-wheeling administration of union funds and who refuse to recognize that the time of irresponsibility and of autonomy alibis is a thing of the past.

In its decision at Miami Beach, the labor movement proclaimed that the sense of responsibility is an indispensable requirement for trade-union leadership. Those who lack it don't belong in the labor movement.

As this is written, the executive council is scheduled to meet in special session to consider the situation. We are certain the council will fulfill its responsibility and act to restore the confidence of the public in the labor movement, shaken by Beck's conduct, by effectuating the policy it adopted at its last meeting in Miami Beach.

With Malice Toward None

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. HAGEN. Mr. Speaker, the income-tax season is at hand. Of this there can be no doubt for as my constituents take receipts in hand and struggle with the multiple internal revenue forms many have communicated to me their feelings on the subject. To put it mildly, they are somewhat less than overjoyed at both the arduous sessions of completing their return and the payments which Uncle Sam is exacting from them.

For the edification of my colleagues I am submitting herewith a letter to the editor of the Bakersfield Californian, located in Bakersfield, Calif., within the 14th Congressional District which I am privileged to represent. The letter was submitted to me by one of my irate taxpayer correspondents. While it is penned in the unmistakable form of Lincoln's Gettysburg Address, it might also be termed a modern day taxpayer's declaration of independence.

The letter follows:

WITH MALICE TOWARD NONE

EDITOR, THE CALIFORNIAN:

Two score and four years ago our fathers brought forth on this continent a new misery, conceived in desperation and dedicated to the proposition that all men are created taxable. Now we are engaged in a great long form, testing whether that taxpayer, or any other taxpayer so confused and so frustrated, can long endure.

We are met on a great battlefield of that struggle. We have come to dedicate a portion of our income to the great causes, useless and foolish, which have taken our money that this Nation might continue to support other nations.

And yet, in a larger sense, we cannot afford, we have not got, we will not have, this hallowed money. For the brave taxpayers, broke and penniless, who have paid here, have dedicated it far above our poor power to add, subtract, multiply, divide, refer to separate schedule Z, etc.

The world will little note nor long remember what we pay here, but the Bureau of Internal Revenue will never forget if we don't. It is for us the living rather to be here dedicated to the unfinished payments which they made here have thus far so reluctantly advanced.

It is rather for us to be here dedicated to the tremendous payments still remaining before us—that from the examples of these financially bankrupt we take increased deductions for the cause for which they gave the last full measure of their money—that we here highly resolve that these paupers shall not have forked over in vain—that this taxpayer, underpaid, shall have a new birth of lower taxes and higher wages, and that government of the taxpayer, by the taxpayers, for the taxpayer, shall not perish from the earth.

A TAXPAYER.

Tax Consideration for Our Teachers

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. DONOHUE. Mr. Speaker, so much talk in recent months about Federal aid to education reminds us that the basic factor in all education, the teacher, has been too long overlooked. The best material facilities in our Nation's schools will avail little if the human quest for learning is not properly guided by dedicated directors.

That very fundamental principle is pointed up in a most timely editorial entitled "Teachers Deserve a Tax Break," which appeared in the March 12, 1957, issue of the Worcester (Mass.) Telegram.

In these days of ever higher living cost, one of the best practical inspirations that could be granted to those engaged in the teaching profession is a little sympathetic consideration of their financial problems through tax adjustment and allowance on the money that they must spend in the pursuit of postgraduate studies.

It appears that this could be accomplished by administrative action of the executive department, but, if not, let us here join together at the proper time to legislatively give the teachers a tax break they need and deserve in this matter.

The editorial follows:

TEACHERS DESERVE A TAX BREAK

Congress is flooded each year with proposals for tax relief which would benefit certain industries, certain professions and certain groups. The Treasury Department cannot be blamed for opposing most of these requests. But the Nation's schoolteachers have entered a plea that certainly deserves some careful consideration.

The public has long since adopted the idea that teachers, in order to keep up with modern developments in education and in order to make themselves professionally more competent, should use some of their spare time to work for additional academic credits and university degrees.

Some public school systems require this. Most systems encourage it by setting pay scales to reward postgraduate study. But the Internal Revenue Service doesn't seem to be cooperating. Teachers need quite a bit of money to take these extra courses—especially when they have to forego summer jobs in order to go back to the classroom. Yet the Government will not allow the tuition expenses to be deducted as business or professional expenses if the teachers pass the courses and get better jobs as a result.

The teachers point out, with rather good justification, that businessmen can deduct the costs of entertaining clients, a practice which is certainly intended to increase the taxpayer's earnings. If night club costs can thus be deducted, why shouldn't the cost of sitting in classrooms and listening to lectures on educational methodology?

If the Federal Government has reached the point where it is willing to spend billions to improve the quality of public education, the concession asked by the teachers makes a good deal of sense. It would be one way the Federal Government could encourage improvement. And it would be a fair and logical concession to the people who have dedicated their lives to the important business of education.

Put the Intelligence Estimates on Airpower in Focus

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the April issue of Air Force magazine, the official publication of the Department of the Air Force.

The editorial, entitled "Put the Intellicence Estimates in Focus," follows:

PUT THE INTELLIGENCE ESTIMATES IN FOCUS

At press time the national budget had become the "bird" in a gigantic game of badminton between the Congress and the executive department. From the standpoint of national defense the prognosis was not good. Pressure for cutting the budget was mounting and, unfortunately, the most tempting area where cuts could be made was in the defense portion.

The sequence went something like this. A short time after presenting the largest peacetime budget in the Nation's history, President Eisenhower voiced hope that the Congress would be able to cut it. This expression was accompanied by a drumbeat of statements by administration figures on the dangers of inflation, talk of a depression "that would curl your hair," "spending ourselves into bankruptcy," and other phrases calculated to stimulate budget-cutting pressures.

A Democratic-led Congress neatly batted the bird back into the White House court by requesting Presidential guidance as to where cuts could be made safely. But the President volleyed with a rejoinder that the executive department had done all it could, that the next move was up to the Congress. Everyone wanted the budget to be cut but no one wanted to take the responsibility for it, or to make the first move.

Quite conveniently, in the midst of all this, there appeared some information that might serve as an excuse, if not a valid reason, for making cuts in the Air Force portion of the budget. The information was made known to the press, and subsequently confirmed before the Congress, that national intelligence estimates of production rates of Russian modern heavy bombers had been revised. The estimates reflected some slippage in production of the Bison, the big Red jet bomber, and a slight falling off of production of the turboprop Bear. Instead of falling behind the U. S. S. R. in operational numbers of long-range modern bombers, we apparently were ahead, and would be so for about 2 more years.

This was welcome news to all would-be budget-slicers. It was trumpeted in the press that last year's supplemental Air Force appropriation, voted by the Congress against administration protests, was a "$900 million bobble." The intelligence estimate revision was termed "an extraordinary turnabout in estimates of Soviet airpower during the year." Previous intelligence reports were described as badly in error. The Russian bogeyman was being cut down to size, went the stories, paving the way for defense budget cuts without jeopardizing national security.

It is difficult to square such sweeping conclusions with the fact. True, the national intelligence estimates of Red production of modern heavy bombers have been revised, but only for the next 2 years. And there was no proof, as some asserted, that the estimates had been tampered with for political purposes, although the timing on the release of the information certainly served a political end. What was damaging was the many things which were being left unsaid. The picture was badly out of focus. To paraphrase Mr. Wilson's famous statement, the new estimates meant that we perhaps have discovered that the Russians are not 8 feet tall, only 7 feet, 9 inches.

In the first place, it should surprise no one that national intelligence estimates are subject to revision. They are based on the best information available at any given time and quite properly they change as the situation changes and as new information becomes available. It would be much more disturbing if they were static tables, unchanging from year to year, instead of the fluid, viable documents they actually are.

What makes this latest revision unusual is the fact that it is downward. For in the past our tendency has been to underestimate, rather than the reverse. The list of such underestimates is far too long to document extensively here. It should suffice to remember how we underestimated Red capabilities in the matters of copying our B–29, jet engine production, the atomic bomb, the hydrogen bomb, MIG production before Korea, submarine production, all-weather fighters production, and so on. Our batting average in this field is none too good.

We must remember, likewise, that long-range bomber production is but one element of Soviet strength. Let's take a look at the long roster of other factors in which there has been no announced change for the better. These include:

The expanding Soviet base complex, both in the U. S. S. R. and in Red China, a big factor in determining what our own attack capability must be.

The fast-growing Russian air-defense capability, one of General LeMay's biggest headaches.

Numbers of Red light bombers—Beagles and Blowlamps.

Numbers of Red jet fighters, including supersonic MIGs and all-weather Flashlights.

Numbers of intermediate-range Badger bombers, roughly equivalent in performance to our B–47.

The Red guided missile effort, in intercontinental and intermediate-range ballistic missiles, and defensive missiles as well.

Red production of scientists and technicians.

The rapidly closing gap between the United States and the U. S. S. R. in science and technology.

To the best of our knowledge and belief, the intelligence estimates in none of these fields has been revised in any direction except upward.

Nor can we take comfort in the fact that the revision of the estimates on Soviet modern long-range bombers applies only during the next 2 years, probably through 1959. In discussing this point before the Congress, General Twining emphasized that "there is no change in the level of strength in modern bombers that we estimate the Soviets could and probably will provide for their long-range force in the time period beyond the next 2 years."

In effect, this means that, while the Russians may not be even with us today in this one category of bomber production, by 1959–60 they will have caught up with us and passed us. And this is precisely the period, from 1959 to 1960 on, which the Air Force is worried about, as General Twining has reiterated time and again.

Further, the aircraft procurement money in the fiscal year 1958 budget, by and large, will not be spent within the next 2 years, in any case.

Nor do the new estimates add one airplane or a single missile to our own Air Force capability, now or in the future. As we have previously pointed out, that trend is steadily downward, with no force goal left at which to shoot. The Reds still know where they are going. Our Air Force does not. In fact, it is probably safe to say that we have a firmer grasp on where the Red air force is heading than where our own will eventually wind up.

This brings up an interesting sidelight on the matter of intelligence revisions. One would like to know how many times the Russian estimates of our own B–52 production have been revised during the past 2 years. The Symington subcommittee testimony brought out that we intended to produce, in round figures, a total of 600 B–52's. A year ago the production rate was projected at an eventual 20 per month. Yet the production

figures for early 1956 went something like this: 4 in January, 2 in February, none in March, none in April, 2 in May, and so on. The production forecast was obviously much higher. It is too much to expect that Red estimates of our B–52 production underwent some radical downward revisions last year? The point is that the kind of revision being touted as a complete turnabout might well have arisen from something as simple as that alternator trouble that was slowing our B–52 deliveries. Or it might reflect something as serious as a major breakthrough in the missile field that would allow cutbacks in Red bomber production.

There is still another item to consider. The new estimates, while only recently made public, did not burst suddenly on our defense planners. They were known at the time the final budget was being prepared; they were known when Mr. Quarles made a last plea for $21 billion for the Air Force; they were known at the time the budget was submitted to Congress. One can only assume that the budget, as presented, already reflected these new estimates. Hence, it is difficult to see how they can now be put forth as justification for congressional cuts. If they are, it will be a case of using the same intelligence estimates to cut the budget twice, in effect—once in the executive department and again on Capitol Hill.

Or take the case of the Symington subcommittee report, issued last February. During its investigation, the subcommittee received some testimony which could not be made public for security reasons, including intelligence information from the Central Intelligence Agency and other sources. In addition, much supplemental intelligence material was requested, obtained, and inserted in the subcommittee record. The latest such material was received by the committee in November, and presumably it reflected the latest estimates.

Yet, in response to our query, a subcommittee staff member told us: "None of the unpublished testimony and none of the other material supplied during or after the hearings was such as to merit any change in the report."

In other words, although the newest intelligence revisions had been made available to the subcommittee, the majority found nothing in them to cause it to revise its gloomy picture of the relative airpower strengths of the United States and the Soviet Union.

In summary then, one must place the revised estimates in balance by remembering that:

They are temporary in nature, and apply only over the next 2 years.

They represent only a fraction of overall Soviet strength.

They have already been reflected in the present budget.

We trust that the Congress will weigh these factors carefully in their current examination of the Air Force budget.

National Press Club Banquet

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. BURDICK. Mr. Speaker, well, I attended another evening affair. Just did not want to miss it as the occasion was the annual meeting and banquet given by the National Press Association for the members and a few of their friends. Each member had the privilege of selecting one Member of Congress, and being that I was a close friend of John Baer, former Member of Congress, a cartoonist, and member of the Press Club, I was invited. The result was that the meeting was overstocked with Congressmen, and I guess the Press Club soon saw the mistake of allowing its members to select the company.

There was, of course, the usual get-acquainted hour from 7 to 8, and there seemed to be plenty of refreshments. I think this was the first big affair I have attended in Washington where hard liquor was not served, but the facts are that I did not try to find any. I heard no loud arguments, or any argument other than a friendly conversation in progress, so I concluded that the foundation of loud arguments was not present. My conclusion may have been in error, as I am sometimes wrong, but I want to faithfully describe the situation, and I saw no evidence of the work of John Barleycorn at this great banquet.

From this slant I was greatly surprised, as I had always thought that newspaper writers, columnists, cartoonists, and newspaper owners would, on occasions like this, forget their decorous attitude and relax and enjoy themselves, and that a reasonable amount of spirits fermenti would greatly assist in limbering up the stiffness so noticeable among a gathering of the Nation's great writers. But no, this feature was evidently not necessary, and everybody had a natural and enjoyable time.

The dinner itself was plain, but most excellent food, with as little of adulterated products as it is possible for any catering organization to obtain. None of the nationally advertised soft drinks were in evidence, and I do not think the press association will procure any until we determine that they contain no harmful chemicals.

The outstanding feature of the occasion—one that was received with uproarious applause—was that there would be no speeches. I can imagine a great dinner without liquor, but a great dinner without speeches is an innovation that can hardly be imagined, especially where so many trigger-happy orators were in attendance. I looked around at the battery of oratorical giants and noted Vice President NIXON, Majority Leader JOHNSON, Minority Leader KNOWLAND, Speaker SAM RAYBURN, Minority Leader JOE MARTIN. The audience seemed to feel perfectly at ease, but I could notice a few sligns of disappointment on the faces of these usual speakers. SAM RAYBURN scowled noticeably. He was probably loaded for bear and had to withhold his fire. Vice President NIXON probably wanted to tell about his setting up a brandnew nation in the jungles of Africa, and took the no speeches announcement with a faint hospital-bed-like smile. JOHNSON and KNOWLAND were both more at ease, as both are candidates for the Presidency, and I presume preferred to be seen and not heard. JOE MARTIN seemed absolutely pleased that he would not have to talk—and so were many others.

I congratulate the National Press Club members for putting on such a nice dinner and in breaking my social precedents. If brother REES of Kansas, a great temperance advocate, had known that this gathering was going to be one that Carrie Nation could approve, he would have contrived in some way to be there. I know I left with a new feeling concerning newspapermen. I know how diligent they are and greatly admire them, but to know that this organization is made up of hard working, intelligent and sober men who can set the brakes on the conventions of society as easily as they can put a Congressman in his place by writing him up, truthfully or otherwise, in the public interest, was an innovation to me.

"Kilroy Was Here!"

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times which brings up to date the actions and achievements of a character of World War II fame, the one and only "Kilroy":

KILROY THE IMMORTAL

When the tugboat *Edgar Bonnet* was lifted out of the bottom of the Suez Canal on Monday, thus clearing that waterway for the passage of ships up to 20,000 tons, her bridge bore the strange devise "Kilroy Was Here." As nearly as one can figure Kilroy must have gone down to the bottom of the canal in a diver's suit ot paint this inscription. But there it was. Kilroy had been there.

Perhaps the second World War is now so far back that some young persons don't know who Kilroy was. They need not feel ashamed. Nobody knew who Kilroy was. All that was certain about Kilroy was that wherever anything needed to be done during the second World War Kilroy went there and did it. Technically speaking, Kilroy was not a fighting man. He would take on one or more members of any army, including his own, if they annoyed him, but mainly Kilroy was a man who built things. He also had fun on his days or hours off, but we had better not go into that.

Kilroy was, among other things, a Seabee, a member of an organization called a construction battalion or something similar. But Kilroy did what interested him. Sometimes he was absent without leave, but in such a case this regrettable circumstance may have been due to the fact that he had finished a road leading up to the edge of Bougainville Perimeter or over the Hump into China, had lost interest and had gone on to fix up Okinawa or, like Caesar, build a bridge across the Rhine.

Kilroy went where he wanted to go, leaving behind him on walls and rocks and the sides of ships and billboards his mysterious motto "Kilroy Was Here." But where he wanted to go was where he was needed. Lately he has been needed in the Suez Canal and so

there he was, over his head in the salt water getting the *Bonnet* ready to lift and maybe working also on the *Abukir*, a slightly bigger job. Kilroy sought no public acclaim. He never rode up Broadway under a shower of ticker tape. He was never mentioned for the Vice-Presidency. He never appeared on television. He never got rich. People didn't recognize his face, but he did like them to know he had been there, and this he still does.

We need Kilroy. It is good to know that after his long vacation, which possibly he spent in the Antarctic, he is with us again. Kilroy is Point 4. Kilroy is friendly aid to all the peoples of the world who feel friendly toward us and will work with us. If a new canal is needed Kilrow will be there digging it. If anybody wants help in fixing up a harbor or running a road through rough country or setting up new houses for people who haven't any houses or draining a malarial swamp, they can call on Kilroy. He will be there. He will be there in a spirit of joviality, not of condescending kindness. He may be there sometimes with a swagger in his walk and his hat tipped over one eye. Kilroy is gay and good and wonderful and now that he has come back let us hope he will never go away again.

We lift a glass to Kilroy and all his comrades in all countries and in all peaceful avocations. We drink to the gusto, the strength and the handiness of good old Kilroy. The world needs him even more than it needs men of battle and men of programs and politics. Maybe the future lies in Kilroy, that jovial, shouting, laughing, confident son of the democratic world.

American Motors Workers Concerned

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. ZABLOCKI. Mr. Speaker, thousands of workers in my district and in the entire metropolitan area of Milwaukee are deeply concerned lest the automobile manufacturing operations of the American Motors Corp. be terminated or taken over by one of the three giant auto manufacturers. Such a change, if it were allowed to occur, would have a profound impact not only on the wellbeing of our people but also on the competitive situation in the automobile industry and on the welfare of all automobile buyers in the United States.

Under leave to extend my remarks in the RECORD, I wish to include an article on this subject written by Mr. George E. Sokolsky which appeared in the March 19 issue of the Milwaukee Sentinel and which was called to my attention by Mr. Herman Steffes, the recording secretary of local 75, United Automobile, Aircraft, Agricultural Implement Workers of America (UAW–AFL–CIO).

The article is as follows:

IF AMC QUITS MAKING CARS, MONOPOLY PROBE TO FOLLOW

(By George E. Sokolsky)

Two problems are raised by the reported plan of Louis Wolfson to purchase the American Motors Corp.:

1. It will further reduce the number of automobile manufacturers in the United States, leaving practically only the three giants, General Motors, Ford, and Chrysler, in the field.

It is questionable whether, from a national standpoint, it is sound for any industry to become so concentrated. On the other hand, AMC has been losing money in the automobile business and it is impossible to require any company to continue to manufacture a product at a loss. As soon as an automobile company stops manufacturing automobiles and goes in for kitchen hardware, the demand in Congress grows for a monopoly investigation in this field. Certainly, if Wolfson becomes dominant in AMC and if he gives up the automobile line and limits himself to iceboxes and other kitchen goods, a monopoly investigation of the automobile industry must ensue. Such an investigation will lead to a side-line study of advertising.

2. In the case of Wolfson, it will raise again the question of raiding and of the secret purchase of controlling interests in various companies. At present, two congressional committees and the SEC are delving deeply into the problem.

Concerning this, many errors of fact and judgment have crept into the public print. First of all, most raids or takeovers are legal. If the stock of a company is for sale, anyone can buy and outsiders can manipulate the market to their advantage.

The essential question is not that. It is where the buyers get their money. It is not illegal to get money wherever one can get it, so long as no tax deception is involved. But there is a tremendous amount of money loose in the world, some of which is hot money going through a process of legitimization.

Anonymous money may be innocent, but the anonymity of the ownership, the fact that the banks managing the money will not disclose the ownership, engenders a suspicion that the ownership is improper.

Dr. James McGregor Burns on the 22d Amendment

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. UDALL. Mr. Speaker, I am appending to these remarks another response to my cross-section survey among historians and political scientists on the wisdom of the 22d amendment.

I present today the reply of Dr. James McGregor Burns, of Williams College, in Massachusetts. In my opinion, Dr. Burns is one of the best of our young political scientists. Some years ago he worked for a time on Capitol Hill, and in 1949 his book Congress on Trial, was published. He is the author of the recent work on contemporary history, Roosevelt: the Lion and the Fox.

Dr. Burns' reply follows:

WILLIAMS COLLEGE,
DEPARTMENT OF POLITICAL SCIENCE,
Williamstown, Mass., March 21, 1957.

Hon. STEWART L. UDALL,
House Office Building,
Washington, D. C.

DEAR MR. UDALL: I favor repeal of the 22d amendment for two main reasons. In the first place, repeal is a matter of simple governmental efficiency and effectiveness. Why compel ourselves to dismiss a President who is still going strong and has had the experience of being President, who has, in effect, spent several years educating himself in the toughest job on earth? No sensible corporation or university, few governments of any importance, artificially require the banishing of talent and judgment that continue to have the confidence of the people.

Secondly, and more important, the 22d amendment is an artificial and dangerous interference with the basic principles of our constitutional system. That system assumes, on the national level, that Congress will reflect the great diversity of interests and attitudes among the people, even if it means risk of delay and even inaction. It assumes that the President, acting on some consensus, will serve as the integrating and energizing force in Government. This was the plan of the framers of the Constitution and the system has worked well. Virtually all political scientists and students of American political history agree that any attempt artificially to limit Presidential tenure is bound to weaken the great role that the framers planned for the President, and will undermine the system of mutual powers and checks on powers that is the genius of our system.

Although a Democrat, I hope that any attempt to repeal the 22d amendment will not exclude the incumbent, President Eisenhower. If his health and energy permit, there is no reason that he should not be eligible for a third term in 1960, or at any rate to place his selection before the American people.

Sincerely yours,

JAMES M. BURNS.

Today Marks 75th Anniversary of the Knights of Columbus

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. FLOOD. Mr. Speaker, today marks a great milestone in the outstanding history of the Knights of Columbus. Today, March 29, 1957, is the 75th anniversary of the granting of a charter by the General Assembly of the State of Connecticut officially starting the Knights of Columbus along the road to formidable accomplishments and a position of the highest respect and admiration based on its humanitarian philosophy and teachings.

I, personally, have been closely associated with the Knights of Columbus for a number of years in my capacity as a former district deputy of the 14th Pennsylvania district as well as master of the fourth degree Calvert province.

I, therefore, Mr. Speaker, speak from a position of experience when I state that the outstanding programs undertaken by the Knights of Columbus stem from a love of God and the love for the human being. At this point, Mr. Speaker, I would like to review the past history of the Knights of Columbus, which I am sure you will agree is an impressive one.

Throughout the 3,900 councils located in the United States, Canada, Cuba, Mexico, Panama, Puerto Rico and the Philippines, the more than 1 million members of the Knights of Columbus are

now engagd in special programs in commemoration of the 75th anniversary of the Knights of Columbus.

On March 29, 1882, the general assembly of the State of Connecticut granted a charter to a new organization—the Knights of Columbus. This charter represented the results of efforts initiated by the Rev. Michael J. McGivney, a young curate at St. Mary's Church in New Haven, Conn., and a small group of men associated with him who were concerned with the plight of the families of Catholic men who had died in the communuity leaving little or no protection for their widows or children. Thus, came into being a fraternal benefit society for Catholic men which from that small beginning soon spread throughout the State of Connecticut and then into Rhode Island, New York, Massachusetts and shortly thereafter into all of the Eastern States. The growth continued until the organization reached its record membership of over 1 million members during the past year. Today, the Knights of Columbus has in force $650 million insurance, has paid insurance benefits of $120 million, and during the calendar year 1956 showed a net increase of insurance in force of $88 million, a new annual record.

Shortly after the institution of the organization its primary purpose of providing insurance protection for Catholic families was expanded by activities sponsored by local, State and supreme councils in the fields of social welfare, aid to religion, patriotic endeavor, civic activities, aid to education and similar projects.

While the original founders did not envision or contemplate the tremendous expansion of the program of the order, it is interesting to note that in the charter granted by the State of Connecticut that after the first principle of "rendering pecuniary aid to its members and beneficiaries of members" there was included the provision of promoting social and intellectual intercourse among its members and of promoting and conducting educational, charitable, religious, social welfare, war relief and welfare and public relief work.

As a result of those provisions the Knights of Columbus has been able over the years to conduct such major projects as the establishment of graduate scholarships at the Catholic University of America, led the fight in the various Oregon and Michigan school cases resulting in Supreme Court decisions protecting the right of Catholic parents to educate their children in parochial schools, its outstanding work for the allied soldiers in World War I, the establishment of graduate courses for the training of professional boys' workers at the University of Notre Dame, the organization of youth-activity programs including a leisure-time program for Catholic boys of high-school age known as the Columbian Squires. These and hundreds of similar projects at the supreme-council level were supplemented by outstanding program work by State councils.

In more recent years the order established in 1944 a $1 million trust fund to provide a Catholic college education for sons and daughters of Knights of Columbus killed or permanently disabled in World War II. The benefits of this fund were further extended to the children of veterans killed or permanently disabled in the Korean war. It is interesting to note that long before the GI bill was ever dreamed of that the Knights of Columbus, following World War I, made available college scholarships to veterans of that war regardless of creed. Probably no single activity has attracted so much attention as has the Catholic advertising program organized on an orderwide level in 1948. Over 2,500,000 persons have written to the Knights of Columbus Religious Information Bureau asking for pamphlets explaining various points of Catholic teachings and over 250,000 persons have enrolled in religious instructions as a result of the advertisements published by the Knights of Columbus in magazines with a circulation of over 56 million persons and in hundreds of local newspapers where the advertisements have been sponsored by State and local councils. This program has drawn enthusiastic endorsement from members of the hierarchy, clergy, and from interested persons of many beliefs. In 1954 the basic program of the order was expanded to provide for youth-activity committees at the State and local council level. Presently, there are over 3,300 such committees in operation providing leadership, facilities, and services to youth on a positive basis, emphasizing the promotion of juvenile decency rather than the prevention of juvenile delinquency.

For centuries the scholars of Europe have great depositories of manuscripts relatively close at hand but such facilities were not readily available to American researchers and scholars. The Knights of Columbus in 1951 established the Knights of Columbus Foundation for the preservation of historic documents at the Vatican Library and the Pius XII Memorial Library is being erected at St. Louis University to house the microfilms of these documents. Already some 800,000 feet of film containing nearly 10 million handwritten pages of these historic documents have been prepared and are available to American scholars through the depository at St. Louis. The printed books at the Vatican Library are also being microfilmed.

At the request of Pope Benedict XV and extended under Pope Pius XI and Pope Pius XII the Knights of Columbus have provided and operated playgrounds in Rome serving the youth of that city for more than 30 years.

The tremendous accomplishments for country, church, community, and fellowman throughout these 75 years is due to the unselfish service of the volunteer leaders, committee workers, and members in the 3,900 councils of the order. Such service goes on year in and year out, in unspectacular fashion, and the total of the benefits rendered is beyond computation.

Demonstrations of the order's devotion to the welfare of the country are reflected in such projects as the sponsorship of the adding of the words "under God" to the pledge of allegiance, its record of militant opposition to atheistic communism long before such opposition was popular, its present organized campaign on behalf of the Hungarian refugees and against the invitation to Marshal Tito of Yugoslavia to vist the United States.

Operating under the principles of charity, unity, fraternity, and patriotism, the Knights of Columbus has achieved a most commendable record during the 75 years of its existence. Every Knight of Columbus everywhere is dedicated to the objective that these accomplishments will be but the cornerstone of a much expanded program for the future. Pleasant as it may be to reflect on the record of these 75 years the leaders and members of the Knights of Columbus are working forward and upward to new peaks of achievement.

How To Cut Spending

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 28, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, Henry Hazlitt is an outstanding economist. His weekly column that appears in Newsweek magazine entitled "Business Tides" is always interesting. His recent article entitled "How To Cut Spending" indicates his grasp of the present situation in which the country finds itself today. The article which appeared in the March 25 issue of Newsweek follows:

BUSINESS TIDES

(By Henry Hazlitt)

HOW TO CUT SPENDING

Nearly everyone, including the President, who proposed it, seems to agree that the $72 billion budget for the fiscal year 1958 should be drastically slashed. But when it comes to any specific spending program, some special interest is sure to cry out that it cannot be touched. The President himself gave an amusing illustration of this in his press conference of March 7. A friend out West had written to say he "was very much upset about the size of the budget," but in his last paragraph expressed the hope that there would be no cut in drought relief. Yet in this very conference Mr. Eisenhower, while he told how he was asking every Government agency and department to suggest cuts in its own spending, expressed grave concern about proposals to make any substantial cut in foreign aid.

The situation suggests that there is only one feasible political device to get substantial cuts in the 1958 budget. This is for Congress to tie every cut it makes in expenditures to a specific tax cut. Only in this way can Congress dramatize the connection between expenditures and taxes, and offset the special political interest in favor of an expenditure by the interest of taxpayers in favor of tax relief.

CUT FOREIGN AID

Let us take, as an example, the foreign-aid program. The public and Congress now express mounting doubts about the need or wisdom of that program. The recent Fairless report, certainly, does nothing to dispel

these doubts. It merely reiterates all the question-begging generalities that have passed for argument in the last 10 years. It mentions once in passing that about 2,000 separate foreign-aid projects are annually authorized in Washington, but makes no "detailed program examination" whatever. It does not even list the countries that are still receiving aid from us. (There are 54 of them, not including our dependencies.) Yet the program involves not merely appalling waste, but positive mischief.

Senator MIKE MANSFIELD has estimated that a $3 billion annual cut could be safely made in the sums that our Government has been spending abroad. It would seem advantageous to cut at least $3 billion out of the $4.4 billion that the President proposes to spend in the fiscal year 1958 for foreign military and economic aid. Out of appropriations left over from past years, the Government will have at least $3 billion to spend for foreign aid in 1958 even if Congress does not appropriate an extra penny. Congress, therefore, need make no appropriation at all for foreign aid for 1958. It can simply recommend that spending for this purpose be limited to $1.2 billion in 1958, and tie this recommendation up with a tax cut of $3.2 billion.

FIFTY PERCENT TAX CEILING

There are any number of places, of course, where such a tax cut could advantageously be made. I suggest, by way of illustration, a cut in the normal personal income tax from 20 to 18 percent, and a cut of all personal income-tax rates above 50 percent down to a 50 percent ceiling.

Roswell Magill, president of the Tax Foundation and a former Under Secretary of the Treasury, has declared: "If we could afford just one modest tax accomplishment in 1957, this 50 percent rate ceiling is the one which I should choose." He estimates that the revenue loss would be about $734 million, even without taking into account the probable increases in reported income as a result of the rate reduction itself. (The confiscatory tax rates up to 91 percent produce little revenue. The basic rate of 20 percent accounts for 85 percent of the total yield of the income tax.) Cutting income-tax rates to a maximum of 50 percent would bring a sharp increase in American production, investment, and the availability of risk capital for new enterprises.

A cut in the normal tax from a 20 percent to an 18 percent would mean an additional loss in revenue of about $2.4 billion; but it would also mean income-tax relief and increased incentives for everyone.

Any attempt to oppose or veto such a tax cut in order to maintain foreign-aid expenditures at their present level would bring home to the American people what foreign aid is really costing them. Other tax cuts could be tied to other spending cuts, with similar educational results.

"If I Were Ike" Contest Winners

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. BROWNSON. Mr. Speaker, under unanimous consent I am having printed in the Appendix of the RECORD an article from the Indianapolis Times of Wednesday, March 27, in which the winners of that newspaper's "If I Were Ike" contest are announced and the winning letter printed. Elsewhere in the RECORD I intend to extend my remarks congratulating the editors and the winner for their direct and fearless approach to cutting the budget.

The article follows:

"IF I WERE IKE" CONTEST WINNERS

First prize, $50: Donald J. Bugbee, 6449 West Jackson, Indianapolis.

Second prize, $25: Fred C. McClurg, 215 East 9th, Rochester, Ind.

Third prize, $10: Mrs. Joan Bentz, box 162, Vernon, Ind.

WINNING LETTER

Donald J. Bugbee, winner of the Indianapolis Times' "If I Were Ike" contest, said the Government should get out of competition with private business.

INDIANAPOLIS, IND., *March 11, 1957.*

"IF I WERE IKE,"
Care of the Indianapolis Times,
Indianapolis, Ind.

To reduce the Federal budget, I would:

1. Recommend appropriations for only essential governmental functions which cannot be performed by the individual States.
2. Eliminate the unsound, costly matching-aid program.
3. Eliminate Federal participation in school and housing programs.
4. Curtail Federal health and welfare programs to essential aid to States in case of emergency.
5. Curtail foreign aid to that necessary for humanitarian reasons.
6. Consolidate Government department and bureau functions to avoid duplication and waste.
7. Sell Government installations that are in direct competition with private business.

DONALD J. BUGBEE.

WRITERS AGREE ON MANY POINTS

Entrants in the "If I Were Ike" contest sponsored by the Indianapolis Times to get ideas from Hoosiers as to how the current Federal budget could be trimmed, agreed on many points as to how it could be done.

Their major suggestions were:

1. Follow the recommendations of the Hoover Commission.
2. Cut foreign aid.
3. Get Government out of private enterprise.
4. Eliminate Federal grants to States.
5. Raise postal rates.

Other suggestions ranged from a national lottery to return of the 18th amendment.

And, interestingly, 50 percent of the hundreds of entries came from readers of the Times in the smaller communities outside Indianapolis.

Whether this indicates that the small town taxpayer is closer to the Federal problem, or at least more interested in it, or whether his big town neighbor in Indianapolis is too busy with local tax problems to worry about the national picture, is not known.

The editorial board which chose the winners found most of the entries to be thoughtfully composed and written with considerable attention to the necessity of impressing the Congress as well as the Eisenhower administration with the grassroots movement to stop wastage, plug leaks and demand improved performance of Federal employees.

Besides the items mentioned above, other suggestions included: Removal of the farm subsidy, eliminate social security, make a percentage cut across the boards in all agencies, sell the Tennessee Valley Authority, and freeze wages and taxes.

There also were many unusual suggestions. Among them:

Foreign aid: "Send help to help themselves. A plow and a horse with a cow, sow, two dozen hens, grain and seed would be the kind of start many Americans would appreciate" • • • "Send the missionaries to preach the gospel" • • • "Send arms to both Israel and Egypt and let them fight it out" • • • "Stop foreign aid now, let churches attend to charity abroad."

National lottery: "Declare horse racing a national sport with betting legal • • • Sell tickets through the post office, $1 each, give $200,000 in prizes, tax free, every month."

Also:

"Get rid of the deadheads • • • put them on direct relief until they muster sufficient decency to start earning an honest living • • • Cut my (Ike's) salary half or at least one-third and go from there to Congress and the Senate and cut their's about the same."

"Cut atomic research on explosives. World peace should be stressed before we blow up the world."

Others had personal advice for President Eisenhower, including elimination of the helicopter he uses at times and also his airplane • • • "A 'for rent' sign on the White House," "Keep Nixon and Dulles at home." "Go fishing for 2 or 3 weeks and let the Congressmen settle it." "Resign."

One writer concluded: "I certainly thank God that I am not Ike," and another remarked, "I feel better now since I got it off my chest, to tell someone else instead of my friends."

Still another exceeded the 100-word limit and then added, "Whoever heard of solving anything as big as the United States Government in 100 words or less?"

In any event, most who entered the contest apparently enjoyed "getting it off their chest." And they'll be glad to know that the summary of their recommendations is going to the White House secretariat as a "grassroots" indication of what Midwesterners, particularly Hoosiers, are thinking about budget trimming and the administration in general.

Needs of Schools of Public Health

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, recently Congressman NEAL and I had an opportunity to participate on behalf of the Committee on Interstate and Foreign Commerce in the annual meeting of the Association of Schools of Public Health held in San Juan, Puerto Rico. At this meeting were represented the deans of all of the schools of public health in the United States. As a result of the discussions which Congressman NEAL and I had during this meeting, we told the deans of the schools of public health that we would be glad to give sympathetic consideration to sponsoring legislation to support the operations of the schools of public health if the schools will submit an appropriate plan for operational assistance.

Congressman NEAL and I have summarized our views in the following letter to Congressman OREN HARRIS, chairman of the Interstate and Foreign Commerce Committee, and also to Congressman JOHN BELL WILLIAMS, chairman of the Subcommittee on Health and Science of the Committee on Interstate and Foreign Commerce:

MARCH 6, 1957.

Hon. OREN HARRIS,
Chairman, Interstate and Foreign Commerce Committee, House of Representatives, Washington, D. C.

DEAR CHAIRMAN HARRIS: Congressman NEAL and I greatly appreciated the opportunity to participate, on behalf of the Committee on Interstate and Foreign Commerce, in the meeting of the Association of Schools of Public Health in San Juan, P. R., on February 20 and 21. At this meeting were represented the deans or directors of all of the schools of public health in the United States, including Puerto Rico. There were also present representatives of schools of public health from several South American countries.

We would like to report to you briefly on our meeting with the deans of the 11 schools of public health.

Of the 11 schools, 5 are publicly owned and supported (University of California, Berkeley; University of Michigan; University of Minnesota; University of North Carolina; and University of Puerto Rico). Six of the schools are private nonprofit institutions (Columbia, Harvard, Johns-Hopkins, Pittsburgh, Tulane, and Yale Universities).

Together, they have this year 1,152 graduate students and 536 undergraduate students. The largest single group among the graduate group consists of physicians. The undergraduate students are mostly public-health nurses.

It should be noted that of the 1,152 graduate students, almost 300 came from 65 foreign countries. It should further be noted that in the State-supported schools of public health, more than two-thirds of the graduate students attending these schools came from other States or from foreign countries.

The fact that a large percentage of the student body of schools of public health consists of out-of-State and foreign students makes it difficult for the publicly owned schools of public health to secure larger operating funds from their State legislatures. There is a natural resistance to spending tax money for the benefit of students coming from other States or from foreign countries.

Another factor which plays an important part in the financial structure of public-health schools is the fact that almost the entire student body upon graduation finds employment in public service, and for that reason schools of public health can count only on relatively slim financial support from alumni.

In discharging its responsibilities in the field of public health, the Federal Government relies to a considerable extent on the teaching and research activities of the schools of public health, and it, therefore, has a direct interest in the adequate functioning of these schools. Finally, the large numbers of foreign students who attend schools of public health in the United States make these schools important centers for our international health programs which are an integral part of our foreign policy.

The legislation which was pending before this committee during the 84th Congress provided for matching grants for the construction of facilities for medical and dental schools and schools of public health. The schools of public health have pointed out that beyond their needs for additional facilities, they are also in need of funds for the operation of their schools.

Congressman NEAL and I told the deans of the schools of public health that we would be glad to give sympathetic consideration to sponsoring legislation to support the operation of schools of public health if the schools will submit an appropriate plan for operational assistance.

May I express again on behalf of Congressman NEAL and myself our appreciation for the opportunity to learn at first hand about the problems of schools of public health. We believe these schools are playing an important role in promoting the health and welfare of our people and of foreign nations, and that, therefore, their problems are worthy of careful study by this committee and its Subcommittee on Health and Science.

Sincerely yours,

GEORGE M. RHODES,
Member of Congress.

Let's Hear About His Own Program

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. ABBITT. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD a splendid editorial from the Progress-Index, of Petersburg, Va., which appeared on Wednesday of this week, in connection with the current discussion regarding our schools.

I wish to congratulate the editor of this paper, Mr. Edward A. Wyatt IV, for his pertinent comments on what I believe to be one of the most important matters ever to face our people. His editorial speaks for itself in calling attention to the questions which have been raised in recent days relative to the approach which Virginia should take with regard to the Supreme Court decision of May 17, 1954.

Ever since the Supreme Court decision was issued in 1954, Mr. Wyatt has dealt with the various aspects of this as intelligently and forthrightly as anyone I know, and for this reason I commend the reading of his editorial to the Members of the House.

The editorial follows:

LET'S HEAR ABOUT HIS OWN PROGRAM

As an individual and as a political leader, State Senator Ted Dalton has every right to oppose Virginia's plan of massive resistance to the Supreme Court's ruling striking down segregation in the public schools. He has a right to criticize Senator Byrd, Governor Stanley, and the many others who have helped to bring into being the program which is described as massive resistance. Furthermore, if he chooses to spell out his own views on the situation and to become the Republican candidate for the governorship, he can erect a standard to which those who agree with him may repair.

His recent comments, however, do not meet the requirements of either disinterested criticism or a program offered for the sake of political leadership.

Senator Dalton sees no good in the legislation which has been enacted, for he does not regard it as an intelligent or effective approach to the problem. He predicts that it will not succeed in accomplishing its purpose, although we are only now on the verge of the testing. While he criticizes the Supreme Court decision and expresses hope that the white schools will be kept white, he reserves his greatest concern for the danger of schools being closed. We infer from his observations that, although he prefers segregated schools, he would accept integrated schools rather than see any schools closed.

He is entitled to these views and to his belief that the majority of Virginians agree with him. We doubt the accuracy of his appraisal, although no one knows how Virginians would react in a showdown. Even a critic of the Virginia plan should concede that, with its complex provisions, it is designed to delay as long as possible a choice between integrated schools and no schools.

The weakness in Senator Dalton's criticism is that he does not disclose his own program. His legislative record indicates that he would rely solely upon the pupil-assignment plan, although it would permit some of the desegregation to which he says he objects.

He has an obligation to make both his criticism and his own plan more specific. General criticism has been commonplace, for the tendency of many has been to point out the weaknesses in measures under consideration, without setting forth alternatives.

Senator Dalton is too able a man, and the hour is too late, for this sort of thing.

Breakdown of the Postal Service

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 29, 1957

Mr. MADDEN. Mr. Speaker, I have been receiving a great number of letters and complaints from postal patrons in the Calumet industrial area of Indiana, protesting the breakdown of the postal service.

This morning I received a letter from Allan F. O'Rourke of the O'Rourke Insurance Agency, Hammond, Ind., and I quote from his letter:

The postal service in Hammond has reached an alltime low.

He further stated that American Legion Post, No. 16, of which he is adjutant, passed a resolution protesting the failure of mail to reach its members. Sometimes the delay extends over several days and in some instances, several weeks.

Inadequate postal salaries is the prime cause for lack of qualified postal workers. The cost of living in the Chicago area has gone up 7 times in the last 12 months, according to the Bureau of Labor Statistics.

I wish to incorporate with my remarks an article from the Hammond Times of March 24, 1957, setting out the postal situation in the Hammond, Ind., area:

LURE OF INDUSTRY ATTRACTS MAILMEN—REGION POST OFFICES HAVE BIG TURNOVERS

(By Ben Weiss)

The lure of wages in industry has created a 10 to 20 percent employee turnover in Calumet region post offices.

Postmasters in six area communities concur that differences between the wages of post-office clerks and carriers and their equals in factories are causing many to forsake their postal jobs for factory work and are deterring many others from seeking the civil-service positions.

The last general wage increase for postal employees was a 6 percent hike on March 1, 1955. This meant $244 a year more for top men. In December of that year an adjustment brought another raise—ranging from $1 to $100 a year—for the workers.

"We have a turnover of 10 percent a month and everything comes right back to money," commented Donald Clark, Hammond postmaster.

"Most of the men we have also have outside jobs or else their wives working. This business has given us substandard help and the service is not up to par."

The beginning wage for a postal clerk or carrier is $1.82 an hour with a 6-cent raise to $1.88 after 1 year of service.

In comparison the starting wage for a laborer at Standard Oil Co. Whiting refinery is $2.16 an hour with a 14-cent raise to $2.30 after 6 months.

After 25 years of service, with longevity increments, a postal worker makes $2.26 an hour, 4 cents an hour less than the 6-month refinery worker.

"We've had quite a turnover the last 2 or 3 years," noted Levern Fortin, Whiting postmaster. "We have a lot of trouble breaking in new help all the time. Several of our employees—even regulars—have gone to Standard Oil. The work there isn't near as trying."

Assistant Postmaster M. J. Stankovich of East Chicago added, "We had about 20 percent turnover for 1956. The largest reason is industry. The men don't look for the retirement system and fringe benefits. They look for what they can get their fingers on today.

"As far as a full complement, we're about five clerks and carriers short all together right now. We have a couple of retirements coming up at the end of March and that's going to hurt.

"We have four career employees on civil service and the rest are all temporary. The regular employees get no overtime except in an emergency or at Christmas. And there are not very many emergencies."

After 15 years service, a postal employee receives $2.12 an hour. In comparison, the average pay at Lever Bros., after a recent wage increase, is $2.33 an hour.

Calumet City Postmaster Charles Smith reported: "We have trouble both getting and keeping help. For the size of the office, the turnover is big. I know it's too many.

"We have to combat with the situation if higher wages paid for shorter periods of time like in the construction industry.

"A good number of applicants don't all prove out. Then some get other jobs before their applications are considered.

"We pay overtime only in an emergency. Other times the regular, career men can work only 40 hours a week. A substitute employee can work more hours but only at straight time pay, not time and one-half.

"It's definitely true some of the men aren't taking the civil-service exams because they can make more as temporary employees. We've had regular career men who wanted to get off of civil service because they could make more money as temporaries."

Lansing Postmaster William Erfert said, "We've had men with 14 and 15 years of experience quit. Something's wrong. Industry's after them because a good worker can get a job anywhere.

"On several routes we use some men as substitutes on their days off in industry. If we expand, then we'll have trouble finding help.

"We're in for a big building project with a new disposal plant and more sewage being built."

"We're always having trouble getting carriers," added Mrs. July Disks, assistant postmaster at Griffith. "We're breaking in a new one right now. We just put on a new route and changed some around.

"Most of the time we get kids fresh out of high school and they're not too dependable because they don't realize responsibility like an older man does. Our men always have to have some other income to make ends meet."

"The Hammond postmaster explained, "When we talk of fringe benefits they really aren't because they are deducted from our pay. We pay 6½ percent of our wages for benefits."

He added that the earned vacation and sick-leave pay for postal workers is 15 and 13 days per year respectively. Workers also get $100 per year longevity pay after 13 years; another $100 for 18 years and a third and final $100 for 25 years.

In comparison, a recent agreement at American Maize-Products Co. included 104 hours vacation pay a year after 5 years; 124 hours after 10 years; 140 hours after 15 years; and 176 hours after 25 years.

The agreement also includes an average hourly wage of $2.17, accident and sickness payment increases, a choice of two life-insurance plans, and a new pension with a minimum pension of $120 a month after 15 to 25 years of service.

Clark noted that the civil service examination, with applications now being accepted until April 29, has been declared an "open exam."

Previously, he explained, only residents of Hammond could apply for the exam for jobs in Hammond. Now, he continued, anyone in the area can apply.

Postmaster General Arthur E. Summerfield last week appealed to Congress for a raise in postal rates and elimination of what he termed a "staggering" postal deficit.

He noted the Department's deficit since 1945 has totaled $5 billion and added that such a sum could provide anti-polio vaccine for every man, woman, and child on the face of the earth.

Summerfield urged prompt passage of an administration measure to bring in an extra $527 million a year by hiking regular letter mail from 3 to 4 cents and making other rate changes.

Erfert said that post office employees are now "two raises behind" since 1947 and estimated the salaries should have been hiked by $800 or $900 a year since that time.

The postmasters voiced little hope that their problems could be eased with hiring of women to carry the mails.

Clark, whose office has the only woman carrier in the area—Mrs. Gladys Herberg, of Sheffield Trailer Court, who handles the Sheffield Avenue route—said he had five women come in prior to their making applications for the posts recently and only one of them showed possibilities of standing up under the load.

That one, he noted, was given a trial with Mrs. Herberg and gave up because "her feet couldn't take it" after 2 days, even using a mail cart.

The Hammond postmaster hastily added, however, that there is no prejudice against women in the civil service applications and exams for the jobs and any woman who wants to try is eligible to become a route carrier.

Mrs. Herberg, he explained, has handled her route, with a home-made two-wheel carrier, since 1951 after taking on the delivery job during World War II when there were a few other woman carriers in the area.

Dolefully fingering a desk plaque saying "Ulcer department," Clark concluded, "We could have more regulars if they'd stay around long enough.

"Too many don't want to become regulars because it actually means a cut in pay for them."

What's Wrong With Economy?

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. MINSHALL. Mr. Speaker, the following editorial appeared as the lead editorial in the Cleveland Press, and I should like to call it to the attention of my colleagues:

WHAT'S WRONG WITH ECONOMY?

President Eisenhower was unnecessarily defensive about the budget at his press conference yesterday.

No one, he said, has urged cutting the Armed Forces by "20 percent or 10 percent or any other thing that would give us a significant saving in the budget."

That's right. No one has. But national security, including foreign aid, adds up to $45 billion in the budget and less than a fourth of that is payroll for the Armed Forces.

The President strongly defended expenditures for foreign aid, but admitted some savings might be made. He referred to services—such as carrying the mail—which the Government renders at less than cost.

"If we could get these things on a business basis," he said, "and tackle the problem where the money is going out, we would save a whole lot."

But there was an apparent touch of irony when it said that "it is a great satisfaction to me to find out there are so many economy-minded people in Washington. They didn't used to be here."

This shift in sentiment should be welcomed by an administration elected on an economy platform—an administration which cut $10 billion out of a budget prepared by its predecessor.

The President admitted that "you can save some money here and there and I am all for it to the last dollar." That sounds more like Ike and that's the main thing that most people ask. Some money here and some money there could amount to a large saving in a $71,800,000,000 budget.

National Mutual Savings Banks

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the Journal of Commerce of March 15, 1957, written by its editor, Ed Tyng:

MUTUAL SAVINGS BANKS FAVOR UNITED STATES CHARTER MOVE

(By Ed Tyng)

The Nation's mutual savings banks are displaying increasing interest and approval of proposals in Congress aimed at granting Federal charters to mutual savings banks. They favor the idea, not because they intend to shift immediately to a national form of incorporation, but because they want to have available a Federal umbrella.

Should the savings banks, in their current drive for wider branch powers in New York, meet again with failure to achieve what they are seeking, it is probable that much more support will be gained for Federal charters. Should there be at some later date a rush to nationalize, there would be a corresponding loss to State banking jurisdiction.

BILL NOW PENDING IN CONGRESS

Pending in Congress now is a bill introduced by Representative ABRAHAM J. MULTER, of Brooklyn, a member of the House Banking and Currency Committee, called the National Mutual Savings Bank Act of 1957. This would give the Comptroller of the Currency power to provide for the organization, incorporation, examination, operation, and

regulation of mutual savings banks, and to charter them.

Important in the Multer bill is a clause which says that any such nationally chartered savings bank may operate one or more branches as the Comptroller may prescribe, subject to State limits.

UMBRELLA IDEA IMPORTANT

But there is a proviso that State restrictions shall not be applied in such a manner as to give savings banks lesser rights and privileges than other State financial institutions enjoy. In New York State savings banks do not enjoy the branching powers of State chartered commercial banks.

Leading savings bankers questioned by the Journal of Commerce point out that the "umbrella" idea is important. Commercial banks can shift to national bank charters; savings and loan associations can move from State to Federal charter status and even credit unions can federalize.

Unlike these other segments of the banking business, savings banks have no Federal shelter, no possible national status and therefore enjoy none of the benefits of bargaining that are inherent in optional Federal incorporation.

They feel that an alternative of Federal incorporation would make their voice more powerful in asking for changes in State restrictions.

They are marshalling in their support some important realty interests who look upon savings banks as a source of mortgage money.

Last week, for instance, the Real Estate Industry Committee for the Savings Banks, which has been giving "friend-of-court" services to the savings banks in their branch fight, came out with a statement that if the New York savings banks didn't get at least part of what they are asking in the way of equal rights on branches, they would apply for Federal charters under proposed legislation.

The real estate group also noted that, if savings banks got Federal charters, more savings bank money would be invested out-of-State and real estate interests in New York would lose some of the potential funds now available to them.

PROVISION FOR CONVERSION

Also contained in the Multer bill is a provision for conversion of savings and loan associations into savings banks. Such a switch would result in the conversion of large numbers of persons who own proprietary rights in savings and loan associations into creditor positions in savings banks.

Both savings bankers and savings and loan executives feel that not much would come from this section of Mr. MULTER'S bill. A leading savings and loan executive said the boot should be on the other foot: savings banks should be converted into savings and loan associations. The savings bankers are cool to any such idea.

Mutual savings banks, with their $32½ billion of assets and over $29 billion of deposits, exist only in 17 States and there are only 527 such banks in the Nation. This lack of full national distribution at times in the past has given savings bankers a slight inferiority complex and any national legislation that would provide for the spread of their business into the non-mutual savings bank States would give them satisfaction, whether the spread came through branching by older institutions or through formation of new savings banks.

SPECIAL INDUCEMENT NEEDED

The fact is that the provisions for brand-new savings banks contained in the Multer bill are apparently unworkable in this age of high taxes which discourage the activities of philanthropic angels who were the founders of most of the mutual savings banks existing today.

To get somebody or some group to put up the required surplus fund for a new mutual savings bank would require some special inducement or some exemption from existing law, particularly some exemption from taxes for a period of years. Mr. MULTER has been giving thought to that aspect too, but as yet has not come up with any new ideas. He says he will welcome any suggestions.

Support of Secretary of Labor Mitchell

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mrs. DWYER. Mr. Speaker, while I most certainly agree that economy in Government is an important responsibility facing this Congress—particularly in view of our vast and vital commitments around the world and the need for maintaining a strong national security—I strongly believe that some of the appropriations cuts voted for this week in the Department of Labor budget have been, as President Eisenhower stated, "fatuous and foolish."

I have the greatest respect for our Secretary of Labor, James P. Mitchell. I believe he is one of the greatest Secretaries of Labor our Nation has ever had, and I think it is important to recall that both labor and management, recognizing his outstanding abilities, were overjoyed this year when he agreed to stay in his job rather than accept an important post in industry.

During his years in office, Secretary Mitchell has done much to bring about a sounder relationship between labor and management; he has shown a sincere concern for, and understanding of, the problems of both important segments of our national life. He has administered his department with high efficiency and integrity.

I am proud to claim Secretary Mitchell as a resident of my Sixth Congressional District of New Jersey; I am proud to be able to say here that I have, during these past few days, firmly sustained his recommendations against certain budget cuts.

I did so—even when a coalition of Republicans and Democrats took an opposite stand—because I was convinced these recommendations were sound. I did so because I shared with Secretary Mitchell a conviction that certain of these appropriations cuts would seriously cripple essential services and programs. I did so in the knowledge that the Department of Labor was created to safeguard the welfare of the working men and women of America; that it serves more of our people than any other governmental department.

I regret that more Members of the House did not share these convictions, for I believe we have, in some instances, been guilty of unwise and unjust acts in the name of false economy; that we have effected certain cuts which can only impair and cripple essential services to our people.

Sertoma Club of Washington, D. C., Presents Significant Service to Mankind Award to Maj. Gen. U. S. Grant III, United States Army, Retired—Hon. Joseph W. Martin, Jr., Presents Another Significant Award by the Club to Secretary of the Army Wilber M. Brucker

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the brief text relating to a very significant presentation by the Sertoma Club of Washington, D. C., to a distinguished United States citizen; to wit, Maj. Gen. U. S. Grant III, United States Army, retired.

Every Member of this great legislative body will be pleased and interested to know that our distinguished Member—to wit, Hon. JOSEPH W. MARTIN, of Massachusetts—is an honorary member of the Sertoma Club of Washington, D. C., and was personally present on the occasion. Also our distinguished colleague played a very important part on that significant occasion by presenting to Secretary of the Army Wilber M. Brucker the American way award on behalf of the Sertoma Club of Washington. And upon receiving said distinction, the Honorable Secretary of the Army, and former Governor of Michigan, made a very inspiring and informative address to the members and their ladies present.

It is my pleasure, Mr. Speaker, to be a member of the Sertoma Club, of Compton, Calif., in the great 23d Congressional District, which I represent this my 11th year in this great legislative body:

SERTOMA CLUB OF WASHINGTON PRESENTATION OF SERVICE TO MANKIND AWARD TO MAJ. GEN. U. S. GRANT III, UNITED STATES ARMY, RETIRED, AT THIRD ANNIVERSARY BANQUET, JANUARY 25, 1957, AT NATIONAL PRESS CLUB BALLROOM

(Remarks by Edward R. Place, Sertoma Club charter president)

Sertoma derives its name from its motto, "Service to mankind," which motivates Sertomans everywhere in the United States, Canada, and Mexico.

Sertoma clubs traditionally recognize outstanding and unselfish achievements and acts by public officials and ordinary citizens in all walks of life that benefit their fellowmen. The service to mankind plaque is a symbol of this recognition.

Our club in its lifetime has presented five such trophies.

Our first presentation took place in 1954 in a Christmas setting at the Pageant of Peace. District Commissioner and Sertoman Renah Camalier made the presentation to Police Chief Murray and Deputy Police Chief Covell for effective police work reducing crime in the District of Columbia.

In this ballroom at our 1955 banquet, Sertoma's international president, Dr. John M. Fernald, of Los Angeles, presented a similar trophy to our Children's Hospital for notable

success in combatting polio. Renah Camalier received the same award at a testimonial dinner at the Mayflower Hotel in June 1955, following his retirement as District of Columbia Commissioner. He made the presentation to the Salvation Army at our 1956 banquet at Kenwood Country Club.

Our fourth service to mankind presentation took place last March amidst military pomp and ceremony on the Fort George G. Meade parade grounds. Our club president, Comdr. Raymond Leavitt, bestowed the plaque "for assistance to victims of the Pennsylvania train wreck at Odenton, Md., on February 23, 1956." Col. Julian Lindsey, post commander, accepted the award on behalf of Fort Meade personunel.

This year the Sertoma Club has selected a distinguished Sertoman who has devoted his life to military and public service, Maj. Gen. U. S. Grant III, United States Army, Retired. General Grant was inducted into Sertoma membership on April 6, 1954, at the University Club. It was my privilege to sponsor him and to conduct the induction ceremony.

At the time, Sertomans were proudly aware of his leadership in many enterprises—president of the American Planning and Civic Association, president of the Columbia Historical Society, president of Government Services, Inc., and commander of the Military Order of the Loyal Legion of the United States.

General Grant had had a leading role in the annual Lincoln Day observance at Lincoln Memorial and in rites honoring L'Enfant. Our club has had an active part in these events.

More recently, General Grant has been engaged in a great crusade to strengthen national unity through creation of a great national shrine of American ancestry at the base of the Statue of Liberty.

This shrine is the American Museum of Immigration.

General Grant is the president and chairman of the board of trustees of the American Museum of Immigration.

In the words of President Dwight D. Eisenhower: "The establishment of the American Museum of Immigration at the foot of the Statue of Liberty is an event of genuine significance. This is a nation of nations. Our forefathers came here from all the countries of the world, and from our variety of ancestries has grown an unimagined national vigor. United as one people, we have created new freedom and new opportunity for all. There is no story like it in history, and the idea of telling it at the foot of the Statue of Liberty is a spendid one. I know that millions of Americans will join with me in commending the establishment of this great national shrine."

The museum will be a freewill offering of the American people, giving individually as free and patriotic citizens.

To the world, the museum will tell the story of how in America, people of different national backgrounds can and do live together in peace and accord.

Mobilization of the American people for this project will create an operation unity, which will inspire us here at home and enhance our prestige abroad.

The American Museum of Immigration dramatizes the building of America by people of all countries, creeds, colors, and cultures. It will stand in the years to come as a monument to General Grant's dedication of himself to public service for the betterment of all our citizens and the enrichment of our national heritage.

It is therefore my high privilege and pleasure on behalf of the Sertoma Club of Washington and its awards committee, under the chairmanship of Henry T. Parrett, to present our esteemed Sertoman, General Grant, with this Service to Mankind plaque, fittingly inscribed: "For civic and patriotic devotion."

Address of His Excellency, Señor Dr. Guillermo Sevilla-Sacasa, Ambassador Extraordinary and Plenipotentiary of the Republic of Nicaragua, at the Banquet in Memphis, Tenn., in Honor of the Latin American Ambassadors, February 28, 1957

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following:

ADDRESS OF HIS EXCELLENCY, SEÑOR DR. GUILLERMO SEVILLA-SACASA, AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY OF THE REPUBLIC OF NICARAGUA, AT THE BANQUET IN MEMPHIS, TENN., IN HONOR OF THE LATIN AMERICAN AMBASSADORS, FEBRUARY 28, 1957

Mr. Governor of the State of Tennessee, Mr. Mayor of the city of Memphis, members of the Cordell Hull Foundation, members of the entertainment committee, ladies and gentlemen, when I arrived this morning at the Memphis airport, I had the welcome opportunity to say that my colleagues from Latin America, their wives, and I were greatly pleased at being able to visit the flourishing State of Tennessee, thanks to the kind invitation extended to us by your illustrious Governor, the Honorable Frank C. Clement, to attend the ceremonies sponsored by the Cordell Hull Foundation in honor of the memory of the outstanding statesman who is the pride of Tennessee and the genuine archetype of continental citizen.

We are absolutely sure that in Tennessee we would be received with open arms, with the kindness and courtesy that are characteristics of the sons of this privileged region of the United States of America, in which the Almighty arranged to install a great laboratory with the resources that well out of this fertile soil; where sparks flash in the eyes of its enchanting women; and where the talent of its men bursts out in wit.

Everything in Tennessee awakens wonder: the culture of its generous and hospitable people; the treasure locked in its majestic rivers; its superb mountains, and its magnificent fields and meadows; the work that its leaders have done to make these cities true emporia of wealth; and, above all, the climate of concord and spiritual peace that Tennessee offers to visitors.

We have come from different but friendly sister nations, good neighbors and good partners, whose peoples cherish sentiments of sincere admiration for the great Nation of North America; peoples devotedly loyal to the cause that the democracies are upholding; peoples that enjoy giving more than asking; peoples that are upright and honorable and have the courage that gives its men the imprint of their noble forefathers; decided peoples, resolved to join their common destinies, who do not create dangerous international problems for the United States; peoples whose economic potentiality is simply immense, who produce many things that the United States consumes, and who consume many things that the United States produces; and who have set up with this great Nation of Washington and Jefferson a juridical system for peace that is a model for the world.

We who are now your grateful guests represent those sister nations and bring an affectionate message from our republics, which finds expression in sympathy toward your glorious Nation, your State, and your beloved city of Memphis, as immaculate as its skies, whose name alone transports us to that famous Egyptian city that shone in past centuries, but that did not have your mountain, or your rivers, or your valley, which is a sea of wealth, and much less your beautiful women. It has been said, and truly said, that here in Memphis "all the women are ladies, and all the ladies are beautiful."

In every Latin heart, above the inconfessable struggles of egoism, there is an unconscious aspiration for unity; unity of our destinies; unity of our ideals; unity of our laws.

There is a sentiment that grows and grows and takes on added stature with experience and catastrophies.

It is the sentiment of cohesion; it is the esprit de corps of Latin American brotherhood; it is the awareness of the soul of our race, which is our ultimate bulwark, as it is our greatest hope.

For that reason, when we are brought together as we have been today, it is for us not just a ceremony, but a great moment of delightful cordiality.

Good-will visits like the one we are making to Tennessee are in themselves important, for they offer the opportunity for us, men of Latin America, to know you better, and for you, as we talk together, to become aware that your true friends are scattered throughout the Americas that stretch south from the Rio Grande, that we are men who know how to be loyal to the friendship that is offered to us and who never ask for recompense, except perhaps that which takes the form of the consideration and the respect that those who are friends merit from one another.

It is obviously urgent that we know one another better. Unfortunately, the news that is sent from there and published here mentions, as a general thing, only the less agreeable things about our countries, to the extremes that many think, and with reason, that we live from revolution to revolution, expecting political cataclysms, concerned over the stability of our governments, as if the cultured people of the United States were interested only in such matters.

Very seldom does the press comment favorably on the economic possibilities of our countries, which are truly extraordinary; the advantageous geographic location of our republics, bathed as they are by two mighty oceans; the natural wealth of their vast lands; the very propitious opportunities that our countries offer for United States trade and industry.

They never comment on the guaranties that insure a favorable climate for the capitalists of this country to make investments; nor the growing interest that is evident in Latin America in knowing this Nation better; nor the desire that has become an obsession, that our young people and professional men and women be enabled to study in your excellent universities; nor the aspiration that you too will travel south of the United States so that you may realize that we are friendly and cultured nations, with a fascinating history, emblazoned with glorious epics; nations of heroes, as you are, that pray to the same God who directs the destinies of the universe.

In America, nature has happily outlined our geographical proximity; human understanding made us friends; and our common destiny has encouraged us to foster a most promising brotherhood, because we have faith in the future of our hemisphere and we cherish in any and all circumstances our unfailing devotion to the ideals of the men of America.

When the tribunal of the future makes a conscientious analysis of the still unwritten annals of our productive America, it will find that unfailingly, in every generation, the greatest efforts have been made to increase our mutual understanding; that we have eagerly sought means of reducing inter-

national tension; that we have been united in the face of threats and dangers; and that we have persisted without flagging in the search for legitimate solutions that were inspired in the noble sentiments of our forefathers, in order to make America a living example of what mankind can be.

Many decades of untiring labor went into the building of the regional system which today is recognized in the Charter of the United Nations, thanks to the able participation of the Plenipotentiaries of America at the San Francisco Conference.

Before pan-Americanism had a written constitution, we had achieved the acceptance of transcendental postulates that marked the rhythm of international relations in our America. Many of those postulates are inseparably connected with the activities of a beloved son of Tennessee, an eminent citizen of this great Nation, to which he rendered outstanding services not only in arms, as captain of the 45th Regiment of Tennessee, in the Spanish-American War, but in the fields of law, politics, and diplomacy.

I refer, of course, to Cordell Hull, the noble inspiration of the good neighbor policy; the leader of the principles of nonintervention, proclaimed at the Montevideo Conference; the Father of the United Nations, not only because he was the principal mentor of the Declaration of January 1, 1942, in which 26 nations agreed to use all their resources against Nazi-Fascism and reiterated their adherence to the principles set forth in the Atlantic Charter, but because he succeeded in getting the Ministers of Foreign Affairs of China, Great Britain, and the Soviet Union to accept and recognize, in the Declaration of Moscow on October 30, 1943, the necessity of creating, as essential for the preservation of international peace and security, an organization based on the principles of the sovereign equality of states.

With his death, the United States lost one of its finest sons, and Latin America a noble friend.

For that reason, when we find ourselves in Tennessee, not very far from the place where he was born, we are naturally swept by emotion.

On this pleasant occasion we congratulate the distinguished gentleman, headed by Governor Clement, maintain and encourage the Cordell Hull Foundation, whose principal purpose is to have students from Latin America come to be educated and learn in the renowned cultural centers of this country.

We applaud also International House, in New Orleans, which is administering in so exemplary a manner the Cordell Hull Foundation.

Those of us who had the honor of attending the commemorative ceremonies that took place in Panama City in July 1956, in tribute to the Liberator Simón Bolivar and the Amphictyonic Congress of 1826—a memorable year for all Americans and especially for Memphis—were greatly pleased to hear the President of the United States of America, Gen. Dwight D. Eisenhower, put forward officially the idea that the Presidents of the American Republics should designate a special representative to "join in preparing for us concrete recommendations for making our Organization of American States a more effective instrument in those fields of cooperative effort that affect the welfare of our peoples."

The Inter-American Committee of Presidential Representatives have already held two important meetings in Washington, and they will hold a third and final meeting beginning on April 29 next, under the able chairmanship of the distinguished statesman Dr. Milton Eisenhower.

Our Chief Executive, our peoples, and we their representatives sincerely believe that this Committee, created at the noble suggestion of President Eisenhower, will bring forth results that will benefit our sister republics.

And just as at the recent Caracas Conference—where we adopted concrete measures to combat the infiltration of international communism in America—we came away convinced of the solidarity of our peoples, a solidarity based on the most fraternal relations and on interdependence and mutual respect, which are genuine contributions of the thinking of the men of America, we believe that the Committee of Presidential Representatives has opened a chapter of well-founded hopes in the annals of our America.

Full of those hopes, we have come to Tennessee, to enjoy your traditional hospitality, to admire your countryside and the various expressions of your extraordinary progress, to lay before you the affectionate message from our Republics, and to tell you that we want to return soon to this flourishing port of Memphis, for our hearts will surely show us the road leading to this paradise of marvels, whose destiny lies in the hands of your able Governor Frank C. Clement.

We thank you especially for the presence of so many distinguished ladies of Tennessee, with whom our wives have spent such pleasant hours. To all of them we pay the tribute of our respectful admiration, and to you, our dear friends of Tennessee, we offer our hands under the welcoming sight of our unfurled flags. Many thanks.

Resolution Favoring Holding Pan-American Games in Cleveland

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. VANIK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution urging the Senators from Ohio and the Members of the House of Representatives representing the Greater Cleveland area to give their utmost support and effort to make possible the holding of the pan-American games in the city of Cleveland:

RESOLUTION NO. 648–57

Whereas the people of Cleveland have manifested their complete support for the pan-American games which have been scheduled to be held in this community in 1958; and

Whereas it has been said that the pan-American games would afford a singular opportunity for the United States to further cement the deep bonds of friendship with our sister nations in South America and Latin America; and

Whereas only the concerted effort of the United States Government, the State of Ohio, and the city of Cleveland can assure the success of this vital sports conference which will bring together the youth of the various nations representing the pan-American conference; and

Whereas this resolution constitutes an emergency measure in that the same provides for the usual daily operation of a municipal department: Now, therefore, be it

Resolved by the Council of the City of Cleveland:

SECTION 1. That the Senators from Ohio and the Members of the House of Representatives representing the Greater Cleveland area be, and the same hereby are, urged to give their utmost support and efforts to make possible the holding of the pan-American games in the city of Cleveland.

SEC. 2. That the clerk of council be, and he hereby is, requested to transmit copies of this resolution to Senators JOHN J. BRICKER, FRANK J. LAUSCHE, and Congressman FRANCES P. BOLTON, MICHAEL A. FEIGHAN, WILLIAM E. MINSHALL, and CHARLES A. VANIK.

SEC. 3. That this resolution is hereby declared to be an emergency measure, and, provided it receives the affirmative vote of two-thirds of all the members elected to council, it shall take effect and be in force immediately upon its adoption and approval by the mayor; otherwise it shall take effect and be in force from and after the earliest period allowed by law.

Adopted March 11, 1957.

JACK P. RUSSELL,
President of Council.
THAD FUSCO,
Clerk of Council.

Approved by mayor:

ANTHONY J. CELEBREZZE.

MARCH 13, 1957.

Resolutions of the New York Board of Rabbis

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following resolutions which were adopted at the annual meeting of the New York Board of Rabbis, held on January 30, 1957.

These resolutions are of special significance because the board is one of the oldest rabbinical associations in the United States and is composed of orthodox, conservative, and reform rabbis:

ANNUAL MEETING RESOLUTIONS

(The following resolutions were adopted January 30, 1957, at the annual meeting of the New York Board of Rabbis:)

Inspired by the ideal of the Fatherhood of God and the brotherhood of man, and moved to apply the great teachings of our Torah concretely to the social problems of our day, the New York Board of Rabbis prayerfully offers the following resolutions:

I. WORLD AFFAIRS

1. Hungarian resistance

The New York Board of Rabbis, seeing in communism the antithesis of the Jewish ideal of freedom and man's inviolable dignity, solemnly invokes the blessing of God upon those who in Hungary are resisting Soviet tyranny. We find in their heroic existence proof that tyranny cannot long endure and that the Soviet system is not invincible. We, therefore, respectfully urge that, in the light of these developments, the foreign policy of our Government be infused with renewed faith in the vitality of the democratic ideal and its ability to commend itself to the minds and hearts of all peoples in the war of ideas. We respectfully urge that our Government continue to assist the underprivileged and underdeveloped countries of the world that their democratic leaders be successful in resisting the blandishments of world communism. We ask that our Government wage an unceasing campaign in the United Nations and through diplomatic

channels to acquaint the nations of the world with the truth about Hungary.

2. Refugees

The New York Board of Rabbis applauds the hospitality extended to Hungarian refugees under the parolee system, and urges that all refugees from tyranny everywhere, including Egyptian Jews disenfranchised and terrorized by the Nasser regime, be welcomed into the United States under the same arrangements. The refugee situation dramatically indicates the inadequacy and injustice of the McCarran-Walter Act with its selective immigration categories. We, therefore, call upon the new Congress to repeal it as a violation of the American spirit of brotherhood which has welcomed to these shores immigrants of all faiths, races, and nations.

3. Freedom of press

The New York Board of Rabbis regards the principle of freedom of the press as an indispensable element in the securing and extension of democracy through enlightenment to understanding. Such actions as the barrier of American newsmen from visiting Red China are therefore to be deplored. We are horrified by the persecution of innocent prisoners by totalitarian governments, but feel that curtailing the right of journalists to visit such countries is not the answer to the problem. On the contrary, if the American press has the opportunity to carefully scrutinize the practices of totalitarian countries, the world may be better informed of the horrors of communism.

4. Middle East

The New York Board of Rabbis shares with other faiths deep concern over the conflict in the Middle East and joins with all men of good will in prayers for peace in the land which cradles the faiths of the Western World. We endorse the United Nations' action in sending a police force to Egypt and the Suez Peninsula to promote the conditions of peace, and strongly urge that the U. N. police force remain there until the Suez question is satisfactorily resolved and permanent peace is established between Egypt and Israel. Our Government cannot in conscience lend its support to any decisions which do not include access to the Suez Canal and the Gulf of Aqaba by all nations including Israel, the securing of Israel's borders against future lawless attacks and safeguarding the rights of Jews now being violated in Egypt and other Arab States. We urge that the resettlement of Arab refugees be discussed as soon as possible with the understanding that the Arab States as well as Israel assume fair shares of responsibility for their resettlement. Realizing that the complex Middle Eastern problems cannot be settled without the establishment of peace between Israel and her Arab neighbors, we respectfully urge the President to initiate a direct meeting between Israeli and Arab leaders for a discussion of the problem. It is to be noted that Prime Minister Ben Gurion has indicated his willingness to meet Arab representatives anywhere at any time for the building of a just and lasting peace.

5. King Saud

The New York Board of Rabbis views with dismay the visit of King Saud of Saudi Arabia to the White House. Cited last year by the United Nations for his sanction of human slavery, displaying deep-rooted prejudice against other faiths in his objection to American military chaplains wearing the insignia of their traditions, and barring American Jewish Army personnel from his kingdom, he is the antithesis of the high ideals and democratic principles for which America stands. We applaud the courageous stand of Mayor Wagner in refusing to accord King Saud an official reception in New York City.

II. NATIONAL SCENE

1. The President

The New York Board of Rabbis respectfully felicitates President Eisenhower on the beginning of his second term in office. We invoke God's blessing of strength and health upon him and all who counsel and advise him.

2. Integration

The New York Board of Rabbis continues to deplore efforts to circumvent the Supreme Court ruling outlawing segregation in the schools and public conveyances, and the wave of violence and economic reprisal directed against Negro and white citizens who courageously pursue their rights of franchise and integration. We hail the nonviolent resistance by Negro leaders in the South as an inspiring example of dispassionate social action in the highest traditions of the Judaeo-Christian ideal. We urge the President to make a personal tour of the more troublesome areas to plead for the peaceful acceptance of the Supreme Court decision on desegregation.

III. THE LOCAL SCENE

1. The mayor

The New York Board of Rabbis congratulates Mayor Robert Wagner on his forward-looking program of slum clearance and urban renewal. We express the hope, however, that relocation of residents in blighted areas be effected with a minimum of hardship and that priority in new housing be granted to those living in the area. We strongly urge that all housing developments be so conducted that the residents be thoroughly integrated economically and racially within all neighborhoods, resulting in complete integration in the public schools.

2. Public housing

The New York Board of Rabbis strongly favors the stand taken by the State Commission Against Discrimination in support of integration in private housing as in public housing. Discrimination and prejudice will not disappear as long as we are not permitted to live together as brothers.

We take this opportunity to express pride in the religious, racial, and ethnic heterogeneity of our city and commend it as an example of the one-world ideal. We extend the hand of brotherhood to all newcomers to our city and pledge ourselves to assist them in every way possible to establish a satisfying life in our great metropolis.

3. Religion in the schools

The New York Board of Rabbis reiterates its fervent belief in the separation of church and state which redounds to the advantage both of democracy and religion. We feel that sectarian religious instruction in the public schools is an invasion of this separation. While the statement of the board of superintendents of the New York city schools is a vast improvement over its prior statement, the New York Board of Rabbis pledges itself and the members of our congregations to be vigilant lest it be used to intrude sectarianism into the classrooms.

4. Censorship

The New York Board of Rabbis reiterates its belief in the ability of the true and the right to triumph in the free market of ideas. We express our complete faith in the citizens of our community, State and Nation to eschew the evil and reject that which is untrue. We feel that censorship whether of the press, radio, television, the stage, or the cinema, is an invasion of America's traditional freedoms. We affirm the right of artists, writers, publicists, dramatists, etc., to portray problems as they see them, providing their work is not obscene, the right of the public to view or read or hear their portrayal, and the duty of religious institutions not to oppose such portrayal but to supply the answers to the problems so portrayed.

5. Sunday law

The New York Board of Rabbis respectfully requests the city council to seek permission from the State of New York for enabling local legislation to right an inequity imposed upon those citizens who observe Saturday as their day of rest. Those, who by reason of religious conviction are constrained to keep their places of business closed on Saturday, should be given the right to conduct their business activities on Sunday. We deem it most inappropriate to preserve, under prevailing legislation, a discriminatory handicap for those who are faithful to their religion.

6. Bingo

The New York Board of Rabbis calls upon the legislature of the State of New York to vote against the forthcoming bill for the legalization of the use of Bingo for the financial support of religious institutions. The raising of funds through Bingo games, even for worthwhile causes, is not consonant with the high standards of morality and dignity which the synagogue sets for the general community. To use questionable means for spiritual ends would seem to negate the ideals which move our people to establish a house of God, and taint the moral climate of congregational life.

7. Divorce problem

The New York Board of Rabbis recognizes the integrity of the family as the keystone of our society. While hopeful that the divorce laws of our State will eventually be reviewed with a view to their liberalization, the board urges upon its members and their congregations the support of new efforts in the Legislature of the State of New York which will study marriage problems, with a view to establishing machinery for the settlement of marital disputes before they reach the courts, and for the maintenance of family stability.

Jet Age Deficiency of the Nation's Capital

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star which comments on the lack of facilities in Washington for handling jet airliners:

OUR JET-AGE DEFICIENCY

The dramatic transcontinental flight of Boeing's huge 707 jet airliner again has brought forcefully to public attention Washington's lack of preparedness for the jet age. Not only does the Nation's Capital have no facilities for handling the fast jet civil aircraft now being demonstrated at other airports, but we are making no progress toward correcting the deficiency. And, at the present rate of production, the big jet passenger aircraft will be in general airline use before a new airport could be built—even if work were started today.

Because the present Washington National Airport could not accommodate the Boeing airliner on its flight from Seattle to this part of the country, it was forced to land at Baltimore's Friendship Airport. It made the trip in the record time of 3 hours and

48 minutes. And it is interesting to note that if Friendship were the regular eastern terminal for such flights from the west coast it would take the passengers destined for Washington 45 to 70 minutes additional to arrive here, via ground transportation.

Boeing is not the only American manufacturer in the jet airliner race. Douglas has just announced contracts for the sale of its DC-8 stratosphere ship to a number of foreign and American airlines—with a prediction that the giant jet transports will be in regular operation one day soon. In fact, according to CAA Administrator Pyle, we are in a period of rapid transition from propeller civil aircraft to the jet-propelled types. He foresees general commercial jet operations within about 2 years. If that forecast is accurate, Washington will have to be bypassed by the airlines of tomorrow until a new airport, designed for the jet age, has been provided here. Are Congress and the nearby Virginia community going to delay action on a second local airport so interminably that Washington's jet air traffic will go to Friendship Airport by default?

Partnership Best for Trinity River

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. GUBSER. Mr. Speaker, I submit herewith the following editorial from the San Jose Mercury for March 12, 1957, with respect to Trinity River partnership proposal:

PARTNERSHIP BEST FOR TRINITY PLAN

The Halls of Congress will shortly echo to the thump and rumble of oratory designed to prove conclusively that:

1. Secretary of the Interior Fred A. Seaton has entered into an unholy alliance with a monopolistic utility octopus, the Pacific Gas & Electric Co., to strip California of the benefit of publicly generated hydroelectric power, or

2. The P. G. & E., in partnership with the Federal Government, has offered to perform a needed and valuable public service from which every American will benefit.

Critical examination of the facts substantiates the latter view.

In offering to build the power generating and distribution facilities of the Trinity River period, the P. G. & E. will be saving taxpayers in California and elsewhere many millions of dollars. The utility will, in addition,, be helping California to solve one of its greatest problems—development of adequate supplies of agricultural and domestic water.

The partnership proposal submitted to Congress by Seaton is easy to grasp and makes eminent sense.

Overall cost of the Trinity project is $225,213,000. Generating and distribution facilities to be built by P. G. & E., would reduce this amount by $56,730,000.

Additionally, P. G. & E. offers to pay the Federal Government another $165 million over the 50-year life of its contract for the use of the falling water which will generate the electricity. On top of that, P. G. & E. during the 50 years of the contract will pay another $83 million to the Federal Government in taxes and some $62 million in taxes to State and local governments.

The public power advocates will complain that these millions must be paid ultimately by P. G. & E.'s customers. This is, of course, true, but the customers' interests should be protected adequately by the rate-setting powers of the California Public Utilities Commission.

Last but not lease, full development of the Trinity River project will make an additional 2,752,630 acre-feet of water available to thirsty California acres.

On balance, the partnership advocates have an overwhelmingly better case in this instance.

Trinity River Project

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. GUBSER. Mr. Speaker, it is interesting to note that one of California's important local unions has endorsed Secretary Seaton's partnership proposal of the Trinity River project.

I submit herewith a statement by Local No. 1245, of the International Brotherhood of Electrical Workers, AFL-CIO:

TRINITY RIVER PROJECT

Our union, Local No. 1245, of the International Brotherhood of Electrical Workers, AFL-CIO, represents some 14,500 employees of the Pacific Gas & Electric Co.

We wish to bring to your attention our views on the partnership plan as recommended by Interior Secretary Seaton for consideration by the Congress in the matter of the Trinity River project.

Our members, who make their living by serving the public, work for the P. G. & E., which is a regulated private industrial enterprise. The employees work under collective bargaining agreements covering wages, working conditions, and other employee benefits.

This union was chosen by the employees to represent them as a result of procedures afforded by Federal law and a peaceful and harmonious relationship has been developed over a number of years.

The employee, the employer, and the general public have benefited by a legal and responsible application of the principles of sound industrial relations.

We are seriously concerned over the possibility of the Federal Government building and operating the power facilities involved in the Trinity River project. Should the Government build the generating plants, transmit and market the power developed on the Trinity, our members will be adversely affected.

Public power advocates seem to ignore the fact that the economic welfare of thousands of utility workers is affected each time governmental agencies invade the private power industry.

Public agencies generally do not allow and usually prohibit the right of free organization for collective bargaining and the right of contract. We have seen group after group of utility workers shunted into publicly operated power districts without any consideration given to decent wages, working conditions, and safety regulations.

Private development of the power facilities of the Trinity project will provide additional employment for our members and will serve to maintain adequate wages and conditions through collective bargaining. Federal development and power marketing will, our experience shows, lead to expansion of the unfair treatment of utility workers through loss of rights enjoyed by the rest of labor.

We share in the desire to safeguard the welfare of the general public through flood control, wildlife protection, irrigation water, reasonable power rates, and reasonable taxation. We also believe that these safeguards are present in the partnership proposal as recommended to the Congress.

We urge that you give consideration to our views and that you may act favorably on the partnership recommendation when the issue is considered by the Congress.

RONALD T. WEAKLEY,
Business Manager, Local Union, No. 1245, IBEW, AFL-CIO, Oakland, Calif.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE
